C18. In estimating the cost of fulfillment the entity takes into account all readily available information at the measurement date under current market conditions in estimating the obligation to settle the liability at the expected fulfillment date.

C19. The cost of fulfillment shall not include the non-performance risk of the entity to settle its liability. A cost of fulfillment measurement is a measure of the value of a liability assuming the entity will fulfill its obligations. As non-performance risk takes into account the effect on the value of a liability of the entity potentially not meeting its obligations, it is inconsistent to include in the measure of a liability the possibility that it may not meet its obligations when the cost of fulfillment measurement assumes the liability will be fulfilled in the normal course of operations.

Measurement Technique

C20. The cost of fulfilment, cannot be observed directly in an active market. It is determined using the income approach measurement technique.

C21. An entity shall use the income approach. The cost of fulfillment reflects entity-specific assumptions rather than assumptions used by market participants. In practice, there may be little difference between the assumptions that a market participant would apply and those an entity uses itself.

C22. The objective of using the income approach is to estimate the cost that the entity will incur in fulfilling the obligations represented by the liability at the measurement date under current market conditions. The main aspects of that approach as it relates to the cost of fulfillment are summarized in paragraphs C23–C48.

Income Approach

C23. Applying the income approach to estimate the cost of fulfillment shall take into account the attributes of the cost of fulfillment measurement basis. This includes:

(a) Estimates of future cash flows.

(b) Possible variations in the estimated amount or timing of future cash flows for liability being measured, caused by the uncertainty inherent in the cash flows.

(c) The time value of money.

(d) Other factors that impact the value of the liability.

C24. Paragraphs C25–C48 describe the use of present value techniques to measure the cost of fulfillment. Those paragraphs neither prescribe the use of a single specific present value technique nor limit the use of present value techniques to measure the cost of fulfillment to the techniques discussed. The present value technique used to measure the cost of fulfillment will depend on facts and circumstances specific to the liability being measured and the availability of sufficient data.

Future Outflows of Resources

C25. The estimates of outflows of resources used to measure the cost of fulfillment shall include all inflows of resources and outflows of resources that relate directly to the fulfillment of the liability. Those estimates shall:

(a) Be explicit (i.e., the entity shall estimate those outflows of resources separately from the estimates of discount rates that adjust those future outflows of resources for the time value of money and the risk adjustment that adjusts those future outflows of resources for the effects of uncertainty about the amount and timing of those outflows of resources);

(b) Reflect the perspective of the entity, provided that the estimates of any relevant market variables do not contradict the observable market prices for those variables (see paragraphs C30–C34);

(c) Incorporate, in an unbiased way, all of the available information about the amount, timing and uncertainty of all of the inflows of resources and outflows of resources that are expected to arise as the entity fulfills the liability (see paragraph C35); and

(d) Be current (i.e., the estimates shall reflect all of the available information at the measurement date) (see paragraphs C36–C40).

Uncertainty and the Expected Value Approach

C26. The expected present value technique uses as a starting point a set of outflows of resources that represents the probability-weighted average of all possible future outflows of resources (i.e., the expected outflows of resources). The resulting estimate is identical to expected value, which, in statistical terms, is the weighted average of a discrete random variable's possible values with the respective probabilities as the weights. Because all possible outflows of resources are probability-weighted, the resulting expected outflows of resources are not conditional upon the occurrence of any specified event (unlike the outflows of resources used in the discount rate adjustment technique).

C27. In determining the expected outflows of resources an entity must:

(a) Identify each possible outcome;

(b) Make an unbiased estimate of the amount and timing of the future outflows of resources for each outcome; and

(c) Make an unbiased estimate of the probability of each outcome.

C28. Paragraph C27 requires the estimate of expected values to reflect an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes. In practice, this may not need to be a complex analysis. In some cases, relatively simple modelling may be sufficient, without the need for a large number of detailed simulations of scenarios. For example, the identification of scenarios that specify the amount and timing of the outflows of resources for particular outcomes and the estimated probability of those outcomes will probably be needed. In those situations, the expected outflows of resources shall reflect at least two outcomes.

C29. In identifying the set of outflows of resources that represents the probability-weighted average of all possible future outflows of resources, paragraph C2 assumes that the liability is settled by the entity in the least costly manner. Each outflow represents one possible scenario where the liability is settled in the least costly manner.

Market Variables and Non-Market Variables (Paragraph C25(b))

C30. This Appendix identifies two types of variables:

(a) Market variables—variables that can be observed in, or derived directly from, markets (e.g., interest rates); and

(b) Non-market variables—all other variables (e.g., the frequency and severity of natural disasters impacting decommissioning liabilities).

Market Variables

C31. Estimates of market variables shall be consistent with observable market prices at the measurement date. An entity shall not substitute its own estimates for observed market prices except as described in paragraph D59. In accordance with Appendix D, if market variables need to be estimated (e.g., because no observable market variables exist), they shall be as consistent as possible with observable market variables.

Non-Market Variables

C32. Estimates of non-market variables shall reflect all of the available evidence, both external and internal.

C33. Non-market external data (e.g., national statistics for decommissioning of a nuclear power facility) may have more or less relevance than internal data (e.g., internally developed statistics for decommissioning of a nuclear power facility), depending on the circumstances.

C34. Estimated probabilities for non-market variables shall not contradict observable market variables. For example, estimated probabilities for future inflation rate scenarios shall be as consistent as possible with probabilities implied by market interest rates.

Estimating Probabilities of Future Payments (Paragraph C25(c))

C35. An entity estimates the probabilities associated with future payments on the basis of:

(a) Information about the known or estimated characteristics of the liability; and

(b) Historical data about the entity's own experience, supplemented when necessary with historical data from other sources. Historical data is adjusted if, for example:

(i) The characteristics of the liability differ (or will differ, for example because of adverse selection) from those of the population that has been used as a basis for the historical data;

(ii) There is evidence that historical trends will not continue, that new trends will emerge or that economic or other changes may affect the outflow of resources that arise from the existing liability; or

(iii) There have been changes in the entity's practices or procedures that may affect the relevance of historical data to the liability.

Under Current Estimates (Paragraph C25(d))

C36. In estimating the probability of each outflow of resources scenario, an entity shall use all of the available current information at the measurement date. An entity shall review the estimates of the probabilities that it made at the end of the previous measurement date and update them for any changes. In doing so, an entity shall consider whether:

(a) The updated estimates faithfully represent the conditions at the end of the measurement date; and

(b) The changes in estimates faithfully represent the changes in conditions during the period. For example, suppose that estimates were at one end of a reasonable range at the beginning of the period. If the conditions have not changed, changing the estimates to the other end of the range at the end of the period would not faithfully represent what has happened during the whole period. If an entity's most recent estimates are different from its previous estimates, but conditions have not changed, it shall assess whether the new probabilities that are assigned to each scenario are justified. In updating its estimates of those probabilities, the entity shall consider both the evidence that supported its previous estimates and all of the new available evidence, giving more weight to the more persuasive evidence.

C37. The probability assigned to each scenario shall reflect the conditions at the measurement date. Consequently, in accordance with IPSAS 14, Events After the Reporting Date, an event that occurs after the end of the reporting period and resolves a condition that existed at the reporting date does not provide evidence of a condition that existed at the end of the reporting period. For example, there may be a 20 per cent probability at the end of the reporting period that a major storm will strike prior to a facility being decommissioned that would increase the cost of decommission. After the end of the reporting period and before the financial statements are authorized for issue, a storm strikes. The outflow of resources under that contract shall not reflect the storm that, with hindsight, is known to have occurred. Instead, the outflow of

resources that were included in the measurement are multiplied by the 20 per cent probability that was apparent at the end of the reporting period (with appropriate disclosure, in accordance with IPSAS 14, that a non-adjusting event occurred after the end of the reporting period).

Future Events (Paragraph C25(d))

C38. Estimates of non-market variables shall consider not just current information about the liabilities but also information about trends. For example, technology has consistently improved over long periods thereby decreasing decommissioning costs. The determination of the outflow of resources reflects the probabilities that would be assigned to each possible trend scenario in the light of all the available evidence.

C39. Similarly, if the outflow of resources associated with fulfilling the liability are sensitive to inflation, the determination of the outflow of resources shall reflect possible future inflation rates. Because inflation rates are likely to be correlated with interest rates, the measurement of the outflow of resources reflects the probabilities for each inflation scenario in a way that is consistent with the probabilities that are implied by market interest rates.

C40. When estimating the outflow of resources associated with fulfilling the liability, an entity shall take into account future events that might affect the outflow of resources. The entity shall develop scenarios that reflect those future events, as well as unbiased estimates of the probability weights for each scenario. However, an entity shall not take into account future events, such as a change in legislation, that would change or discharge the present obligation or create new obligations under the existing liability.

Time Value of Money

C41. Entities are not indifferent to the timing of an outflow of resources. Accordingly, the timing of the future outflows of resources is a characteristic of a liability and needs to be encompassed in any measurement of a liability's current value. Failure to reflect the time value of money would mean that the resulting measurement would not be a faithful representation of the economic burden the liability represents.

C42. An entity shall determine the estimated outflows of resources by adjusting the estimates of future outflows of resources for the time value of money, using discount rates that reflect the characteristics of the liability. Such rates shall:

(a) Be consistent with observable current market prices for instruments with outflows of resources whose characteristics are consistent with those of the liability's outflows of resources, in terms of, for example, timing, currency and liquidity.

(b) Exclude the effect of any factors that influence the observable market prices but that are not relevant to the outflows of resources of the liability.

C43. When using a risk-free rate, the logical sources of reference rates are high quality bonds, for example, bonds issued by a financially sound government. These instruments should include no or insignificant default risk. They will also typically have a range of maturity dates or durations to match the liability durations. In the event that long-dated bonds are unavailable for liabilities with long durations, such as some decommissioning liabilities, it would be necessary to use extrapolation techniques to estimate the rates.

C44. Although rates on high quality government bonds will not need to be adjusted for default risk in determining the risk-free discount rate, they may need to be adjusted for liquidity risk. Some government bonds are traded in deep and liquid markets enabling bond holders to readily sell them at minimal cost. The rate payable on such bonds is lower than the rate payable on an equivalent illiquid bond. Accordingly, it might be necessary to include a 'premium for illiquidity' in the observed rate for government bonds that are not traded in deep and liquid markets.

Inputs to the Income Approach

General Principles

C45. The income approach used in a cost of fulfillment measurement reflects entity-specific assumptions rather than assumptions used by market participants.

C46. The cost of fulfillment measurement is an entity-specific valuation. When an income approach is applied, an entity shall select inputs that are consistent with the characteristics of the liability (see paragraph C10). The technique should maximize the use of observable inputs that are available to a market participant that is making the same valuation as the entity, from the entity's perspective. For example, when measuring the cost to fulfill a decommissioning liability where payments are due in 50 years, an observable market input when discounting the outflow of resources is the government bond rate applicable to the entity.

C47. In some cases, the characteristics of a liability may result in the application of an adjustment (e.g., there is no corresponding bond rate to discount an outflow of resources due in 3.5 years). However, a cost of fulfillment measurement shall not incorporate an adjustment that is inconsistent with the unit of account in the IPSAS that requires or permits the cost of fulfillment measurement.

C48. When a liability will be settled at a future date, the assumptions applied in developing and identifying inputs are based on current market conditions. For example, a decommissioning liability may be expected to settle in 50 years. The payment due on fulfillment and the associated discount rate are both based on information available at the measurement date.

Appendix D

Fair Value

This Appendix is an integral part of IPSAS 46.

Measurement

D1. The objective of a fair value measurement is to estimate the price at which an orderly transaction to sell the asset or to transfer the liability would take place between market participants at the measurement date under current market conditions. A fair value measurement requires an entity to determine all the following:

(a) The particular asset or liability that is the subject of the measurement (consistently with its unit of account);

(b) For a non-financial asset, the valuation premise that is appropriate for the measurement (consistently with its highest and best use);

(c) The principal (or most advantageous) market for the asset or liability; and

(d) The measurement technique(s) appropriate for the measurement, considering the availability of data with which to develop inputs that represent the assumptions that market participants would use when pricing the asset or liability and the level of the fair value hierarchy within which the inputs are categorized.

The Transaction

D2. A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date under current market conditions.

D3. A fair value measurement assumes that the transaction to sell the asset or transfer the liability takes place either:

(a) In the principal market for the asset or liability; or

(b) In the absence of a principal market, in the most advantageous market for the asset or liability.

D4. An entity need not undertake an exhaustive search of all possible markets to identify the principal market or, in the absence of a principal market, the most advantageous market, but it shall take into account all information that is reasonably available. In the absence of evidence to the contrary, the market in which the entity would normally enter into a transaction to sell the asset or to transfer the liability is presumed to be the principal market or, in the absence of a principal market, the most advantageous market.

D5. If there is a principal market for the asset or liability, the fair value measurement shall represent the price in that market (whether that price is directly observable or estimated using another measurement technique), even if the price in a different market is potentially more advantageous at the measurement date.

D6. The entity must have access to the principal (or most advantageous) market at the measurement date. Because different entities (and operations within those entities) with different activities may have access to different markets, the principal (or most advantageous) market for the same asset or liability might be different for different entities (and operations within those entities). Therefore, the principal (or most advantageous) market (and thus, market participants) shall be considered from the perspective of the entity, thereby allowing for differences between and among entities with different activities.

D7. Although an entity must be able to access the market, the entity does not need to be able to sell the particular asset or transfer the particular liability on the measurement date to be able to measure fair value on the basis of the price in that market.

D8. Even when there is no observable market to provide pricing information about the sale of an asset or the transfer of a liability at the measurement date, a fair value measurement shall assume that a transaction takes place at that date, considered from the perspective of a market participant that holds the asset or owes the liability. That assumed transaction establishes a basis for estimating the price to sell the asset or to transfer the liability.

Market Participants

D9. An entity shall measure the fair value of an asset or a liability using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

D10. In developing those assumptions, an entity need not identify specific market participants. Rather, the entity shall identify characteristics that distinguish market participants generally, considering factors specific to all the following:

(a) The asset or liability;

(b) The principal (or most advantageous) market for the asset or liability; and

(c) Market participants with whom the entity would enter into a transaction in that market.

The Price

D11. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date under current market conditions (i.e., an exit price) regardless of whether that price is directly observable or estimated using another measurement technique.

D12. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. Transaction costs shall be accounted for in accordance with other IPSAS. Transaction costs are not a characteristic of an asset or a liability; rather, they are specific to a transaction and will differ depending on how an entity enters into a transaction for the asset or liability.

D13. Transaction costs do not include transport costs. If location is a characteristic of the asset (as might be the case, e.g., for a commodity), the price in the principal (or most advantageous) market shall be adjusted for the costs, if any, that would be incurred to transport the asset from its current location to that market.

Application to non-financial assets

Highest and Best Use for Non-Financial Assets

D14. A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

D15. The highest and best use of a non-financial asset takes into account the use of the asset that is physically possible, legally permissible and financially feasible, as follows:

(a) A use that is physically possible takes into account the physical characteristics of the asset that market participants would take into account when pricing the asset (e.g., the location or size of a property).

(b) A use that is legally permissible takes into account any legal restrictions on the use of the asset that market participants would take into account when pricing the asset (e.g., the zoning regulations applicable to a property).

(c) A use that is financially feasible takes into account whether a use of the asset that is physically possible and legally permissible generates adequate revenue or cash flows (taking into account the costs of converting the asset to that use) to produce an investment return that market participants would require from an investment in that asset put to that use.

D16. Highest and best use is determined from the perspective of market participants, even if the entity intends a different use. However, an entity's current use of a non-financial asset is presumed to be its highest and best use unless market or other factors suggest that a different use by market participants would maximize the value of the asset.

D17. To protect the public interest, or for other reasons, an entity may intend not to use an acquired non-financial asset actively or it may intend not to use the asset according to its highest and best use. For example, that might be the case for an acquired intangible asset, such as a drug patent, that the entity plans to use to manufacture vaccines for its citizens. Nevertheless, the entity shall measure the fair value of a non-financial asset assuming its highest and best use by market participants.

Valuation Premise for Non-Financial Assets

D18. The highest and best use of a non-financial asset establishes the valuation premise used to measure the fair value of the asset, as follows:

(a) The highest and best use of a non-financial asset might provide maximum value to market participants through its use in combination with other assets as a group (as installed or otherwise configured for use) or in combination with other assets and liabilities (e.g., an operation).

(i) If the highest and best use of the asset is to use the asset in combination with other assets or with other assets and liabilities, the fair value of the asset is the price that would be received in a current transaction to sell the asset assuming that the asset would be used with other assets or with other assets and liabilities and that those assets and liabilities (i.e., its complementary assets and the associated liabilities) would be available to market participants.

(ii) Liabilities associated with the asset and with the complementary assets include liabilities that fund working capital, but do not include liabilities used to fund assets other than those within the group of assets.

(iii) Assumptions about the highest and best use of a non-financial asset shall be consistent for all the assets (for which highest and best use is relevant) of the group of assets or the group of assets and liabilities within which the asset would be used.

(b) The highest and best use of a non-financial asset might provide maximum value to market participants on a stand-alone basis. If the highest and best use of the asset is to use it on a stand-alone basis, the fair value of the asset is the price that would be received in a current transaction to sell the asset to market participants that would use the asset on a stand-alone basis.

D19. The fair value measurement of a non-financial asset assumes that the asset is sold consistently with the unit of account specified in other IPSAS (which may be an individual asset). That is the case even when that fair value measurement assumes that the highest and best use of the asset is to use it in combination with other assets or with other assets and liabilities because a fair value measurement assumes that the market participant already holds the complementary assets and the associated liabilities.

D20. When measuring the fair value of a non-financial asset used in combination with other assets as a group (as installed or otherwise configured for use) or in combination with other assets and liabilities (e.g., an operation), the effect of the valuation premise depends on the circumstances. For example:

(a) The fair value of the asset might be the same whether the asset is used on a stand-alone basis or in combination with other assets or with other assets and liabilities. That might be the case if the asset is an operation that market participants would continue to operate. In that case, the transaction would involve valuing the operation in its entirety. The use of the assets as a group in an ongoing operation would generate synergies that would be available to market participants (i.e., market participant synergies that, therefore, should affect the fair value of the asset on either a stand-alone basis or in combination with other assets or with other assets and liabilities).

(b) An asset's use in combination with other assets or with other assets and liabilities might be incorporated into the fair value measurement through adjustments to the value of the asset used on a stand-alone basis. That might be the case if the asset is a machine and the fair value measurement is determined using an observed price for a similar machine (not installed or otherwise configured for use), adjusted for transport and installation costs so that the fair value measurement reflects the current condition and location of the machine (installed and configured for use).

(c) An asset's use in combination with other assets or with other assets and liabilities might be incorporated into the fair value measurement through the market participant assumptions used to measure the fair value of the asset. For example, if the asset is work in progress inventory that is unique and market participants would convert the inventory into finished goods, the fair value of the inventory would assume that market participants have acquired or would acquire any specialized machinery necessary to convert the inventory into finished goods.

(d) An asset's use in combination with other assets or with other assets and liabilities might be incorporated into the measurement technique used to measure the fair value of the asset. That might be the case when using the multi-period excess earnings method to measure the fair value of an intangible asset because that measurement technique specifically takes into account the contribution of any complementary assets and the associated liabilities in the group in which such an intangible asset would be used.

(e) In more limited situations, when an entity uses an asset within a group of assets, the entity might measure the asset at an amount that approximates its fair value when allocating the fair value of the asset group to the individual assets of the group. That might be the case if the valuation involves real property and the fair value of improved property (i.e., an asset group) is allocated to its component assets (such as land and improvements).

Fair Value at Initial Recognition

D21. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price is the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability is the price that would be received to sell the asset or paid to transfer the liability (an exit price). Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

D22. In many cases the transaction price will equal the fair value (e.g., that might be the case when on the transaction date the transaction to buy an asset takes place in the market in which the asset would be sold).

D23. When determining whether fair value at initial recognition equals the transaction price, an entity shall take into account factors specific to the transaction and to the asset or liability. Paragraph D25 describes situations in which the transaction price might not represent the fair value of an asset or a liability at initial recognition.

D24. If another IPSAS requires or permits an entity to measure an asset or a liability initially at fair value and the transaction price differs from fair value, the entity shall recognize the resulting gain or loss in surplus or deficit unless that IPSAS specifies otherwise.

D25. When determining whether fair value at initial recognition equals the transaction price, an entity shall take into account factors specific to the transaction and to the asset or liability. For example, the transaction price might not represent the fair value of an asset or a liability at initial recognition if any of the following conditions exist:

(a) The transaction is between related parties, although the price in a related party transaction may be used as an input into a fair value measurement if the entity has evidence that the transaction was entered into at market terms.

(b) The transaction takes place under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

(c) The unit of account represented by the transaction price is different from the unit of account for the asset or liability measured at fair value. For example, that might be the case if the asset or liability measured at fair value is only one of the elements in the transaction (e.g., in a public sector combination), the transaction includes unstated rights and privileges that are measured separately in accordance with another IPSAS, or the transaction price includes transaction costs.

(d) The market in which the transaction takes place is different from the principal market (or most advantageous market). For example, those markets might be different if the entity is a dealer that enters into transactions with customers in the retail market, but the principal (or most advantageous) market for the exit transaction is with other dealers in the dealer market.

(e) The transaction takes place to achieve a specific social policy objective (e.g., issuing concessionary loans or financial guarantees where no, or a nominal fee, is charged).

Measurement Techniques

D26. In some cases, fair value can be determined directly by observing prices in an active market. In other cases, it is determined indirectly using measurement techniques.

D27. An entity shall use measurement techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximizing the use of relevant observable inputs and minimizing the use of unobservable inputs.

D28. The objective of using a measurement technique is to estimate the price at which an orderly transaction to sell the asset or to transfer the liability would take place between market participants at the measurement date under current market conditions. Three widely used measurement techniques are the market approach, the cost approach and the income approach. The main aspects of those approaches are summarized in paragraphs D31–D36. An entity shall use measurement techniques consistent with one or more of those approaches to measure fair value.

D29. If multiple measurement techniques are used to measure fair value, the results (i.e., respective indications of fair value) shall be evaluated considering the reasonableness of the range of values indicated by those results. A fair value measurement is the point within that range that is most representative of fair value in the circumstances.

D30. If the transaction price is fair value at initial recognition and a measurement technique that uses unobservable inputs will be used to measure fair value in subsequent periods, the measurement technique shall be calibrated so that at initial recognition the result of the measurement technique equals the transaction price. Calibration ensures that the measurement technique reflects current market conditions, and it helps an entity to determine whether an adjustment to the measurement technique is necessary (e.g., there might be a characteristic of the asset or liability that is not captured by the measurement technique). After initial recognition, when measuring fair value using a measurement technique or techniques that use unobservable

inputs, an entity shall ensure that those measurement techniques reflect observable market data (e.g., the price for a similar asset or liability) at the measurement date.

Market Approach

D31. Measurement techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might be in ranges with a different multiple for each comparable. The selection of the appropriate multiple within the range requires judgment, considering qualitative and quantitative factors specific to the measurement.

D32. Measurement techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value some types of financial instruments, such as debt securities, without relying exclusively on quoted prices for the specific securities, but rather relying on the securities' relationship to other benchmark quoted securities.

Cost Approach

D33. The cost approach reflects the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost).

Market Participant

D34. From the perspective of a market participant seller, the price that would be received for the asset is based on the cost to a market participant buyer to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. That is because a market participant buyer would not pay more for an asset than the amount for which it could replace the service capacity of that asset. Obsolescence encompasses physical deterioration, functional (technological) obsolescence and economic (external) obsolescence and is broader than depreciation for financial reporting purposes (an allocation of historical cost) or tax purposes (using specified service lives). In many cases the current replacement cost method is used to measure the fair value of tangible assets that are used in combination with other assets or with other assets and liabilities.

Income Approach

D35. When estimating fair value, the income approach can be applied using several methods. Those methods include, for example, the following:

(a) Present value techniques (see paragraph D36);

(b) Option pricing models, such as the Black-Scholes-Merton formula or a binomial model (i.e., a lattice model), that incorporate present value techniques and reflect both the time value and the intrinsic value of an option; and

(c) The multi-period excess earnings method, which is used to measure the fair value of some intangible assets.

Present Value Techniques

D36. Paragraphs D37–D54 describe the use of present value techniques to measure fair value. Those paragraphs focus on a discount rate adjustment technique and an expected cash flow (expected present value) technique. Those paragraphs neither prescribe the use of a single specific present value technique nor limit the use of present value techniques to measure fair value to the techniques discussed. The present value technique used to measure fair value will depend on facts and circumstances specific to the asset or liability being measured (e.g., whether prices for comparable assets or liabilities can be observed in the market) and the availability of sufficient data.

The Components of a Present Value Measurement

D37. Present value (i.e., an application of the income approach) is a tool used to link future amounts (e.g., cash flows or values) to a present amount using a discount rate. A measurement of an asset or a liability using a present value technique captures all the following elements from the perspective of market participants at the measurement date:

(a) An estimate of future cash flows for the asset or liability being measured.

(b) Expectations about possible variations in the amount and timing of the cash flows representing the uncertainty inherent in the cash flows.

(c) The time value of money, represented by the rate on risk-free monetary assets that have maturity dates or durations that coincide with the period covered by the cash flows and pose neither uncertainty in timing nor risk of default to the holder (i.e., a risk-free interest rate).

(d) The price for bearing the uncertainty inherent in the cash flows (i.e., a risk premium).

(e) Other factors that market participants would take into account in the circumstances.

(f) For a liability, the non-performance risk relating to that liability, including the entity's (i.e., the obligor's) own credit risk.

General Principles

D38. Present value techniques differ in how they capture the elements in paragraph D37. However, all the following general principles govern the application of any present value technique used to measure fair value:

(a) Cash flows and discount rates should reflect assumptions that market participants would use when pricing the asset or liability.

(b) Cash flows and discount rates should take into account only the factors attributable to the asset or liability being measured.

(c) To avoid double-counting or omitting the effects of risk factors, discount rates should reflect assumptions that are consistent with those inherent in the cash flows. For example, a discount rate that reflects the uncertainty in expectations about future defaults is appropriate if using contractual cash flows of a loan (i.e., a discount rate adjustment technique). That same rate should not be used if using expected (i.e., probability-weighted) cash flows (i.e., an expected present value technique) because the expected cash flows already reflect assumptions about the uncertainty in future defaults; instead, a discount rate that is commensurate with the risk inherent in the expected cash flows should be used.

(d) Assumptions about cash flows and discount rates should be internally consistent. For example, nominal cash flows, which include the effect of inflation, should be discounted at a rate that includes the effect of inflation. The nominal risk-free interest rate includes the effect of inflation. Real cash flows, which exclude the effect of inflation, should be discounted at a rate that excludes the effect of inflation. Similarly, after-tax cash flows should be discounted using an after-tax discount rate. Pre-tax cash flows should be discounted at a rate consistent with those cash flows.

(e) Discount rates should be consistent with the underlying economic factors of the currency in which the cash flows are denominated.

Risk and Uncertainty

D39. A measurement using present value techniques is made under conditions of uncertainty because the cash flows used are estimates rather than known amounts. In many cases both the amount and timing of the cash

flows are uncertain. Even contractually fixed amounts, such as the payments on a loan, are uncertain if there is risk of default.

D40. Market participants generally seek compensation (i.e., a risk premium) for bearing the uncertainty inherent in the cash flows of an asset or a liability. A fair value measurement should include a risk premium reflecting the amount that market participants would demand as compensation for the uncertainty inherent in the cash flows. Otherwise, the measurement would not faithfully represent fair value. In some cases, determining the appropriate risk premium might be difficult. However, the degree of difficulty alone is not a sufficient reason to exclude a risk premium.

D41. Present value techniques differ in how they adjust for risk and in the type of cash flows they use. For example:

(a) The discount rate adjustment technique (see paragraphs D42–D46) uses a risk-adjusted discount rate and contractual, promised or most likely cash flows.

(b) Method 1 of the expected present value technique (see paragraph D49) uses risk-adjusted expected cash flows and a risk-free rate.

(c) Method 2 of the expected present value technique (see paragraph D50) uses expected cash flows that are not risk-adjusted and a discount rate adjusted to include the risk premium that market participants require. That rate is different from the rate used in the discount rate adjustment technique.

Discount Rate Adjustment Technique

D42. The discount rate adjustment technique uses a single set of cash flows from the range of possible estimated amounts, whether contractual or promised (as is the case for a bond) or most likely cash flows. In all cases, those cash flows are conditional upon the occurrence of specified events (e.g., contractual or promised cash flows for a bond are conditional on the event of no default by the debtor). The discount rate used in the discount rate adjustment technique is derived from observed rates of return for comparable assets or liabilities that are traded in the market. Accordingly, the contractual, promised or most likely cash flows are discounted at an observed or estimated market rate for such conditional cash flows (i.e., a market rate of return).

D43. The discount rate adjustment technique requires an analysis of market data for comparable assets or liabilities. Comparability is established by considering the nature of the cash flows (e.g., whether the cash flows are contractual or non-contractual and are likely to respond similarly to changes in economic conditions), as well as other factors (e.g., credit standing, collateral, duration, restrictive covenants and liquidity). Alternatively, if a single comparable asset or liability does not fairly reflect the risk inherent in the cash flows of the asset or liability being measured, it may be possible to derive a discount rate using data for several comparable assets or liabilities in conjunction with the risk-free yield curve (i.e., using a ‘build-up’ approach).

D44. To illustrate a build-up approach, assume that Asset A is a contractual right to receive CU800 in one year (i.e., there is no timing uncertainty). There is an established market for comparable assets, and information about those assets, including price information, is available. Of those comparable assets:

(a) Asset B is a contractual right to receive CU1,200 in one year and has a market price of CU1,083. Thus, the implied annual rate of return (i.e., a one-year market rate of return) is 10.8 per cent [(CU1,200/CU1,083) – 1].

(b) Asset C is a contractual right to receive CU700 in two years and has a market price of CU566. Thus, the implied annual rate of return (i.e., a two-year market rate of return) is 11.2 per cent [(CU700/CU566)^0.5 – 1].

(c) All three assets are comparable with respect to risk (i.e., dispersion of possible pay-offs and credit).

D45. On the basis of the timing of the contractual payments to be received for Asset A relative to the timing for Asset B and Asset C (i.e., one year for Asset B versus two years for Asset C), Asset B is deemed more comparable to Asset A. Using the contractual payment to be received for Asset A (CU800) and the one-year market rate derived from Asset B (10.8 per cent), the value of Asset A is CU722 (CU800/1.108). Alternatively, in the absence of available market information for Asset B, the one-year market rate could be derived from Asset C using the build-up approach. In that case the two-year market rate indicated by Asset C (11.2 per cent) would be adjusted to a one-year market rate using the term structure of the risk-free yield curve. Additional information and analysis might be required to determine whether the risk premiums for one-year and two-year assets are the same. If it is determined that the risk premiums for one-year and two-year assets are not the same, the two-year market rate of return would be further adjusted for that effect.

D46. When the discount rate adjustment technique is applied to fixed receipts or payments, the adjustment for risk inherent in the cash flows of the asset or liability being measured is included in the discount rate. In some applications of the discount rate adjustment technique to cash flows that are not fixed receipts or payments, an adjustment to the cash flows may be necessary to achieve comparability with the observed asset or liability from which the discount rate is derived.

Expected Present Value Technique

D47. The expected present value technique uses as a starting point a set of cash flows that represents the probability-weighted average of all possible future cash flows (i.e., the expected cash flows). The resulting estimate is identical to expected value, which, in statistical terms, is the weighted average of a discrete random variable's possible values with the respective probabilities as the weights. Because all possible cash flows are probability-weighted, the resulting expected cash flow is not conditional upon the occurrence of any specified event (unlike the cash flows used in the discount rate adjustment technique).

D48. In making an investment decision, risk-averse market participants would take into account the risk that the actual cash flows may differ from the expected cash flows. Portfolio theory distinguishes between two types of risk:

(a) Unsystematic (diversifiable) risk, which is the risk specific to a particular asset or liability.

(b) Systematic (non-diversifiable) risk, which is the common risk shared by an asset or a liability with the other items in a diversified portfolio.

Portfolio theory holds that in a market in equilibrium, market participants will be compensated only for bearing the systematic risk inherent in the cash flows. (In markets that are inefficient or out of equilibrium, other forms of return or compensation might be available.)

D49. Method 1 of the expected present value technique adjusts the expected cash flows of an asset for systematic (i.e., market) risk by subtracting a cash risk premium (i.e., risk-adjusted expected cash flows). Those risk-adjusted expected cash flows represent a certainty-equivalent cash flow, which is discounted at a risk-free interest rate. A certainty-equivalent cash flow refers to an expected cash flow (as defined), adjusted for risk so that a market participant is indifferent to trading a certain cash flow for an expected cash flow. For example, if a market participant was willing to trade an expected cash flow of CU1,200 for a certain cash flow of CU1,000, the CU1,000 is the certainty equivalent of the CU1,200 (i.e., the CU200 would represent the cash risk premium). In that case the market participant would be indifferent as to the asset held.

D50. In contrast, Method 2 of the expected present value technique adjusts for systematic (i.e., market) risk by applying a risk premium to the risk-free interest rate. Accordingly, the expected cash flows are discounted at a rate that corresponds to an expected rate associated with probability-weighted cash flows (i.e., an expected rate of return). Models used for pricing risky assets, such as the capital asset pricing model, can be used to estimate the expected rate of return. Because the discount rate used in the discount rate adjustment

technique is a rate of return relating to conditional cash flows, it is likely to be higher than the discount rate used in Method 2 of the expected present value technique, which is an expected rate of return relating to expected or probability-weighted cash flows.

D51. To illustrate Methods 1 and 2, assume that an asset has expected cash flows of CU780 in one year determined on the basis of the possible cash flows and probabilities shown below. The applicable risk-free interest rate for cash flows with a one-year horizon is 5 per cent, and the systematic risk premium for an asset with the same risk profile is 3 per cent.

Possible cash flows	**Probability**	**Probability-weighted cash flows**
CU500	15%	CU75
CU800	60%	CU480
CU900	25%	CU225
Expected cash flows		CU780

D52. In this simple illustration, the expected cash flows (CU780) represent the probability-weighted average of the three possible outcomes. In more realistic situations, there could be many possible outcomes. However, to apply the expected present value technique, it is not always necessary to take into account distributions of all possible cash flows using complex models and techniques. Rather, it might be possible to develop a limited number of discrete scenarios and probabilities that capture the array of possible cash flows. For example, an entity might use realized cash flows for some relevant past period, adjusted for changes in circumstances occurring subsequently (e.g., changes in external factors, including economic or market conditions, industry trends and competition as well as changes in internal factors affecting the entity more specifically), taking into account the assumptions of market participants.

D53. In theory, the present value of the asset's cash flows is the same whether determined using Method 1 or Method 2, as follows:

(a) Using Method 1, the expected cash flows are adjusted for systematic (i.e., market) risk. In the absence of market data directly indicating the amount of the risk adjustment, such adjustment could be derived from an asset pricing model using the concept of certainty equivalents. For example, the risk adjustment (i.e., the cash risk premium of CU22) could be determined using the systematic risk premium of 3 per cent (CU780 – [CU780 × (1.05/1.08)]), which results in risk-adjusted expected cash flows of CU758 (CU780 – CU22). The CU758 is the certainty equivalent of CU780 and is discounted at the risk-free interest rate (5 per cent). The present value (i.e., the fair value) of the asset is CU722 (CU758/1.05).

(b) Using Method 2, the expected cash flows are not adjusted for systematic (i.e., market) risk. Rather, the adjustment for that risk is included in the discount rate. Thus, the expected cash flows are discounted at an expected rate of return of 8 per cent (i.e., the 5 per cent risk-free interest rate plus the 3 per cent systematic risk premium). The present value of the asset is CU722 (CU780/1.08).

D54. When using an expected present value technique, either Method 1 or Method 2 could be used. The selection of Method 1 or Method 2 will depend on facts and circumstances specific to the asset or liability being measured, the extent to which sufficient data are available and the judgments applied.

Inputs to Measurement Techniques

General Principles

D55. Measurement techniques used to measure fair value shall maximize the use of relevant observable inputs and minimize the use of unobservable inputs.

D56. Examples of markets in which inputs might be observable for some assets and liabilities (e.g., financial instruments) include the following:

(a) Exchange markets. In an exchange market, closing prices are both readily available and generally representative of fair value. An example of such a market is the London Stock Exchange.

(b) Dealer markets. In a dealer market, dealers stand ready to trade (either buy or sell for their own account), thereby providing liquidity by using their capital to hold an inventory of the items for which they make a market. Typically bid and ask prices (representing the price at which the dealer is willing to buy and the price at which the dealer is willing to sell, respectively) are more readily available than closing prices. Over-the-counter markets (for which prices are publicly reported) are dealer markets. Dealer markets also exist for some other assets and liabilities, including some financial instruments, commodities and physical assets (e.g., used equipment).

(c) Brokered markets. In a brokered market, brokers attempt to match buyers with sellers but do not stand ready to trade for their own account. In other words, brokers do not use their own capital to hold an inventory of the items for which they make a market. The broker knows the prices bid and asked by the respective parties, but each party is typically unaware of another party's price requirements. Prices of completed transactions are sometimes available. Brokered markets include electronic communication networks, in which buy and sell orders are matched, and commercial and residential real estate markets.

(d) Principal-to-principal markets. In a principal-to-principal market, transactions, both originations and resales, are negotiated independently with no intermediary. Little information about those transactions may be made available publicly.

D57. An entity shall select inputs that are consistent with the characteristics of the asset or liability that market participants would take into account in a transaction for the asset or liability (see paragraphs 32 and 33). In some cases, those characteristics result in the application of an adjustment, such as a premium or discount (e.g., a control premium or non-controlling interest discount). However, a fair value measurement shall not incorporate a premium or discount that is inconsistent with the unit of account in the IPSAS that requires or permits the fair value measurement (see paragraphs 34 and 35). Premiums or discounts that reflect size as a characteristic of the entity's holding (specifically, a blockage factor that adjusts the quoted price of an asset or a liability because the market's normal daily trading volume is not sufficient to absorb the quantity held by the entity, as described in paragraph D66) rather than as a characteristic of the asset or liability (e.g., a control premium when measuring the fair value of a controlling interest) are not permitted in a fair value measurement. In all cases, if there is a quoted price in an active market (i.e., a Level 1 input) for an asset or a liability, an entity shall use that price without adjustment when measuring fair value, except as specified in paragraph D65.

Fair Value Hierarchy

D58. To increase consistency and comparability in fair value measurements and related disclosures, this Appendix establishes a fair value hierarchy that categorizes into three levels the inputs to measurement techniques used to measure fair value (see paragraphs D62–D89). The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1 inputs) and the lowest priority to unobservable inputs (Level 3 inputs).

D59. In some cases, the inputs used to measure the fair value of an asset or a liability might be categorized within different levels of the fair value hierarchy. In those cases, the fair value measurement is categorized in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement. Assessing the significance of a particular input to the entire measurement requires judgment, taking into account factors specific to the asset or liability. Adjustments to arrive at measurements based on

fair value, such as costs to sell when measuring fair value less costs of disposal, shall not be taken into account when determining the level of the fair value hierarchy within which a fair value measurement is categorized.

D60. The availability of relevant inputs and their relative subjectivity might affect the selection of appropriate measurement techniques (see paragraph D27). However, the fair value hierarchy prioritizes the inputs to measurement techniques, not the measurement techniques used to measure fair value. For example, a fair value measurement developed using a present value technique might be categorized within Level 2 or Level 3, depending on the inputs that are significant to the entire measurement and the level of the fair value hierarchy within which those inputs are categorized.

D61. If an observable input requires an adjustment using an unobservable input and that adjustment results in a significantly higher or lower fair value measurement, the resulting measurement would be categorized within Level 3 of the fair value hierarchy. For example, if a market participant would take into account the effect of a restriction on the sale of an asset when estimating the price for the asset, an entity would adjust the quoted price to reflect the effect of that restriction. If that quoted price is a Level 2 input and the adjustment is an unobservable input that is significant to the entire measurement, the measurement would be categorized within Level 3 of the fair value hierarchy.

Level 1 Inputs

D62. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

D63. A quoted price in an active market provides the most faithfully representative evidence of fair value and shall be used without adjustment to measure fair value whenever available, except as specified in paragraph D65.

D64. A Level 1 input will be available for many financial assets and financial liabilities, some of which might be exchanged in multiple active markets (e.g., on different exchanges). Therefore, the emphasis within Level 1 is on determining both of the following:

(a) The principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability; and

(b) Whether the entity can enter into a transaction for the asset or liability at the price in that market at the measurement date.

D65. An entity shall not make an adjustment to a Level 1 input except in the following circumstances:

(a) When an entity holds a large number of similar (but not identical) assets or liabilities (e.g., debt securities) that are measured at fair value and a quoted price in an active market is available but not readily accessible for each of those assets or liabilities individually (i.e., given the large number of similar assets or liabilities held by the entity, it would be difficult to obtain pricing information for each individual asset or liability at the measurement date). In that case, as a practical expedient, an entity may measure fair value using an alternative pricing method that does not rely exclusively on quoted prices (e.g., matrix pricing). However, the use of an alternative pricing method results in a fair value measurement categorized within a lower level of the fair value hierarchy.

(b) When a quoted price in an active market does not represent fair value at the measurement date. That might be the case if, for example, significant events (such as transactions in a principal-to-principal market, trades in a brokered market or announcements) take place after the close of a market but before the measurement date. An entity shall establish and consistently apply a policy for identifying those events that might affect fair value measurements. However, if the quoted price is adjusted for

new information, the adjustment results in a fair value measurement categorized within a lower level of the fair value hierarchy.

(c) When measuring the fair value of a liability or an entity's own equity instrument using the quoted price for the identical item traded as an asset in an active market and that price needs to be adjusted for factors specific to the item or the asset (see paragraph AG143F of IPSAS 41). If no adjustment to the quoted price of the asset is required, the result is a fair value measurement categorized within Level 1 of the fair value hierarchy. However, any adjustment to the quoted price of the asset results in a fair value measurement categorized within a lower level of the fair value hierarchy.

D66. If an entity holds a position in a single asset or liability (including a position comprising a large number of identical assets or liabilities, such as a holding of financial instruments) and the asset or liability is traded in an active market, the fair value of the asset or liability shall be measured within Level 1 as the product of the quoted price for the individual asset or liability and the quantity held by the entity. That is the case even if a market's normal daily trading volume is not sufficient to absorb the quantity held and placing orders to sell the position in a single transaction might affect the quoted price.

Level 2 Inputs

D67. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly.

D68. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

(a) Quoted prices for similar assets or liabilities in active markets.

(b) Quoted prices for identical or similar assets or liabilities in markets that are not active.

(c) Inputs other than quoted prices that are observable for the asset or liability, for example:

(i) Interest rates and yield curves observable at commonly quoted intervals;

(ii) Implied volatilities; and

(iii) Credit spreads.

(d) Market-corroborated inputs.

D69. Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the following:

(a) The condition or location of the asset;

(b) The extent to which inputs relate to items that are comparable to the asset or liability (including those factors described in paragraph AG143F of IPSAS 41); and

(c) The volume or level of activity in the markets within which the inputs are observed.

D70. An adjustment to a Level 2 input that is significant to the entire measurement might result in a fair value measurement categorized within Level 3 of the fair value hierarchy if the adjustment uses significant unobservable inputs.

D71. Paragraph D72 describes the use of Level 2 inputs for particular assets and liabilities.

D72. Examples of Level 2 inputs for particular assets and liabilities include the following:

(a) Licensing arrangement. For a licensing arrangement that is acquired in a public sector combination and was recently negotiated with an unrelated party by the acquired entity (the party to the licensing

arrangement), a Level 2 input would be the royalty rate in the contract with the unrelated party at inception of the arrangement.

(b) Finished goods inventory at a retail outlet. For finished goods inventory that is acquired in a public sector combination, a Level 2 input would be either a price to customers in a retail market or a price to retailers in a wholesale market, adjusted for differences between the condition and location of the inventory item and the comparable (i.e., similar) inventory items so that the fair value measurement reflects the price that would be received in a transaction to sell the inventory to another retailer that would complete the requisite selling efforts. Conceptually, the fair value measurement will be the same, whether adjustments are made to a retail price (downward) or to a wholesale price (upward). Generally, the price that requires the least amount of subjective adjustments should be used for the fair value measurement.

(c) Building held and used. A Level 2 input would be the price per square meter for the building (a valuation multiple) derived from observable market data, e.g., multiples derived from prices in observed transactions involving comparable (i.e., similar) buildings in similar locations.

(d) Cash-generating unit. A Level 2 input would be a valuation multiple (e.g., a multiple of earnings or revenue or a similar performance measure) derived from observable market data, e.g., multiples derived from prices in observed transactions involving comparable (i.e., similar) operations, taking into account operational, market, financial and non-financial factors.

Level 3 Inputs

D73. Level 3 inputs are unobservable inputs for the asset or liability.

D74. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, i.e., an exit price at the measurement date from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk.

D75. Assumptions about risk include the risk inherent in a particular measurement technique used to measure fair value (such as a pricing model) and the risk inherent in the inputs to the measurement technique. A measurement that does not include an adjustment for risk would not represent a fair value measurement if market participants would include one when pricing the asset or liability. For example, it might be necessary to include a risk adjustment when there is significant measurement uncertainty (e.g., when there has been a significant decrease in the volume or level of activity when compared with normal market activity for the asset or liability, or similar assets or liabilities, and the entity has determined that the transaction price or quoted price does not represent fair value, as described in paragraphs D76–D86).

Measuring Fair Value when the Volume or Level of Activity for an Asset or a Liability has Significantly Decreased

D76. The fair value of an asset or a liability might be affected when there has been a significant decrease in the volume or level of activity for that asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities). To determine whether, on the basis of the evidence available, there has been a significant decrease in the volume or level of activity for the asset or liability, an entity shall evaluate the significance and relevance of factors such as the following:

(a) There are few recent transactions.

(b) Price quotations are not developed using current information.

(c) Price quotations vary substantially either over time or among market-makers (e.g., some brokered markets).

(d) Indices that previously were highly correlated with the fair values of the asset or liability are demonstrably uncorrelated with recent indications of fair value for that asset or liability.

(e) There is a significant increase in implied liquidity risk premiums, yields or performance indicators (such as delinquency rates or loss severities) for observed transactions or quoted prices when compared with the entity's estimate of expected cash flows, taking into account all available market data about credit and other non-performance risk for the asset or liability.

(f) There is a wide bid-ask spread or significant increase in the bid-ask spread.

(g) There is a significant decline in the activity of, or there is an absence of, a market for new issues (i.e., a primary market) for the asset or liability or similar assets or liabilities.

(h) Little information is publicly available (e.g., for transactions that take place in a principal-to-principal market).

D77. If an entity concludes that there has been a significant decrease in the volume or level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities), further analysis of the transactions or quoted prices is needed. A decrease in the volume or level of activity on its own may not indicate that a transaction price or quoted price does not represent fair value or that a transaction in that market is not orderly. However, if an entity determines that a transaction or quoted price does not represent fair value (e.g., there may be transactions that are not orderly), an adjustment to the transactions or quoted prices will be necessary if the entity uses those prices as a basis for measuring fair value and that adjustment may be significant to the fair value measurement in its entirety. Adjustments also may be necessary in other circumstances (e.g., when a price for a similar asset requires significant adjustment to make it comparable to the asset being measured or when the price is stale).

D78. This Appendix does not prescribe a methodology for making significant adjustments to transactions or quoted prices. See paragraphs D26–D29 and D31–D40 for a discussion of the use of measurement techniques when measuring fair value. Regardless of the measurement technique used, an entity shall include appropriate risk adjustments, including a risk premium reflecting the amount that market participants would demand as compensation for the uncertainty inherent in the cash flows of an asset or a liability (see paragraph D48). Otherwise, the measurement does not faithfully represent fair value. In some cases, determining the appropriate risk adjustment might be difficult. However, the degree of difficulty alone is not a sufficient basis on which to exclude a risk adjustment. The risk adjustment shall be reflective of an orderly transaction between market participants at the measurement date under current market conditions.

D79. If there has been a significant decrease in the volume or level of activity for the asset or liability, a change in measurement technique or the use of multiple measurement techniques may be appropriate (e.g., the use of a market approach and a present value technique). When weighting indications of fair value resulting from the use of multiple measurement techniques, an entity shall consider the reasonableness of the range of fair value measurements. The objective is to determine the point within the range that is most representative of fair value under current market conditions. A wide range of fair value measurements may be an indication that further analysis is needed.

D80. Even when there has been a significant decrease in the volume or level of activity for the asset or liability, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (i.e., not a forced liquidation or distress sale) between market participants at the measurement date under current market conditions.

D81. Estimating the price at which market participants would be willing to enter into a transaction at the measurement date under current market conditions if there has been a significant decrease in the volume or level of activity for the asset or liability depends on the facts and circumstances at the measurement date and requires judgment. An entity's intention to hold the asset or to settle or otherwise fulfill the liability is not relevant when measuring fair value because fair value is a market-based measurement, not an entity-specific measurement.

Identifying Transactions that are not Orderly

D82. The determination of whether a transaction is orderly (or is not orderly) is more difficult if there has been a significant decrease in the volume or level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities). In such circumstances it is not appropriate to conclude that all transactions in that market are not orderly (i.e., forced liquidations or distress sales). Circumstances that may indicate that a transaction is not orderly include the following:

(a) There was not adequate exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities under current market conditions.

(b) There was a usual and customary marketing period, but the seller marketed the asset or liability to a single market participant.

(c) The seller is in or near bankruptcy or receivership (i.e., the seller is distressed).

(d) The seller was required to sell to meet regulatory or legal requirements (i.e., the seller was forced).

(e) The transaction price is an outlier when compared with other recent transactions for the same or a similar asset or liability.

An entity shall evaluate the circumstances to determine whether, on the weight of the evidence available, the transaction is orderly.

D83. An entity shall consider all the following when measuring fair value or estimating market risk premiums:

(a) If the evidence indicates that a transaction is not orderly, an entity shall place little, if any, weight (compared with other indications of fair value) on that transaction price.

(b) If the evidence indicates that a transaction is orderly, an entity shall take into account that transaction price. The amount of weight placed on that transaction price when compared with other indications of fair value will depend on the facts and circumstances, such as the following:

(i) The volume of the transaction.

(ii) The comparability of the transaction to the asset or liability being measured.

(iii) The proximity of the transaction to the measurement date.

(c) If an entity does not have sufficient information to conclude whether a transaction is orderly, it shall take into account the transaction price. However, that transaction price may not represent fair value (i.e., the transaction price is not necessarily the sole or primary basis for measuring fair value or estimating market risk premiums). When an entity does not have sufficient information to conclude whether particular transactions are orderly, the entity shall place less weight on those transactions when compared with other transactions that are known to be orderly.

An entity need not undertake exhaustive efforts to determine whether a transaction is orderly, but it shall not ignore information that is reasonably available. When an entity is a party to a transaction, it is presumed to have sufficient information to conclude whether the transaction is orderly.

Using Quoted Prices Provided by Third Parties

D84. This Appendix does not preclude the use of quoted prices provided by third parties, such as pricing services or brokers, if an entity has determined that the quoted prices provided by those parties are developed in accordance with this Appendix.

D85. If there has been a significant decrease in the volume or level of activity for the asset or liability, an entity shall evaluate whether the quoted prices provided by third parties are developed using current information that reflects orderly transactions or a measurement technique that reflects market participant assumptions (including assumptions about risk). In weighting a quoted price as an input to a fair value measurement, an entity places less weight (when compared with other indications of fair value that reflect the results of transactions) on quotes that do not reflect the result of transactions.

D86. Furthermore, the nature of a quote (e.g., whether the quote is an indicative price or a binding offer) shall be taken into account when weighting the available evidence, with more weight given to quotes provided by third parties that represent binding offers.

Level 3 Inputs

D87. An entity shall develop unobservable inputs using the best information available in the circumstances, which might include the entity's own data. In developing unobservable inputs, an entity may begin with its own data, but it shall adjust those data if reasonably available information indicates that other market participants would use different data or there is something particular to the entity that is not available to other market participants (e.g., an entity-specific synergy). An entity need not undertake exhaustive efforts to obtain information about market participant assumptions. However, an entity shall take into account all information about market participant assumptions that is reasonably available. Unobservable inputs developed in the manner described above are considered market participant assumptions and meet the objective of a fair value measurement.

D88. Paragraph D89 describes the use of Level 3 inputs for particular assets and liabilities.

D89. Examples of Level 3 inputs for particular assets and liabilities include the following:

(a) Long-dated currency swap. A Level 3 input would be an interest rate in a specified currency that is not observable and cannot be corroborated by observable market data at commonly quoted intervals or otherwise for substantially the full term of the currency swap. The interest rates in a currency swap are the swap rates calculated from the respective countries' yield curves.

(b) Three-year option on exchange-traded shares. A Level 3 input would be historical volatility, i.e., the volatility for the shares derived from the shares' historical prices. Historical volatility typically does not represent current market participants' expectations about future volatility, even if it is the only information available to price an option.

(c) Interest rate swap. A Level 3 input would be an adjustment to a mid-market consensus (non-binding) price for the swap developed using data that are not directly observable and cannot otherwise be corroborated by observable market data.

(d) Decommissioning liability assumed in a public sector combination. A Level 3 input would be a current estimate using the entity's own data about the future cash outflows to be paid to fulfill the liability (including market participants' expectations about the costs of fulfilling the liability and the compensation that a market participant would require for taking on the liability to dismantle the asset) if there is no reasonably available information that indicates that market participants would use different assumptions. That Level 3 input would be used in a present value technique together with other inputs, e.g., a current risk-free interest rate or a credit-adjusted risk-free rate if the effect of the entity's credit

standing on the fair value of the liability is reflected in the discount rate rather than in the estimate of future cash outflows.

(e) Cash-generating unit. A Level 3 input would be a financial forecast (e.g., of cash) developed using the entity's own data if there is no reasonably available information that indicates that market participants would use different assumptions.

Amendments to Other IPSAS

[Deleted]

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 46.

Introduction

The Purpose of Measurement in Public Sector Financial Statements

BC1. The purpose of measurement in public sector financial statements is to provide information about assets and liabilities and related revenues and expenditures that users need for accountability and decision making. Measurement that fairly reflects the cost of services, operational capacity and financial capacity of a public sector entity supports users' assessments of such matters as:

(a) Whether the entity provided its services to constituents in an efficient and effective manner;

(b) The resources currently available for future expenditures, and to what extent there are restrictions or conditions attached to their use;

(c) To what extent the burden on future-year taxpayers of paying for current services has changed; and

(d) Whether the entity's ability to provide services has improved or deteriorated compared with the previous year.

Service Delivery Objective and Public Sector Assets and Liabilities

BC2. Public sector measurement should take into account both the primary objective of most public entities and the type of assets and liabilities that such entities hold. The primary objective of most public sector entities is to deliver services to the public, rather than to make profits and generate a return on equity to investors. The type of assets and liabilities that a public sector entity holds is likely to reflect this objective. For example, in the public sector the primary reason for holding property, plant, and equipment and other assets is for their service potential rather than their ability to generate cash flows. Because of the types of services provided, a significant proportion of assets used by public sector entities are specialized—for example, roads and military assets. There may be a limited market for specialized assets and, even then, they may need considerable adaptation in order to be used by other operators. These factors have implications for the measurement of such assets.

BC3. Another common feature of public sector assets is that they are held to achieve policy objectives, such as service delivery, which need to be taken into account when measurement aims to derive a value that reflects existing use.

BC4. Governments and other public sector entities may hold items that contribute to the historical and cultural character of a nation or region—for example, art treasures, historical buildings, and other artifacts. They may also be responsible for national parks and other areas of natural significance with native flora and fauna. Such items and areas are not generally held for sale, even if markets exist. Rather, governments and public sector entities have a responsibility to preserve and maintain them for current and future generations.

BC5. Governments and other public sector entities incur liabilities related to their service delivery objectives. Many liabilities arise from non-exchange transactions and include those related to programs that operate to deliver social benefits. Liabilities may also arise from governments' role as a lender of last resort and from any obligations to transfer resources to those affected by disasters. In addition, many governments have obligations that arise from monetary activities such as currency in circulation.

Measurement of Assets and Liabilities for Financial Reporting by Public Sector Entities

BC6. Chapter 7 of *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the Conceptual Framework) addresses measurement of assets and liabilities in the financial statements. In

developing Chapter 7, the IPSASB took into account the special characteristics of the public sector, the needs of users, public sector entities' objectives, different types of assets and liabilities, and the importance of service potential.

BC7. Where an asset is held primarily for its service potential, rather than its ability to generate future economic benefits, its measurement should provide information on the value of the asset's service potential to the entity. This was an important consideration for the IPSASB, as it developed concepts for public sector measurement and identified appropriate measurement bases for use in the public sector.

BC8. The objective of measurement and the measurement bases in Chapter 7 of the Conceptual Framework address public sector financial reporting needs. They differ from objectives and measurement bases developed for private sector entities that operate to make a profit and value assets and liabilities in terms of their ability to generate future economic benefits, which focuses on future cash flows.

BC9. The objective of measurement is to select those measurement bases that most fairly reflect the cost of services, operational capacity and financial capacity of the entity in a manner that is useful in holding the entity to account, and for decision-making purposes.

Relationship Between IPSAS 46, Measurement and Other IPSAS

BC10. During the development of this Standard, the IPSASB considered including all requirements with respect to measurement of assets and liabilities in one IPSAS, in order to provide a comprehensive "one stop shop". However, the IPSASB decided:

(a) Other IPSAS should identify which measurement basis should be applied and any specific measurement requirements relating to the assets or liabilities covered by the IPSAS, and address impairment, depreciation, and amortization.

(b) IPSAS 46 should provide the definitions and generic application guidance for the measurement bases identified in the Conceptual Framework. For example, IPSAS 45, *Property, Plant, and Equipment*, allows property, plant, and equipment measured at historical cost, current operational value, or fair value. The application guidance for these measurement bases is located in this Standard.

The objective of this Standard is to support consistent application of measurement bases referred to in other IPSAS.

BC11. The IPSASB decided to develop appendices for the following four measurement bases: historical cost basis, current operational value basis, cost of fulfillment basis, and fair value basis because the greater need for guidance relates to these four measurement bases.

Objective (paragraph 1)

BC12. The Standard's objective explains that it focuses on the definition of appropriate measurement bases and their derivation. It does not establish requirements for which measurement bases should be used in IPSAS. This Standard refers to the objective of measurement in the Conceptual Framework because this underpins its approach to measurement bases and their selection.

Structure of Measurement Standard

BC13. One objective of the measurement project is to provide detailed guidance on the implementation of commonly used measurement bases, and the circumstances under which these measurement bases will be used.

BC14. In order to satisfy this objective, the IPSASB agreed core text should define key terms and provide generic principles for measurement bases and techniques while the appendices would expand on principles for measurement bases and outline how measurement techniques are applied when estimating the value of an asset or liability measured by a specific measurement basis.

BC15. The IPSASB concluded this structure is appropriate because:

(a) Core text stands alone. Including principle level guidance for measurement bases and measurement techniques in the core text allows it to be read and applied independently of the appendices.

(b) Minimal duplication. The most significant challenge to overcome in structuring the material was to reduce the duplication of measurement technique guidance between the core text and the appendices, and within the appendices. This was a challenge because some measurement techniques can be applied to more than one measurement basis. The structure of the Standard allows for key measurement techniques and principles to be included once in the core text, and application of those principles to each measurement basis to be included in the appropriate appendix.

Scope and Definitions (paragraphs 2–6)

BC16. The Standard's scope conveys the definitions of measurement bases and the related appendices apply when another IPSAS requires measurement using one of the defined measurement bases. As part of its scoping decision, the IPSASB considered whether the Standard should include guidance on the measurement of assets held for sale. The IPSASB noted that the issues relating to the measurement of assets held for sale are similar to those relating to the measurement of impaired assets, which is outside the scope of the project. Therefore, the IPSASB decided that the measurement of assets held for sale should also be excluded and issued a separate IPSAS (IPSAS 44, *Non-Current Assets Held for Sale and Discontinued Operations*).

Initial Measurement (paragraphs 7–16)

BC17. The IPSASB discussed the applicability of the subsequent measurement framework to initial and subsequent measurement. Unless otherwise required or permitted by another IPSAS, the IPSASB concluded measurement bases identified in the subsequent measurement framework are applicable to initial measurement at deemed cost when the transaction price does not faithfully present relevant information about the entity in a manner that is useful in holding the entity accountable, and for decision-making purposes.

BC18. On the transaction date an asset or liability is initially measured at its transaction price, plus or minus transaction costs, or, as noted in paragraph BC17, at a deemed cost. This approach is applied regardless of whether the current value model or historical cost model is subsequently applied when measuring assets and liabilities in the financial statements.

BC19. A transaction price is applied, where appropriate, because transactions occurring in orderly markets are negotiated between parties at arm's length and are presumed to faithfully present the economics of the transaction. The transaction price is therefore useful for decision-making purposes and to the users of the financial information to hold decision-makers to account. Where transaction price is not appropriate, a deemed cost is calculated using a current value measurement basis to approximate the value of the asset or liability on the transaction date.

BC20. After measurement on the transaction date the entity makes an accounting policy choice, where permitted, to apply a historical cost model or current value model to reflect the measurement objective of the item being measured.

Deemed Cost

BC21. With the development of current operational value for assets held for operational capacity, the IPSASB decided deemed cost should be an amount used as a surrogate for transaction price. The definition of deemed cost in IPSAS 33, *First-Time Adoption of Accruals Basis International Public Sector Accounting Standards*, was replaced to reflect the IPSASB's decision and allows for initial measurement of property, plant, and equipment transactions where the transaction price does not faithfully present relevant information to be measured at current operational value, in addition to fair value.

BC22. The IPSASB concluded the usefulness of information that current operational value provides financial statement users in subsequent measurement for property, plant, and equipment, held for their operational capacity also applies at initial measurement.

BC23. The IPSASB concluded that:

(a) Fair value faithfully represents the value the public sector entity accrues as a result of the transaction when the property, plant, and equipment, is held for its financial capacity; and

(b) Current operational value faithfully represents the value of the property, plant, and equipment, to the public sector entity when the transaction occurs for assets held for their operational capacity.

BC23A. In August 2024, the IPSASB published Exposure Draft (ED) 90, *Amendments to IPSAS as a Result of the Application of IPSAS 46, Measurement* proposing to align the initial measurement of inventories acquired through a non-exchange transaction with IPSAS 46. Some respondents to ED 90 requested that the IPSASB clarify what current value measurement basis should be applied to determine the deemed cost of inventory acquired in a non-exchange transaction, noting that IPSAS 12 refers the reader to IPSAS 46 and does not specify whether an entity should estimate deemed cost of an asset using current operational value or fair value.

BC23B. The IPSASB considered these views, noting that implementation guidance on Section B: Selection of Measurement Bases could be enhanced to ensure the consistent determination of deemed cost of a non-exchange transaction. The IPSASB discussed whether the guidance should be included in IPSAS 12 instead of IPSAS 46; however, it decided that it should be included in IPSAS 46, as this standard provides generic guidance to ensure the consistent application of measurement bases in its scope and is relevant to other IPSAS.

BC23C. In response to constituents' comments, the IPSASB decided to add implementation guidance that notes that whether an entity applies current operational or fair value depends on the primary objective for which the entity holds the asset.

Amendments to Other IPSAS

BC24. The initial measurement guidance developed in this Standard, is principles-based and broadly applicable across the IPSAS suite of standards. When making amendments to other IPSAS as a result of IPSAS 46, the IPSASB agreed the initial measurement requirements in individual IPSAS would not be replaced by the initial measurement principles in IPSAS 46. The IPSASB concluded the more specific initial measurement guidance in specific IPSAS continues to be relevant and therefore should be retained.

Subsequent Measurement (paragraphs 17–53)

Use of the Historical Cost Model or Current Value Model

BC25. The IPSASB accepts that the existence of accounting policy options reduces comparability between reporting entities. The IPSASB considered the options for measurement subsequent to initial recognition in existing IPSAS with a view to eliminating or reducing those options.

BC26. The IPSASB noted that Chapter 7 of the Conceptual Framework sets out the measurement objective (see paragraph BC8).

BC27. The Conceptual Framework states that it is not possible to identify a single measurement model that best meets the measurement objective and acknowledges both historical cost and current value measurements models.

BC28. The IPSASB concluded that:

(a) Where an accounting policy choice exists in an IPSAS to measure using the historical cost model or current value model, it would be inconsistent with the Conceptual Framework to eliminate existing accounting policy options for subsequent measurement; and

(b) Such a step would be outside the scope of this Standard, which is to provide requirements and guidance on the definitions and application of measurement bases (i.e., what is meant by each measurement basis and how to derive measurement bases), rather than to specify where they should be used. The latter is a decision for individual standards.

BC29. The Basis for Conclusions of the Conceptual Framework notes that many respondents to the Exposure Draft on the Conceptual Framework and the Exposure Draft on Measurement advocated the continued widespread use of the historical cost basis, mostly in combination with other measurement bases. Supporters of historical cost referenced the accountability objective of financial reporting, the verifiability of historical cost and its suitability for budget reporting purposes where budgets are prepared on a historical cost basis.

BC30. Conversely, those who supported current values linked this view to both decision making and accountability, arguing that the cost of service provision should reflect the value of assets used in service provision at the time they are consumed, rather than their transaction price.

Determining the Measurement Model

BC31. Some respondents to the Measurement Exposure Draft recommended guidance be developed explaining how to determine the appropriate measurement model. The IPSASB agreed clarifications would support the consistent application of the guidance and developed Implementation Guidance to expand on the accounting policy choice.

BC32. The IPSASB noted the historical cost model or current value model applied to measure an entity's assets and liabilities may be determined by factors outside of the entity's control. This may occur when the policy choice is made by:

(a) A more senior level of government for all entities in a sector or jurisdiction; or

(b) An applicable regulatory framework in the sector or jurisdiction.

When the reporting entity can make its own accounting policy choice in selecting a measurement model, the entity considers the information it believes best meets the qualitative characteristics.

BC33. In selecting the appropriate measurement model, the reporting entity should consider whether it wants its asset or liability to reflect the value of the transaction at the date of initial recognition or the current value of the same transaction on the date of measurement.

Historical Cost (Appendix A)

Measurement Techniques

BC34. The IPSASB agreed initial measurement of an asset or a liability should be at its transaction price, adjusted for transaction costs, or deemed cost. Historical cost is the consideration given to acquire, construct, or develop an asset, plus transaction costs, or the consideration received to assume a liability, minus transaction costs, at the time of the asset's acquisition, construction, or development, or when the liability is incurred.

BC35. Since the measurement framework applies only to subsequent measurement, no measurement techniques apply to the historical cost basis. This is because after initial measurement, the gross carrying amount of an asset or liability measured at the historical cost basis remains unaffected by changes in the underlying current market conditions (i.e., no measurement techniques are applied).

Financial Instruments Measured at Historical Cost

Amortized Cost

BC36. The amortized cost of a financial asset or financial liability reflects estimates of future cash flows discounted at a rate that is not updated after initial recognition. For loans given or received, if interest is receivable or payable regularly, the amortized cost of the loan typically approximates the amount originally paid or received. Therefore, the amortized cost of a financial asset or liability is considered to be a form of the historical cost basis.

Current Operational Value (Appendix B)

BC37. Most responses to the April 2019 Measurement Consultation Paper agreed with the IPSASB's preliminary view that fair value is relevant and applicable in measuring some assets and liabilities in the public sector. Constituents' concerns with fair value related to the fact that when an item is held for its operational capacity, as is often the case in the public sector, fair value is difficult and inappropriate to apply because the following concepts generally are not applicable:

(a) Highest and best use; and

(b) Maximizing the use of market participant data.

BC38. While respondents agreed the fair value definition proposed is applicable in some circumstances, they also noted the definition is unlikely to be appropriate as a current value measurement basis in most cases. Respondents expressed the view that a public sector specific measurement is required.

BC39. The IPSASB agreed with respondents' views and developed a current value measurement basis unique to the public sector. Given fair value is applied to items held for their financial capacity, this basis was developed specifically for assets held for their operational capacity.

BC40. When assets are held for their operational capacity in the public sector, they are held to achieve a policy objective. Holding an asset to meet a policy objective often results in an asset being held in a capacity other than one that satisfies its highest and best financial use. For example, an entity may have a policy objective to provide medical services to citizens of a city center. While operating a building the entity owns as a hospital may not be in the best financial interests of the entity, it does satisfy the policy objective.

BC41. The IPSASB agreed that, when an asset is held for its operational capacity, the most relevant information to the users of financial information is the current value of the asset in its existing use. This provides users with useful information in the public sector:

(a) In the statement of financial position, it reflects the amount an entity would pay at the measurement date for the remaining service potential of its existing assets.

(b) In the statement of financial performance, the consumption of the asset, through depreciation, reflects the amount the entity would incur during the period to provide the service at the prevailing prices when an asset is measured. This differs from the historical cost basis, which reflects consumption of the asset in terms of the prices that prevailed when the asset was acquired, constructed, or developed.

Developing a Public Sector Specific Measurement Basis

BC42. In responding to comments received to the April 2019 Measurement Consultation Paper, the IPSASB developed a new measurement basis that addressed the challenges in measuring most public sector assets. Specifically, the measurement basis considered how to present assets held for their operational capacity in the financial statements that provided users of those reports with relevant and useful information.

BC43. The Measurement Exposure Draft, issued in April 2021, defined current operational value as the value of an asset used to achieve the entity's service delivery objectives at the measurement date. The Exposure Draft

clarified the definition by proposing several key principles that were relevant for a public sector measurement basis. These principles included:

(a) Current asset;

(b) Current use of the asset;

(c) Current location of the asset;

(d) Service policy objective of the asset;

(e) Entry price;

(f) Least costly manner;

(g) Current market conditions;

(h) Use of observable inputs; and

(i) Entity-specific valuation.

BC44. The Exposure Draft included an Alternative View proposed by two members of the IPSASB. The Alternative View disagreed with the proposal in the Exposure Draft as follows:

(a) The income approach is not appropriate as a measurement technique for current operational value;

(b) The lack of clarity about the accounting for surplus capacity;

(c) The proposed definition of current operational value could permit either entry or exit values; and

(d) The lack of clarity in the proposed definition of current operational value risks not achieving the qualitative characteristics of financial reporting.

BC45. In responding to the Exposure Draft, stakeholders were clear a public sector measurement basis was necessary. Respondents strongly supported the inclusion of fair value, aligned with IFRS 13, but echoed responses to the Consultation Paper, that fair value would not provide financial statement users with relevant and useful information for assets held for their service capacity. While there was support for current operational value, respondents indicated further clarification on its application in practice was necessary.

BC46. In responding to stakeholder comments, the IPSASB updated current operational value by:

(a) Removing the income approach as a separate measurement technique for current operational value. The IPSASB agreed it is unlikely discounting future cash flows, whether inflows or outflows, would be relevant in determining the amount an entity would pay for the remaining service potential of an asset.

(b) Clarifying when unused capacity is included in current operational value by developing implementation guidance, including a decision tree and examples.

(c) Revising the definition of current operational value to the amount an entity would pay for the remaining service potential of an asset at the measurement date. This clarified current operational value is an entry price and gave those applying the measurement basis a clearer understanding of the basis.

BC47. Finally, in developing the current operational value for this Standard, the IPSASB revisited each principle proposed in the Exposure Draft. The IPSASB reaffirmed each principle was necessary to present relevant and useful information regarding assets held for their operational capacity. The IPSASB also clarified each principle to enhance understandability and facilitate application in practice. The following principles are applicable to current operational value:

(a) Existing asset;

(b) Existing use;

(c) Existing location;

(d) Remaining service potential;

(e) Entry price;

(f) Least costly manner;

(g) Current market conditions;

(h) Use of observable inputs; and

(i) Entity-specific valuation.

Current Operational Value – Amount the Entity Would Pay

BC48. When assets are held for their operational capacity in the public sector, they are held to achieve a policy objective. A strong indication of the value of the operational capacity of an asset is the amount the entity would pay for the remaining service potential of the asset to achieve its policy objective. The IPSASB decided current operational value should reflect this concept by estimating the amount that would be paid for the remaining service potential of an asset (i.e., an entry price) rather than using an exit price (i.e., the amount that could be received to sell the asset), which does not necessarily reflect the amount that would be paid for the remaining service potential of an asset.

BC49. Estimating the amount that would be paid for the remaining service potential of an asset (i.e., the entry price) requires an entity to determine the price that would be paid to acquire that asset in an exchange transaction. The IPSASB decided estimating the price that would be paid to acquire the asset in an exchange transaction remained relevant, even in circumstances where the asset being measured is acquired through a non-exchange transaction. For an estimate to provide relevant and reliable information it should be based on assumptions that can be verified and duplicated by the user of the information. Assuming the asset is acquired, constructed, or developed, in an exchange transaction enables the entity to present useful information allowing the user to observe the amount an entity would pay for the remaining service potential of the asset.

Revision of IPSAS 46 as a result of Part 1 of *Amendments to IPSAS Standards as a Result of the Application of IPSAS 46, Measurement*

The Amount the Entity Would Pay – Least Costly Manner

BC49A. During the development of *Amendments to IPSAS Standards as a Result of the Application of IPSAS 46, Measurement* and the analysis of the responses received by the IPSASB for Exposure Draft 84, *Concessionary Leases and Right-of-Use Assets In-Kind (Amendments to IPSAS 43 and IPSAS 23)*, the IPSASB noted that ‘least costly manner’ could be interpreted to include concessionary elements, such as those received in concessionary leases.

BC49B. The IPSASB noted that the inclusion of a concessionary element when determining the current operational value of an asset would not provide users with information that is a faithful representation of the transaction. The IPSASB agreed that the ‘least costly manner’ should not be interpreted to include a concessionary element, because current operational value is a measurement basis that achieves the qualitative characteristics in the Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities, such as faithfully presenting relevant valuation information about the asset to users.

BC49C. The IPSASB decided to clarify the application of the current operational value principle, ‘least costly manner’. The amendments to IPSAS 46 seek to ensure consistent application of current operational value.

Current Operational Value – Existing Asset

BC50. During the development of this Standard, the IPSASB discussed alternative approaches to capture the value of public sector assets. Based on some responses to the Exposure Draft, the IPSASB considered whether measuring the asset based on the value of the service or benefits the asset provides results in useful and relevant information when presenting an asset held for its operational capacity – i.e., to deliver direct services to the public, and/or to provide a wider community benefit.

BC51. The IPSASB rejected the idea of measuring public sector assets based on the value of services or benefits they provide because:

(a) It is inconsistent with how all other non-financial assets are measured on the statement of financial position;

(b) The IPSASB agreed that a public sector measurement basis that values the asset by valuing the services delivered to the public, or the wider community benefits to the public, would result in the asset recognition criteria not being satisfied, as there is no well-established method in practice to derive such a valuation in a relevant and reliable way.

BC52. The IPSASB agreed that the public sector measurement basis is based on the value of the physical items that comprise the asset. For example, a public sector entity provides a service for passenger vehicles to cross a water way. The service is currently being delivered with a tunnel. A current operational value measurement estimates the amount an entity would pay for the remaining service potential of the asset. In this example, the tunnel. Current operational value does not measure the value of the service and, by extension, alternative assets (such as a bridge or ferry service) that could also provide the same service.

Current Operational Value – Existing Use

BC53. An asset supports an entity in achieving its policy objectives in its existing use. Existing use is the current way an asset or group of assets is used. Measuring the existing use of an asset disregards potential alternative uses and any other characteristics of the asset that could maximize its market value. This approach reflects the economic position of the entity, rather than the position prevailing in a hypothetical market.

BC54. The IPSASB agreed the concept of existing use is core to current operational value. The IPSASB agreed with responses to its Exposure Draft that fair value does not present relevant measurement information for assets held for their service capacity because fair value requires assets to be measured at their ‘highest and best use’. A public-sector-specific measurement basis must measure assets as they are currently being used to meet the entity’s policy objectives. This measurement will provide users of the entity’s financial information with the value of the asset to the entity as it is currently being used.

Current Operational Value – Existing Location of the Asset

BC55. The IPSASB noted that, in carrying out a valuation under the cost approach, valuation professionals would consider the cost of a site suitable for the delivery of the service delivery objectives from a modern equivalent asset. This might be a site of a similar size and in a similar location to the actual site. Where the actual site would no longer be considered appropriate because, for example, the service would be delivered more efficiently or effectively from another location, a hypothetical site in an appropriate location would be used as the basis for the land valuation, subject to discussion and agreement with the entity.

BC56. Despite this, the IPSASB agreed that a valuation based on an alternative site would not achieve the objective of a current operational value measurement because it would not provide a value of the existing asset in its existing use. This is because delivering the service from another location is unlikely to be in the public interest, given that the location where the asset is currently situated was selected for service delivery needs. Relocating the asset to another location is a separate, future policy decision that should not be taken into

consideration when measuring the asset. Current operational value valuations should be based on delivering the entity's goods and/or services from the existing location.

BC57. The IPSASB noted that measuring land held for its operational capacity at its existing location, total capacity and actual size may result in a valuation that is similar to a market participant valuation, or fair value.

Current Operational Value – Measurement Techniques

BC58. To support the application of current operational value, the IPSASB agreed the market approach and the cost approach reflect the attributes of the measurement basis and can be applied in estimating the value of the asset when measured at current operational value. No hierarchy was developed to select the measurement technique. The IPSASB agreed the selection of the measurement technique that approximates the value of the asset under current operational value should be based on judgment. In most cases the IPSASB believes the selection should be straightforward as the measurement technique is generally selected based on the data available to the entity measuring the asset.

BC59. For example, an active market for an identical asset may exist for certain types of assets. In these circumstances applying the market approach is likely to be a straightforward valuation. As the asset becomes more specialized, the existence of an active market likely decreases. In these circumstances the cost approach is relevant.

BC60. The IPSASB agreed the income approach is not an appropriate measurement technique when estimating the value of the asset when measured at current operational value. Given public sector assets often generate little to no cash flows, and generally cash flows are insufficient to cover operating expenses, the IPSASB concluded discounting future income streams would be impracticable. Furthermore, given the nature of current operational value, the income approach would not be applied in conjunction with another measurement technique because discounting future cash flows is not necessary given the market approach assumes pricing for the asset is available on the measurement date, and the cost approach assumes the production or development of the asset is immediate. However, the exclusion of the income approach as a measurement technique to estimate current operational value does not preclude the use of the present value technique in the market approach or the cost approach when the time value of money is material.

Use of Current Operational Value throughout IPSAS

BC61. A review of existing IPSAS was performed to determine whether the public sector specific measurement basis, current operational value, should be added to, or replace, existing measurement bases in each IPSAS.

BC62. The IPSASB agreed current operational value should be available to estimate the value of property, plant, and equipment within the scope of IPSAS 45. The IPSASB added current operational value to historical cost and fair value as measurement bases available to estimate property, plant, and equipment because many items of property, plant, and equipment are held for their operational capacity in the public sector, which may not be accurately represented when applying fair value.

BC63. The IPSASB had identified other instances where current operational value may be appropriate throughout its literature. However, the IPSASB agreed any additional changes to measurement bases are best made through projects specific to the IPSAS in question to allow stakeholders to focus on the impact of the proposal. The IPSASB did not propose current operational value be added to any other IPSAS when this Standard was issued.

BC63A. After approving this Standard in March 2023, the IPSASB decided to evaluate the applicability of current operational value across existing IPSAS, in the context of the recently approved current operational value principles in this Standard and the updated objective of measurement of assets in the updated Conceptual Framework: Chapter 7, *Measurement of Assets and Liabilities in Financial Statements*. See paragraphs

BC92-BC105 for the analysis as a result of Part 1 of *Amendments to IPSAS Standards as a Result of the Application of IPSAS 46, Measurement*.

Cost of Fulfilment (Appendix C)

BC64. In developing Cost of Fulfillment, the IPSASB considered concepts applied by the IASB related to Fulfillment Value. Both measurement bases share many characteristics. However, one key difference between the bases is fulfillment value requires a risk premium be included when measuring a liability. A risk premium, also known as a risk adjustment or risk margin, is the price for bearing the uncertainty inherent in the cash flows.

BC65. In developing its April 2019 Measurement Consultation Paper, the IPSASB proposed including the requirement to include a risk premium when measuring liabilities using the Cost of Fulfillment measurement basis. Respondents challenged the rationale and questioned the need for a risk premium in the public sector. Respondents:

(a) Questioned whether the risk premium provides faithfully representative and relevant information to users about the extent of the entity's liabilities to be settled in the future;

(b) Noted it does not reflect the least costly manner to fulfill the liability; and

(c) Expressed the view that a risk premium reflects a bias in the estimate due to the entity's perception of its indifference to variable and fixed cash flows.

BC66. The IPSASB agreed concerns raised by stakeholders could apply in some circumstances and agreed that an assessment as to whether to include a risk premium in the valuation of a liability was specific guidance that should be provided on a standard-by-standard basis.

Fair Value (Appendix D)

BC67. During the development of this Standard, the IPSASB considered whether the fair value measurement basis was relevant to measuring assets and liabilities held by public sector entities. The IPSASB concluded that:

(a) There are assets and liabilities held by public sector entities that should be measured at fair value; and,

(b) The term "fair value" should have the same meaning as that established by IFRS 13, *Fair Value Measurement*.

BC68. In reaching these two conclusions the IPSASB noted that there were references to fair value throughout IPSAS. However, the definition of fair value in the initial suite of IPSAS was derived from a pre-IFRS 13 definition. IFRS 13 defines fair value as an exit value, as follows:

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

BC69. The IPSASB's 2014 Conceptual Framework did not include fair value in its list of measurement bases because the IPSASB considered that the IFRS 13 meaning of fair value would not be appropriate for many public sector assets and liabilities, because it is an exit value. However, during the development of this Standard, the IPSASB's work on financial instruments has demonstrated that an exit-based definition of fair value is relevant for many financial instruments and more generally assets held for financial capacity rather than operational capacity.

BC70. The IPSASB decided that if the term "fair value" continues to be used in IPSAS, the same meaning as that in IFRS 13 should apply. This avoids confusion and supports good quality measurement, when using this measurement basis.

BC71. In June 2018 the IPSASB approved IPSAS 41, *Financial Instruments*, which is an IFRS-aligned IPSAS. IPSAS 41 identifies fair value as a measurement basis applicable to financial instruments. The IPSASB had

already decided, in September 2017, that the Measurement project should allow for measurement at fair value, with the issue being one of how to integrate the IFRS 13 definition of fair value into IPSAS. The IPSASB decided that IPSAS 46 should include the majority of IFRS 13 text to ensure that its definition of fair value would be consistent with that in IFRS 13, and adequately support IPSAS 41's requirements with respect to measurement of financial instruments at fair value. On that basis the Standard's fair value appendix, Appendix D, has reproduced the majority of IFRS 13 text and aims to ensure that the Standard's definition of fair value is the same as that established in IFRS 13.

Use of Fair Value throughout IPSAS

BC72. A review of existing IPSAS was performed to determine whether the updated fair value was applicable in IPSAS where the legacy "fair value" definition was applied. The IPSASB considered the components of the IFRS 13 definition of fair value to identify the key indicator or indicators of the appropriateness of fair value. The IPSASB concluded that the exit versus entry distinction is not useful in selecting measurement bases (see BC7.19–BC7.22 of the IPSASB Conceptual Framework). The IPSASB noted that some jurisdictions considered the specialized versus non-specialized distinction to be useful in considering whether fair value is an appropriate measurement basis. The IPSASB concluded that while the specialization of an asset is a useful distinction, it is not a clear determinant when assessing the appropriateness of fair value. Rather, the IPSASB agreed that an entity's intent to hold the asset or liability for either financial or operational capacity is the clearest indicator. The IPSASB concluded that fair value is an appropriate measurement basis when the asset is held, or the liability incurred, primarily for its financial capacity.

BC73. The IPSASB also cautioned against a "blanket approach" of fair value appropriateness by Standard, as there may be instances where the use of fair value appropriateness may differ by reporting entity in a consolidation, or where a cash-generating or non-cash-generating asset may have hybrid measurement objectives. It is important to consider transaction-specific and entity-specific considerations within each IPSAS when selecting measurement bases.

BC74. In cases where assets held for operational capacity and assets held for financial capacity are within the scope of the same IPSAS, an entity should exercise professional judgment, consider entity- and transaction-specific factors, and apply accounting principles in existing IPSAS. The primary measurement objective, and in turn the measurement basis, is determined for each individual asset or class of assets (i.e., assets with similar nature and use to an entity's operations within the same IPSAS). The IPSASB concluded that accounting principles to guide an entity to group assets of similar nature and determine the intended primary objective are sufficiently illustrated in existing IPSAS guidance.

BC75. The IPSASB concluded that the need for consequential amendments will be decided on a case-by-case basis in accordance with IPSAS 46. In performing this analysis, the IPSASB reviewed each IPSAS and decided to retain the term fair value throughout IPSAS and apply this Standard's definition except for:

(a) IPSAS 43, *Leases*,[3] where the term and existing fair value definition in IPSAS 43 are retained;

(b) IPSAS 21, *Impairment of Non-Cash-Generating Assets*, where the term and existing fair value definition in IPSAS 21 are retained; and

(c) IPSAS 32, *Service Concession Arrangements: Grantor*, where the term and existing fair value definition in IPSAS 32 are retained.

In each instance where the term and existing fair value definition are retained, the IPSASB decided changes to these definitions of fair value should be considered as part of any projects specific to these IPSAS.

[3] If IPSAS 46, *Measurement* is adopted prior to IPSAS 43, *Leases*, the measurement requirements of this standard do not apply to IPSAS 13, *Leases*.

BC76. As noted in BC10, guidance in IPSAS 46 is generic in nature. As such, specific measurement guidance in IFRS 13 has been located in the applicable IPSAS. For example, IFRS 13 paragraphs 34–56 and 70–71 are specific to measuring financial instruments and have been added to IPSAS 41, *Financial Instruments*.

Value in Use

BC77. One of the project's objectives was to provide more detailed guidance on the implementation of commonly used measurement bases and the circumstances under which these measurement bases will be used. In considering whether this Standard should include measurement guidance related to value in use, the IPSASB concluded value in use:

(a) Is not commonly used – value in use is limited to impairment evaluations in IPSAS 21, *Impairment of Non-Cash-Generating Assets*, and IPSAS 26, *Impairment of Cash-Generating Assets*; and

(b) Is well understood both in application and identifying when it should be applied – IPSAS 21 and IPSAS 26 include extensive measurement guidance when applying a value in use measurement.

BC78. The IPSASB agreed including value in use guidance in this Standard is unnecessary. This decision was supported by responses to the Measurement Consultation Paper.

Application of Measurement Techniques

BC79. Since measurement techniques consider the attributes of measurement bases, some techniques can be applied to multiple bases. As such, the IPSASB decided to place generic measurement technique guidance in the core text to reflect the generic nature of the measurement technique and enable that guidance to be applicable across multiple measurement bases.

BC80. The IPSASB considered how a measurement technique can be used to estimate a value of an asset or a liability under a measurement basis when a public sector entity uses data available to estimate and reflect the attributes of that basis. Based on this analysis, the IPSASB concluded:

(a) The market approach can be used to estimate measures under the fair value and current operational value measurement bases;

(b) The income approach can be used to estimate measures under the fair value and cost of fulfillment measurement bases; and

(c) The cost approach can be used to estimate measures under the fair value and current operational value measurement bases.

The IPSASB noted that judgment is required to select and apply the most appropriate technique to estimate a value of an asset or a liability under a particular measurement basis for each transaction, or event, that best meets the objective of that basis.

BC81. In developing this Standard, the IPSASB elected to align with IFRS 13, *Fair Value*, adopting all measurement techniques set out in IFRS 13. The cost approach is considered an appropriate measurement technique to approximate Fair Value as the cost to replace an asset is consistent with an exit price definition of fair value. An entity's cost to replace an asset would equal the amount that a market participant buyer of that asset (that would use it similarly) would pay to acquire it (i.e., the entry price and the exit price would be equal in the same market).

Depreciation and Amortization

BC82. Depreciation is a charge for the consumption of an asset over its estimated useful life. The Standard does not address depreciation. Requirements and guidance on depreciation are provided at standards level. For example, IPSAS 45, *Property, Plant, and Equipment*, addresses:

(a) The unit of account for depreciation;

(b) The recognition of depreciation;

(c) The point at which depreciation of an asset begins;

(d) The relationship between economic and useful lives;

(e) The circumstances under which land may be depreciated;

(f) Depreciation methods; and

(g) The relationship between the revenue generated by an asset and depreciation.

BC83. Amortization is the term applied to the consumption of an intangible asset that does not have a physical substance. As for depreciation, requirements and guidance are provided at standards-level, and the Standard does not address amortization. IPSAS 31, *Intangible Assets*, distinguishes intangible assets with definite and indefinite useful lives, and for the former provides requirements and guidance on amortization periods and methods and their review and residual value.

BC84. The selection of an accounting policy for measurement subsequent to initial recognition may have an impact on whether an asset is depreciated or amortized. This is determined at standards level. For example, IPSAS 45 requires that assets on the current value model with useful lives are depreciated. IPSAS 16, *Investment Property*, does not require depreciation of an investment property that is measured in accordance with the current value model subsequent to initial recognition.

Disclosures

BC85. The scope of the measurement project included the development of enhanced measurement disclosures that would apply across the IPSAS. In developing disclosures, the IPSASB agreed no additional disclosures are required for assets and liabilities measured using the historical cost model. As no remeasurement occurs, there is no additional information to disclose as part of subsequent measurement.

BC86. For assets and liabilities measured using the current value model, the IPSASB agreed additional disclosures are required. With recurring remeasurements, new information is available as at each measurement date. Disclosures providing information about the measurement techniques, inputs and assumptions applied when measuring assets and liabilities using the current value model provide useful information for decision making.

BC87. The IPSASB developed disclosures that are to be applied consistently across the IPSAS that require assets or liabilities be measured using a measurement basis available in the current value model. These disclosure requirements were inserted in the relevant IPSAS to clearly indicate to which IPSAS the disclosures are to be applied.

BC88. In March 2022, the IPSASB reconfirmed the location of the disclosure requirements. The IPSASB considered whether generic measurement disclosure requirements that apply across the IPSAS should be consolidated in the Measurement standard. The IPSASB expressed concern about splitting the disclosure requirements. The IPSASB agreed to maintain the existing approach of inserting the disclosure requirements in the relevant IPSAS to clearly indicate the disclosures to be applied.

Improvements to Current Value Measurement Disclosures

BC88A. As part of the IPSASB's review of the applicability of current operational value in ED 90, the IPSASB reviewed the current value measurement disclosures and concluded that the term 'recurring or non-recurring' is not necessary when an IPSAS only requires recurring current value measurement of assets. The IPSASB noted that whether a current value measurement basis is applied on a recurring basis after initial recognition is specified in the relevant IPSAS. Therefore, having these terms can lead to inconsistent application of the current value measurement disclosure principles.

BC88B. In August 2024, the IPSASB published Exposure Draft (ED) 90, *Amendments to IPSAS as a Result of the Application of IPSAS 46, Measurement*, which proposed enhancing current value measurement disclosures by removing the terms 'recurring and non-recurring' across IPSAS. While respondents supported the proposal in Part 4 of ED 90, a few respondents noted that the removal of 'recurring and non-recurring' expanded the scope to initial recognition for fair value measurement using significant unobservable inputs (Level 3).

BC88C. The IPSASB agreed that the removal of 'recurring' in paragraphs that do not stipulate 'in the statement of financial position after initial recognition' could be interpreted to require current value measurement disclosures for assets initially measured at deemed cost. In responding to constituents' comments, the IPSASB updated relevant current value measurement disclosures paragraphs across IPSAS to ensure the scope of current value measurement disclosures is limited to assets measurement using current value measurement basis in the statement of financial position after initial recognition.

Transition

BC89. The IPSASB concluded that although IPSAS 46 is a major new standard that incorporates the IFRS 13, *Fair Value,* concept into IPSASB literature, much of the Standard is a codification of existing measurement guidance currently spread across many individual IPSAS. IPSAS 46 brings together generic measurement guidance, while transaction-specific guidance remains in those individual IPSAS.

BC90. Consequently, the IPSASB decided that IPSAS 46 should be effective for annual periods beginning on or after January 1, 2025. Because IPSAS 46 applies when other IPSAS require or permit application of the measurement bases, the IPSASB believes that the extended transition period for IPSAS 46 provides enough time for entities, their auditors and users of financial statements to prepare for implementation of its requirements.

BC91. The IPSASB proposed prospective application because a change between current value measures would be inseparable from a change in the current value measurements (i.e., as new events occur or as new information is obtained, e.g., through better insight or improved judgment). Therefore, the IPSASB concluded that IPSAS 46 should be applied prospectively (in the same way as a change in accounting estimate).

Analysis as a result of *Amendments to IPSAS Standards as a Result of the Application of IPSAS 46, Measurement*

Scope

BC92. The IPSASB developed current operational value in response to constituents' concerns received on the April 2019 Measurement Consultation Paper that fair value is difficult and inappropriate to apply to assets held for their operational capacity. Therefore, when considering which IPSAS should be in the scope of the Measurement Application Phase project, the IPSASB identified IPSAS that require measurement of assets at current values or non-historical cost measurement basis.

BC93. The following IPSAS were in the scope of the Measurement Application Phase project:

(a) IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*;

(b) IPSAS 12, *Inventories*;

(c) IPSAS 16, *Investment Property*;

(d) IPSAS 21, *Impairment of Non-Cash-Generating Assets*;

(e) IPSAS 27, *Agriculture*;

(f) IPSAS 31, *Intangible Assets*;

(g) IPSAS 32, *Service Concession Arrangements: Grantor*;

(h) IPSAS 36, *Investments in Associates and Joint Ventures*;

(i) IPSAS 37, *Joint Arrangements*;

(j) IPSAS 40, *Public Sector Combinations*;

(k) IPSAS 41, *Financial Instruments*; and

(l) IPSAS 43, *Leases*.

Applicability of Current Operational Value

BC94. During the development of ED 90, the IPSASB had concluded current operational value is an applicable measurement basis:

(a) At initial measurement, for the determination of deemed cost, for inventories (IPSAS 12) and intangible assets (IPSAS 31) acquired through a non-exchange transaction;

(b) At subsequent measurement for inventories (IPSAS 12) held for:

(i) Distribution at no charge (a transfer expense) or for a nominal charge;

(ii) Consumption in the production process of goods to be distributed at no charge (a transfer expense) or for a nominal charge; or

(iii) Consumption in the rendering of services at no charge (a transfer expense) or for a nominal charge;

(c) At subsequent measurement for intangible assets (IPSAS 31) held for their operational capacity, when the entity chooses the current value model as its accounting policy choice;

(d) At subsequent measurement for service concession assets (IPSAS 32) when the entity chooses the current value model as its accounting policy choice in accordance with IPSAS 31 or IPSAS 45; and

(e) At subsequent measurement for right-of-use assets (IPSAS 43) when the lessee chooses the current value model as its accounting policy choice in accordance with IPSAS 45.

BC95. The IPSASB had concluded current operational value is applicable to these transactions based on the intended use or the entity's reasons for holding the asset (i.e., the assets are held for their operational capacity) and current operational value will present more relevant measurement information to users in a manner that is useful in holding the entity to account, and for decision-making purposes.

BC96. The IPSASB had agreed that amendments are not required to IPSAS 32 and IPSAS 43 on the applicability of current operational value at subsequent measurement for service concession assets and right-of-use assets because these IPSAS cross reference to IPSAS 31 and IPSAS 45. Revisions of IPSAS 12 and IPSAS 31 as a result of ED 90 were proposed, further information on the amendments and the IPSASB's decision on the evaluation of current operational value can be found in paragraphs BC16-BC23 of IPSAS 12 and BC107-BC108, respectively.

BC97. The IPSASB had concluded that current operational value is an applicable current value measurement for:

(a) Service concession assets subsequently measured in accordance with IPSAS 31 and IPSAS 45 because consistency in the subsequent measurement guidance ensures comparability.

(b) Right-of-use assets subsequently measured in accordance with IPSAS 45 because the subsequent measurement guidance should not change depending on whether the asset is owned or leased.

BC98. The IPSASB had concluded that current operational value is not an applicable current value measurement for assets in the scope of:

(a) IPSAS 16 because these are held for their financial capacity;

(b) IPSAS 27 because the biological transformation these assets undergo during their lifespan is best reflected by fair value less costs to sell;

(c) IPSAS 41 because financial assets do not have service potential on their own; and

(d) IPSAS 36 because current operational value does not reflect the investor's ability to participate in the financial and operating decisions of the investee.

BC99. The IPSASB noted that measurement requirements of assets within the scope of IPSAS 37 and IPSAS 40 are determined by reference to other IPSAS. Thus, it was decided that this final pronouncement should not amend IPSAS 37 and IPSAS 40, and the measurement of an asset within their scope should continue to be determined by reference to the relevant IPSAS.

Applicability of Current Operational Value – Right-of-Use Assets

BC100. During the development of ED 90, the IPSASB evaluated the applicability of current operational value for right-of-use assets (i.e., assets in the scope of IPSAS 43) subsequently measured in accordance with IPSAS 45.

BC101. The IPSASB had noted that the value of right-of-use assets is most commonly estimated by discounting the expected lease payments. Considering this, the IPSASB discussed whether current operational value could be used to subsequently measure right-of-use assets. The discussion resulted in the following two views:

(a) View 1. An entity should discount cash flows when applying the market approach and the cost approach to estimate the current operational value of an asset at subsequent measurement. For example, applying the market approach would require an entity to estimate the current operational value of a right-of-use asset by discounting observable lease payments of an identical or comparable right-of-use asset in an active market.

(b) View 2. The absence of the income approach to convert future amounts to a single current amount, results in limited practical application of current operational value to estimate the value of a right-of-use asset at subsequent measurement.

BC102. Having considered both views, the IPSASB had concluded that the ability to discount cash flows is a concept that is not limited to one measurement technique and that current operational value is an applicable measurement basis for right-of-use assets subsequently measured in accordance with IPSAS 45 using the market approach or cost approach.

Responses to the Applicability of Current Operational Value at Initial and Subsequent Measurement Proposed in ED 90

BC103. In August 2024, the IPSASB published Exposure Draft (ED) 90, *Amendments to IPSAS as a Result of the Application of IPSAS 46, Measurement*. The following proposals in ED 90 received strong constituent support:

(a) Current operational value is an applicable measurement basis for inventories (IPSAS 12) acquired through a non-exchange transaction;

(b) Current operational value should replace 'current replacement cost' in the measurement of inventories (IPSAS 12.17) at 'the lower of cost and current replacement cost';

(c) Current operational value is an applicable subsequent measurement basis for service concessions assets (IPSAS 32) when the entity chooses the current value model as its accounting policy choice in accordance with IPSAS 45; and

(d) Current operational value is an applicable subsequent measurement basis for right-of-use assets (IPSAS 43) when the lessee chooses the current value model as its accounting policy choice in accordance with IPSAS 45.

BC104. Some respondents noted the following issues:

(a) Current operational value cannot be applied to right-of-use assets without the income approach as one of its measurement techniques;

(b) Additional guidance is required to determine current operational value of a right-of-use asset because current operational value was developed for tangible assets, noting uncertainty regarding the applicability of certain current operational value principles-'modern equivalent' and existing location'; and

(c) Additional guidance is required to assist preparers in estimating the current operational value of a right-of-use asset when using the cost approach.

BC105. The IPSASB considered these views and decided to proceed with the strongly supported proposals above because:

(a) Present value techniques are not exclusive to the income approach; rather, an entity applies present value techniques when estimating current operational value using the market or cost approach when the time value of money is material;

(b) Though current operational value was first applied to property, plant, and equipment, this should not be interpreted to mean current operational value was developed exclusively for tangible assets; and

(c) IPSAS 46 includes principles-based guidance to estimate current operational value using the cost approach. Additionally, the IPSASB noted that both the market and the cost approach are well-understood measurement techniques.

BC106. Two respondents sought clarification on the IPSASB's conclusion on the applicability of the current operational value for assets in the scope of IPSAS 27 and IPSAS 41, respectively. The IPSASB discussed that though assets in the scope of IPSAS 27 can be distributed at no charge or for a nominal charge, fair value less costs to sell provides more relevant and useful information for decision-making as it reflects the maximization of the output. The IPSASB discussed that financial assets (IPSAS 41) can contribute to service delivery objectives; however, it does not have service potential on their own. The IPSASB considered these and decided to proceed with its decision that current operational value is not an applicable current value measurement for such assets.

BC107. ED 90 proposed that current operational value is an applicable current value measurement basis at initial and subsequent measurement for intangible assets and proposed to amend IPSAS 31. While a majority of respondents to ED 90 supported the proposal, a significant number of respondents did not. The majority of these views either supported a component or the entirety of the Alternative View included in ED 90:

(a) The applicability of current operational value should be considered after the IASB completes its comprehensive project on IAS 38 *Intangible Assets*;

(b) The absence of an active market restriction for the determination of current operational value within the current value model in IPSAS 31 may impact the reliability and faithfulness of intangible assets' current value; and

(c) There is uncertainty about the applicability of certain current operational value principles to intangible assets.

BC108. The IPSASB considered these views and decided to conduct further analysis on the applicability of the current operational value for assets in the scope of IPSAS 31. Therefore, at this time, proposals to amend IPSAS 31 were removed from Part 1 of this final pronouncement.

IPSAS 3, Accounting Policies, Changes in Accounting Estimates and Errors

BC109. The IPSASB decided in December 2023 to amend IPSAS 3 to reflect that a change in measurement model rather than a change in measurement basis is a change in accounting policy.

Limited Scope Update of IPSAS 21, Impairment of Non-Cash-Generating Assets

BC110. The IPSASB concluded that the two branches of recoverable service amount in IPSAS 21 shall be current operational value and fair value less costs to sell, and that depreciated replacement cost, restoration cost and service unit approaches should be removed from the updated IPSAS 21. These changes were made to enhance the usefulness of the measurement information provided and to align IPSAS 21 measurement principles with IPSAS 46 and updated Chapter 7 of the Conceptual Framework.

Definition of an Accounting Estimate

BC111. The IPSASB decided that the revisions to IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* included in *Definition of Accounting Estimates* (Amendments to IAS 8) issued by the IASB in February 2021 should be in the scope of Part 3 of this Final Pronouncement. However, if the amendments to IAS 8 were adopted verbatim in IPSAS 3, it would result in terminology inconsistencies within the IPSAS literature, specifically with the meaning of the term 'measurement techniques' introduced by IPSAS 46. Therefore, the IPSASB decided the amendments to IPSAS 3 would be aligned with the terminology of IPSAS 46.

Revision of IPSAS 46 as a result of Part 3 of *Amendments to IPSAS Standards as a Result of the Application of IPSAS 46, Measurement* issued in August 2025

BC112. The IPSASB replaced the term ‘valuation techniques’ with the term ‘measurement techniques’ for consistency with the new terminology introduced in IPSAS 46, *Measurement*.

Implementation Guidance

This guidance accompanies, but is not part of, IPSAS 46.

Section A: Measurement

A.1. *What are the attributes of each measurement basis?*

	Fair Value	Current Operational Value	Cost of Fulfillment	Historical Cost
Asset Valuation	X	X		X
Liability Valuation	X		X	X
Exit Value	X		X	
Entry Value		X		X
Entity Specific		X	X	X
Market Inputs	X	X	X	
Market Participant	X			
Non-Performance Risk	X			
Risk Premium	X			
Current Market Conditions	X	X	X	
Principal or most advantageous market	X	X		
Highest and Best Use	X			
Least costly manner		X	X	

A.2 *What disclosures are required when applying current value measurements bases in IPSAS?*

The level of necessary disclosures depends on whether the current value measurement is applied on a recurring or non-recurring basis after initial recognition. Recurring current value measurements of assets are those that the specific IPSAS requires or permits in the statement of financial position at the end of each reporting period. Non-recurring current value measurements of assets are those that the specific IPSAS requires or permits in the statement of financial position in particular circumstances, such as when an entity subsequently measures inventories at current operational value because the inventories' current operational value is lower than its cost.

Disclosures for recurring and non-recurring measurements are required because new information is available at the measurement date. Disclosures providing information about the measurement techniques, inputs and assumptions applied when measuring assets and liabilities using the current value model provide useful information for decision making. These disclosure requirements were inserted in the relevant IPSAS to clearly indicate to which IPSAS the disclosures are to be applied. For example, disclosures related to the fair value hierarchy are inserted in the relevant IPSAS as follows:

			Fair Value Measurement						Only Fair Value Disclosed		
			Recurring			Non-Recurring					
IPSAS	**Relevant paragraph**	**Requirement**	**L1[4]**	**L2[5]**	**L3[6]**	**L1**	**L2**	**L3**	**L1**	**L2**	**L3**
IPSAS 12 (50C (b)) **IPSAS 16 (89C (b))** **IPSAS 27 (46C (b))** **IPSAS 30 (30C (b))** **IPSAS 31 (123C (b))** **IPSAS 34 (23C (b))** **IPSAS 38 (57C (b))**	**(a)**	Fair value measurement at the end of the reporting period	X	X	X	X	X	X			
	(a)	Reasons for the measurement				X	X	X			
	(b)	Level of the fair value hierarchy	X	X	X	X	X	X	X	X	X
	(c)	Description of the measurement technique(s) and the inputs used in the fair value measurement		X	X		X	X		X	X
	(c)	Any changes to the measurement technique(s) and the reasons therefore		X	X		X	X		X	X
	(c)	Quantitative information about the significant unobservable inputs used in the fair value measurement		X	X		X	X		X	X
	(d)	Reconciliation from the opening balances to the closing balances			X						
	(e)	Total gains or losses for the period included in surplus or deficit that is attributable to the change in unrealized gains or losses relating to those intangible assets held at the end of the reporting period			X						
	(f)	Description of the valuation processes used by the entity			X			X			
	(g)	Narrative description of the sensitivity of the fair value measurement to changes in unobservable inputs			X						

[4] Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

[5] Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly.

[6] “Level 3 inputs are unobservable inputs for the asset or liability.

	(g)	For financial assets and financial liabilities, if changing one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, an entity shall state that fact and disclose the effect of those changes[7].			X						

Section B: Selection of Measurement Bases

B.1. *How does an entity determine the intended primary measurement objective of an asset?*

Where an asset is held for both its financial capacity and operational capacity purposes, an entity shall determine the primary objective of holding the asset in order to select the appropriate measurement basis. An entity should apply professional judgment and consider the principles outlined in IPSAS 21, *Impairment of Non-Cash-Generating Assets*, (paragraphs 16–21) to determine the asset's intended primary objective. Where an entity is unable to do so using those principles, an entity shall presume that the asset is non-cash-generating given the overall objective of the public sector.

B.2. *How does an entity determine whether an asset is one unit of account or multiple units of account?*

In some cases, an asset held for both its financial and operational capacity may be an indicator of where each part of the asset should be measured separately and measured using a different measurement basis. For example, the part of the asset used for operational purposes is measured using current operational value, and the part of the asset used for financial purposes is measured using fair value. This may occur when one wing of a hospital generates a financial return by charging for health care services, while another wing of a hospital is held only for its operational capacity where health care services are delivered free of charge to citizens.

Whether the asset is a stand-alone asset, has multiple parts, or is a group of assets depends on its unit of account. The unit of account for the asset or liability shall be determined in accordance with the IPSAS that requires or permits the application of one or more measurement bases identified in this Standard.

B.3. *What should an entity consider when determining the appropriate measurement model?*

The historical cost model or current value model applied to measure an entity's assets and liabilities may be determined by factors outside of the entity's control. This may occur when the policy choice is made by:

(a) A more senior level of government for all entities in a sector or jurisdiction; or

(b) An applicable regulatory framework in the jurisdiction.

When the reporting entity can make its own accounting policy choice in selecting a measurement model, the entity should select the measurement model that best meets the informational needs of the user of the financial reports.

In selecting the appropriate measurement model, the reporting entity should consider whether or not or not it wants its asset or liability to reflect the value of the transaction at the date of initial recognition, or the current value of the same transaction on the date of measurement.

[7] This disclosure requirement is limited to the amendments made to IPSAS 30, Financial Instruments: Disclosures.

B.4. *How should an entity select between current value measurement bases when estimating deemed cost at initial measurement, when an asset is acquired in a non-exchange transaction?*

The selection of measurement basis to estimate deemed cost, at initial measurement, takes into consideration the primary objective for which the entity holds the asset:

(a) When an entity holds an asset for its operational capacity, it will measure the deemed cost using current operational value. This is because current operational value faithfully represents the value of the asset to the public sector entity in its operational capacity.

(b) When an entity holds an asset for its financial capacity, it will measure the deemed cost using fair value. This is because fair value faithfully represents the value of the asset to the public sector entity in its financial capacity.

Section C: Historical Cost

C.1. *Is there a difference between the transaction price and the historical cost basis?*

Yes. Transaction price is defined as the consideration given to acquire, construct, or develop an asset, or received to assume a liability, and is used to measure an asset or liability on the date of initial recognition. The historical cost basis is derived from the transaction price adjusted for transaction costs, or deemed cost where applicable. In some cases, the historical cost basis may be equal to the transaction price, and in some cases the historical cost basis is derived, at least in part, from the price of the transaction or other event that gave rise to the asset or liability.

C.2. *Should transaction costs be subtracted from the transaction price when determining the historical cost of a liability?*

Yes. The definition of historical cost includes transaction costs, as such costs can be significant. To appropriately reflect the economics of the liability, transaction costs incurred to assume the liability are deducted from the contractual amount of the borrowing. For example, an entity borrows CU1,000,000 of which transaction costs are CU100,000. In such an instance the historical cost is 900,000 CU. This is because immediately after taking receipt of the CU1,000,000, the transaction costs of CU100,000 is repaid to the institution or counterparty, leaving the entity with CU900,000. The transaction costs of CU100,000 are included in interest expense over the term of the instrument as the carrying amount of CU900,000 is accreted to CU1,000,000 on the settlement date.

Section D: Current Operational Value

D.1. *How does an entity reflect the remaining service potential of an asset?*

Service potential is the capacity to provide services that contribute to achieving the entity's policy objectives. Service potential enables an entity to achieve its objectives without necessarily generating net cash inflows. To reflect the remaining service potential, the age, functionality, and condition of the asset need to be reflected in the measurement.

For example, a new asset is expected to have more remaining service potential than an asset that is midway through its service life. The age of the asset is correlated with the remaining service potential. Reflecting the age of the asset in the measurement, ensures the remaining service potential is estimated appropriately.

The current age, functionality, and condition of an asset is reflected in the asset measurement by considering physical, functional, and economic obsolescence.

(a) Physical Obsolescence – Physical obsolescence relates to any loss of service potential due to the physical deterioration of the asset or its components resulting from its age and use. In assessing physical obsolescence, an entity should also consider any probable future routine, regular

maintenance, as such maintenance may provide insight into the asset or its components' useful lives and their rate of deterioration.

(b) Functional Obsolescence – Functional obsolescence relates to any loss of service potential resulting from inefficiencies in the asset that is being valued compared with its modern equivalent – is the asset suitable for its current function? Functional obsolescence might occur because of advances or changes in the design and/or specification of the asset, or because of technological advances. For example, advances in health care technology might mean that the asset in use is outdated, or technological advances in educational material could mean that chalk/white boards would be replaced by digital screens. Such advances will need to be incorporated into the assessment of functional obsolescence.

(c) Economic (or External) Obsolescence – Economic obsolescence relates to any loss of utility caused by economic or other factors outside the control of the entity. This may include, for example, capacity that is excess to the usage requirements of the existing asset.

D.2. *How does an entity calculate the current operational value of an asset when there is no active market?*

If the price to acquire an identical, or a similar, asset is unavailable in an active market, current operational value will be determined based on the cost to develop or produce an identical, or a similar, asset (i.e., the cost approach).

When determining the cost to develop or produce an identical, or similar, asset, an entity determines the price of each part of the asset included in the assembly of the asset. The cost to develop or produce the asset also includes the amount that would be paid to assemble the parts, or develop the asset. Observable inputs are used in determining the price of parts and the costs to assemble, construct, or develop when it is feasible to do so. As current operational value is an entity-specific valuation, observable inputs are used when they are available, and they are relevant to the entity. For example, when measuring an aircraft, the ministry of defense may conclude it would acquire each of the parts in an active market, but use its own personnel to construct the aircraft (i.e., the least costly manner). Observable inputs are used for the fuselage, engine, etc. as they are relevant to the ministry of defense. Entity-specific inputs related to the assembly of the parts are applied as the ministry of defense will assemble the aircraft internally.

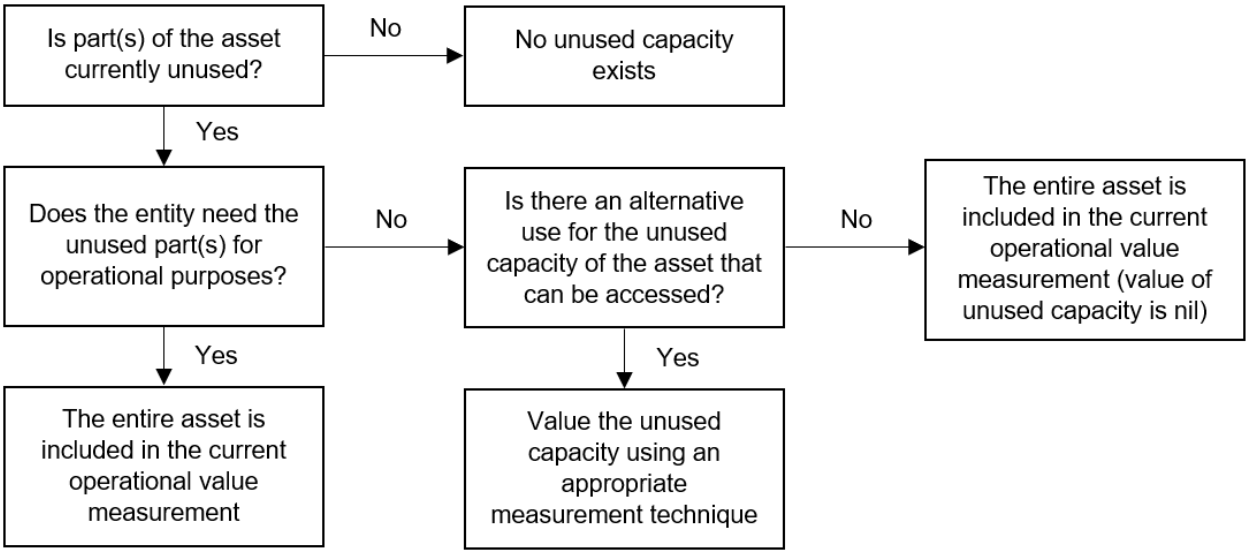
D.3. *How does an entity identify an identical, or similar, asset when new technology has been developed making the existing asset obsolete?*

An entity measures current operational value by identifying the price it would pay for the remaining service potential of an identical asset in an active market. An identical asset in an active market is used regardless of whether new technology exists that supersedes the asset under valuation. For example, if a health authority is measuring the current operational value of ventilators acquired 10 years previously, it does not consider the newest iteration of a ventilator when identifying an identical asset.

When an identical asset cannot be identified, a similar asset may be the latest iteration of the asset. However, in determining the current operational value, the value of the most recent iteration of the asset is adjusted to reflect the current age, functionality, and condition of the asset under valuation.

D.4. *Is the currently unused capacity of an asset excluded from the current operational value of an asset?*

It depends. Any part of the asset that is currently unused is evaluated to determine whether the unused part is held for an operational purpose associated with the asset. This may occur when an asset has security requirements, legal or other restrictions, or when the unused portion is necessary for future use (see decision tree below).



For example, a community center in a municipality prone to natural disasters has a capacity of 700 individuals even though only 200 individuals currently use the location on a regular basis. The unused portion still has operational capacity because the building has a dual purpose. It is operated as both a community center and

as a shelter for the community in the event of a natural disaster. The currently unused capacity of 500 individuals is still required for the municipality's broader operational purpose and so the whole asset is included in the measurement of its current operational value.

Another example might be where the currently unused part of the asset is expected to be required in the near future. In circumstances where a school is built in a community that is rapidly growing, it may have been constructed to take the anticipated student numbers rather than the existing student numbers. The current unused portion is, therefore, required and is included in the measurement of the school's current operational value.

Where it is determined that the unused part of the asset has no operational purpose, an entity must determine whether it has an alternative use. When an alternative use is currently available, the relevant part of the asset is valued as a separate unit of account using an appropriate measurement basis. Where the unused part has no alternative use, it is included in the current operational value, but has no value.

Illustration of the Analysis of Unused Capacity

D.5. *Are restrictions on an asset's use or disposal taken into account in the current operational value of an asset?*

Yes. Many assets are subject to restrictions on their use or disposal. Such restrictions affect how the entity operates the asset. For example, a state may restrict the operation of a municipally run building, where the building is required to be operated as a library. When the entity measures the current operational value of the building, it measures the building on the basis that its use is restricted to being operated as a library.

D.6. *What factors are considered in identifying a modern equivalent asset, and what adjustments are necessary to reflect the current operational value of the existing asset?*

A modern equivalent should reflect the same characteristics as the asset being measured. If the equivalent asset has a different service potential from the asset being measured (although necessarily the same nature), comparison techniques are used to adjust for the difference between the service potential of the entity's asset being measured and the service potential of the equivalent reference asset.

In some circumstances a modern equivalent asset may not be reflective of the asset being measured. For example, it may be challenging to calculate the cost of a modern equivalent asset when estimating the current operational value of a heritage asset, such as an historical building. This is because the value of the asset extends beyond the mere facsimile of the existing asset. Replacing the heritage asset with a modern equivalent would not represent the heritage value of the asset and therefore would not be a suitable measurement.

The cost of a modern equivalent asset will reflect the amount that would be paid if the asset were developed or produced on the measurement date. However, there are factors that may result in the cost of the modern equivalent asset being different from that of creating the actual asset:

(a) Phasing of work – An asset may have been developed in phases. The cost of a modern equivalent asset would be based on a single-phase development, and measured at the cost at the measurement date. A single-phase development may still occur over an extended period of time.

(b) Borrowing costs – If the entity does not capitalize borrowing costs in accordance with IPSAS 5, *Borrowing Costs*, the entity disregards any financing costs in measuring the modern equivalent asset.

(c) Additional costs arising from extending an existing asset – These costs are not considered as the valuation will be of a modern equivalent asset.

(d) Contract variations – Additional construction costs because of contract variations should not be considered. The modern equivalent asset being valued will have the same service capacity as the existing asset in its existing use.

(e) Planning changes – Entities should consider whether planning consent would need to be obtained to construct the modern equivalent asset and take this into account.

It may not always be practicable to separately identify adjustments for each form of obsolescence. In particular, it may be difficult to distinguish between functional obsolescence and economic (or external) obsolescence. In such cases the adjustments for obsolescence may need to be considered collectively.

D.7. *Does the least costly amount an entity would pay for the remaining service potential of an asset include concessionary elements received by an entity when determining the current operational value of an asset?*

No. Current operational value measures the amount the entity would pay for the remaining service potential of the asset in an orderly transaction. The inclusion of a concessionary element when determining current operational value will incorporate a non-exchange element into the value and would not faithfully present relevant information to users of general purpose financial statements. For example, an entity that at subsequent measurement is determining the current value of a donated asset (i.e., building), initially recognized at deemed cost, will determine the current value of the asset using current operational value or fair value, which excludes the concessionary element from its measurement.

Section E: Use of Experts

E.1. *Who should carry out a valuation of assets or liabilities?*

Responsibility for obtaining a valuation of asset(s) or liability(ies) for financial accounting and reporting purposes rests with the preparer of the relevant financial statements. However, the valuation should be carried out by an individual (or organization) with the relevant expertise to provide a valuation that faithfully represents the values of the asset(s) or liability(ies) in the financial statements in accordance with IPSAS 1, *Presentation of Financial Statements*, paragraph 27.

The nature of the asset(s) or liability(ies) will guide the preparer of the financial statements in determining what field of expertise is required. For example: the measurement of liabilities arising under a pension scheme will require the input of an actuary; the measurement of medical plant and equipment assets will involve discussions with clinicians and procurement experts; those responsible for the management of vehicle fleets will need to be involved with the valuation of those fleets; the measurement of any legal claims against the entity (liabilities) will involve discussions with the entity's legal advisors; the valuation of infrastructure assets will involve engineers and surveyors; and the valuation of land and buildings will need to be carried out by appropriately qualified surveyors.

E.2. *What type of information will the valuation specialist require in order to carry out a valuation?*

The entity and the valuation specialist will need to discuss and agree the nature and scope of the valuation assignment prior to the assignment being undertaken. The information that the valuation specialist will require depends in part on the nature of the asset(s) or liability(ies) to be valued.

The information that the entity will need to give to the valuation specialist in order that the specialist can carry out a valuation will generally include some or all of the following.

(a) The purpose of the valuation. An entity might require a valuation of its assets or liabilities for a variety of reasons, and the purpose might determine the basis of valuation that the expert will adopt. The purpose of the valuation in applying this Standard is for inclusion in the entity's financial statements. The entity should inform the valuation specialist that the financial statements will be prepared in accordance with IPSAS; a copy of the relevant IPSAS (or the relevant extract) might usefully be supplied to and discussed with the valuation specialist. Any discussion between the entity and the valuation specialist should clarify what valuation work will be carried out and any specific disclosures required to accompany the valuation in order to ensure that the precise accounting needs are addressed.

(b) The asset(s) or liability(ies) being valued. The entity and the valuation specialist need to agree what asset(s) or liability(ies) are to be valued for inclusion in the financial statements. The valuation specialist will need:

  (i) To understand the entity's legal interest in each asset or liability, and whether the whole or only part of the legal interest will be valued;

  (ii) Information about the purpose of holding the asset or liability – for financial capacity or operational capacity – as the purpose may influence the valuation specialist in the selection of a valuation method (a measurement basis or technique);

  (iii) Information about any improvements made by the entity, where the entity is a tenant of real estate, and whether these improvements would to be disregarded on renewals, or review of the lease, and whether the entity will need to reinstate the real estate to its original condition at the end of the tenancy;

  (iv) To understand the degree of control an entity has over real estate or other property[8] that is owned by more than one entity and how any rights held by the other owning entities might restrict the ability of an entity to sell its interest in the real estate or other property;

  (v) To ensure that, in the context of a portfolio of real estate, any grouping of those assets is appropriate;

(c) Assumptions. International or national standards applicable to the type of valuation may differentiate between assumptions that are consistent, or could be consistent, with the known facts at the date of the valuation, and where the assumptions used in the valuation differ from the known facts. When applicable, the entity and the valuation specialist will need to agree what assumptions should be used in the valuation, taking into account the attributes of the measurement basis; any assumptions should be included in the valuation report.

(d) The valuation date. The entity will need to inform the valuation specialist of the specific valuation date required.

[8] Other property is/are asset(s) or liability(ies) other than real estate as defined above.

(e) The reporting currency. The entity must inform the valuation specialist of the currency in which the valuation of the asset or liability will be expressed in the financial statements. This is particularly important where the asset(s) or liability(ies) being valued are spread across more than one jurisdiction or where cash flows associated with the asset(s) or liability(ies) are expressed in more than one currency. A typical example is the operation of overseas diplomatic activities.

(f) Limitations on the work of the valuation specialist. A valuation specialist will follow the appropriate international or national standards applicable to the type of valuation being undertaken. The methodology used by the valuation specialist might include any of the following:

(i) Physical inspections of the asset(s) or liability(ies) (particularly if the valuation specialist is undertaking a valuation of the specific asset(s) or liability(ies) for the first time).

(ii) Enquiries (both internal and external to the entity).

(iii) Analysis of the information provided by the entity or through enquiries, or from the results of any physical inspections.

The entity must inform the valuation specialist of any limitations or restrictions that will be imposed on the valuation assignment because these may affect the results of the valuation and will need to be recorded in the valuation report.

E.3. *What valuation bases does the valuation specialist use?*

Valuation specialists will use international or national standards appropriate for the valuation assignment. In general terms, the valuation specialist will use a market approach, income approach, or cost approach to determine the valuation, depending on the nature of the asset (or liability), the purpose, measurement objective and measurement basis, intended use and context of the particular assignment, and any jurisdictional statutory or other mandatory requirements.

E.4. *What sort of assumptions would it be reasonable for the valuation specialist to make when carrying out a valuation of real estate using the cost approach (often referred to as the depreciated replacement cost valuation method)?*

The nature of any assumptions must be consistent with the principles of the standard. Nevertheless, because the valuation is entity specific, it is important that the valuation specialist understands the entity's perspective about the real estate, and information that supports that perspective, when determining the assumptions. Assumptions are likely to take in to account the factors listed below, which the valuation specialist should determine with the entity when scoping the valuation assignment.

(a) The construction of the building is immediate.

Although buildings are constructed over time, when revalued under the cost approach the valuation specialist is required to assume the production or development of the asset is immediate as at the valuation date, rather than establish the costs over the likely period of construction, adjusted for the time value of money. The method of determining the base cost is a factor that the valuation specialist should determine with the entity.

(b) The existing location of the real estate.

Goods and services can be provided from various locations. For example, a hospital can be constructed in various locations to provide similar health care services to a group of citizens. When applying current operational value, the valuation specialist is required to assume the entity will continue to deliver goods and/or services from the same location in which the asset is currently situated.

(c) Whether or not the entity has a policy to capitalize borrowing costs.

Borrowing costs are included in the current operational value of the asset only if the entity capitalizes borrowing costs in accordance with IPSAS 5, *Borrowing Costs*. Where the entity does not capitalize borrowing costs, the valuation specialist reflects this policy choice in their assumptions and disregards any financing costs in measuring the modern equivalent asset.

(d) Expected demographic changes that affect the use of the building.

Demographic changes may be reasonably expected over the remaining life of the building. Such changes may indicate a reduction in the demand for services delivered using the building. This in turn might lead to a change in assumption about the ongoing use of the building or to a change in the specifications required for an efficient and effective replacement of the building. Conversely, demographic changes may support an increase in the expected demand for services delivered using the building, which may support a higher use for the asset than current demographics indicate. This may occur when a school is operating below capacity, but other development in the area suggests the school will operate at capacity when the development is complete. The effect of demographic changes on the replacement of the building is a factor that the valuation specialist should determine with the entity.

(e) Specialized features of the building.

A building might have a conventional, basic design that is similar to other buildings that are regularly bought and sold in the market, but on closer inspection have specialized features designed to meet the requirements of the entity. Examples of specialized features include the addition of security/safety enhancements to protect staff from physical attack in buildings used for the delivery of services directly to the public; stand-off land around embassies to protect the premises (and staff) from terrorist attack; or other adaptations to a building to enhance efficiency and effectiveness in delivering services. The requirement for specialized features associated with real estate assets is a factor that the valuation specialist should determine with the entity.

(f) The appropriateness of standard design lives and costings.

The construction industry will generally have standard design lives for different types of buildings (residential, commercial, or industrial); engineers will take a similar approach to certain types of built structures such as bridges or dams. In some cases, there may also be standard costings associated with property assets. The valuation specialist is likely to use these standard model assumptions in preparing the valuation unless there is information to suggest that those standards should be adjusted. Information to support appropriate design lives and costings are factors that the valuation specialist should determine with the entity.

E.5. *What is meant by a 'modern equivalent asset'?*

A modern equivalent asset is one that provides similar function and equivalent utility to the asset being valued, but which is of a current design and constructed or made using current cost-effective materials and techniques.

The concept of a modern equivalent asset is applied by a valuation specialist when valuing real estate under the cost approach (the depreciated replacement cost (DRC) valuation method in some international or national valuation standards).

The depreciated replacement cost method is based on the economic theory of substitution. The underlying theory is that the potential buyer in an exchange transaction would not pay any more to acquire the asset being valued than the cost of acquiring an equivalent new one. The technique involves assessing all the costs of providing a modern equivalent asset using pricing at the valuation date.

In order to assess the price that the entity would pay for the actual asset, valuation adjustments have to be made to the gross replacement cost of the modern equivalent asset to reflect the differences between it and the modern equivalent. These differences can reflect obsolescence factors such as the physical condition, the remaining economic life, the comparative running costs and the comparative efficiency and functionality of the actual asset. Land required for the modern equivalent asset will be separately assessed.

Under the cost approach, the valuation specialist will reflect all appropriate costs in the price the entity would pay for the asset; these will include the value of the land, infrastructure, design fees, finance costs (where appropriate) and developer profit that would be incurred by a participant in creating an equivalent asset.

If the entity does not capitalize borrowing costs under IPSAS 5, *Borrowing Costs*, the valuation expert needs to disregard financing costs.

The cost of the modern equivalent asset needs to be adjusted to reflect the condition, functionality and any other factors of obsolescence of the existing asset. The valuation specialist will consider, in consultation with the entity:

(a) Physical Obsolescence – Physical obsolescence relates to any loss of service potential due to the physical deterioration of the asset or its components resulting from its age and use. In assessing physical obsolescence, an entity should also consider any probable future routine, regular maintenance, as such maintenance may provide insight into the asset or its components' useful lives and their rate of deterioration.

(b) Functional Obsolescence – Functional obsolescence relates to any loss of service potential resulting from inefficiencies in the asset that is being valued compared with its modern equivalent – is the asset suitable for its current function? Functional obsolescence might occur because of advances or changes in the design and/or specification of the asset, or because of technological advances. For example, advances in health care technology might mean that the asset in use is outdated, or technological advances in educational material could mean that chalk/white boards would be replaced by digital screens. Such advances will need to be incorporated into the assessment of functional obsolescence.

(c) Economic (or External) Obsolescence – Economic obsolescence relates to any loss of utility caused by economic or other factors outside the control of the entity. This may include, for example, capacity that is excess to the usage requirements of the existing asset.

E.6. Do I have to use a valuation expert external to my entity?

You do not have to use a specialist from another organization. Where an entity has the relevant, suitably qualified (that is, a member of an appropriate professional body) expertise available in-house, that specialist can be used to provide a valuation.

Whatever the source of the expertise, the name, qualifications and employing organization of the valuation specialist must be provided in the notes to the financial statements. This disclosure might be in the note on accounting policies or in the notes accompanying the detailed asset disclosures.

E.7. What can I expect from a valuation specialist's report?

International and national valuation standards require valuation specialists to include certain information in their reports. This will apply regardless of whether the valuation is carried out in-house or externally.

The information in a report will depend partly on what the entity and the valuation specialist agreed prior to the assignment, partly on the nature of the asset(s) or liability(ies) being valued, and partly on the standards framework used by the valuation specialist.

The information in the report will include, but will not necessarily be limited to:

(a) The name, qualifications, employing organization and any other relevant details of the valuation specialist.

(b) The name of the entity that commissioned the valuation and the name(s) of any other intended users of the report.

(c) The purpose of the valuation.

(d) The asset(s) or liability(ies) valued. For real estate assets, the report might include maps and plans depending on jurisdictional requirements, as well as the type of tenure (freehold or leasehold and, in the case of leasehold, details of the financial terms and of the responsibilities for repairs etc. under the lease).

(e) The valuation base(s) adopted.

(f) The valuation date and the date of the valuation report.

(g) A discussion of the approach the valuation specialist took in undertaking the assignment – for example, details of any physical inspections, interviews, review of documents, constraints placed on the assignment, etc.).

(h) Assumptions and special assumptions.

(i) Confirmation that the valuation has been undertaken in accordance with the relevant international or national valuation standards.

(j) The valuation amount(s) and the reasoning behind arriving at those amounts, with reference to the bases used. The report will provide separate valuation amounts for land and buildings on that land. It is likely that the valuation report will include separate valuation amounts for individual components of an asset where material in terms of the amounts or significant in terms of the asset itself. The report will include valuation amounts in both functional and reporting currencies (as appropriate).

(k) A discussion of any material uncertainties in the valuation amount(s) where this is necessary for a proper understanding of the valuation amount(s).

(l) For certain liabilities, the probability of the timing and amount of any payments to settle claims.

COMPARISON WITH IFRS 13

The fair value measurement requirements in IPSAS 46, *Measurement* are drawn primarily from IFRS 13, *Fair Value Measurement* (issued in May 2011, including amendments up to February 2023). The main differences between IPSAS 46 and IFRS 13 are as follows:

- IPSAS 46 provides guidance on historical cost, current operational value, cost of fulfilment and fair value. IFRS 13 only provides guidance on fair value.
- IPSAS 46 requires an entity to apply the measurement disclosure requirements in the relevant IPSAS. IFRS 13 includes all disclosures about fair value measurement.

COMPARISON WITH GFS

In developing IPSAS 46, *Measurement*, the IPSASB considered Government Finance Statistics (GFS) reporting guidelines.

Key similarities and differences with GFS are as follows:

- The similarities and differences between the measurements under IPSAS 46 and GFS will depend on the facts and circumstances of the transactions and carrying amounts at the end of the reporting period.
- On initial recognition, IPSAS 46 requires measurement at transaction price or deemed cost where appropriate. In GFS, as a general rule, all assets and liabilities should be measured at market prices, so both may result in the same valuations.
- IPSAS 46 requires capitalization of transaction costs for all assets, while GFS only requires capitalization of cost of ownership transfer for non-financial assets.
- On subsequent measurement, IPSAS 46 allows historical cost, current operational value, cost of fulfilment and fair value measurement bases. In GFS, as a general rule, all assets and liabilities should be measured at market prices, so the same valuation can result if the market approach is used as the measurement technique.

IPSAS 47, *REVENUE*

History of IPSAS Accounting Standard

This version includes amendments resulting from IPSAS Accounting Standards issued up to January 31, 2026.

IPSAS 47, *Revenue* was issued in May 2023.

Since then, IPSAS 47 has been amended by the following IPSAS Accounting Standards:

- IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards* (issued November 2025)
- *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (issued October 2024)

Table of Amended Paragraphs in IPSAS 47

Paragraph Affected	How Affected	Affected By
194A	Added	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024

International Public Sector Accounting Standard 47, *Revenue*, is set out in paragraphs 1–204. All the paragraphs have equal authority. IPSAS 47 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*. IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provides a basis for selecting and applying accounting policies in the absence of explicit guidance.

Objective

1. The objective of this Standard is to establish the principles that an entity shall apply to report useful information to users of financial statements about the nature, amount, timing and uncertainty of revenue and cash flows arising from revenue transactions.

2. To meet the objective in paragraph 1, this Standard:

   (a) Requires an entity to consider the terms of the transaction, and all relevant facts and circumstances, to determine the type of revenue transaction; and

   (b) Sets out the accounting requirements to account for the revenue transaction.

Scope

3. **An entity that prepares and presents financial statements under the accrual basis of accounting shall apply this Standard in accounting for its revenue transactions. This Standard does not apply to:**

   (a) **Contributions to social benefit schemes that are accounted for in accordance with paragraphs 26–31 of IPSAS 42, *Social Benefits* (the insurance approach);**

   (b) **A public sector combination within the scope of IPSAS 40, *Public Sector Combinations*;**

   (c) **The accounting for contributions from owners;**

   (d) **Lease contracts within the scope of IPSAS 43, *Leases*;**

   (e) **Insurance contracts within the scope of the relevant international or national accounting standard dealing with insurance contracts[1];**

   (f) **Financial instruments and other contractual rights or obligations within the scope of IPSAS 41, *Financial Instruments*;**

   (g) **Rights or obligations arising from binding arrangements within the scope of IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*, IPSAS 32, *Service Concession Arrangements: Grantor*, IPSAS 34, *Separate Financial Statements*, IPSAS 35, *Consolidated Financial Statements*, IPSAS 36, *Investments in Associates and Joint Ventures*, IPSAS 37, *Joint Arrangements*, IPSAS 39, *Employee Benefits*, and IPSAS 40;**

   (h) **Non-monetary exchanges between entities in the same line of business to facilitate sales to resource providers or potential resource providers. For example, this Standard would not apply to a binding arrangement between two public sector entities that agree to an exchange of electricity to satisfy demand from their resource providers in different specified locations on a timely basis;**

   (i) **Gains from the sale of non-financial assets that are not an output of an entity's activities and are within the scope of IPSAS 16, *Investment Property*, IPSAS 45, *Property, Plant, and Equipment*[2], or IPSAS 31, *Intangible Assets* (see paragraph AG5);**

   (j) **Changes in the value of current and non-current assets arising from subsequent measurement;**

   (k) **Initial recognition or changes in the fair value of biological assets related to agricultural activity (see IPSAS 27, *Agriculture*); and**

---

1 There is no equivalent IPSAS and no standard is being developed in the IPSAS literature on insurance contracts.

2 If this Standard is applied prior to IPSAS 45, then references to IPSAS 45 in this Standard should refer to IPSAS 17, *Property, Plant, and Equipment*.

(l) **The extraction of mineral resources.**

Definitions

4. **The following terms are used in this Standard with the meanings specified:**

For the purposes of this Standard, a binding arrangement is an arrangement that confers both rights and obligations, enforceable through legal or equivalent means, on the parties to the arrangement. (Paragraphs AG10–AG31 provide additional guidance.)

A binding arrangement asset is an entity's right to consideration for satisfying its compliance obligations in compliance with the terms of the binding arrangement when that right is conditioned on something other than the passage of time (for example, the entity's future performance).

A binding arrangement liability is an entity's obligation to satisfy its compliance obligation in compliance with the terms of the binding arrangement for which the entity has received consideration (or the amount is due) from the resource provider.

From the perspective of a resource recipient, a capital transfer is an inflow of cash or another asset that arises from a binding arrangement with a specification that the entity acquires or constructs a non-financial asset that will be controlled by the entity. (Paragraph AG140 provides additional guidance.)

A compliance obligation is an entity's promise in a binding arrangement to either use resources[3] internally for distinct goods or services[4] or transfer distinct goods or services to a purchaser or third-party beneficiary.

A customer is a party that has contracted with an entity to obtain goods or services that are an output of the entity's activities in exchange for consideration.

Expenses paid through the tax system are amounts that are available to beneficiaries regardless of whether or not they pay taxes.

Fines are economic benefits or service potential received or receivable by the entity, as determined by a court or other law enforcement body, as a consequence of the breach of laws and/or regulations.

Other compulsory contributions and levies is cash or another asset, paid or payable to the entity, in accordance with laws and/or regulations, established to provide revenue that is to be used in the provision of specified government programs.

A purchaser is a resource provider that provides a resource to the entity in exchange for goods or services that are an output of an entity's activities under a binding arrangement for its own consumption. (Paragraph AG27 provides additional guidance.)

A resource provider is the party that provides a resource to the entity. (Paragraphs AG26–AG31 provides additional guidance.)

The stand-alone value (of a good or service) is the price of a good or service that is required to be used internally, or provided separately to a purchaser or third-party beneficiary.

Tax expenditures are preferential provisions of the tax law that provide certain taxpayers with concessions that are not available to others.

[3] In this Standard, the term resource includes goods, services, and other assets, which may encompass cash or non-current assets.

[4] In this Standard, references to goods and services, or goods or services are to be read as incorporating references to cash and non-current assets.

The taxable event is the event that the government, legislature, or other authority has determined will be subject to taxation.

Taxes are economic benefits or service potential compulsorily paid or payable to the entity, in accordance with laws and/or regulations, established to provide revenue to the government. Taxes do not include fines or other penalties imposed for breaches of laws and/or regulations.

A third-party beneficiary is an entity, household or individual who will benefit from a transaction made between other parties by receiving resources. (Paragraph AG29 provides additional guidance.)

For the purposes of this Standard, the transaction consideration is the amount of resources to which an entity expects to be entitled.

A transfer is a transaction, other than taxes, in which an entity receives a resource from a resource provider (which may be another entity or an individual) without directly providing any good, service, or other asset in return.

Terms defined in other IPSAS are used in this Standard with the same meaning as in those Standards and are reproduced in the *Glossary of Defined Terms* published separately.

Revenue

5. Revenue comprises gross inflows of economic benefits or service potential received and receivable by the entity, which represents an increase in net assets/equity, other than increases relating to contributions from owners. Amounts collected as an agent of the government or another government organization or other third parties are not considered revenue of the agent, as these amounts will not give rise to an increase in net assets/equity of the agent. This is because the agent entity cannot control the use of, or otherwise benefit from, the collected assets in the pursuit of its objectives.

6. Where an entity incurs some cost in relation to revenue arising from a revenue transaction, the revenue is the gross inflow of future economic benefits or service potential, and any transfer of resources is recognized as a cost of the transaction. For example, if an entity is required to pay delivery and installation costs in relation to the transfer of an item of plant to it from another entity (resource provider), those costs are recognized separately from revenue arising from the transfer of the item of plant. Delivery and installation costs are recognized in accordance with IPSAS 45.

Taxes

7. Taxes, which include compulsory contributions and levies, are the major source of revenue for many governments and other public sector entities. Taxes are defined in paragraph 4 as economic benefits or service potential compulsorily paid or payable to public sector entities, in accordance with laws and/or regulations, established to provide revenue to the government, excluding fines or other penalties imposed for breaches of laws and/or regulations. Non-compulsory transfers to the government or public sector entities, such as donations and the payment of fees, are not taxes, although they may be the result of transactions without a binding arrangement. A government levies taxation on individuals and other entities, known as taxpayers, within its jurisdiction by use of its sovereign powers.

8. The rights (of a government to calculate the tax receivable and ensure payment is received) and obligations (on the taxpayer to submit returns and monies when due) established in tax laws and/or regulations do not create binding arrangements between the government and the taxpayer.

Identify the Revenue Transaction

9. Public sector revenues may arise from transactions without binding arrangements or with binding arrangements. The majority of revenue of governments and other public sector entities is typically derived from transactions without binding arrangements, or from transactions with binding arrangements that do not include transfers of distinct goods or services to external parties.

10. **At inception, an entity should first consider whether it has entered into a revenue transaction with or without a binding arrangement**.

Identify whether a Binding Arrangement Exists

11. **For an arrangement to be binding, it must be enforceable through legal or equivalent means. Enforceability can arise from various mechanisms, so long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the binding arrangement and hold the parties accountable for the satisfaction of their obligations.**

12. In determining whether an arrangement is enforceable, the entity considers the substance rather than the legal form of the arrangement. The assessment of whether an arrangement is enforceable is based on an entity's ability to enforce the specified terms and conditions of the arrangement and the satisfaction of the other parties' stated obligations.

13. A binding arrangement includes both rights and obligations that are enforceable for two or more of the parties in the arrangement. Each party's enforceable rights and obligations within the binding arrangement are interdependent and inseparable.

14. Binding arrangements can be evidenced in several ways. A binding arrangement can be written, oral or implied by an entity's customary practices. The practices and processes for establishing binding arrangements vary across legal jurisdictions, sectors and entities. In addition, they may vary within an entity (for example, they may depend on the class of the resource provider or the nature of the entity's promise in the binding arrangement).

15. An entity will apply the recognition and measurement criteria in this Standard as follows:

    (a) Revenue from transactions without binding arrangements are accounted for by applying paragraphs 18–55, with guidance specific to taxes in paragraphs 36–55; and

    (b) Revenue from transactions with binding arrangements are accounted for by applying paragraphs 56–147.

16. Paragraphs AG10–AG31 provide additional guidance on enforceability and binding arrangements.

Revenue from Transactions without Binding Arrangements

Recognition

17. **An entity's revenue transaction without a binding arrangement may confer rights and/or obligations. Any entity shall determine if:**

    (a) **Any of its rights in its revenue transaction without binding arrangements meet the definition of an asset in accordance with paragraphs 18–25; and**

    (b) **Any of its obligations in its revenue transaction without binding arrangements meet the definition of a liability in accordance with paragraphs 26–27.**

Analysis of the Initial Inflow of Resources

18. An entity may receive an initial inflow of resources from a revenue transaction without a binding arrangement. The entity recognizes this inflow of resources as an asset if it presently controls the resources (such as goods, services, or other assets) received as a result of past events, and the value of the asset can be measured reliably.[5] Control of the resource entails the ability of the entity to use the resource (or direct other parties on its use) so as to derive the benefit of the service potential or economic benefits embodied in the resource in achieving its service delivery or other objectives. A past event that gives the entity control of a resource may be a purchase, a taxable event, or a transfer. Transactions or events expected to occur in the future do not in themselves give rise to assets – for example, an intention to levy taxation is not a past event that gives rise to an asset in the form of a claim against a taxpayer.

19. The ability to exclude or regulate the access of others to the benefits of an asset is an essential element of control that distinguishes an entity's assets from those public goods that all entities have access to and benefit from. In the public sector, governments exercise a regulatory role over certain activities, for example, financial institutions or pension funds. This regulatory role does not necessarily mean that such regulated items meet the definition of an asset of the government, or satisfy the criteria for recognition as an asset in the general purpose financial statements of the government that regulates those assets. In accordance with paragraph AG143, entities may, but are not required to, recognize services in-kind.

20. Each type of inflow of resources is analyzed and accounted for separately. In certain circumstances, such as when a creditor forgives a liability, a decrease in the carrying amount of a previously recognized liability may give rise to an inflow of resources. In some cases, gaining control of the inflow of resources may also carry with it obligations that the entity may recognize as a liability until the obligations are satisfied (in accordance with paragraph 26).

Right to an Inflow of Resources

21. When an entity has not received an inflow of resources for a revenue transaction without a binding arrangement, it should consider whether it has a right to receive an inflow of goods, services, or other assets which may be a resource that meets the definition of an asset and is to be recognized as an asset. The entity bases this determination on the facts and circumstances of its revenue transaction, its ability to enforce this right through legal or equivalent means, its past experience with similar types of flows of resources, and its expectations regarding the resource provider's ability and intention to provide the resources.

22. An announcement of an intention to transfer resources to a public sector entity is not of itself sufficient to identify resources as controlled by an entity.[6]

23. In circumstances where an agreement is required before resources can be transferred, an entity will not identify the resources as controlled until such time as the entity's right in the agreement is enforceable, because the entity cannot exclude or regulate the access of the resource provider to the resources. In many instances, the entity will need to establish enforceability of its control of resources before it can recognize an asset. If an entity does not have an enforceable claim to resources, it cannot exclude or regulate the resource provider's access to those resources.

---

[5] Information that is reliable is free from material error and bias, and can be depended on by users to faithfully represent that which it purports to represent or could reasonably be expected to represent. Paragraph BC16 of IPSAS 1, *Presentation of Financial Statements* discusses the transitional approach to the explanation of reliability.

[6] For example, if a public school were destroyed by a fire and a government announced its intention to transfer funds to rebuild the school, the school would not recognize an inflow of resources (resources receivable) at the time of the announcement.

Contingent Assets

24. An item that possesses the essential characteristics of an asset, but fails to satisfy the criteria for recognition, may warrant disclosure in the notes as a contingent asset (see IPSAS 19).

Subsequent Consideration of Asset Recognition Criteria

25. An entity shall continue to assess the revenue transaction, and any inflow of resources received or to be received, to determine whether the criteria for asset recognition in paragraph 21 are subsequently met.

Existence and Recognition of a Liability

26. An entity may have an obligation associated with the inflow of resources as a result of entering into a revenue transaction without a binding arrangement. The obligation meets the definition of a liability when it is a present obligation of the entity to transfer resources as a result of past events.

27. For a liability to exist, it is necessary that the entity cannot avoid a transfer of resources as a consequence of past events, and that the transfer of resources is probable. An entity should consider the facts and circumstances relating to the revenue transaction to determine if the obligation is enforceable and requires an incremental transfer of resources if the entity does not satisfy its obligation(s).

28. An obligation that meets the definition of a liability shall be recognized as a liability when, and only when, the amount of the obligation can be measured reliably.

Recognition of Revenue Transactions without Binding Arrangements

29. **When an entity recognizes an inflow or right to an inflow of resources as an asset for a revenue transaction without a binding arrangement in accordance with paragraphs 18–25, it recognizes revenue based on the nature of the requirements in its revenue transaction. An entity shall recognize revenue from a transaction without a binding arrangement:**

    (a) **When (or as) the entity satisfies any obligations associated with the inflow of resources that meet the definition of a liability; or**

    (b) **Immediately if the entity does not have an enforceable obligation associated with the inflow of resources.**

Measurement

Measurement of Assets from an Inflow of Resources

30. **An inflow of resources or a right to an inflow of resources that meets the definition of an asset shall initially be measured by the entity at its transaction consideration as at the date at which the criteria for asset recognition are satisfied. To determine the transaction consideration for non-cash consideration, an entity shall measure the non-cash consideration (or right to a non-cash inflow) at its current value, in accordance with the relevant IPSAS.**

31. After initial recognition, an entity shall subsequently measure:

    (a) A receivable asset:

        (i) Within the scope of IPSAS 41 as a financial asset in accordance with IPSAS 41; or

        (ii) Not within the scope of IPSAS 41 on the same basis as a financial asset in accordance with IPSAS 41, by analogy.

    (b) All other assets as prescribed by the applicable IPSAS.

Measurement of Liabilities

32. **The amount recognized as a liability shall be the best estimate of the amount required to settle the obligation at the reporting date. For the purposes of this Standard, the best estimate of a liability on initial recognition is limited to the value of the associated asset recognized.**

33. The estimate takes account of the risks and uncertainties that surround the events causing the liability to be recognized. Where the time value of money is material, the liability shall be measured at the present value of the amount expected to be required to settle the obligation. This requirement is in accordance with the principles established in IPSAS 19.

Measurement of Revenue Transactions without Binding Arrangements

34. **Revenue from transactions without a binding arrangement shall be measured at the amount of the increase in net assets (e.g., the consideration received or receivable) recognized by the entity.**

35. When, as a result of a revenue transaction without a binding arrangement, an entity recognizes an asset, it also recognizes revenue equivalent to the amount of the asset measured in accordance with paragraph 30, subject to any liability recognized in accordance with paragraphs 26–28.

Taxes

36. **An entity shall recognize an asset in respect of taxes, which include other compulsory contributions and levies, when the taxable event, or other event giving rise to other compulsory contributions and levies, occurs and the asset recognition criteria are met.**

37. Tax laws and/or regulations can vary significantly from jurisdiction to jurisdiction, but they have a number of common characteristics. Tax laws and/or regulations (a) establish a government's right to collect the tax, (b) identify the basis on which the tax is calculated, and (c) establish procedures to administer the tax, that is, procedures to calculate the tax receivable and ensure payment is received. Tax laws and/or regulations often require taxpayers to file periodic returns to the government agency that administers a particular tax. The taxpayer generally provides details and evidence of the level of activity subject to tax, and the amount of tax receivable by the government is calculated. Arrangements for receipt of taxes vary widely but are normally designed to ensure that the government receives payments on a regular basis without resorting to legal action. Tax laws and/or regulations are usually rigorously enforced and often impose severe penalties on individuals or other entities breaching the law.

38. Resources arising from taxes satisfy the definition of an asset when the entity controls the resources as a result of past events (taxable events) and expects to receive future economic benefits or service potential from those resources. Resources arising from taxes satisfy the criteria for recognition as an asset when they are presently controlled by the entity as a result of past events and their value can be measured reliably. The entity should consider evidence available at the time of initial recognition, which includes, but is not limited to, disclosure of the taxable event by the taxpayer.

39. Taxation revenue arises only for the government that imposes the tax, and not for other entities. For example, where the national government imposes a tax that is collected by its taxation agency, assets and revenue accrue to the government, not the taxation agency. Further, where a national government imposes a sales tax, the entire proceeds of which it passes to state governments, based on a continuing appropriation, the national government recognizes assets and revenue for the tax, and a decrease in assets and an expense for the transfer to state governments. The state governments will recognize assets and revenue for the transfer. Where a single entity collects taxes on behalf of several other entities, it is acting as an agent for all of them. For example, where a state taxation agency collects income taxes for the state government and

several city governments, it does not recognize revenue in respect of the taxes collected – rather, the individual governments that impose the taxes recognize assets and revenue in respect of the taxes.

40. Taxes do not satisfy the definition of contributions from owners, because the payment of taxes does not give the taxpayers a right to receive (a) distributions of future economic benefits or service potential by the entity during its life, or (b) distribution of any excess of assets over liabilities in the event of the government being wound up. Nor does the payment of taxes provide taxpayers with an ownership right in the government that can be sold, exchanged, transferred, or redeemed.

41. Taxes are a transaction without a binding arrangement because the taxpayer transfers resources to the government, and the government is not required to transfer distinct goods or services to the taxpayer or a third-party beneficiary in return. While the taxpayer may benefit from a range of social policies established by the government, the taxpayer has no control over which benefits they receive as a result of the payment of taxes.

Triggering Event for Taxes and Other Compulsory Contributions and Levies

42. Similar types of taxes are levied in many jurisdictions. The entity analyzes the taxation law in its own jurisdiction to determine what the taxable event is for the various taxes levied.

43. Similar types of other compulsory contributions and levies occur in many jurisdictions. The entity analyzes the law and/or regulation relating to other compulsory contributions and levies in its own jurisdiction to determine what event the government, legislature, or other authority has determined will result in the other compulsory contribution or levy. Examples of such events include:

    (a) Income being earned (where other compulsory contributions are based on earnings, for example other compulsory contributions in respect of unemployment benefits which are based on a percentage of earned income);

    (b) The passage of time (where other compulsory contributions to a social benefit are based on time, for example monthly payments); and

    (c) The purchase of goods or services (where levies are based on a percentage of sales, for example where accident benefit schemes impose a levy on fuel sales).

Advance Receipts of Taxes and Other Compulsory Contributions and Levies

44. Advance receipts, being amounts received in advance of the taxable event, may also arise in respect of taxes. Consistent with the definitions of assets, liabilities, and the requirements of paragraph 36, resources for taxes and other compulsory contributions and levies received prior to the occurrence of the triggering event for other compulsory contributions and levies are recognized as an asset and a liability (advance receipts), because (a) the event that gives rise to the entity's entitlement to the taxes or other compulsory contributions and levies has not occurred, and (b) the criteria for recognition of taxation revenue or revenue from other compulsory contributions and levies have not been satisfied, notwithstanding that the entity has already received an inflow of resources. Advance receipts in respect of taxes and other compulsory contributions and levies are not fundamentally different from other advance receipts, so a liability is recognized until the triggering event for other compulsory contributions and levies occurs. When the triggering event for other compulsory contributions and levies occurs, the liability is discharged and revenue is recognized.

Measurement of Assets Arising from Taxation Transactions

45. Assets arising from taxation transactions are measured in accordance with paragraph 30. An entity shall consider the terms of the transaction and its customary practices to determine the transaction consideration.

Assets arising from taxation transactions are measured at the best estimate of the inflow of resources to the entity, which is consistent with the most likely amount (i.e., the single most likely amount or outcome in a range of possible consideration amounts). The accounting policies for estimating these assets will take account of both the probability that the resources arising from taxation transactions will flow to the government, and the fair value of the resultant assets.

46. Where there is a separation between the timing of the taxable event and the collection of taxes, public sector entities may measure assets arising from these transactions by using, for example, statistical models based on the history of collecting the particular tax, contribution or levy in prior periods. These models will include consideration of the timing of cash receipts from taxpayers, declarations made by taxpayers, and the relationship of taxation, contribution or levy receivable to other events in the economy. Measurement models will also take account of other factors such as:

(a) The tax law and/or regulation allowing taxpayers a longer period to file returns than the government is permitted for publishing general purpose financial statements;

(b) Taxpayers failing to file returns on a timely basis;

(c) Valuing non-monetary assets for tax assessment purposes;

(d) Complexities in tax law and/or regulation requiring extended periods for assessing taxes due from certain taxpayers;

(e) The potential that the financial and political costs of rigorously enforcing the tax laws and/or regulations (or laws and/or regulations relating to other compulsory contributions and levies) and collecting all the taxes, contributions and levies legally due to the government may outweigh the benefits received;

(f) The tax law and/or regulation permitting taxpayers to defer payment of some taxes; and

(g) A variety of circumstances particular to individual taxes and jurisdictions.

47. Measuring assets and revenue arising from taxation transactions using statistical models may result in the actual amount of assets and revenue recognized being different from the amounts determined in subsequent reporting periods as being due from taxpayers in respect of the current reporting period. Revisions to estimates are made in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.

48. In some cases, the assets arising from taxation transactions cannot be reliably measured until some time after the taxable event has occurred. This may occur if a tax base is volatile and a reliable estimation is not possible. In many cases, the assets and revenue may be recognized in the period subsequent to the occurrence of the taxable event. However, there are exceptional circumstances when several reporting periods will pass before a taxable event results in the recognition of an asset. For example, it may take several years to determine and reliably measure the amount of death duty due in respect of a deceased individual's large estate because it includes a number of valuable antiques and artworks, which require specialist valuations. Consequently, the recognition criteria may not be satisfied until payment is received or receivable.

Measurement of Taxes with Collection Uncertainty

49. The measurement of assets arising from taxation transactions is limited to the extent that it is highly probable that a significant reversal of the amount of cumulative revenue recognized will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

50. In assessing whether it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur once the uncertainty related to the variable consideration is subsequently resolved,

an entity shall consider both the likelihood and the magnitude of the revenue reversal. Factors that could increase the likelihood or the magnitude of a revenue reversal include, but are not limited to, any of the following:

(a) The amount of consideration is highly susceptible to factors outside the entity's influence. Those factors may include volatility in a market, the judgment or actions of third parties.

(b) The uncertainty about the amount of consideration is not expected to be resolved for a long period of time. This uncertainty may result from the amount being determined in a period subsequent to timing of the obligating event.

(c) The entity's experience (or other evidence) with similar types of arrangements is limited, or that experience (or other evidence) has limited predictive value.

(d) The entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar arrangements in similar circumstances.

(e) The transaction has a large number and broad range of possible consideration amounts.

Expenses Paid Through the Tax System and Tax Expenditures

51. **Taxation revenue shall be determined at a gross amount. It shall not be reduced for expenses paid through the tax system.**

52. In some jurisdictions, the government uses the tax system as a convenient method of paying to taxpayers benefits that would otherwise be paid using another payment method, such as writing a check, directly depositing the amount in a taxpayer's bank account, or settling another account on behalf of the taxpayer. For example, a government may pay part of residents' health insurance premiums, to encourage the uptake of such insurance, either by reducing the individual's tax liability, by making a payment by check, or by paying an amount directly to the insurance company. In these cases, the amount is payable irrespective of whether the individual pays taxes. Consequently, this amount is an expense of the government and should be recognized separately in the statement of financial performance. Tax revenue should be increased for the amount of any of these expenses paid through the tax system.

53. **Taxation revenue shall not be grossed up for the amount of tax expenditures.**

54. In most jurisdictions, governments use the tax system to encourage certain financial behavior and discourage other behavior. For example, in some jurisdictions, homeowners are permitted to deduct mortgage interest and property taxes from their gross income when calculating tax-assessable income. These types of concessions are available only to taxpayers. If an entity (including a natural person) does not pay tax, it cannot access the concession. These types of concessions are called tax expenditures. Tax expenditures are foregone revenue, not expenses, and do not give rise to inflows or outflows of resources – that is, they do not give rise to assets, liabilities, revenue, or expenses of the taxing government.

55. The key distinction between expenses paid through the tax system and tax expenditures is that, for expenses paid through the tax system, the amount is available to entities irrespective of whether they pay taxes, or use a particular mechanism to pay their taxes. IPSAS 1 prohibits the offsetting of items of revenue and expense unless permitted by another standard. The offsetting of tax revenue and expenses paid through the tax system is not permitted.

Revenue from Transactions with Binding Arrangements

Recognition

Accounting for the Binding Arrangement

56. **An entity shall account for a binding arrangement using the binding arrangement accounting model if all of the following criteria are met:**

    (a) **The parties to the binding arrangement have approved the binding arrangement (in writing, orally or in accordance with other customary practices) and are committed to perform their respective obligations;**

    (b) **The entity can identify each party's rights under the binding arrangement;**

    (c) **The entity can identify the payment terms for the satisfaction of each identified compliance obligation;**

    (d) **The binding arrangement has economic substance (i.e., the risk, timing or amount of the entity's future cash flows or service potential is expected to change as a result of the binding arrangement) (paragraphs AG32–AG34 provide additional guidance for binding arrangements that require a transfer of distinct goods or services to a purchaser or third-party beneficiary); and**

    (e) **It is probable that the entity will collect the consideration to which it will be entitled for satisfying its compliance obligations in accordance with the terms of the binding arrangement (paragraphs AG35–AG39 provide additional guidance). In evaluating whether collectability of an amount of consideration is probable, an entity shall consider only the resource provider's ability and intention to pay that amount of consideration when it is due. The amount of consideration to which the entity will be entitled may be less than the transaction consideration stated in the binding arrangement if the consideration is variable because the entity may offer the resource provider a price concession (see paragraph 115).**

57. If a binding arrangement meets the criteria in paragraph 56 at the inception of the binding arrangement, an entity shall not reassess those criteria unless there is an indication of a significant change in facts and circumstances. For example, if a resource provider's ability to pay the consideration deteriorates significantly, an entity would reassess whether it is probable that the entity will collect the consideration to which the entity will be entitled for the satisfaction of any remaining compliance obligations in the binding arrangement.

58. When a binding arrangement does not meet all of the criteria in paragraph 56, the entity shall recognize any consideration received as revenue only when either of the following events has occurred:

    (a) The entity has fully satisfied its compliance obligation to which the consideration that has been received relates and the consideration received from the resource provider is non-refundable; or

    (b) The binding arrangement has been terminated and the consideration received from the resource provider is non-refundable.

    An entity shall continue to assess the binding arrangement to determine whether the criteria in paragraph 56 are subsequently met.

59. For the purpose of applying this Standard, an arrangement is not a binding arrangement if each party to the binding arrangement has the unilateral enforceable right to terminate a wholly unsatisfied binding arrangement without compensating the other party (or parties).

60. A binding arrangement is wholly unsatisfied if both of the following criteria are met:

(a) The entity has not yet started satisfying any of its compliance obligations in the binding arrangement; and

(b) The resource provider has not yet paid, and is not yet obligated to pay, any consideration to the entity for the entity satisfying any of its compliance obligations in the binding arrangement.

61. If an entity has determined that its revenue arises from a transaction with a binding arrangement that is to be accounted for using the binding arrangement accounting model, the entity shall also consider whether it should be combined with other binding arrangements, and whether there are any modifications to its binding arrangement.

Combination of Binding Arrangements

62. An entity shall combine two or more binding arrangements entered into at or near the same time with the same resource provider (or related parties of the resource provider) and account for the binding arrangements as a single binding arrangement if one or more of the following criteria are met:

(a) The binding arrangements are negotiated as a package with a single objective;

(b) The amount of consideration to be paid in one binding arrangement depends on the consideration or performance of the other binding arrangement; or

(c) The promises in the binding arrangements (or some promises in each of the binding arrangements) are a single compliance obligation in accordance with paragraphs 68–77.

Modifications to a Binding Arrangement

63. A modification to a binding arrangement is a change in the scope or consideration (or both) of a binding arrangement that is approved by the parties to the binding arrangement. In some sectors and jurisdictions, a modification to a binding arrangement may be described as a variation, an amendment, or a change order. A modification to a binding arrangement exists when the parties to a binding arrangement approve a modification that either creates new or changes existing enforceable rights and obligations of the parties to the binding arrangement. A modification to a binding arrangement could be approved in writing, by oral agreement or implied by an entity's customary practices. If the parties to the binding arrangement have not approved a modification to a binding arrangement, an entity shall continue to apply this Standard to the existing binding arrangement until the modification to a binding arrangement is approved.

64. A modification to a binding arrangement may exist even though the parties to the binding arrangement have a dispute about the scope or consideration (or both) of the modification or the parties have approved a change in the scope of the binding arrangement but have not yet determined the corresponding change in consideration. In determining whether the rights and obligations that are created or changed by a modification are enforceable, an entity shall consider all relevant facts and circumstances including the terms of the binding arrangement and other evidence. If the parties to a binding arrangement have approved a change in the scope of the binding arrangement but have not yet determined the corresponding change in consideration, an entity shall estimate the change to the transaction consideration arising from the modification in accordance with paragraphs 113–117 on estimating variable consideration and paragraphs 119–121 on constraining estimates of variable consideration.

65. An entity shall account for a modification to a binding arrangement as a separate binding arrangement if both of the following conditions are present:

(a) The scope of the binding arrangement increases because of the addition of promises that are distinct (in accordance with paragraphs 73–77); and

(b) The consideration of the binding arrangement increases by an amount of consideration that reflects the entity's stand-alone values of the additional promises and any appropriate adjustments to that value to reflect the circumstances of the particular binding arrangement. For example, an entity may adjust the stand-alone value of an additional good or service for a discount that the resource provider receives, because it is not necessary for the entity to incur the related costs that it would incur when providing a similar good or service to a new resource provider.

66. If a modification to a binding arrangement is not accounted for as a separate binding arrangement in accordance with paragraph 65, an entity shall account for the promises not yet transferred at the date of the modification to a binding arrangement (i.e., the remaining promises) in whichever of the following ways is applicable:

(a) An entity shall account for the modification to a binding arrangement as if it were a termination of the existing binding arrangement and the creation of a new binding arrangement, if the remaining promises are distinct from the promises satisfied on or before the date of the modification to a binding arrangement. The amount of consideration to be allocated to the remaining compliance obligations (or to the remaining promises in a single compliance obligation identified in accordance with paragraph (b)) is the sum of:

(i) The consideration promised by the resource provider (including amounts already received from the resource provider) that was included in the estimate of the transaction consideration and that had not been recognized as revenue; and

(ii) The consideration promised as part of the modification to a binding arrangement.

(b) An entity shall account for the modification to a binding arrangement as if it were a part of the existing binding arrangement if the remaining promises are not distinct and, therefore, form part of a single compliance obligation that is partially satisfied at the date of the modification to a binding arrangement. The effect that the modification to a binding arrangement has on the transaction consideration, and on the entity's measure of progress towards complete satisfaction of the compliance obligation, is recognized as an adjustment to revenue (either as an increase in or a reduction of revenue) at the date of the modification of a binding arrangement (i.e., the adjustment to revenue is made on a cumulative catch-up basis).

(c) If the remaining promises are a combination of items (a) and (b), then the entity shall account for the effects of the modification on the unsatisfied (including partially unsatisfied) compliance obligations in the modified binding arrangement in a manner that is consistent with the objectives of this paragraph.

Duration of a Binding Arrangement

67. Some binding arrangements may have no fixed duration and can be terminated or modified by either party at any time. Other binding arrangements may automatically renew on a periodic basis that is specified in the binding arrangement. An entity shall apply this Standard to the duration of the binding arrangement (i.e., the period of the binding arrangement) in which the parties to the binding arrangement have present enforceable rights and obligations.

Identifying Compliance Obligations in a Binding Arrangement

68. **At the inception of the binding arrangement, an entity shall assess the goods or services promised in a binding arrangement with a resource provider and shall identify as a compliance obligation each promise to use resources internally for, or transfer to an external party or parties (i.e., the purchaser (the resource provider) or third-party beneficiary), either:**

(a) **A good or service (or a bundle of goods or services) that is distinct; or**

(b) **A series of distinct goods or services that are substantially the same in characteristics and risks and that have the same pattern of use internally or transfer to the purchaser or third-party beneficiary (see paragraph 70).**

Paragraphs AG43–AG56 provide additional guidance on identifying compliance obligations.

69. **A binding arrangement has at least one compliance obligation because its enforceability holds the entity accountable for satisfying its obligations of the arrangement, for which the entity has little or no realistic alternative to avoid.**

70. A series of distinct goods or services has the same pattern of use internally or transfer to the purchaser or third-party beneficiary if both of the following criteria are met:

(a) Each distinct good or service in the series would meet the criteria in paragraph 92 or 95 to be a compliance obligation satisfied over time; and

(b) In accordance with paragraphs 98–99, the same method would be used to measure the entity's progress towards complete satisfaction of the compliance obligation.

Promises to Use Resources

71. A binding arrangement generally explicitly states the goods or services that an entity promises to either obtain for use internally or transfer to a purchaser or third-party beneficiary. However, the compliance obligations identified in a binding arrangement may not be limited to the goods or services that are explicitly stated in that binding arrangement. This is because a binding arrangement may also include promises that are implied by an entity's customary practices, published policies or specific statements if, at the time of entering into the binding arrangement, those promises create a valid expectation of the resource provider that the entity will perform, and are of sufficient specificity for them to be able to hold the entity accountable.

72. Compliance obligations do not include activities that an entity must undertake to satisfy a binding arrangement unless the completion of those activities uses resources in a manner clearly specified in the binding arrangement. For example, an entity may need to perform various administrative tasks to set up a binding arrangement. The performance of those tasks does not use a resource internally for a service or transfer a service to a purchaser or third-party beneficiary as the tasks are performed. Therefore, those setup activities are not a compliance obligation.

Identifying Distinct Promises to Use Resources

73. A compliance obligation is a unit of account in a revenue transaction with a binding arrangement that represents a distinct promise or group of promises to which recognition criteria and measurement concepts are applied. A good or service that is promised in a binding arrangement is distinct if both of the following criteria are met:

(a) The party receiving the good or service can generate economic benefits or service potential from the good or service either on its own or together with other resources that are readily available to that party (i.e., the good or service is capable of being distinct); and

(b) The entity's promise to use resource internally for the good or service or transfer the good or service to the purchaser or third-party beneficiary is separately identifiable from other promises in the binding arrangement (i.e., the promise is distinct within the context of the binding arrangement).

See paragraphs AG53–AG56 for specific guidance on identifying distinct promises to use resources for another party.

74. An entity determines if the party receiving the good or service is itself, resource provider (purchaser), or a specified third-party beneficiary by considering the nature of its compliance obligation.

(a) In a compliance obligation where an entity promises to use resources internally for a distinct good or service, the entity itself is the recipient of the goods or services.

(b) In a compliance obligation where an entity promises to use resources to transfer a distinct good or service to a purchaser or third-party beneficiary, the recipient of the goods or services is either the purchaser, or the third-party beneficiary.

See paragraph AG27 for additional guidance.

75. A party can generate the economic benefits or service potential from the good or service in accordance with paragraph (a) if the good or service could be used, consumed, sold for an amount that is greater than scrap value or otherwise held in a way that generates economic benefits or service potential. For some goods or services, a party may be able to generate economic benefits or service potential from the good or service on its own. For other goods or services, a party may be able to generate economic benefits or service potential from the good or service only in conjunction with other readily available resources. A readily available resource is a good or service that is sold separately (by the entity or another entity) or a resource that the party has already obtained from the entity (including goods or services that the entity will use internally or that will be transferred to the purchaser or third-party beneficiary, under the binding arrangement) or from other transactions or events. Various factors may provide evidence that the party can generate economic benefits or service potential from the good or service either on its own or in conjunction with other readily available resources. For example, the fact that the entity regularly internally uses or provides a good or service separately would indicate that a party can generate economic benefits or service potential from the good or service on its own or with other readily available resources.

76. In assessing whether an entity's promises to use resources internally for goods or services or transfer goods or services to the purchaser or third-party beneficiary are separately identifiable in accordance with paragraph (b), the objective is to determine whether the nature of the promise, within the context of the binding arrangement, is a promise to use resources in individually specific ways rather than in a combined manner. Factors that indicate that two or more promises are not separately identifiable include, but are not limited to, the following:

(a) The entity provides a significant service of integrating the goods or services with other goods or services promised in the binding arrangement into a bundle of goods or services that represent the combined output or outputs for which the resource provider has entered into binding arrangements. In other words, the entity is using the goods or services as inputs to produce or deliver the combined output or outputs specified by the resource provider. A combined output or outputs might include more than one phase, element or unit.

(b) One or more of the goods or services significantly modifies or customizes, or are significantly modified or customized by, one or more of the other goods or services promised in the binding arrangement.

(c) The goods or services are highly interdependent or highly interrelated. In other words, each of the goods or services is significantly affected by one or more of the other goods or services in the binding arrangement. For example, in some cases, two or more goods or services are significantly affected by each other because the entity would not be able to satisfy its promise by using each of the goods or services internally, or transferring each of the goods or services, independently.

77. If a promised good or service is not distinct, an entity shall combine that good or service with other promised goods or services until it identifies a bundle of goods or services that is distinct. In some cases, that would result in the entity accounting for all of the goods or services promised in a binding arrangement as a single compliance obligation.

Initial Recognition of Revenue Transactions with a Binding Arrangement

78. When a binding arrangement is wholly unsatisfied in accordance with paragraph 60, an entity shall not recognize any asset, liability or revenue associated with the binding arrangement, unless the binding arrangement is onerous. The recognition of assets, liabilities, and revenues commences when one party to the binding arrangement starts to satisfy its obligations under the arrangement.

79. Where a binding arrangement becomes onerous, an entity shall account for the expected deficit in accordance with IPSAS 19. Paragraphs AG57–AG58 provide additional guidance on unsatisfied binding arrangements.

Analysis of the Initial Inflow of Resources

80. An entity may receive or have the right to an inflow of resources arising from a revenue transaction with a binding arrangement before or after it begins satisfying its compliance obligations. An entity should apply paragraphs 18–25, and recognize an inflow of resources from a revenue transaction with a binding arrangement as an asset when the definition of, and the recognition criteria for, an asset are met.

Existence and Recognition of a Liability

81. Public sector entities typically receive resources from governments or other entities. When an entity recognizes an asset for an inflow of resources, it shall consider if there are compliance obligations related to the inflow which result in the recognition of a liability.

82. A compliance obligation gives rise to a liability when:

    (a) The entity has received resources associated with its unsatisfied or partially unsatisfied compliance obligation in a binding arrangement; and

    (b) The resource provider can enforce the binding arrangement, if the entity does not satisfy the compliance obligation(s) associated with the consideration received, by requiring the entity to transfer resources to another party in compliance with the terms of the binding arrangement.

    See additional guidance in paragraphs AG59–AG62.

83. In accordance with paragraph 27, a liability exists if the entity cannot avoid a transfer of resources as a consequence of past events, and the transfer of resources is probable. An entity should consider the facts and circumstances relating to the binding arrangement to determine if the other party or parties (which is typically the resource provider) are able to enforce their rights and impose a consequence that requires an incremental transfer of resources as a result of the entity's non-compliance (i.e., not satisfying its compliance obligation(s)).

84. As an administrative convenience, a transfer of resources as a consequence of the entity not satisfying its compliance obligations may be effectively returned by deducting the amount to be returned from other assets due to be transferred for other purposes. The entity will still recognize the gross amounts in its financial statements: that is, the entity will recognize a reduction in assets and liabilities for the return of the transfer under the terms of the breached binding arrangement, and will reflect the recognition of assets, liabilities, and/or revenue for the new transfer.

85. If an entity receives resources prior to both the parties agreeing to the terms of the arrangement and it is expected that a binding arrangement will be entered into, it recognizes a liability for an advance receipt until such time as the arrangement becomes binding.

86. A compliance obligation that meets the definition of a liability shall be recognized as a liability when, and only when the amount of the obligation can be measured reliably. The entity shall continue to recognize the liability until one of the events in paragraph 58 is subsequently met.

Recognition of Revenue Transactions with a Binding Arrangement

87. **When an entity receives an inflow of resources in a revenue transaction with a binding arrangement that meets the definition of and recognition criteria for, an asset in accordance with paragraphs 18–25, the entity shall recognize:**

    (a) **Revenue for any satisfied compliance obligations in respect of the same inflow; and**

    (b) **A liability for any unsatisfied compliance obligations in respect of the same inflow.**

88. **The timing of revenue recognition is determined by the nature of the requirements in a binding arrangement and their settlement. An entity shall recognize revenue from a transaction with a binding arrangement when (or as) the entity satisfies a compliance obligation by using resources in the specified manner, in compliance with the terms of the binding arrangement. The entity shall reduce the carrying amount of any liability that was recognized in accordance with paragraphs 81–86 by an equal amount. Paragraphs AG63–AG95 provide additional guidance on the satisfaction of compliance obligations.**

89. **An entity satisfies a compliance obligation by using resources internally for a promised good or service (i.e., an asset), or to transfer a promised good or service to a purchaser or third-party beneficiary. An asset is used internally or transferred when (or as) the entity receiving the asset obtains control of that asset.**

90. Goods and services are assets, even if only momentarily, when they are received and used (as in the case of many services). Control includes the ability to prevent other entities from directing the use of, and obtaining the benefits from, a resource (see paragraph 18). The economic benefits or service potential embodied in a resource are the potential cash flows (inflows or savings in outflows), or the capability to provide services that contribute to achieving the entity's objectives, that can be obtained directly or indirectly in many ways, such as by:

    (a) Using the resource to provide internal training;

    (b) Using the resource to produce goods or provide services (including public services);

    (c) Using the resource to enhance the value of other assets;

    (d) Using the resource to settle liabilities or reduce expenses;

    (e) Selling or exchanging the resource;

    (f) Pledging the resource to secure a loan; and

    (g) Holding the resource.

91. For each compliance obligation identified in accordance with paragraphs 68–77, an entity shall determine at the inception of the binding arrangement whether it satisfies the compliance obligation over time (in accordance with paragraphs 92–93 or paragraphs 95–96) or satisfies the compliance obligation at a point in time (in accordance with paragraph 94 or paragraph 97). If the entity does not satisfy a compliance obligation over time, the compliance obligation is satisfied at a point in time.

Compliance Obligations to Use Resources for Goods or Services Internally

Satisfied Over Time

92. An entity obtains control of a good or service over time and, therefore, satisfies a compliance obligation and recognizes revenue over time, if one of the following criteria is met:

(a) The entity simultaneously receives and consumes the economic benefits or service potential provided by the entity's performance as the entity performs (see paragraphs AG64–AG65);

(b) The entity's performance creates or enhances an asset (for example, work in progress) that the entity controls as the asset is created or enhanced (see paragraph AG66); or

(c) The entity has an enforceable right to consideration for performance completed to date (see paragraph 93).

93. An entity shall consider the terms of the binding arrangement, as well as any laws that apply to the binding arrangement, when evaluating whether it has an enforceable right to consideration for any compliance obligation completed to date in accordance with paragraph (c). The right to consideration for any compliance obligation completed to date does not need to be for a fixed amount. However, at all times throughout the duration of the binding arrangement, the entity must be entitled to an amount that at least compensates the entity for any compliance obligation completed to date if the binding arrangement is terminated by the resource provider or another party with enforceable rights and obligations in the binding arrangement for reasons other than the entity's failure to perform as promised. Paragraphs AG67–AG71 provide guidance for assessing the existence and enforceability of a right to consideration and whether an entity's right to consideration would entitle the entity to be paid for any compliance obligation completed to date.

Satisfied at a Point in Time

94. If a compliance obligation is not satisfied over time in accordance with paragraphs 92–93, an entity satisfies the compliance obligation at a point in time. To determine the point in time at which the entity obtains control of a promised asset and satisfies a compliance obligation, the entity shall consider the requirements for control in paragraphs 89–90.

Compliance Obligations to Transfer Goods or Services to Another Party (Purchaser or Third-Party Beneficiary)

Satisfied Over Time

95. An entity transfers control of a good or service over time and, therefore, satisfies a compliance obligation and recognizes revenue over time, if one of the following criteria is met:

(a) The purchaser or third-party beneficiary simultaneously receives and consumes the economic benefits or service potential provided by the entity's performance as the entity performs (see paragraphs AG73–AG74);

(b) The entity's performance creates or enhances an asset (for example, work in progress) that the purchaser or third-party beneficiary controls as the asset is created or enhanced (see paragraph AG75); or

(c) The entity's performance does not create an asset with an alternative use to the entity (see paragraph 96) and the entity has an enforceable right to consideration for performance completed to date (see paragraph 93).

96. An asset created by an entity's performance does not have an alternative use to an entity if the entity is either restricted by the binding arrangement from readily directing the asset for another use during the creation or enhancement of that asset or limited practically from readily directing the asset in its completed state for another use. The assessment of whether an asset has an alternative use to the entity is made at the inception of the binding arrangement. After the inception of the binding arrangement, an entity shall not update the assessment of the alternative use of an asset unless the parties to the binding arrangement approve a modification to a binding arrangement that substantively changes the compliance obligation. Paragraphs AG76–AG78 provide guidance for assessing whether an asset has an alternative use to an entity.

Satisfied at a Point in Time

97. If a compliance obligation is not satisfied over time in accordance with paragraphs 95–96, an entity satisfies the compliance obligation at a point in time. To determine the point in time at which a purchaser or third-party beneficiary obtains control of a promised asset and the entity satisfies a compliance obligation, the entity shall consider the requirements for control in paragraphs 89–90 (and AG183–AG185 if the entity has a repurchase agreement). In addition, an entity shall consider indicators of the transfer of control, which include, but are not limited to, the following:

(a) The entity has a present right to consideration for the asset — if a resource provider is presently obligated to pay for an asset, then that may indicate that the resource provider has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset in exchange.

(b) The purchaser or third-party beneficiary has legal title to the asset — legal title may indicate which party to a binding arrangement has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, an asset or to restrict the access of other entities to those economic benefits or service potential. Therefore, the transfer of legal title of an asset may indicate that the purchaser or third-party beneficiary has obtained control of the asset. If an entity retains legal title solely as protection against the resource provider's failure to pay, those rights of the entity would not preclude the purchaser or third-party beneficiary from obtaining control of an asset.

(c) The entity has transferred physical possession of the asset — the purchaser's or third-party beneficiary's physical possession of an asset may indicate that the resource provider has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset or to restrict the access of other entities to those economic benefits or service potential. However, physical possession may not coincide with control of an asset. For example, in some repurchase agreements and in some consignment arrangements, a resource provider or consignee may have physical possession of an asset that the entity controls. Conversely, in some bill-and-hold arrangements, the entity may have physical possession of an asset that the resource provider controls. Paragraphs AG183–AG196, AG197–AG198, and AG199–AG202 provide guidance on accounting for repurchase agreements, consignment arrangements and bill-and-hold arrangements, respectively.

(d) The purchaser or third-party beneficiary has the significant risks and rewards of ownership of the asset — the transfer of the significant risks and rewards of ownership of an asset to the purchaser or third-party beneficiary may indicate that the resource provider has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset. However, when evaluating the risks and rewards of ownership of a promised asset, an entity shall exclude any risks that give rise to a separate compliance obligation in addition to the compliance obligation to transfer the asset. For example, an entity may have transferred control of an asset to a resource provider but not yet satisfied an additional compliance obligation to provide maintenance services related to the transferred asset.

(e) The resource provider has accepted the asset — the resource provider's acceptance of an asset may indicate that it has obtained the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset. To evaluate the effect of an acceptance clause in a binding arrangement on when control of an asset is transferred, an entity shall consider the guidance in paragraphs AG82–AG85.

Measuring Progress Towards Complete Satisfaction of a Compliance Obligation

98. For each compliance obligation satisfied over time in accordance with paragraphs 92–93 (for compliance obligations to use goods or services internally) or paragraphs 95–96 (for compliance obligations to transfer

goods or services to another party), an entity shall recognize revenue over time by measuring the progress towards complete satisfaction of that compliance obligation. The objective when measuring progress is to depict an entity's performance to satisfy its compliance obligation.

99. An entity shall apply a single method of measuring progress for each compliance obligation satisfied over time and the entity shall apply that method consistently to similar compliance obligations and in similar circumstances. At the end of each reporting period, an entity shall remeasure its progress towards complete satisfaction of a compliance obligation satisfied over time.

Methods for Measuring Progress

100. Appropriate methods of measuring progress include output methods and input methods. Paragraphs AG86–AG95 provide guidance for using output methods and input methods to measure an entity's progress towards complete satisfaction of a compliance obligation. In determining the appropriate method for measuring progress, an entity shall consider the nature of the entity's promise, and whether the terms of the binding arrangement specify the activities or expenditures an entity is to perform or incur, respectively.

101. When applying a method for measuring progress for a specific compliance obligation, an entity shall exclude from the measure of progress any goods or services not directly related to that compliance obligation:

(a) For a compliance obligation where the entity promises to use resources internally for a distinct good or service, the entity shall exclude from the measure of progress any goods or services for which the entity does not retain control. Conversely, an entity shall include in the measure of progress any goods or services for which the entity retains control when satisfying that compliance obligation; and

(b) For a compliance obligation where the entity promises to use resources to transfer a distinct good or service to another party, the entity shall exclude from the measure of progress any goods or services for which the entity does not transfer control to another party (i.e., a purchaser or third-party beneficiary). Conversely, an entity shall include in the measure of progress any goods or services for which the entity does transfer control to another party (i.e., a purchaser or third-party beneficiary) when satisfying that compliance obligation.

102. As circumstances change over time, an entity shall update its measure of progress to reflect any changes in the satisfaction of the compliance obligation. Such changes to an entity's measure of progress shall be accounted for as a change in accounting estimate in accordance with IPSAS 3.

Reasonable Measures of Progress

103. An entity shall recognize revenue for a compliance obligation satisfied over time only if the entity can reasonably measure its progress towards complete satisfaction of the compliance obligation. An entity would not be able to reasonably measure its progress towards complete satisfaction of a compliance obligation if it lacks reliable information that would be required to apply an appropriate method of measuring progress.

104. In some circumstances (for example, in the early stages of a binding arrangement), an entity may not be able to reasonably measure the outcome of a compliance obligation, but the entity expects to recover the costs incurred in satisfying the compliance obligation. In those circumstances, the entity shall recognize revenue only to the extent of the costs incurred until such time that it can reasonably measure the outcome of the compliance obligation.

Subsequent Consideration of Asset Recognition Criteria

105. When an inflow of resources from a binding arrangement within the scope of this Standard does not meet the criteria in paragraph 18, and an entity subsequently receives an inflow of resources from the resource

provider, the entity shall recognize the inflow received as revenue only when either of the following events has occurred:

(a) The entity has no unsatisfied compliance obligation; or

(b) The arrangement has been terminated and the inflow received from the resource provider is non-refundable.

Measurement

Measurement of Assets from an Inflow of Resources

106. **An asset in a revenue transaction with a binding arrangement shall initially be measured by the entity at its transaction consideration as at the date in which the criteria for asset recognition are satisfied (see paragraphs 109–132). An entity shall subsequently measure the asset in accordance with paragraph 31.**

Measurement of Liabilities

107. The amount recognized as a liability shall be the best estimate of the amount required to settle the compliance obligation at the reporting date. For the purposes of this Standard, the best estimate of a liability on initial recognition is limited to the value of the associated asset recognized for the inflow of resources. An entity shall apply paragraph 33 in determining its best estimate of the liability.

Measurement of Revenue Transactions with Binding Arrangements

108. **When (or as) a compliance obligation is satisfied, an entity shall recognize as revenue the amount of the transaction consideration (which excludes estimates of variable consideration that are constrained in accordance with paragraphs 119–121) that is allocated to that compliance obligation.**

Determining the Transaction Consideration

109. An entity shall consider the terms of the binding arrangement and its customary practices to determine the transaction consideration. The transaction consideration is the amount of resources to which an entity expects to be entitled in the binding arrangement for satisfying its compliance obligations, excluding amounts collected on behalf of third parties (for example, some sales taxes). The consideration promised in a binding arrangement may include fixed amounts, variable amounts, or both.

110. Credit risk is not considered when determining the amount the entity expects to be entitled to. Impairment losses relating to a credit risk (that is, impairment of a receivable) are measured based on the guidance in IPSAS 41.

111. The nature, timing and amount of consideration affect the estimate of the transaction consideration. When determining the transaction consideration, an entity shall consider the effects of all of the following:

(a) Variable consideration (see paragraphs 113–117 and 122);

(b) Constraining estimates of variable consideration (see paragraphs 119–121);

(c) The existence of a significant financing component in the binding arrangement (see paragraphs 123–128);

(d) Non-cash consideration (see paragraphs 129–132); and

(e) Consideration payable to a resource provider (see paragraphs AG104–AG106).

112. For the purpose of determining the transaction consideration, an entity shall assume that the consideration will be received in accordance with the terms of the existing binding arrangement and that the binding arrangement will not be cancelled, renewed or modified.

Variable Consideration

113. If the consideration in the binding arrangement includes a variable amount, an entity shall estimate the amount of the consideration to which the entity expects to collect from the resource provider.

114. An amount of consideration can vary because of discounts, rebates, refunds, credits, price concessions, incentives, performance bonuses, penalties or other similar items. The consideration can also vary if an entity's entitlement to the consideration is contingent on the occurrence or non-occurrence of a future event. For example, an amount of consideration would be variable if a fixed amount is promised as a performance bonus on achievement of a milestone specified in the binding arrangement.

115. The variability relating to the consideration may be explicitly stated in laws, regulations, or a binding arrangement. In addition to the terms of laws, regulations, or a binding arrangement, the consideration is variable if either of the following circumstances exists:

(a) The resource provider has a valid expectation arising from an entity's customary practices, published policies or specific statements that the entity will accept an amount of consideration that is less than the amount stated in the binding arrangement or applicable legislation. That is, it is expected that the entity will offer or accept a reduced amount due to a concession. Depending on the jurisdiction, sector or resource provider, this offer may be referred to as a discount, rebate, refund or credit; or

(b) Other facts and circumstances indicate that the entity's intention, when entering into the arrangement with the resource provider, is to offer a price concession to the resource provider.

Paragraph AG37 provides additional guidance on implicit price concessions.

116. An entity shall estimate an amount of variable consideration by using either of the following methods, depending on which method the entity expects to better predict the amount of consideration to which it expects to be entitled to:

(a) The expected value—the expected value is the sum of probability-weighted amounts in a range of possible consideration amounts. An expected value may be an appropriate estimate of the amount of variable consideration if an entity has a large number of binding arrangements with similar characteristics; or

(b) The most likely amount—the most likely amount is the single most likely amount in a range of possible consideration amounts (i.e., the single most likely outcome of the binding arrangement). The most likely amount may be an appropriate estimate of the amount of variable consideration if the binding arrangement has only two possible outcomes (for example, an entity either completes construction of infrastructure on schedule or not).

117. An entity shall apply one method consistently when estimating the effect of uncertainty on an amount of variable consideration to which the entity expects to be entitled. In addition, an entity shall consider all the information (historical, current and forecast) that is reasonably available to the entity and shall identify a reasonable number of possible consideration amounts. The information that an entity uses to estimate the amount of variable consideration would typically be similar to the information that the entity's management uses to estimate the amount receivable. In cases where the binding arrangement requires the entity to transfer distinct goods or services to another party, the information would typically be similar to the information that the entity's management uses during the bid-and-proposal process and in establishing prices for promised goods or services.

Refund Liabilities

118. An entity may enter into a binding arrangement which includes a right of return. In these cases, the entity shall recognize a refund liability if the entity receives consideration from a resource provider and expects to refund some or all of that consideration to the resource provider relating to a transfer of distinct goods or services to a purchaser or third-party beneficiary. A refund liability is measured at the amount of consideration received (or receivable) for which the entity does not expect to be entitled (i.e., amounts not included in the transaction consideration). The refund liability (and corresponding change in the transaction consideration and, therefore, the binding arrangement liability) shall be updated at the end of each reporting period for changes in circumstances. To account for a refund liability relating to a sale with a right of return, an entity shall apply the guidance in paragraphs AG96–AG103.

Constraining Estimates of Variable Consideration

119. An entity shall include in the transaction consideration some or all of an amount of variable consideration estimated in accordance with paragraph 116 only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

120. In assessing whether it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur once the uncertainty related to the variable consideration is subsequently resolved, an entity shall consider both the likelihood and the magnitude of the revenue reversal. Factors that could increase the likelihood or the magnitude of a revenue reversal include, but are not limited to, any of the following:

(a) The amount of consideration is highly susceptible to factors outside the entity's influence. Those factors may include volatility in a market, the judgment or actions of third parties, weather conditions and a high risk of obsolescence of the consideration (when it is non-cash) or the promised good or service.

(b) The uncertainty about the amount of consideration is not expected to be resolved for a long period of time. This uncertainty may result from the amount being determined in a period subsequent to timing of the obligating event.

(c) The entity's experience (or other evidence) with similar types of binding arrangements is limited, or that experience (or other evidence) has limited predictive value.

(d) The entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar binding arrangements in similar circumstances.

(e) The binding arrangement has a large number and broad range of possible consideration amounts.

121. An entity shall apply paragraphs AG180–AG182 to account for consideration in the form of a sales-based or usage-based royalty that is promised in exchange for a license of intellectual property.

Reassessment of Variable Consideration

122. At the end of each reporting period, an entity shall update the estimated transaction consideration (including updating its assessment of whether an estimate of variable inflow is constrained) to represent faithfully the circumstances present at the end of the reporting period and the changes in circumstances during the reporting period. The entity shall account for changes in the transaction consideration in accordance with paragraphs 144–147.

The Existence of a Significant Financing Component in the Binding Arrangement

123. In determining the transaction consideration, an entity shall adjust the amount of consideration for the effects of the time value of money if the timing of the inflows agreed to by the parties to the binding arrangement

(either explicitly or implicitly) provides the resource provider or the entity with a significant benefit of financing the binding arrangement. In those circumstances, the binding arrangement contains a significant financing component. A significant financing component may exist regardless of whether the promise of financing is explicitly stated in the binding arrangement or implied by the terms agreed to by the parties to the binding arrangement or applicable laws and/or regulations.

124. The objective when adjusting the promised amount of consideration for a significant financing component is for an entity to recognize revenue at an amount that reflects the consideration that a resource provider would have transferred if the resource provider had transferred cash (i.e., the cash price) for those goods or services promised in the compliance obligation when (or as) the entity uses them (internally) or transfers them (to the purchaser or third-party beneficiary). An entity shall consider all relevant facts and circumstances in assessing whether a binding arrangement contains a financing component and whether that financing component is significant to the binding arrangement, including both of the following:

(a) The difference, if any, between the amount of promised consideration and the cash price of the promised goods or services in the compliance obligation; and

(b) The combined effect of both of the following:

(i) The expected length of time between when the entity satisfies the compliance obligation (if any) and when the resource provider transfers the consideration; and

(ii) The prevailing interest rates in the relevant market.

125. Notwithstanding the assessment in paragraph 124, a binding arrangement with a resource provider would not have a significant financing component if any of the following factors exist:

(a) The resource provider made the transfer in advance and the timing of when the compliance obligation is satisfied is at the discretion of the resource provider.

(b) A substantial amount of the inflow promised by the resource provider is variable and the amount or timing of that consideration varies on the basis of the occurrence or non-occurrence of a future event that is not substantially within the control of the resource provider or the entity.

(c) The difference between the consideration and the cash price of the transfer (as described in paragraph 124) arises for reasons other than the provision of finance to either the resource provider or the entity, and the difference between those amounts is proportional to the reason for the difference. For example, the terms might provide the entity or the resource provider with protection from the other party failing to adequately complete some or all of its obligations under the binding arrangement.

126. As a practical expedient, an entity need not adjust the consideration for the effects of a significant financing component if the entity expects, at the inception of the binding arrangement, that the period between when the entity satisfies the compliance obligation and when the resource provider transfers the consideration will be one year or less.

127. To meet the objective in paragraph 124 when adjusting the consideration for a significant financing component, an entity shall use the discount rate that would be reflected in a separate financing transaction between the entity and its resource provider at the inception of the binding arrangement. That rate would reflect the credit characteristics of the party receiving financing in the binding arrangement, as well as any collateral or security provided by the resource provider or the entity, including assets transferred in the binding arrangement. An entity may be able to determine that rate by identifying the rate that discounts the nominal amount of the consideration to the price that the resource provider would transfer when (or as) the compliance obligation is satisfied (where applicable). After the inception of the binding arrangement, an entity shall not update the discount rate for changes in interest rates or other circumstances (such as a change in the assessment of the resource provider’s credit risk).

128. An entity shall present the effects of financing (interest revenue or interest expense) separately from revenue from binding arrangements in the statement of financial performance. Interest revenue or interest expense is recognized only to the extent that a binding arrangement asset (or receivable) or a binding arrangement liability is recognized in accounting for a binding arrangement.

Non-Cash Consideration

129. To determine the transaction consideration for binding arrangements in which a resource provider promises consideration in a form other than cash, an entity shall measure the non-cash consideration (or right to a non-cash inflow) at its current value, in accordance with the relevant IPSAS, as at the time when the criteria for asset recognition are satisfied.

130. If an entity cannot reasonably estimate the current value of the non-cash consideration, the entity shall measure the consideration indirectly by reference to the stand-alone value of the goods or services that are required to be used internally or transferred to the purchaser or third-party beneficiary (or class of resource provider) for the consideration.

131. The current value of the non-cash consideration may vary because of the form of the consideration. If the current value of the non-cash consideration promised by a resource provider varies for reasons other than only the form of the consideration, an entity shall apply the requirements in paragraphs 119–121.

132. If a resource provider contributes goods or services (for example, materials, equipment or labor) to facilitate an entity's satisfaction of the binding arrangement, the entity shall assess whether it obtains control of those contributed goods or services. If so, the entity shall account for the contributed goods or services as non-cash consideration received from the resource provider.

Allocating the Transaction Consideration to Compliance Obligations

133. **The objective when allocating the transaction consideration is for an entity to allocate the transaction consideration to each compliance obligation in the amount that depicts the amount of consideration to which the entity expects to be entitled in satisfying the compliance obligations.**

134. To meet the allocation objective, an entity shall allocate the transaction consideration to each compliance obligation identified in the binding arrangement on a relative stand-alone value basis in accordance with paragraphs 136–140, except as specified in paragraphs AG107–AG109 (for allocating discounts) and paragraphs 141–143 (for allocating consideration that includes variable amounts). The amount of revenue recognized shall be a proportionate amount of the resource inflow recognized as an asset, based on the estimated percentage of the total compliance obligations satisfied.

135. Paragraphs 136–143 do not apply if a binding arrangement has only one compliance obligation. However, paragraphs 141–143 may apply if an entity promises to use or transfer a series of distinct goods or services identified as a single compliance obligation in accordance with paragraph (b) and the promised consideration includes variable amounts.

Allocation Based on Stand-Alone Values

136. To allocate the transaction consideration to each compliance obligation on a relative stand-alone value basis, an entity shall determine the stand-alone value at the inception of the binding arrangement of the distinct good or service underlying each compliance obligation in the binding arrangement and allocate the transaction consideration in proportion to those stand-alone values.

137. The stand-alone value is the price of a good or service that is required to be used internally or provided separately to a purchaser or third-party. The best evidence of a stand-alone value is the observable price of a good or service when the entity provides that good or service separately in similar circumstances and to

similar resource providers. In a binding arrangement, the stated price or a list price for a good or service may be (but shall not be presumed to be) the stand-alone value of that good or service.

138. If a stand-alone value is not directly observable, an entity shall estimate the stand-alone value at an amount that would result in the allocation of the transaction consideration meeting the allocation objective in paragraph 133. When estimating a stand-alone value, an entity shall consider all information (including entity-specific factors, information about the resource provider or class of resource provider, and market conditions where relevant) that is reasonably available to the entity. In doing so, an entity shall maximize the use of observable inputs and apply estimation methods consistently in similar circumstances.

139. Suitable methods for estimating the stand-alone value of a good or service include, but are not limited to, the following:

(a) Adjusted market assessment approach—an entity could evaluate the market in which it uses or provides goods or services and estimate the price that other entities in that market would be willing to pay for those goods or services, or similar goods or services, and adjusting those prices as necessary to reflect the entity's costs and margins.

(b) Expected cost approach—an entity could forecast its expected costs of satisfying a compliance obligation and, if applicable, add an appropriate margin for that good or service.

(c) Residual approach—an entity may estimate the stand-alone value by reference to the total transaction consideration less the sum of the observable stand-alone values of other goods or services to be used or transferred in the binding arrangement. However, an entity may use a residual approach to estimate, in accordance with paragraph 138, the stand-alone value of a good or service only if one of the following criteria is met:

(i) The entity uses or provides the same good or service to different parties (at or near the same time) for a broad range of amounts (i.e., the price is highly variable because a representative stand-alone value is not discernible from past transactions or other observable evidence); or

(ii) The entity has not yet determined a price for that good or service and the good or service has not previously been provided on a stand-alone basis (i.e., the price is uncertain).

140. A combination of methods may need to be used to estimate the stand-alone values of the goods or services to be used or transferred in the binding arrangement if two or more of those goods or services have highly variable or uncertain stand-alone values. For example, an entity may use a residual approach to estimate the aggregate stand-alone value for those goods or services with highly variable or uncertain stand-alone values and then use another method to estimate the stand-alone values of the individual goods or services relative to that estimated aggregate stand-alone value determined by the residual approach. When an entity uses a combination of methods to estimate the stand-alone value of each good or service in the binding arrangement, the entity shall evaluate whether allocating the transaction consideration at those estimated stand-alone values would be consistent with the allocation objective in paragraph 133 and the requirements for estimating stand-alone values in paragraph 138.

Allocation of Variable Consideration

141. Variable consideration that is promised in a binding arrangement may be attributable to the entire binding arrangement or to a specific part of the binding arrangement, such as either of the following:

(a) One or more, but not all, compliance obligations in the binding arrangement (for example, a bonus may be contingent on an entity using or transferring a promised good or service within a specified period of time); or

(b) One or more, but not all, distinct goods or services in a series of distinct goods or services that forms part of a single compliance obligation in accordance with paragraph (b) (for example, the consideration promised for the second year of a two-year cleaning service binding arrangement will increase on the basis of movements in a specified inflation index).

142. An entity shall allocate a variable amount (and subsequent changes to that amount) entirely to a compliance obligation or to a distinct good or service that forms part of a single compliance obligation in accordance with paragraph (b) if both of the following criteria are met:

(a) The terms of a variable payment relate specifically to the entity's efforts to satisfy the compliance obligation or use or transfer the distinct good or service (or to a specific outcome from satisfying the compliance obligation or using or transferring the distinct good or service); and

(b) Allocating the variable amount of consideration entirely to the compliance obligation or the distinct good or service is consistent with the allocation objective in paragraph 133 when considering all of the compliance obligations and payment terms in the binding arrangement.

143. The allocation requirements in paragraphs 133–140 shall be applied to allocate the remaining amount of the transaction consideration that does not meet the criteria in paragraph 142.

Changes in the Transaction Consideration

144. After the inception of the binding arrangement, the transaction consideration can change for various reasons, including the resolution of uncertain events or other changes in circumstances that change the amount of consideration to which an entity expects to be entitled for satisfying its compliance obligation.

145. An entity shall allocate to the compliance obligations in the binding arrangement any subsequent changes in the transaction consideration on the same basis as at the inception of the binding arrangement. Consequently, an entity shall not reallocate the transaction consideration to reflect changes in stand-alone values after the inception of the binding arrangement. Amounts allocated to a satisfied compliance obligation shall be recognized as revenue, or as a reduction of revenue, in the period in which the transaction consideration changes.

146. An entity shall allocate a change in the transaction consideration entirely to one or more, but not all, compliance obligations or distinct goods or services in a series that forms part of a single compliance obligation in accordance with paragraph (b) only if the criteria in paragraph 142 on allocating variable consideration are met.

147. An entity shall account for a change in the transaction consideration that arises as a result of a modification to a binding arrangement in accordance with paragraphs 63–66. However, for a change in the transaction consideration that occurs after a modification to a binding arrangement, an entity shall apply paragraphs 144–146 to allocate the change in the transaction consideration in whichever of the following ways is applicable:

(a) An entity shall allocate the change in the transaction consideration to the compliance obligations identified in the binding arrangement before the modification if, and to the extent that, the change in the transaction consideration is attributable to an amount of variable consideration promised before the modification and the modification is accounted for in accordance with paragraph (a).

(b) In all other cases in which the modification was not accounted for as a separate binding arrangement in accordance with paragraph 65, an entity shall allocate the change in the transaction consideration to the compliance obligations in the modified binding arrangement (i.e., the compliance obligations that were unsatisfied or partially unsatisfied immediately after the modification).

Other Assets from Revenue Transactions with Binding Arrangement Costs

Incremental Costs of Obtaining a Binding Arrangement

148. **An entity shall recognize as an asset the incremental costs of obtaining a binding arrangement if the entity expects to recover those costs.**

149. The incremental costs of obtaining a binding arrangement are those costs that an entity incurs to obtain a binding arrangement that it would not have incurred if the binding arrangement had not been obtained (for example, a sales commission).

150. Costs to obtain a binding arrangement that would have been incurred regardless of whether the binding arrangement was obtained shall be recognized as an expense when incurred, unless those costs are explicitly chargeable to the resource provider regardless of whether the binding arrangement is obtained.

151. As a practical expedient, an entity may recognize the incremental costs of obtaining a binding arrangement as an expense when incurred if the amortization period of the asset that the entity otherwise would have recognized is one year or less.

Costs to Fulfill a Binding Arrangement

152. **If the costs incurred in fulfilling a binding arrangement are not within the scope of another Standard (for example, IPSAS 12, *Inventories*, IPSAS 31, or IPSAS 45), an entity shall recognize an asset from the costs incurred to fulfill a binding arrangement only if those costs meet all of the following criteria:**

(a) **The costs relate directly to a binding arrangement or to an anticipated binding arrangement that the entity can specifically identify (for example, costs relating to services to be provided under renewal of an existing binding arrangement or costs of designing an asset to be transferred under a specific binding arrangement that has not yet been approved);**

(b) **The costs generate or enhance resources of the entity that will be used in satisfying (or in continuing to satisfy) compliance obligations in the future; and**

(c) **The costs are expected to be recovered.**

153. For costs incurred in fulfilling a binding arrangement that are within the scope of another Standard, an entity shall account for those costs in accordance with those other Standards.

154. Costs that relate directly to a binding arrangement (or a specific anticipated binding arrangement) include any of the following:

(a) Direct labor (for example, salaries and wages of employees who provide the promised services directly to a purchaser or third-party beneficiary);

(b) Direct materials (for example, supplies used in providing the promised services to a purchaser or third-party beneficiary);

(c) Allocations of costs that relate directly to the binding arrangement or to activities within the binding arrangement (for example, costs of management and supervision, insurance and depreciation of tools, equipment and right-of-use assets used in fulfilling the binding arrangement);

(d) Costs that are explicitly chargeable to the resource provider under the binding arrangement; and

(e) Other costs that are incurred only because an entity entered into the binding arrangement (for example, payments to subcontractors).

155. An entity shall recognize the following costs as expenses when incurred:

(a) General and administrative costs (unless those costs are explicitly chargeable to the resource provider under the binding arrangement, in which case an entity shall evaluate those costs in accordance with paragraph 154);

(b) Costs of wasted materials, labor or other resources to fulfill the binding arrangement that were not reflected in the price of the binding arrangement;

(c) Costs that relate to satisfied compliance obligations (or partially satisfied compliance obligations) in the binding arrangement (i.e., costs that relate to past fulfillment); and

(d) Costs for which an entity cannot distinguish whether the costs relate to unsatisfied compliance obligations or to satisfied compliance obligations (or partially satisfied compliance obligations).

Amortization and Impairment

156. An asset recognized in accordance with paragraph 148 or 152 shall be amortized on a systematic basis that is consistent with the satisfaction of the compliance obligation to which the asset relates. The asset may relate to promises to be satisfied under a specific anticipated binding arrangement (as described in paragraph (a)).

157. An entity shall update the amortization to reflect a significant change in the entity's expected timing of the satisfaction of the compliance obligation to which the asset relates. Such a change shall be accounted for as a change in accounting estimate in accordance with IPSAS 3.

158. An entity shall recognize an impairment loss in surplus or deficit to the extent that the carrying amount of an asset recognized in accordance with paragraph 148 or 152 exceeds:

(a) The remaining amount of consideration that the entity expects to receive for the satisfaction of the compliance obligations to which the asset relates; less

(b) The costs that relate directly to satisfying the compliance obligations and that have not been recognized as expenses (see paragraph 154).

159. For the purposes of applying paragraph 158 to determine the amount of consideration that an entity expects to receive, an entity shall use the principles for determining the transaction consideration (except for the requirements in paragraphs 119–121 on constraining estimates of variable consideration) and adjust that amount to reflect the effects of the resource provider's credit risk.

160. Before an entity recognizes an impairment loss for an asset recognized in accordance with paragraph 148 or 152, the entity shall recognize any impairment loss for assets related to the binding arrangement that are recognized in accordance with another Standard (for example, IPSAS 12, IPSAS 31, and IPSAS 45). After applying the impairment test in paragraph 158, an entity shall include the resulting carrying amount of the asset recognized in accordance with paragraph 148 or 152 in the carrying amount of the cash-generating unit to which it belongs for the purpose of applying IPSAS 26, *Impairment of Cash-Generating Assets* to that cash-generating unit.

161. An entity shall recognize in surplus or deficit a reversal of some or all of an impairment loss previously recognized in accordance with paragraph 158 when the impairment conditions no longer exist or have improved. The increased carrying amount of the asset shall not exceed the amount that would have been determined (net of amortization) if no impairment loss had been recognized previously.

Presentation

Display

162. When either party to a binding arrangement has performed, an entity shall present the binding arrangement in the statement of financial position as a binding arrangement asset or a binding arrangement liability, depending on the relationship between the entity's performance and the resource provider's transfer of consideration. An entity shall present any unconditional rights to consideration separately as a receivable.

163. If a resource provider transfers cash or another asset, or an entity has a right to consideration that is unconditional (i.e., a receivable), before the entity satisfies its compliance obligation, the entity shall present the binding arrangement as a binding arrangement liability when the transfer of consideration is made or is due (whichever is earlier). A binding arrangement liability is an entity's obligation to satisfy a compliance obligation for which the entity has received consideration (or an amount of an unconditional transfer of consideration is due) from the resource provider.

164. If an entity performs by satisfying a compliance obligation before the transfer of consideration is received or before the unconditional transfer of consideration is due, the entity shall present the binding arrangement as a binding arrangement asset, excluding any amounts presented as a receivable. A binding arrangement asset is an entity's right to consideration for satisfying its compliance obligations in compliance with the terms of the binding arrangement when that right is conditioned on something other than the passage of time. An entity shall assess a binding arrangement asset for impairment in accordance with IPSAS 41. An impairment of a binding arrangement asset shall be measured, presented and disclosed on the same basis as a financial asset that is within the scope of IPSAS 41 (see also paragraph (b)).

165. A receivable is an entity's right to consideration that is unconditional. A right to consideration is unconditional if only the passage of time is required before consideration is due. For example, an entity would recognize a receivable if it has a present right to a transfer even though that amount may be subject to refund in the future. In accordance with paragraph 31, an entity shall subsequently measure a receivable in accordance with IPSAS 41. Upon initial recognition of a receivable, any difference between the measurement of the receivable in accordance with IPSAS 41 and the corresponding amount of revenue recognized shall be presented as an expense (for example, as an impairment loss).

166. This Standard uses the terms "binding arrangement asset" and "binding arrangement liability" but does not prohibit an entity from using alternative descriptions in the statement of financial position for those items. If an entity uses an alternative description for a binding arrangement asset, the entity shall provide sufficient information for a user of the financial statements to distinguish between receivables and binding arrangement assets.

Disclosure

167. **The objective of the disclosure requirements is for an entity to disclose sufficient information to enable users of financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from revenue transactions. To achieve that objective, an entity shall disclose qualitative and quantitative information about all of the following:**

(a) **Its revenues from transactions without binding arrangements (see paragraphs 172–176);**

(b) **Its revenues from transactions with binding arrangements (see paragraphs 177–187);**

(c) **The significant judgments, and changes in the judgments, made in applying this Standard to those binding arrangements (see paragraphs 188–190); and**

(d) **Any assets recognized from the costs to obtain or fulfill a binding arrangement with a resource provider in accordance with paragraph 148 or 152 (see paragraphs 191–192).**

168. An entity shall consider the level of detail necessary to satisfy the disclosure objective and how much emphasis to place on each of the various requirements. An entity shall aggregate or disaggregate disclosures so that useful information is not obscured by either the inclusion of a large amount of insignificant detail or the aggregation of items that have substantially different characteristics. See paragraphs AG203–AG204 for additional guidance.

169. **An entity shall disclose either on the face of, or in the notes to, the general purpose financial statements:**

(a) **The amount of revenue from transactions recognized during the period, showing separately, and by major classes:**

(i) **Taxes;**

(ii) **Other compulsory contributions and levies;**

(iii) **Transfers; and**

(iv) **Compliance obligations in a binding arrangement.**

(b) **The amount of receivables recognized at the reporting date in respect of revenue;**

(c) **The amount of liabilities recognized at the reporting date in respect of transferred assets subject to compliance obligations;**

(d) **The amount of liabilities recognized at the reporting date in respect of concessionary loans that are subject to requirements on transferred assets;**

(e) **The existence and amounts of any advance receipts in respect of transactions; and**

(f) **The amount of any liabilities forgiven.**

170. **An entity shall disclose in the notes to the general purpose financial statements:**

(a) **The accounting policies adopted for the recognition of revenue;**

(b) **The judgments, and changes in the judgments, made in applying this Standard that significantly affect the determination of the amount and timing of revenue;**

(c) **For major classes of revenue from transactions, the basis on which the transaction consideration of inflowing resources was measured;**

(d) **For major classes of taxation revenue and revenue from other compulsory contributions and levies that the entity cannot measure reliably during the period in which the taxable event or equivalent event for other compulsory contributions and levies occurs, information about the nature of the tax, or other compulsory contribution or levy;**

(e) **The nature and type of major classes of bequests, gifts, and donations showing separately major classes of goods in-kind received; and**

(f) **Qualitative and quantitative information about services in-kind that have been recognized.**

171. In the public sector, an entity may have a revenue transaction where the entity is compelled to satisfy an obligation for or impose a cost on the counterparty in the transaction, and the face value of the revenue transaction may not always be collectible. This may occur when the entity is compelled by way of legislation, constitutional authority, legally sanctioned process and policy decisions, or other mechanisms, and the counterparty may not have the ability or intention to pay. Examples of such transactions include revenue from

taxes or fines without binding arrangements, or revenue from satisfying a compliance obligation by providing goods or services to a third-party beneficiary in a binding arrangement. The entity shall disclose the following:

(a) A description of the legislation or policy decision which compels a party in the revenue transaction to satisfy its obligation to the entity in the revenue transaction;

(b) The amount of revenue from these transactions that was recognized after application of paragraphs 25 and 105 of this Standard, or the amount of revenue recognized after consideration of an implicit price concession from the application of paragraph 115;

(c) The amount from these transactions that was not recognized as revenue, as the collection of consideration was not probable in accordance with paragraph 119, or as the amount from these transactions that was not recognized as revenue as it was considered to be an implicit price concession from the application of paragraph 115; and

(d) If the transaction consideration has been reduced after consideration of an implicit price concession from the application of paragraph 115, an entity shall disclose the following:

(i) The amount from these transactions that was recognized as revenue after identification of the implicit price concession; and

(ii) The amount from these transactions that was not recognized as revenue, as it was considered an implicit price concession.

Specific Disclosure for Revenue without Binding Arrangements

172. As noted in paragraph 46, in many cases an entity will be able to reliably measure assets and revenue arising from taxation and other compulsory contributions and levies transactions, using, for example, statistical models. However, there may be exceptional circumstances where an entity is unable to reliably measure the assets and revenue arising until one or more reporting periods has or have elapsed since the taxable event or equivalent event for other compulsory contributions and levies occurred. In these cases, the entity makes disclosures about the nature of major classes of taxation or other compulsory contributions and levies that cannot be reliably measured, and therefore recognized, during the reporting period in which the taxable event or equivalent event for other compulsory contributions and levies occurs.

173. Paragraph (e) requires an entity to disclose the existence of advance receipts. These liabilities carry the risk that the entity will have to make a sacrifice of future economic benefits or service potential if the taxable event does not occur, or a transfer arrangement does not become binding.

174. Paragraph (e) requires an entity to make disclosures about the nature and type of major classes of bequests, gifts, and donations it has received. These inflows of resources are received at the discretion of the resource provider, which exposes the entity to the risk that, in future periods, such sources of resources may change significantly.

175. Entities that do not recognize services in-kind on the face of the general purpose financial statements are strongly encouraged to disclose qualitative information about the nature and type of major classes of services in-kind received, particularly if those services in-kind received are integral to the operations of the entity. The extent to which an entity is dependent on a class of services in-kind will determine the disclosures it makes in respect of that class.

176. Where services in-kind meet the definition of an asset and satisfy the criteria for recognition as an asset, entities may elect to recognize these services in-kind and measure them at their fair value. Paragraph 175 strongly encourages an entity to make qualitative disclosures about the nature and type of all services in-kind received, whether they are recognized or not. Such disclosures may assist users to make informed judgments about (a) the contribution made by such services to the achievement of the entity's objectives

during the reporting period, and (b) the entity's dependence on such services for the achievement of its objectives in the future.

Specific Disclosure for Revenue with Binding Arrangements

177. An entity shall disclose all of the following amounts for the reporting period unless those amounts are presented separately in the statement of financial performance in accordance with other Standards:

(a) Revenue recognized from binding arrangements with compliance obligations, separately from its other sources of revenue; and

(b) Any impairment losses recognized (in accordance with IPSAS 41) on any receivables or binding arrangement assets arising from an entity's binding arrangements, which the entity shall disclose separately from impairment losses from other binding arrangements.

178. Compliance obligations impose limits on the use of assets, which impacts the operations of the entity. Disclosure of the amount of liabilities recognized in respect of compliance obligations assists users in making judgments about the ability of the entity to use its assets at its own discretion. Entities are encouraged to disaggregate by class the information required to be disclosed by paragraph (c).

Disaggregation of Revenue

179. An entity shall disaggregate revenue recognized from binding arrangements into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. An entity shall apply the guidance in paragraphs AG205–AG207 when selecting the categories to use to disaggregate revenue.

180. In addition, an entity shall disclose sufficient information to enable users of financial statements to understand the relationship between the disclosure of disaggregated revenue (in accordance with paragraph 179) and revenue information that is disclosed for each reportable segment, if the entity applies IPSAS 18, *Segment Reporting*.

Binding Arrangement Balances

181. An entity shall disclose all of the following:

(a) The opening and closing balances of receivables, binding arrangement assets and binding arrangement liabilities from binding arrangements, if not otherwise separately presented or disclosed;

(b) Revenue recognized in the reporting period that was included in the binding arrangement liability balance at the beginning of the period; and

(c) Revenue recognized in the reporting period from compliance obligations satisfied (or partially satisfied) in previous periods (for example, changes in transaction consideration).

182. An entity shall explain how the timing of satisfaction of its compliance obligations (see paragraph (a)) relates to the typical timing of payment (see paragraph (b)) and the effect that those factors have on the binding arrangement asset and the binding arrangement liability balances. The explanation provided may use qualitative information.

183. An entity shall provide an explanation of the significant changes in the binding arrangement asset and the binding arrangement liability balances during the reporting period. The explanation shall include qualitative and quantitative information. Examples of changes in the entity's balances of binding arrangement assets and binding arrangement liabilities include any of the following:

(a) Changes due to public sector combinations;

(b) Cumulative catch-up adjustments to revenue that affect the corresponding binding arrangement asset or binding arrangement liability, including adjustments arising from a change in the measure of progress, a change in an estimate of the transaction consideration (including any changes in the assessment of whether an estimate of variable consideration is constrained) or a modification to a binding arrangement;

(c) Impairment of a binding arrangement asset;

(d) A change in the time frame for a right to consideration to become unconditional (i.e., for a binding arrangement asset to be reclassified to a receivable); and

(e) A change in the time frame for a compliance obligation to be satisfied (i.e., for the recognition of revenue arising from a binding arrangement liability).

Compliance Obligations

184. An entity shall disclose information about its compliance obligations in binding arrangements, including a description of all of the following:

(a) When the entity typically satisfies its compliance obligations (for example, upon shipment, upon delivery, as services are rendered or upon completion of service), including when compliance obligations are satisfied in a bill-and-hold arrangement;

(b) The significant payment terms (for example, when payment is typically due, whether the binding arrangement has a significant financing component, whether the consideration amount is variable and whether the estimate of variable consideration is typically constrained in accordance with paragraphs 119–121);

(c) The nature of the compliance obligations the entity has promised to satisfy, highlighting any compliance obligations to arrange for another party to incur compliance obligations (i.e., if the entity is acting as an agent);

(d) Obligations for returns, refunds and other similar obligations; and

(e) Types of warranties and related obligations.

Transaction Consideration Allocated to the Remaining Compliance Obligations

185. An entity shall disclose the following information about its remaining compliance obligations:

(a) The aggregate amount of the transaction consideration allocated to the compliance obligations that are unsatisfied (or partially unsatisfied) as of the end of the reporting period; and

(b) An explanation of when the entity expects to recognize as revenue the amount disclosed in accordance with paragraph 185(a), which the entity shall disclose in either of the following ways:

(i) On a quantitative basis using the time bands that would be most appropriate for the duration of the remaining compliance obligations; or

(ii) By using qualitative information.

186. As a practical expedient, an entity need not disclose the information in paragraph 185 for a compliance obligation if either of the following conditions is met:

(a) The compliance obligation is part of a binding arrangement that has an original expected duration of one year or less; or

(b) The entity recognizes revenue from the satisfaction of the compliance obligation in accordance with paragraph AG90.

187. An entity shall explain qualitatively whether it is applying the practical expedient in paragraph 186 and whether any consideration from binding arrangements is not included in the transaction consideration and, therefore, not included in the information disclosed in accordance with paragraph 185. For example, an estimate of the transaction consideration would not include any estimated amounts of variable consideration that are constrained (see paragraphs 119–121).

Significant Judgments in the Application of this Standard

Determining the Timing of Satisfaction of Compliance Obligations

188. For compliance obligations that an entity satisfies over time, an entity shall disclose both of the following:

(a) The methods used to recognize revenue (for example, a description of the output methods or input methods used and how those methods are applied); and

(b) An explanation of why the methods used provide a faithful depiction of the use or transfer of goods or services.

189. For compliance obligations satisfied at a point in time, an entity shall disclose the significant judgments made in evaluating when a compliance obligation is satisfied.

Determining the Transaction Consideration and the Amounts Allocated to Compliance Obligations

190. An entity shall disclose information about the methods, inputs and assumptions used for all of the following:

(a) Determining the transaction consideration, which includes, but is not limited to, estimating variable consideration, adjusting the consideration for the effects of the time value of money and measuring non-cash consideration;

(b) Assessing whether an estimate of variable consideration is constrained;

(c) Allocating the transaction consideration, including estimating stand-alone values of promised goods or services, and allocating discounts and variable consideration to a specific part of the binding arrangement (if applicable); and

(d) Measuring obligations for returns, refunds and other similar obligations.

Assets Recognized from the Costs to Obtain or Fulfill a Binding Arrangement with a Resource Provider

191. An entity shall describe both of the following:

(a) The judgments made in determining the amount of the costs incurred to obtain or fulfill a binding arrangement with a resource provider (in accordance with paragraph 148 or 152); and

(b) The method it uses to determine the amortization for each reporting period.

192. An entity shall disclose all of the following:

(a) The closing balances of assets recognized from the costs incurred to obtain or fulfill a binding arrangement with a resource provider (in accordance with paragraph 148 or 152), by main category of asset (for example, costs to obtain binding arrangements with resource providers, pre-binding arrangement costs and setup costs); and

(b) The amount of amortization and any impairment losses recognized in the reporting period.

Practical Expedients

193. If an entity elects to use the practical expedient in either paragraph 126 (about the existence of a significant financing component) or paragraph 151 (about the incremental costs of obtaining a binding arrangement), the entity shall disclose that fact.

Effective Date and Transition

Effective Date

194. **An entity shall apply this Standard for annual financial statements covering periods beginning on or after January 1, 2026. Earlier application is permitted. If an entity applies this Standard earlier, it shall disclose that fact.**

194A. **Paragraphs 203A, AG153A–AG153B, AG202A–AG202J were added and paragraphs AG1 and AG154 were amended by *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48) issued in October 2024. An entity shall apply these amendments for annual financial statements covering periods beginning on or after January 1, 2027. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2027, it shall disclose that fact and apply IPSAS 43, IPSAS 45, IPSAS 46, *Measurement*, IPSAS 47, and IPSAS 48, *Transfer Expenses* at the same time.**

195. When an entity adopts accrual basis IPSAS Standards as defined in IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards* for financial reporting purposes subsequent to this effective date, this Standard applies to the entity's annual financial statements covering periods beginning on or after the date of adoption of IPSAS Standards.

Transition

196. For the purposes of the transition requirements in paragraphs 197–203:

(a) The date of initial application is the start of the reporting period in which an entity first applies this Standard; and

(b) A completed binding arrangement is a binding arrangement for which:

(i) The entity has satisfied all of the conditions identified in accordance with IPSAS 23, *Revenue from Non-Exchange Transactions (Taxes and Transfers)*; or

(ii) The entity has satisfied all of its promises identified in accordance with IPSAS 9, *Revenue from Exchange Transactions* and IPSAS 11, *Construction Contracts*.

197. An entity shall apply this Standard using one of the following two methods:

(a) Retrospectively to each prior reporting period presented in accordance with IPSAS 3, subject to the expedients in paragraph 199; or

(b) Retrospectively with the cumulative effect of initially applying this Standard recognized at the date of initial application in accordance with paragraphs 201–203.

198. Notwithstanding the requirements of paragraph 33 of IPSAS 3, when this Standard is first applied, an entity need only present the quantitative information required by paragraph 33(f) of IPSAS 3 for the annual period immediately preceding the first annual period for which this Standard is applied (the "immediately preceding period") and only if the entity applies this Standard retrospectively in accordance with paragraph (a)). An entity may also present this information for the current period or for earlier comparative periods, but is not required to do so.

199. An entity may use one or more of the following practical expedients when applying this Standard retrospectively in accordance with paragraph (a):

(a) For completed binding arrangements, an entity need not restate binding arrangements that:

(i) Begin and end within the same annual reporting period; or

(ii) Are completed binding arrangements at the beginning of the earliest period presented.

(b) For completed binding arrangements that have variable consideration, an entity may use the transaction consideration at the date the binding arrangement was completed rather than estimating variable consideration amounts in the comparative reporting periods.

(c) For binding arrangements that were modified before the beginning of the earliest period presented, an entity need not retrospectively restate the binding arrangement for those modifications to a binding arrangement in accordance with paragraphs 65–66. Instead, an entity shall reflect the aggregate effect of all of the modifications that occur before the beginning of the earliest period presented when:

(i) Identifying the satisfied and unsatisfied compliance obligations;

(ii) Determining the transaction consideration; and

(iii) Allocating the transaction consideration to the satisfied and unsatisfied compliance obligations.

(d) For all reporting periods presented before the date of initial application, an entity need not disclose the amount of the transaction consideration allocated to the remaining compliance obligations and an explanation of when the entity expects to recognize that amount as revenue.

200. For any of the practical expedients in paragraph 199 that an entity uses, the entity shall apply that expedient consistently to all binding arrangements within all reporting periods presented. In addition, the entity shall disclose all of the following information:

(a) The expedients that have been used; and

(b) To the extent reasonably possible, a qualitative assessment of the estimated effect of applying each of those expedients.

201. If an entity elects to apply this Standard retrospectively in accordance with paragraph (b), the entity shall recognize the cumulative effect of initially applying this Standard as an adjustment to the opening balance of accumulated surplus (or other component of net assets/equity, as appropriate) of the annual reporting period that includes the date of initial application. Under this transition method, an entity may elect to apply this Standard retrospectively only to binding arrangements that are not completed binding arrangements at the date of initial application (for example, January 1, 20XX for an entity with a December 31 year-end).

202. An entity applying this Standard retrospectively in accordance with paragraph (b) may also use the practical expedient described in paragraph (c), either:

(a) For all modifications to a binding arrangement that occur before the beginning of the earliest period presented; or

(b) For all modifications to a binding arrangement that occur before the date of initial application.

If an entity uses this practical expedient, the entity shall apply the expedient consistently to all binding arrangements and disclose the information required by paragraph 200.

203. For reporting periods that include the date of initial application, an entity shall provide both of the following additional disclosures if this Standard is applied retrospectively in accordance with paragraph (b):

(a) The amount by which each financial statement line item is affected in the current reporting period by the application of this Standard as compared to IPSAS 9, IPSAS 11, and IPSAS 23; and

(b) An explanation of the reasons for significant changes identified.

203A. The transition requirements for right-of-use assets in paragraphs 106–117, 123, and 124–126 of IPSAS 43 are also applicable to the measurement of the right-of-use assets in-kind held by an entity, as appropriate.

Withdrawal of Other Standards

204. This Standard supersedes the following Standards:

(a) IPSAS 9, issued in 2001;

(b) IPSAS 11, issued in 2001; and

(c) IPSAS 23, issued in 2006.

IPSAS 9, IPSAS 11, and IPSAS 23 remain applicable until IPSAS 47 is applied or becomes effective, whichever is earlier.

Appendix A

Application Guidance

This Appendix is an integral part of IPSAS 47.

AG1. This Application Guidance is organized into the following categories:

(a) Scope (paragraphs AG2–AG9);

(b) Definitions (paragraphs AG10–AG12);

(c) Identify the Revenue Transaction (paragraphs AG13–AG31);

(i) Enforceability (paragraphs AG14–AG25);

(ii) Parties in an Arrangement (paragraphs AG26–AG31);

(d) Revenue from Transaction with Binding Arrangements (paragraphs AG32–AG138);

(i) Criteria for the Binding Arrangement Accounting Model (paragraphs AG32–AG39);

(ii) Breach of Terms and Conditions of a Binding Arrangement (paragraphs AG40–AG42);

(iii) Identifying Compliance Obligations in a Binding Arrangement (paragraphs AG43–AG56);

(iv) Initial Recognition of Revenue (paragraphs AG57–AG58);

(v) Existence and Recognition of a Liability (paragraphs AG59–AG62);

(vi) Satisfaction of Compliance Obligations (paragraphs AG63–AG81);

(vii) Resource Provider Acceptance of the Entity's Transfer of Goods or Services (paragraphs AG82–AG85);

(viii) Methods for Measuring Progress towards Complete Satisfaction of a Compliance Obligation (paragraphs AG86–AG95);

(ix) Right of Return for a Transfer of Goods or Services to Another Party (paragraphs AG96–AG103);

(x) Consideration Payable to a Resource Provider for a Transfer of Goods or Services to Another Party (paragraphs AG104–AG106);

(xi) Allocation of a Discount for a Transfer of Goods or Services to Another Party (paragraphs AG107–AG109);

(xii) Determination of the Stand-Alone Value (paragraph AG110);

(xiii) Warranties for Goods or Services Transferred to Another Party (paragraphs AG111–AG116);

(xiv) Principal Versus Agent Considerations (paragraphs AG117–AG125);

(xv) Resource Provider Options for Additional Goods or Services (paragraphs AG126–AG130);

(xvi) Resource Providers' Unexercised Rights (paragraphs AG131–AG134);

(xvii) Non-Refundable Upfront Fees (and Some Related Costs) for a Transfer of Goods or Services to Another Party (paragraphs AG135–AG138);

(e) Application of Principles to Specific Transactions (paragraphs AG139–AG202);

(i) Capital Transfers (paragraphs AG140–AG142);

(ii) Services In-Kind (paragraphs AG143–AG149);

(iii) Pledges (paragraph AG150);

(iv) Advance Receipts of Transfers (paragraph AG151);

(v) Concessionary Loans (paragraphs AG152–AG153);

(va) Concessionary Leases for Lessees (paragraphs AG153A–AG153B);

(vi) Measurement of Transferred Assets (paragraph AG154);

(vii) Debt Forgiveness and Assumptions of Liabilities (paragraphs AG155–AG158);

(viii) Fines (paragraphs AG159–AG160);

(ix) Bequests (paragraphs AG161–AG163);

(x) Gifts and Donations, including Goods In-Kind (paragraphs AG164–AG167);

(xi) Licensing (paragraphs AG168–AG182);

(xii) Repurchase Agreements (paragraphs AG183–AG196);

(xiii) Consignment Arrangements (paragraphs AG197–AG198);

(xiv) Bill-and-Hold Arrangements (paragraphs AG199–AG202);

(xv) Right-of-use Assets In-kind (paragraphs AG202A–AG202J); and

(f) Disclosure (paragraphs AG203–AG207);

(i) Disclosure of Disaggregated Revenue (paragraphs AG205–AG207).

Scope (paragraph 3)

AG2. The scope of this Standard is focused on establishing principles and requirements when accounting for revenue transactions. Revenue may arise from transactions without binding arrangements or with binding arrangements. The definitions in paragraph 4 establish the key elements in applying the scope of the Standard.

AG3. While taxation is the major source of revenue for many governments, other public sector entities rely on transfers (sometimes known as grants) and other sources of funding. Examples of these revenues include, but are not limited to:

(a) Taxes;

(b) Transfers (whether cash or non-cash), including debt forgiveness, fines, bequests, gifts, donations, goods in-kind, services in-kind, and the off-market portion of concessionary loans received; and

(c) Capital transfers.

AG4. This Standard specifies the accounting for the incremental costs of obtaining a binding arrangement and for the costs incurred to satisfy a binding arrangement if those costs are not within the scope of another Standard (see paragraphs 148–161). An entity shall apply those paragraphs only to the costs incurred that relate to a binding arrangement (or part of that binding arrangement) that is within the scope of this Standard.

Scope Exclusions

AG5. Gains from the sale of non-financial assets within the scope of IPSAS 16, *Investment Property*, IPSAS 31, *Intangible Assets*, or IPSAS 45, *Property, Plant, and Equipment*, that are not an output of an entity's activities are not considered revenue. However, the recognition and measurement principles within this Standard may be applied to account for the disposals of such assets.

AG6. This Standard does not apply to public sector combinations. Governments may reorganize the public sector, merging some public sector entities, and dividing other entities into two or more separate entities. A public sector combination occurs when two or more operations are brought together to form one reporting entity. These restructurings do not ordinarily involve one entity purchasing another operation or entity, but may result in a new or existing entity acquiring all of the assets and liabilities of another operation or entity. Public sector combinations are accounted for in accordance with IPSAS 40, *Public Sector Combinations*.

AG7. Transfers of resources that satisfy the definition of contributions from owners will not give rise to revenue. Contributions from owners are defined in IPSAS 1, *Presentation of Financial Statements*. For a transaction to qualify as a contribution from owners, it will be necessary to satisfy the characteristics identified in that definition, and to consider the substance rather than the form of the transaction. A contribution from owners may be evidenced by, for example:

(a) A formal designation of the transfer (or a class of such transfers) by the contributor or a controlling entity of the contributor as forming part of the recipient's contributed net assets/equity, either before the contribution occurs or at the time of the contribution;

(b) A formal agreement, in relation to the contribution, establishing or increasing an existing financial interest in the net assets/equity of the recipient that can be sold, transferred, or redeemed; or

(c) The issuance, in relation to the contribution, of equity instruments that can be sold, transferred, or redeemed.

AG8. Agreements that (a) specify that the entity providing resources is entitled to distributions of future economic benefits or service potential during the recipient entity's life, or distribution of any excess of assets over liabilities in the event that the recipient entity is wound up, or (b) specify that the entity providing resources acquires a financial interest in the recipient entity that can be sold, exchanged, transferred, or redeemed, are, in substance, agreements to make a contribution from owners.

AG9. If, despite the form of the transaction, the substance is clearly that of a loan or another kind of liability, or revenue, the entity recognizes it as such and makes an appropriate disclosure in the notes to the general purpose financial statements, if material. For example, if a transaction purports to be a contribution from owners but specifies that the entity will pay fixed distributions to the resource provider, with a return of the resource provider's investment at a specified future time, the transaction is more characteristic of a loan. For contractual arrangements, an entity also considers the guidance in IPSAS 28, *Financial Instruments: Presentation*, when distinguishing liabilities from contributions from owners.

Definitions (paragraphs 4–8)

Binding Arrangement

AG10. A binding arrangement is an arrangement that confers both enforceable rights and obligations on the parties to the arrangement. A contract is a type of binding arrangement. Each party in the binding arrangement willingly entered into the arrangement and is able to enforce their respective rights and obligations conferred on them in the arrangement.

AG11. This Standard specifies the accounting for an individual binding arrangement. However, as a practical expedient, an entity may apply this Standard to a portfolio of binding arrangements (or compliance obligations) with similar characteristics if the entity reasonably expects that the effects on the financial statements of applying this Standard to the portfolio would not differ materially from applying this Standard to the individual binding arrangements (or compliance obligations) within that portfolio. When accounting for a portfolio, an entity shall use estimates and assumptions that reflect the size and composition of the portfolio.

AG12. Binding arrangements can be evidenced in several ways. A binding arrangement is often, but not always, in writing, in the form of a contract or documented discussions between the parties. The binding arrangement may arise from legal contracts or through other equivalent means such as statutory mechanisms (for example, through legislative or executive authority and/or cabinet or ministerial directives). Legislative or executive authority can create enforceable arrangements, similar to contractual arrangements, either on their own or in conjunction with legal contracts between the parties.

Identify the Revenue Transaction (paragraphs 9–15)

AG13. An entity shall consider the terms of its revenue transaction and all relevant facts and circumstances when applying this Standard. An entity shall apply this Standard, including the use of any practical expedients, consistently to arrangements with similar characteristics and in similar circumstances.

Enforceability

AG14. The interdependent rights and obligations in an arrangement must be enforceable to meet the definition of a binding arrangement. Enforceability can arise from various mechanisms, so long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the arrangement and hold the parties in the arrangement accountable for the satisfaction of stated obligations. An entity should determine whether an arrangement is enforceable based on whether each entity in the arrangement has the ability to enforce the rights and the obligations. The entity's assessment of enforceability occurs at inception and when a significant external change indicates that there may be a change in the enforceability of that arrangement.

AG15. Since enforceability can arise from various mechanisms, an entity should objectively assess all relevant factors to determine whether an arrangement is enforceable. In some jurisdictions, public sector entities cannot enter into legal obligations, because they are not permitted to contract in their own name; however, there are alternative processes with equivalent effect to legal arrangements (described as enforceable through equivalent means). For an arrangement to be enforceable through "equivalent means", the presence of an enforcement mechanism outside the legal system, that is similar to the force of law without being legal in nature, is required to establish the right of the resource provider to obligate the entity to complete the agreed obligation or be subject to remedies for non-completion. Similarly, a mechanism outside the legal systems, that is similar to the force of law without being legal in nature, is required to establish the right of the entity to obligate the resource provider to pay the agreed consideration. Thus, an entity should identify and assess all relevant factors by considering legal or equivalent means in which the involved parties enforce each of the respective rights and obligations under the arrangement.

AG16. In the public sector, an arrangement is enforceable when each of the parties in the arrangement is able to enforce their respective rights and obligations. An arrangement is enforceable if the agreement includes:

(a) Clearly specified rights and obligations for each involved party; and

(b) Remedies for non-completion by each involved party which can be enforced through the identified enforcement mechanisms.

AG17. When an entity assesses enforceability, the entity should consider how the identified mechanisms of enforceability impose implicit or explicit consequences on any party or parties that do not satisfy their obligation(s) in the arrangement, through legal or equivalent means. If the entity is not able to determine how the mechanisms of enforceability identified would in substance enable the entity to hold the other parties in the arrangement accountable for satisfying their obligation(s) in cases of non-completion, then the arrangement is not enforceable and does not meet the definition of a binding arrangement.

AG18. Enforceability arises from the compulsion by a legal system, including through legal means (enforced in the courts in a jurisdiction, as well as judicial rulings and case law precedence to comply with the terms of the

arrangement) or compliance through equivalent means (laws and regulations, including legislation, executive authority, cabinet or ministerial directives).

AG19. Executive authority (sometimes called an executive order) is an authority given to a member or selected members of a government administration to create legislation without ratification by the full parliament. This may be considered a valid enforcement mechanism if such an order was issued directing an entity to satisfy the stated obligations in the arrangement.

AG20. Cabinet or ministerial directives may create an enforcement mechanism between different government departments or different levels of government of the same government structure. For example, a directive given by a minister or government department to an entity controlled by the government to satisfy the stated obligations in the arrangement may be enforceable. Each party must be able to enforce both the rights and obligations conferred on them in the arrangement to meet the definition of a binding arrangement. Each party must have the ability and authority to compel the other party or parties to fulfill the promises established within the arrangement or to seek redress should these promises not be satisfied.

AG21. Sovereign rights are the authority to make, amend and repeal legal provisions. On its own, this authority does not establish enforceable rights and obligations for the purposes of applying this Standard. However, if the use of sovereign rights were detailed in the arrangement as a means of enforcing the satisfaction of obligations by an entity, this may result in a valid enforcement mechanism.

AG22. An entity may feel compelled to deliver on the obligations in an arrangement because of the risk that it might not receive future funding from the other party. In general, the ability to reduce or withhold future funding to which the entity is not presently entitled would not be considered a valid enforcement mechanism in the context of this Standard because there is no obligation on the resource provider to provide such funding. However, if the entity is presently entitled to funding in the future through another binding arrangement, and the terms of this other binding arrangement specifically allow for a reduction in the future funding if other arrangements are breached, then the reduction in future funding could be considered a valid enforcement mechanism.

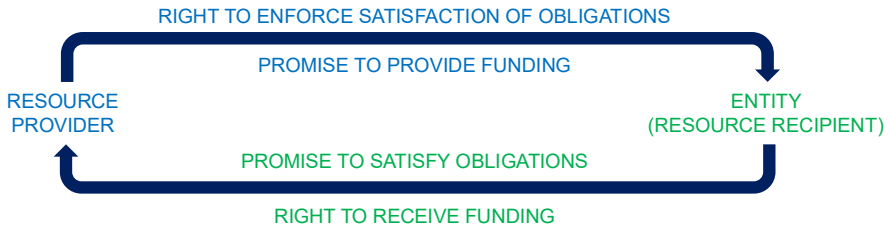
AG23. When determining if a reduction of future funding would be an enforcement mechanism, the entity shall apply judgment based on the facts and circumstances. Key factors that may indicate the resource provider would reduce future funding in the event of a breach of promises made in another binding arrangement are the resource provider’s ability to reduce future funding and its past history of doing so.

AG24. A statement of intent or public announcement by a resource provider (e.g., government) to spend money or deliver goods and/or services in a certain way is not, in and of itself, an enforceable arrangement for the purposes of this Standard. Such a declaration is general in nature and does not create a binding arrangement between a resource provider and an entity (resource recipient).

AG25. In some jurisdictions, specific terms and conditions may be included in arrangements that are intended to enforce the rights and obligations, but they have not been historically enforced. If past experience with a resource provider indicates that the resource provider never enforces the terms of the arrangement when breaches have occurred, then the entity may conclude that the terms of the arrangement are not substantive, and may indicate that such terms do not in substance hold the other entity accountable and the arrangement is not considered enforceable. However, if the entity has no experience with the resource provider, or has not previously breached any terms that would prompt the resource provider to enforce the arrangement, and it has no evidence to the contrary, the entity would assume that the resource provider would enforce the terms, and the arrangement is considered enforceable. An entity should consider any past history of enforcement as one of the relevant factors in its overall assessment of enforceability and whether the entities can objectively be held accountable for enforcing the rights and satisfying the obligations they agreed to in the arrangement.

Parties in an Arrangement

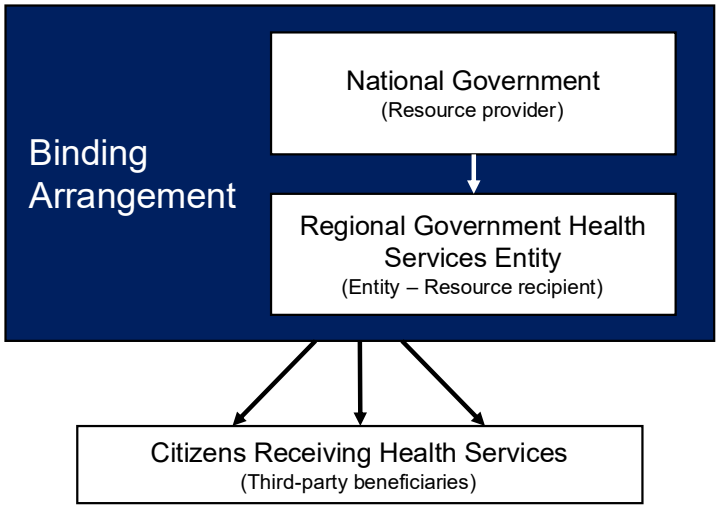
AG26. Arrangements in the public sector often include two or more parties. For the arrangement to meet the definition of a binding arrangement for the purposes of this Standard, at least two of the parties to the arrangement must have their own rights and obligations conferred by the arrangement, and the ability to enforce these rights and obligations.



AG27. For public sector-specific transactions with binding arrangements, the resource provider is the party that provides consideration to the entity for goods or services set out in a binding arrangement but is not necessarily the party that receives those goods or services. The resource provider may provide consideration for the entity to:

(a) Use resources internally for goods or services. In these cases, the resource provider does not directly receive any goods, services, or other assets in return;

(b) Transfer distinct goods or services to the resource provider. In these cases, the resource provider is a purchaser[7], as it receives goods or services that are an output of an entity's activities under a binding arrangement for its own consumption; or



(c) Transfer distinct goods or services to a third-party beneficiary. In multi-party arrangements (discussed below), the resource provider has a binding arrangement with and provides consideration to the entity to deliver goods or services to a third-party beneficiary. For example, if a central government provides funding to a regional health department to conduct bone density screening for citizens over the age of 55, the central government is the resource provider and the citizens are the third-party beneficiaries. The resource provider can enforce delivery of those goods or services or seek recourse from the entity if the promises in the binding arrangement are not satisfied.

AG28. That is, at a minimum, the entity receiving the consideration (resource recipient) must be able to enforce the promise to receive funding (consideration), and the entity providing the funding (the resource provider) must be able to enforce satisfaction of the obligations assumed by the entity receiving the consideration. The minimum two-way enforceability in a binding arrangement is illustrated in the diagram below:

AG29. Parties noted within a binding arrangement that do not have enforceable rights and obligations are third-party beneficiaries. Third-party beneficiaries in multi-party binding arrangements do not have any rights to force the entity to deliver goods or services. However, for these multi-party arrangements to be within the scope of this Standard the resource provider must have the ability to force the entity to deliver distinct goods or services to the third-party beneficiaries. In these multi-party arrangements, the entity (resource recipient) is not an agent of the resource provider because the entity gains control of the consideration from the resource provider and is responsible for providing goods or services to the third-party beneficiaries. This relationship is illustrated in the following diagram:

[7] A purchaser is a resource provider that provides a resource to the entity in exchange for goods or services that are an output of an entity's activities under a binding arrangement for its own consumption. A customer is a type of purchaser.

AG30. In assessing enforceability of an arrangement, the entity considers not only its ability to enforce its right to receive funds related to the completed obligation(s), but also the resource provider's ability to compel the entity to satisfy its obligations.

AG31. Some revenue transactions may be enforceable, but only create enforceable rights and obligations for one party in the arrangement. These transactions do not meet the definition of a binding arrangement for the purposes of this Standard because of the lack of two-way enforceability.

Revenue from Transactions with Binding Arrangements

Criteria for the Binding Arrangement Accounting Model (paragraphs 56–61)

Economic Substance

AG32. An entity shall determine whether a transaction with a binding arrangement that requires a transfer of distinct goods or services to a purchaser or third-party beneficiary has economic substance by considering the extent to which its future cash flows or service potential is expected to change as a result of the transaction. A transaction has economic substance if:

(a) The configuration (risk, timing, and amount) of the cash flows or service potential of the asset received differs from the configuration of the cash flows or service potential of the asset transferred: or

(b) The entity-specific value of the portion of the entity's operations affected by the transaction changes as a result of the exchange; and

(c) The differences in (a) and (b) are significant relative to the current value of the assets exchanged.

AG33. For the purposes of determining whether a transaction has economic substance, the entity-specific value of the portion of the entity's operations affected by the transaction shall reflect post-tax cash flows, if tax applies. The results of these analyses may be clear without an entity having to perform detailed calculations.

AG34. For the purposes of this Standard, economic substance includes commercial substance.

Probability of Collection of Consideration to which an Entity is Entitled – Consequences of Paragraph (e)

AG35. An entity should apply judgment in considering the facts and circumstances upon entering into a binding arrangement to assess the resource provider's ability and intent at inception to pay the expected consideration at a future date.

AG36. An entity should assess collectability at the inception of the binding arrangement based on the entity's best estimate of the risks associated with the resource provider in the binding arrangement. This initial assessment may differ from actual consideration collected subsequently as a result of changes in conditions or expectations. Such changes would be reflected as either impairment (decline from initial circumstances) or recognition of the full consideration (exceeding the expected collection determined at inception).

AG37. A price concession may be provided as part of the binding arrangement. A price concession is generally known by the parties at the inception of the binding arrangement, either implicitly or explicitly, and potentially informed by past history with the parties. This Standard typically measures revenue based on the transaction consideration to which an entity expects to be entitled rather than the amount that it expects to ultimately collect. Revenue is adjusted for discounts, rebates, refunds, credits, price concessions, incentives, performance bonuses, penalties or other similar items, but it is not reduced for impairment losses. However, where an entity is providing goods or services and accepts a lower amount of consideration from the resource provider than the price stated in the binding arrangement, the acceptance of the lower amount of consideration represents an implicit price concession (see paragraphs 109 and (b)). The entity assesses whether this lower amount of consideration, after taking the implicit price concession into account, meets the collectability criterion in paragraph (e).

AG38. In some binding arrangements, entities are compelled by legislation to provide certain goods or services (such as water and electricity) to all citizens, regardless of whether the citizens have the intention or ability to pay for those goods or services.

AG39. When payment of the consideration, less any price concession, is not probable for delivering the good or service to certain groups of citizens, the criterion for identifying a binding arrangement in paragraph (e) is not met. In these circumstances, where the collection of the consideration, less any price concession, is not probable at the inception of the binding arrangement, an entity shall apply paragraph 58 of this Standard.

Breach of Terms and Conditions of a Binding Arrangement

AG40. The accounting treatment of a breach of the terms and conditions of a binding arrangement depends on:

(a) Whether there are any incomplete compliance obligations remaining under the arrangement;

(b) When the breach occurred – i.e., whether it was in the period in which the breach is discovered or in a prior period; and

(c) The reason for the breach.

AG41. If the breach occurs in the current period and is identified before the authorization of the financial statements for issue, the entity will recognize a liability for the amount to be refunded to the resource provider and derecognize any revenue recognized during the reporting period.

AG42. Where the breach is determined to have occurred in a prior period, the accounting treatment will be decided by assessing whether the breach has resulted in a:

(a) Change in accounting estimate as defined in IPSAS 3, *Accounting Policies, Changes in Accounting Estimates, and Errors*. Accounting estimates are used where items in financial statements cannot be measured with precision and judgment may be required in measuring those items as described in IPSAS 3;

(b) Prior period error which has arisen from a failure to use, or from the misuse of, faithfully representative information that was available when the financial statements for the period were authorized for issue or could reasonably be expected to have been obtained; or

(c) Separate past event because the amount recognized in prior period financial statements is not an estimated amount and was based on the use of faithfully representative information available at the date of the approval of the financial statements for the relevant reporting period.

Identifying Compliance Obligations in a Binding Arrangement (paragraphs 68–77)

Promises to Use Resources

AG43. A compliance obligation is an entity's promise in a binding arrangement to either use resources internally for a distinct good or service or transfer a distinct good or service to a purchaser (i.e., resource provider) or third-party beneficiary. The objectives of a compliance obligation may be incremental to the entity's service delivery objectives, or additional objectives in which the entity has engaged through the binding arrangement. The promise to use resources results in other resources (i.e., distinct goods or services that provide rights to economic benefits or service potential, or both) for either the reporting entity or another external party (either the purchaser or a third-party beneficiary. See paragraph AG49 for further guidance). The entity may also receive the benefit of the good or service but directs the use of the benefit to other parties.

AG44. This Standard requires an entity to appropriately identify any compliance obligations when it enters into a binding arrangement, and then recognize revenue as or when it satisfies each of the identified compliance obligations in accordance with the terms and conditions of the binding arrangement.

AG45. In the public sector, identifying compliance obligations may require significant judgment. A necessary condition for the existence of a compliance obligation is that the promise must be sufficiently specific to be able to determine when that compliance obligation is satisfied. An entity considers the following factors in identifying whether a promise is sufficiently specific:

(a) The nature or type of the promise to use resources;

(b) The cost or value of the distinct goods or services from the promise to use resources;

(c) The quantity of the distinct goods or services from the promise to use resources; and

(d) The period over which the use of resources occurs.

AG46. The existence of performance indicators in relation to the promises may, but does not necessarily, indicate the existence of a compliance obligation as defined in this Standard. A performance indicator is a type of performance measurement (either quantitative, qualitative or descriptive) used to evaluate the success and extent to which an entity is using resources, providing services and achieving its service performance objectives. A performance indicator is often an internally imposed measure of performance and not a compliance obligation.

Promises to Use Resources Internally

AG47. In many instances, an entity's promise in a binding arrangement requires the entity to use resources internally for a distinct good or service to achieve specific service delivery objectives. Examples of resources provided to a public sector entity in a binding arrangement may include:

(a) Transfers from national governments to provincial, state or local governments;

(b) Transfers from state/provincial governments to local governments;

(c) Transfers from governments to other public sector entities;

(d) Transfers to governmental agencies that are created by laws or regulations to perform specific functions with operational autonomy, such as statutory authorities or regional boards or authorities; and

(e) Transfers from donor agencies to governments or other public sector entities.

AG48. A resource provider in the binding arrangement would have the ability to enforce how the entity uses resources to achieve specific objectives and hold the entity accountable in complying with such terms. The compliance obligations may be imposed by requirements in binding arrangements establishing the basis of transfers, or may arise from the normal operating environment, such as the recognition of advance receipts.

Promises to Use Resources for Another Party (A Resource Provider (Purchaser) or Third-Party Beneficiary)

AG49. In some instances, an entity's promise in a binding arrangement requires the entity to use resources to transfer a distinct good or service to an external party or parties (i.e., to the purchaser (resource provider) or a third-party beneficiary) identified in the binding arrangement, in compliance with the terms and conditions of the binding arrangement. In practice, an entity will consider whether it maintains control of the resources, or the resources are converted into a good and/or service and are required to be transferred to the resource provider or a third-party beneficiary. In this case, the resource provider is effectively a purchaser of distinct goods or services from the entity.

AG50. A key feature distinguishing an entity's promise to transfer a distinct good or service from other promises in the binding arrangement is the clear identification of an external party receiving the distinct goods or services. A binding arrangement which imposes an obligation on an entity to transfer a distinct good or service to a specified external party (i.e., the purchaser or a specified third-party beneficiary) generally provides a clear indicator of specificity and transfer of control of the economic benefits and service potential of the resources from the entity to the external party.

AG51. Depending on the binding arrangement, goods or services promised in a compliance obligation may include, but are not limited to, the following:

(a) Provision of goods produced by an entity (for example, inventory such as publications or municipal water provided for a fee);

(b) Purchase of goods by an entity and provided to citizens (for example, waste collection bins);

(c) Resale of rights to goods or services purchased by an entity (for example, an emission allowance resold by an entity acting as a principal, see paragraphs AG117–AG125);

(d) Provision of goods or services by an entity to third-party beneficiaries (for example a vaccination program for children provided by a hospital that was funded by a government for that purpose);

(e) Performing a task for a purchaser that is specified in the binding arrangement (for example, management of water facilities);

(f) Providing a service of standing ready to provide goods or services (for example, paramedics on site at an athletic competition organized by a community group);

(g) Providing a service of arranging for another party to transfer goods or services to a purchaser or third-party beneficiary (for example, the Post Office acting as an agent of another party by collecting telephone and electricity payments, see paragraphs AG117–AG125);

(h) Granting rights to goods or services to be provided in the future that a purchaser can resell or provide to its customer (for example, the health department providing drugs and supplements to pharmacies promises to transfer an additional good or service to clinics that purchase the drugs and supplements from the pharmacies);

(i) Constructing, manufacturing or developing an asset on behalf of a purchaser (for example, a government works department building a recreational facility for another municipality);

(j) Granting licenses (see paragraphs AG168–AG182); and

(k) Granting options to purchase additional goods or services (when those options provide a purchaser with a material right (see paragraphs AG126–AG130)).

AG52. An entity earns and recognizes revenue when it satisfies a compliance obligation by transferring a promised good or service to a purchaser or third-party beneficiary. The transfer of the good or service is indicated when the purchaser or third-party beneficiary gains control of the promised goods or services. Paragraph 18 provides indicators of control, which include:

(a) The ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset; and

(b) The ability to prevent others from directing the economic benefits or service potential embodied in the asset.

Identifying Distinct Promises to Use Resources for Another Party (A Resource Provider (Purchaser) or Third-Party Beneficiary)

AG53. Promises to use resources to transfer distinct goods or services to an external party generally have a greater degree of specificity. An entity is required to clearly identify such compliance obligations in order to complete a more objective analysis and precise account for the recognition and measurement of revenue from these transactions.

AG54. In cases where a binding arrangement includes a compliance obligation to transfer distinct goods or services to a purchaser or third-party beneficiary, a good or service promised is distinct if both of the following criteria are met (see paragraph 73):

(a) The promise to use resources to transfer a distinct good or service to the purchaser or third-party beneficiary can generate other resources that provide rights to economic benefits and/or service potential either on its own or together with other resources that are readily available to the party receiving the good or service (i.e., the good or service is capable of being distinct); and

(b) The entity's promise to use resources to transfer a distinct good or service to the purchaser or third-party beneficiary is separately identifiable from other promises in the binding arrangement (i.e., the promise to transfer the good or service is distinct within the context of the binding arrangement).

AG55. In such binding arrangements, the promise to use resources to transfer distinct goods or services to the purchaser or a third-party beneficiary can generate other resources that provide rights to economic benefits and/or service potential when the entity's transfer of the good or service to the party receiving the goods or services contributes to the purchaser achieving its service delivery objectives.

AG56. Compliance obligations that require the transfer of promised goods or services to the purchaser or a third-party beneficiary are separately identifiable (i.e., distinct) from other promises in the same binding arrangement to allow for the purchaser to be able to determine when that promise is satisfied. Therefore, it is possible to have several compliance obligations in one binding arrangement.

Initial Recognition of Revenue Transactions with a Binding Arrangement (paragraph 78)

AG57. In accordance with paragraph 78, when a binding arrangement is wholly unsatisfied, an entity shall not recognize any asset, liability or revenue associated with the binding arrangement, unless the binding arrangement is onerous. An entity's rights and obligations under a wholly unsatisfied binding arrangement are interdependent and inseparable. The combined rights and obligations constitute a single asset or liability

that is measured at zero. Individual rights and obligations are recognized as items (assets, liabilities, revenue and expenses depending on their nature) only when (or as) one or more parties to the binding arrangement satisfy their obligations.

AG58. Where parts of the binding arrangement remain equally unsatisfied, the entity shall not recognize any asset, liability or revenue for the equally unsatisfied parts of the binding arrangement. Such equally unsatisfied parts of the binding arrangement continue to constitute a single asset or liability that is measured at zero.

Existence and Recognition of a Liability (paragraphs 81–86)

AG59. An entity's compliance obligation in a binding arrangement may give rise to a liability. A liability is defined as a present obligation of the entity to transfer resources as a result of past events.

A Present Obligation

AG60. A present obligation may be legally binding (i.e., through legal or equivalent means) or non-legally binding. A compliance obligation is a legally binding present obligation, in revenue transactions with binding arrangements, to use resources in compliance with the terms of the binding arrangement. All binding arrangements include at least one compliance obligation.

As a Result of Past Events

AG61. Public sector entities may willingly enter into binding arrangements in order to deliver their service objectives and obtain assets from governments or other entities, or by purchasing or producing them. A liability may exist as a result of past events, specifically when:

(a) The entity enters into a binding arrangement with one or more parties; and

(b) The resource provider has provided promised resources before the entity satisfies the associated compliance obligation(s) (i.e., the entity has received a prepayment and the binding arrangement is partially satisfied).

Transactions or events expected to occur in the future do not in themselves give rise to compliance obligations.

A Transfer of Resources

AG62. The enforceability of a binding arrangement provides each party in the arrangement with the ability to hold the parties accountable to either satisfy their compliance obligations or face consequences if they do not satisfy their compliance obligations. When the entity has received resources after entering into a binding arrangement as a willing party, a liability exists if the consequence of the entity not satisfying its compliance obligation, as a result of these past events, is to transfer resources to another party (e.g., to the resource provider). Examples of consequences of non-compliance requiring a transfer of resources include, but are not limited to, repaying the resources to the resource provider or incurring some other form of penalty. Such a consequence requires a transfer of resources that the entity would not otherwise have had to transfer (i.e., incremental) had it not willingly entered into the binding arrangement and received resources from the resource provider associated with an unsatisfied or partially unsatisfied obligation (i.e., as a consequence of past events).

Satisfaction of Compliance Obligations (paragraphs 87–104)

Compliance Obligations to Use Resources for Goods or Services Internally

AG63. Paragraph 92 provides that a compliance obligation is satisfied over time if one of the following criteria is met:

(a) The entity simultaneously receives and consumes the economic benefits or service potential provided by the entity's performance as the entity performs (see paragraphs AG64–AG65);

(b) The entity's performance creates or enhances an asset (for example, work in progress) that the entity controls as the asset is created or enhanced (see paragraph AG66); or

(c) The entity has an enforceable right to consideration for performance completed to date (see paragraphs AG67–AG71).

Simultaneous Receipt and Consumption of the Economic Benefits or Service Potential (paragraph (a))

AG64. For some types of compliance obligations, the assessment of whether the entity receives the economic benefits or service potential provided by the entity's performance as the entity performs and simultaneously consumes those economic benefits or service potential as they are received will be straightforward. Examples include routine or recurring services (such as a daily volunteer service) in which the receipt and simultaneous consumption of the economic benefits or service potential by the entity as it satisfies its compliance obligation can be readily identified.

AG65. For other types of compliance obligations, an entity may not be able to readily identify whether the entity simultaneously receives and consumes the economic benefits or service potential from the entity's performance as the entity performs. In those circumstances, a compliance obligation is satisfied over time if an entity determines that another entity would not need to substantially re-perform the work that the entity has completed to date if that other entity were to satisfy the remaining compliance obligation. In determining whether another entity would not need to substantially re-perform the work the entity has completed to date, an entity shall make both of the following assumptions:

(a) Disregard potential restrictions or practical limitations in the binding arrangement that otherwise would prevent the entity from transferring the remaining compliance obligation to another entity; and

(b) Presume that another entity satisfying the remainder of the compliance obligation would not have the economic benefits or service potential of any asset that is presently controlled by the entity and that would remain controlled by the entity if the compliance obligation were to transfer to another entity.

Entity Controls the Asset as it is Created or Enhanced (paragraph (b))

AG66. In determining whether the entity controls an asset as it is created or enhanced in accordance with paragraph (b), an entity shall apply the requirements for control in paragraphs 89–90, 94, and AG183-AG196. The asset that is being created or enhanced (for example, a work-in-progress asset) could be either tangible or intangible.

Right to Consideration for Performance Completed to Date (paragraph (c))

AG67. In accordance with paragraphs (c) and 93, an entity has a right to consideration for compliance obligations completed to date if the entity would be entitled to an amount that at least compensates the entity for its compliance obligations completed to date in the event that the resource provider or another party terminates the binding arrangement for reasons other than the entity's failure to perform as promised. An amount that would compensate an entity for compliance obligations completed to date would be an amount that approximates the total cost of the goods or services used to date for no charge or for a nominal charge, or the price of the goods or services used to date (for example, recovery of the costs incurred by an entity in satisfying the compliance obligation plus a reasonable margin) rather than compensation for only the entity's potential loss of surplus if the binding arrangement were to be terminated. Compensation for a reasonable margin need not equal the margin expected if the binding arrangement was satisfied as promised, but an entity should be entitled to compensation for either of the following amounts:

(a) A proportion of the expected margin in the binding arrangement that reasonably reflects the extent of the entity's performance under the binding arrangement before termination by the resource provider (or another party); or

(b) A reasonable return on the entity's cost of capital for similar binding arrangements (or the entity's typical operating margin for similar binding arrangements) if the specific margin of the binding arrangement is higher than the return the entity usually generates from similar binding arrangements.

AG68. An entity's right to consideration for compliance obligations completed to date need not be a present unconditional right to consideration. In many cases, an entity will have an unconditional right to consideration only at an agreed-upon milestone or upon complete satisfaction of the compliance obligation. In assessing whether it has a right to consideration for compliance obligations completed to date, an entity shall consider whether it would have an enforceable right to demand or retain consideration for compliance obligations completed to date if the binding arrangement were to be terminated before completion for reasons other than the entity's failure to perform as promised.

AG69. In some binding arrangements, a resource provider may have a right to terminate the binding arrangement only at specified times during the life of the binding arrangement or the resource provider might not have any right to terminate the binding arrangement. If a resource provider acts to terminate a binding arrangement without having the right to terminate the binding arrangement at that time (including when a resource provider fails to perform its obligations as promised), the binding arrangement (or other laws) might entitle the entity to continue to use resources internally for distinct goods or services in compliance with the binding arrangement and require the resource provider to pay the consideration promised in exchange for those satisfied compliance obligations. In those circumstances, an entity has a right to consideration for compliance obligations completed to date because the entity has a right to continue to perform its obligations in accordance with the binding arrangement and to require the resource provider to perform its obligations (which include paying the promised consideration).

AG70. In assessing the existence and enforceability of a right to consideration for compliance obligations completed to date, an entity shall consider the terms of the binding arrangement as well as any legislation or legal precedent that could supplement or override those terms of the binding arrangement. This would include an assessment of whether:

(a) Legislation, administrative practice or legal precedent confers upon the entity a right to consideration for performance to date even though that right is not specified in the binding arrangement with the resource provider;

(b) Relevant legal precedent indicates that similar rights to consideration for performance completed to date in similar binding arrangements have no binding legal effect; or

(c) An entity's customary practices of choosing not to enforce a right to consideration has resulted in the right being rendered unenforceable in that legal environment. However, notwithstanding that an entity may choose to waive its right to consideration in similar binding arrangements, an entity would continue to have a right to consideration to date if, in the binding arrangement with the resource provider, its right to consideration for performance to date remains enforceable.

AG71. The payment schedule specified in a binding arrangement does not necessarily indicate whether an entity has an enforceable right to consideration for compliance obligations completed to date. Although the payment schedule in a binding arrangement specifies the timing and amount of consideration that is payable by a resource provider, the payment schedule might not necessarily provide evidence of the entity's right to consideration for compliance obligations completed to date. This is because, for example, the binding arrangement could specify that the consideration received from the resource provider is refundable for reasons other than the entity failing to perform as promised in the binding arrangement.

Compliance Obligations to Transfer Goods or Services to Another Party

AG72. Paragraph 95 provides that a compliance obligation is satisfied over time if one of the following criteria is met:

(a) The purchaser (the resource provider in the binding arrangement) or third-party beneficiary simultaneously receives and consumes the economic benefits or service potential provided by the entity's performance as the entity performs (see paragraphs AG73–AG74);

(b) The entity's performance creates or enhances an asset (for example, work in progress) that the purchaser or third-party beneficiary controls as the asset is created or enhanced (see paragraph AG75); or

(c) The entity's performance does not create an asset with an alternative use to the entity (see paragraphs AG76–AG78) and the entity has an enforceable right to consideration for performance completed to date (see paragraphs AG79–AG81).

Simultaneous Receipt and Consumption of the Economic Benefits or Service Potential (paragraph (a))

AG73. For some types of compliance obligations, the assessment of whether a resource provider receives the economic benefits or service potential of an entity's performance as the entity performs and simultaneously consumes those economic benefits or service potential as they are received will be straightforward. Examples include routine or recurring services (such as a cleaning service) in which the receipt and simultaneous consumption by the purchaser or third-party beneficiary of the economic benefits or service potential of the entity's performance can be readily identified.

AG74. For other types of compliance obligations, an entity may not be able to readily identify whether a resource provider simultaneously receives and consumes the economic benefits or service potential from the entity's performance as the entity performs. In those circumstances, a compliance obligation is satisfied over time if an entity determines that another entity would not need to substantially re-perform the work that the entity has completed to date if that other entity were to satisfy the remaining compliance obligation to the resource provider. In determining whether another entity would not need to substantially re-perform the work the entity has completed to date, an entity shall make both of the following assumptions:

(a) Disregard potential restrictions or practical limitations in the binding arrangement that otherwise would prevent the entity from transferring the remaining compliance obligation to another entity; and

(b) Presume that another entity satisfying the remainder of the compliance obligation would not have the economic benefits or service potential of any asset that is presently controlled by the entity and that would remain controlled by the entity if the compliance obligation were to transfer to another entity.

Entity Controls the Asset as it is Created or Enhanced (paragraph (b))

AG75. In determining whether a resource provider controls an asset as it is created or enhanced in accordance with paragraph (b), an entity shall apply the requirements for control in paragraphs 89–90, 97, and AG183–AG185. The asset that is being created or enhanced (for example, a work-in-progress asset) could be either tangible or intangible.

Entity's Satisfaction does not Create an Asset with an Alternative Use (paragraph (c))

AG76. In assessing whether an asset has an alternative use to an entity in accordance with paragraphs (c) and 96, an entity shall consider the effects of restrictions and practical limitations in the binding arrangement on the entity's ability to readily direct that asset for another use, such as providing it to a different entity. The possibility of the binding arrangement with the resource provider being terminated is not a relevant consideration in assessing whether the entity would be able to readily direct the asset for another use.

AG77. A restriction in the binding arrangement on an entity's ability to direct an asset for another use must be substantive for the asset not to have an alternative use to the entity. A restriction in the binding arrangement is substantive if a resource provider could enforce its rights to the promised asset if the entity sought to direct the asset for another use. In contrast, a restriction in the binding arrangement is not substantive if, for example, an asset is largely interchangeable with other assets that the entity could transfer to another resource provider without breaching the binding arrangement and without incurring significant costs that otherwise would not have been incurred in relation to that binding arrangement.

AG78. A practical limitation on an entity's ability to direct an asset for another use exists if an entity would incur significant economic losses to direct the asset for another use. A significant economic loss could arise because the entity either would incur significant costs to rework the asset or would only be able to provide the asset at a significant loss. For example, an entity may be practically limited from redirecting assets that either have design specifications that are unique to a resource provider or are located in remote areas.

Right to Consideration for Performance Completed to Date (paragraph (c))

AG79. In accordance with paragraphs (c) and 93, an entity has a right to consideration for compliance obligations completed to date if the entity would be entitled to an amount that at least compensates the entity for its performance completed to date in the event that the resource provider or another party terminates the binding arrangement for reasons other than the entity's failure to perform as promised. An amount that would compensate an entity for compliance obligations completed to date would be an amount that approximates the total cost of the goods or services transferred to date for no charge or for a nominal charge, or the price of the goods or services transferred to date (for example, recovery of the costs incurred by an entity in satisfying the compliance obligation plus a reasonable margin) rather than compensation for only the entity's potential loss of surplus if the binding arrangement were to be terminated. Compensation for a reasonable margin need not equal the margin expected if the binding arrangement was satisfied as promised, but an entity should be entitled to compensation for either of the following amounts:

(a) A proportion of the expected margin in the binding arrangement that reasonably reflects the extent of the entity's performance under the binding arrangement before termination by the resource provider (or another party); or

(b) A reasonable return on the entity's cost of capital for similar binding arrangements (or the entity's typical operating margin for similar binding arrangements) if the specific margin of the binding arrangement is higher than the return the entity usually generates from similar binding arrangements.

AG80. In some binding arrangements, a resource provider may have a right to terminate the binding arrangement only at specified times during the life of the binding arrangement or the resource provider might not have any right to terminate the binding arrangement. If a resource provider acts to terminate a binding arrangement without having the right to terminate the binding arrangement at that time (including when a resource provider fails to perform its obligations as promised), the binding arrangement (or other laws) might entitle the entity to continue to transfer to the purchaser or third-party beneficiary the goods or services promised in the binding arrangement and require the resource provider to pay the consideration promised in exchange for those goods or services. In those circumstances, an entity has a right to consideration for compliance obligations completed to date because the entity has a right to continue to perform its obligations in accordance with the binding arrangement and to require the resource provider to perform its obligations (which include paying the promised consideration).

AG81. An entity should also consider paragraphs AG68, AG70 and AG71 in assessing its right to consideration for performance completed to date related to compliance obligations that require a transfer of goods or services to another party.

Resource Provider Acceptance of the Entity's Transfer of Goods or Services (paragraph 97)

AG82. In accordance with paragraph (e), a resource provider's acceptance of an asset may indicate that the resource provider has obtained control of the asset. Resource provider acceptance clauses may allow the resource provider to cancel a binding arrangement or require an entity to take remedial action if a good or service does not meet agreed-upon specifications. An entity shall consider such clauses when evaluating when the resource provider obtains control of a good or service.

AG83. If an entity can objectively determine that control of a good or service has been transferred to the resource provider in accordance with the agreed-upon specifications in the binding arrangement, then resource provider acceptance is a formality that would not affect the entity's determination of when the resource provider has obtained control of the good or service. For example, if the acceptance clause is based on meeting specified size and weight characteristics, an entity would be able to determine whether those criteria have been met before receiving confirmation of resource provider acceptance. The entity's experience with binding arrangements for similar goods or services may provide evidence that a good or service provided to the purchaser or third-party beneficiary is in accordance with the agreed-upon specifications in the binding arrangement. If revenue is recognized before the resource provider accepts the asset, the entity still must consider whether there are any remaining compliance obligations (for example, installation of equipment) and evaluate whether to account for them separately.

AG84. However, if an entity cannot objectively determine that the good or service provided to the purchaser or third-party beneficiary is in accordance with the agreed-upon specifications in the binding arrangement, then the entity would not be able to conclude that the resource provider has obtained control until the entity receives acceptance by the resource provider. That is because in that circumstance the entity cannot determine that the resource provider has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from the good or service.

AG85. If an entity delivers a product to a purchaser or third-party beneficiary for trial or evaluation purposes and the resource provider is not committed to pay any consideration until the trial period lapses, control of the product is not transferred to the resource provider until either the resource provider accepts the product or the trial period lapses.

Methods for Measuring Progress towards Complete Satisfaction of a Compliance Obligation (paragraphs 98–104)

AG86. Methods that can be used to measure an entity's progress towards complete satisfaction of a compliance obligation satisfied over time include the following:

(a) Output methods (see paragraphs AG87–AG91); and

(b) Input methods (see paragraphs AG92–AG95).

Output Methods

AG87. Output methods recognize revenue on the basis of direct measurements of the value to the entity receiving the outputs from the compliance obligations satisfied to date relative to the remaining compliance obligations under the binding arrangement. Output methods include methods such as specified activities performed to date, surveys of performance completed to date, appraisals of results achieved, milestones reached, time elapsed and units produced or units delivered.

AG88. A specified activity is a particular action, stated in a binding arrangement, that the entity must perform and for which the resource provider can compel the entity to perform, such as construct a hospital or conduct a form of research. As a detailed example, a resource provider provides funding to a government science agency (resource recipient) to conduct research and development into a plant-based meat substitute. Any intellectual property developed by the government science agency remains the property of that agency. The

funding is provided on the basis of a detailed project plan (with the individual stages of research and development identified) provided by the government science agency and the resource provider requires the government science agency to report back at each stage. Each of these stages constitutes a specified activity and revenue would be recognized when (or as) they are completed and for the amount incurred in completing that specified action. The enforceability of the binding arrangement enables the resource provider to require the entity to use resources to deliver the specified activity, or face consequences stated in the binding arrangement for non-compliance (such as the return of resources, or another form of redress).

AG89. When an entity evaluates whether to apply an output method to measure its progress, the entity shall consider whether the output selected would faithfully depict the entity's performance towards complete satisfaction of the compliance obligation. An output method would not provide a faithful depiction of the entity's performance if the output selected would fail to measure some of the promises to use resources in the specified manner. For example, output methods based on units produced or units delivered would not faithfully depict an entity's performance in satisfying a compliance obligation if, at the end of the reporting period, the entity's performance has produced work in progress or finished goods controlled by the resource provider that are not included in the measurement of the output.

AG90. As a practical expedient for compliance obligations where the entity is required to transfer a distinct good or service to an external party, if an entity has a right to consideration from a resource provider in an amount that corresponds directly with the value to the resource provider of the entity's compliance obligations completed to date (for example, a binding arrangement to render or provide a service in which an entity bills a fixed amount for each hour of service provided), the entity may recognize revenue in the amount to which the entity has a right to invoice.

AG91. The disadvantages of output methods are that the outputs used to measure progress may not be directly observable and the information required to apply them may not be available to an entity without undue cost. Therefore, an input method may be necessary.

Input Methods

AG92. Input methods recognize revenue on the basis of the entity's efforts or inputs to the satisfaction of a compliance obligation (for example, resources consumed, labor hours expended, eligible expenditures incurred, time elapsed or machine hours used) relative to the total expected inputs to the satisfaction of that compliance obligation. If the entity's efforts or inputs are expended evenly throughout the performance period, it may be appropriate for the entity to recognize revenue on a straight-line basis.

AG93. An eligible expenditure is a transfer of resources incurred in accordance with the requirements set out in a binding arrangement. A binding arrangement may require an entity to use resources for a particular purpose, such as to further the entity's objectives, and incur eligible expenditure for that purpose, but does not have an identifiable specified activity. For example, funding may be provided to a university to employ a marketing manager to promote the university's courses to overseas students. The binding arrangement specifies that the funding is to be spent on promoting the university overseas and that the marketing manager's salary, travel expenses and any promotional materials used would all be classified as eligible expenditures. The enforceability of the binding arrangement enables the resource provider to require the entity to use resources to incur the eligible expenditure, or face consequences stated in the binding arrangement for non-compliance (such as the return of resources, or another form of redress).

AG94. The resource provider needs to be able to confirm that the entity's compliance obligations in the binding arrangement have been satisfied in the specified manner. Therefore, the entity needs to keep appropriate documentation to show that the inputs, such as any eligible expenditures, were incurred by the entity and directly related to the entity's satisfaction of the promises in the specified manner.

AG95. A shortcoming of input methods is that there may not be a direct relationship between an entity's inputs and the satisfaction of its compliance obligation. Therefore, an entity shall exclude from an input method the effects of any inputs that, in accordance with the objective of measuring progress in paragraph 98, do not depict the entity's performance in satisfying its compliance obligations. For instance, when using a cost-based input method, an adjustment to the measure of progress may be required in the following circumstances:

(a) When a cost incurred does not contribute to an entity's progress in satisfying the compliance obligation. For example, an entity would not recognize revenue on the basis of costs incurred that are attributable to significant inefficiencies in the entity's performance that were not reflected in the transaction consideration of the binding arrangement (for example, the costs of unexpected amounts of wasted materials, labor or other resources that were incurred to satisfy the compliance obligation).

(b) When a cost incurred is not proportionate to the entity's progress in satisfying the compliance obligation. In those circumstances, the best depiction of the entity's performance may be to adjust the input method to recognize revenue only to the extent of that cost incurred. For example, a faithful depiction of an entity's performance might be to recognize revenue at an amount equal to the cost of a good used to satisfy a compliance obligation if the entity expects at the inception of the binding arrangement that all of the following conditions would be met:

(i) The good is not distinct;

(ii) The party receiving the good or service is expected to obtain control of the good significantly before receiving services related to the good;

(iii) The cost of the transferred good is significant relative to the total expected costs to completely satisfy the compliance obligation; and

(iv) The entity procures the good from a third party and is not significantly involved in designing and manufacturing the good (but the entity is acting as a principal in accordance with paragraphs AG117–AG125).

Right of Return for a Transfer of Goods or Services to Another Party (paragraph 118)

AG96. In some binding arrangements, an entity transfers control of a product to a resource provider and also grants the resource provider the right to return the product for various reasons (such as dissatisfaction with the product) and receive any combination of the following:

(a) A full or partial refund of any consideration paid;

(b) A credit that can be applied against amounts owed, or that will be owed, to the entity; and

(c) Another product in exchange.

AG97. To account for the transfer of products with a right of return (and for some services that are provided subject to a refund), an entity shall recognize all of the following:

(a) Revenue for the transferred products in the amount of consideration to which the entity expects to be entitled (therefore, revenue would not be recognized for the products expected to be returned);

(b) A refund liability; and

(c) An asset (and corresponding adjustment to cost of sales) for its right to recover products from resource providers on settling the refund liability.

AG98. An entity's promise to stand ready to accept a returned product during the return period shall not be accounted for as a compliance obligation in addition to the obligation to provide a refund.

AG99. An entity shall apply the requirements in paragraphs 109–122 (including the requirements for constraining measurement in paragraphs 119–121) to determine the amount of consideration to which the entity expects to be entitled. In transactions where the binding arrangement requires an entity to transfer distinct goods or services to another party (i.e., the purchaser (resource provider) or third-party beneficiary), this amount would exclude the products expected to be returned. For any amounts received (or receivable) for which an entity does not expect to be entitled, the entity shall not recognize revenue but shall recognize those amounts received (or receivable) as a refund liability. Subsequently, at the end of each reporting period, the entity shall update its assessment of amounts for which it expects to be entitled for satisfying its compliance obligations in the binding arrangement and make a corresponding change to the transaction consideration and, therefore, in the amount of revenue recognized.

AG100. An entity shall update the measurement of the refund liability at the end of each reporting period for changes in expectations about the amount of refunds. An entity shall recognize corresponding adjustments as revenue (or reductions of revenue).

AG101. An asset recognized for an entity's right to recover products from a resource provider on settling a refund liability shall initially be measured by reference to the former carrying amount of the product (for example, inventory) less any expected costs to recover those products (including potential decreases in the value to the entity of returned products). At the end of each reporting period, an entity shall update the measurement of the asset arising from changes in expectations about products to be returned. An entity shall present the asset separately from the refund liability.

AG102. Exchanges by resource providers of one product for another of the same type, quality, condition and price (for example, one color or size for another) are not considered returns for the purposes of applying this Standard.

AG103. Binding arrangements in which a resource provider may return a defective product in exchange for a functioning product shall be evaluated in accordance with the guidance on warranties in paragraphs AG111–AG116.

Consideration Payable to a Resource Provider for a Transfer of Goods or Services to Another Party (paragraph (e))

AG104. Consideration payable to a resource provider includes cash amounts that an entity pays, or expects to pay, to the resource provider (or to other parties that purchase the entity's goods or services from the resource provider). Consideration payable to a resource provider also includes credit or other items (for example, a coupon or voucher) that can be applied against amounts owed to the entity (or to other parties that purchase the entity's goods or services from the resource provider). An entity shall account for consideration payable to a resource provider as a reduction of the transaction consideration and, therefore, of revenue unless the payment to the resource provider is in exchange for a distinct good or service (as described in paragraphs 73–77) that the resource provider transfers to the entity. If the consideration payable to a resource provider includes a variable amount, an entity shall estimate the transaction consideration (including assessing whether the estimate of variable consideration is constrained) in accordance with paragraphs 113–121.

AG105. If consideration payable to a resource provider is a payment for a distinct good or service from the resource provider, then an entity shall account for the purchase of the good or service in the same way that it accounts for other purchases from suppliers. If the amount of consideration payable to the resource provider exceeds the current value of the distinct good or service that the entity receives from the resource provider, then the entity shall account for such an excess as a reduction of the transaction consideration. If the entity cannot reasonably estimate the current value of the good or service received from the resource provider, it shall account for all of the consideration payable to the resource provider as a reduction of the transaction consideration.

AG106. Accordingly, if consideration payable to a resource provider is accounted for as a reduction of the transaction consideration, an entity shall recognize the reduction of revenue when (or as) the later of either of the following events occurs:

(a) The entity recognizes revenue for the transfer of the related goods or services to the purchaser or third-party beneficiary; and

(b) The entity pays or promises to pay the consideration (even if the payment is conditional on a future event). That promise might be implied by the entity's customary practices.

Allocation of a Discount for a Transfer of Goods or Services to Another Party (paragraph 134)

AG107. A resource provider receives a discount for purchasing a bundle of goods or services if the sum of the stand-alone values of those promised goods or services in the binding arrangement exceeds the promised consideration in a binding arrangement. Except when an entity has observable evidence in accordance with paragraph AG108 that the entire discount relates to only one or more, but not all, compliance obligations in a binding arrangement, the entity shall allocate a discount proportionately to all compliance obligations in the binding arrangement. The proportionate allocation of the discount in those circumstances is a consequence of the entity allocating the transaction consideration to each compliance obligation on the basis of the relative stand-alone values of the underlying distinct goods or services.

AG108. An entity shall allocate a discount entirely to one or more, but not all, compliance obligations in the binding arrangement if all of the following criteria are met:

(a) The entity regularly provides each distinct good or service (or each bundle of distinct goods or services) in the binding arrangement on a stand-alone basis;

(b) The entity also regularly provides on a stand-alone basis a bundle (or bundles) of some of those distinct goods or services at a discount to the stand-alone values of the goods or services in each bundle; and

(c) The discount attributable to each bundle of goods or services described in paragraph AG108(b) is substantially the same as the discount in the binding arrangement and an analysis of the goods or services in each bundle provides observable evidence of the compliance obligation (or compliance obligations) to which the entire discount in the binding arrangement belongs.

AG109. If a discount is allocated entirely to one or more compliance obligations in the binding arrangement in accordance with paragraph AG108, an entity shall allocate the discount before using the residual approach to estimate the stand-alone value of a good or service in accordance with paragraph (c).

Determination of the Stand-Alone Value (paragraphs 137–140)

AG110. In the public sector, the determination of a stand-alone value for a compliance obligation in accordance with paragraph 137 may be challenging, particularly in situations where an entity (being the resource recipient) is providing goods or services to third-party beneficiaries. In these circumstances, the stand-alone value is estimated based on the amount the resource provider would need to pay in market terms to acquire the economic benefits or service potential of the goods or services provided to the third-party beneficiaries, plus an appropriate margin if applicable. Where the stand-alone value of the goods or services cannot be estimated from market information, the entity estimates the stand-alone value using the expected cost approach, as noted in paragraph (b).

Warranties for Goods or Services Transferred to Another Party

AG111. In binding arrangements where the entity provides distinct goods or services to another party, it is common for an entity to provide (in accordance with the binding arrangement, the law or the entity's customary practices) a warranty in connection with the sale of a product (whether a good or service). The nature of a

warranty can vary significantly across sectors and binding arrangements. Some warranties provide a resource provider with assurance that the related product will function as the parties intended because it complies with agreed-upon specifications. Other warranties provide the resource provider with a service in addition to the assurance that the product complies with agreed-upon specifications.

AG112. If a resource provider has the option to purchase a warranty separately (for example, because the warranty is priced or negotiated separately), the warranty is a distinct service because the entity promises to provide the service to the purchaser or third-party beneficiary in addition to the product that has the functionality described in the binding arrangement. In those circumstances, an entity shall account for the promised warranty as a compliance obligation in accordance with paragraphs 68–77 and allocate a portion of the transaction consideration to that compliance obligation in accordance with paragraphs 133–143.

AG113. If a resource provider does not have the option to purchase a warranty separately, an entity shall account for the warranty in accordance with IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets* unless the promised warranty, or a part of the promised warranty, provides the purchaser or third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications.

AG114. In assessing whether a warranty provides a purchaser or third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications, an entity shall consider factors such as:

(a) Whether the warranty is required by law – if the entity is required by law to provide a warranty, the existence of that law indicates that the promised warranty is not a compliance obligation because such requirements typically exist to protect resource providers from the risk of purchasing defective products.

(b) The length of the warranty coverage period – the longer the coverage period, the more likely it is that the promised warranty is a compliance obligation because it is more likely to provide a service in addition to the assurance that the product complies with agreed-upon specifications.

(c) The nature of the tasks that the entity promises to perform – if it is necessary for an entity to perform specified tasks to provide the assurance that a product complies with agreed-upon specifications (for example, a return shipping service for a defective product), then those tasks likely do not give rise to a compliance obligation.

AG115. If a warranty, or a part of a warranty, provides a purchaser or third-party beneficiary with a service in addition to the assurance that the product complies with agreed-upon specifications, the promised service is a compliance obligation. Therefore, an entity shall allocate the transaction consideration to the product and the service. If an entity promises both an assurance-type warranty and a service-type warranty but cannot reasonably account for them separately, the entity shall account for both of the warranties together as a single compliance obligation.

AG116. A law that requires an entity to pay compensation if its products cause harm or damage does not give rise to a compliance obligation. For example, a manufacturer such as a government medical laboratory might sell products such as diagnostic ultrasound scanners to both government-owned and privately-owned medical centers and hospitals in a jurisdiction in which the law holds the manufacturer liable for any damages (for example, to personal property) that might be caused by a purchaser or third-party beneficiary using a product for its intended purpose. Similarly, an entity's promise to indemnify the resource provider for liabilities and damages arising from claims of patent, copyright, trademark or other infringement by the entity's products does not give rise to a compliance obligation. The entity shall account for such obligations in accordance with IPSAS 19.

Principal versus Agent Considerations

AG117. When another party is involved in providing goods or services to a purchaser or third-party beneficiary, the entity shall determine whether the nature of its promise is a compliance obligation to provide the specified goods or services itself (i.e., the entity is a principal) or to arrange for those goods or services to be provided by the other party (i.e., the entity is an agent). An entity determines whether it is a principal or an agent for each specified good or service promised to the purchaser or third-party beneficiary. A specified good or service is a distinct good or service (or a distinct bundle of goods or services) to be provided to the purchaser or third-party beneficiary (see paragraphs 73–77 and AG53–AG56). If a binding arrangement with a resource provider includes more than one specified good or service, an entity could be a principal for some specified goods or services and an agent for others.

AG118. To determine the nature of its promise (as described in paragraph AG117), the entity shall:

(a) Identify the specified goods or services to be provided to the purchaser or third-party beneficiary (which, for example, could be a right to a good or service to be provided by another party (see paragraph AG51)); and

(b) Assess whether it controls (as described in paragraph 90) each specified good or service before that good or service is transferred to the purchaser or third-party beneficiary.

AG119. An entity is a principal if it controls the specified good or service before that good or service is transferred to a purchaser or third-party beneficiary. However, an entity does not necessarily control a specified good if the entity obtains legal title to that good only momentarily before legal title is transferred to a purchaser or third-party beneficiary. An entity that is a principal may satisfy its compliance obligation to provide the specified good or service itself or it may engage another party (for example, a subcontractor) to satisfy some or all of the compliance obligation on its behalf.

AG120. When another party is involved in providing goods or services to a purchaser or third-party beneficiary, an entity that is a principal obtains control of any one of the following:

(a) A good or another asset from the other party that it then transfers to the purchaser or third-party beneficiary.

(b) A right to a service to be performed by the other party, which gives the entity the ability to direct that party to provide the service to the purchaser or third-party beneficiary on the entity's behalf.

(c) A good or service from the other party that it then combines with other goods or services in providing the specified good or service to the purchaser or third-party beneficiary. For example, if an entity provides a significant service of integrating goods or services (see paragraph (a)) provided by another party into the specified good or service for which the resource provider has entered into a binding arrangement, the entity controls the specified good or service before that good or service is transferred to the purchaser or third-party beneficiary. This is because the entity first obtains control of the inputs to the specified good or service (which includes goods or services from other parties) and directs their use to create the combined output that is the specified good or service.

AG121. When (or as) an entity that is a principal satisfies a compliance obligation, the entity recognizes revenue in the gross amount of consideration to which it expects to be entitled in exchange for the specified good or service transferred.

AG122. An entity is an agent if the entity's compliance obligation is to arrange for the provision of the specified good or service by another party. An entity that is an agent does not control the specified good or service provided by another party before that good or service is transferred to the purchaser or third-party beneficiary. When (or as) an entity that is an agent satisfies a compliance obligation, the entity recognizes revenue in the amount of any fee or commission to which it expects to be entitled in exchange for arranging for the specified goods

or services to be provided by the other party. An entity's fee or commission might be the net amount of consideration that the entity retains after paying the other party the consideration received in exchange for the goods or services to be provided by that party.

AG123. Indicators that an entity controls the specified good or service before it is transferred to the purchaser or third-party beneficiary (and is therefore a principal (see paragraph AG119)) include, but are not limited to, the following:

(a) The entity is primarily responsible for satisfying the promise to provide the specified good or service. This typically includes responsibility for the acceptability of the specified good or service (for example, primary responsibility for the good or service meeting resource provider specifications). If the entity is primarily responsible for satisfying the promise to provide the specified good or service, this may indicate that the other party involved in providing the specified good or service is acting on the entity's behalf.

(b) The entity has inventory risk before the specified good or service has been transferred to a purchaser or third-party beneficiary or after transfer of control to the resource provider (for example, if the resource provider has a right of return). For example, if the entity obtains, or commits itself to obtain, the specified good or service before obtaining a binding arrangement with a resource provider, that may indicate that the entity has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the good or service before it is transferred to the purchaser or third-party beneficiary.

(c) The entity has discretion in establishing the price for the specified good or service. Establishing the price that the resource provider pays for the specified good or service may indicate that the entity has the ability to direct the use of that good or service and obtain substantially all of the remaining economic benefits or service potential. However, an agent can have discretion in establishing prices in some cases. For example, an agent may have some flexibility in setting prices in order to generate additional revenue from its service of arranging for goods or services to be provided by other parties to purchasers or third-party beneficiaries.

AG124. The indicators in paragraph AG123 may be more or less relevant to the assessment of control depending on the nature of the specified good or service and the terms and conditions of the binding arrangement. In addition, different indicators may provide more persuasive evidence in different binding arrangements.

AG125. If another entity assumes the entity's compliance obligations and rights in the binding arrangement so that the entity is no longer required to satisfy the compliance obligation to transfer the specified good or service to the purchaser or third-party beneficiary (i.e., the entity is no longer acting as the principal), the entity shall not recognize revenue for that compliance obligation. Instead, the entity shall evaluate whether to recognize revenue for satisfying a compliance obligation to obtain a binding arrangement for the other party (i.e., whether the entity is acting as an agent).

Resource Provider Options for Additional Goods or Services

AG126. Resource provider options to acquire additional goods or services for free or at a discount come in many forms, including sales incentives, resource provider award credits (or points), renewal options in a binding arrangement or other discounts on future goods or services.

AG127. If, in a binding arrangement, an entity grants a resource provider the option to acquire additional goods or services, that option gives rise to a compliance obligation in the binding arrangement only if the option provides a material right to the resource provider that it would not receive without entering into that binding arrangement (for example, a discount that is incremental to the range of discounts typically given for those goods or services to that class of resource provider in that geographical area or market). If the option provides

a material right to the resource provider, the resource provider in effect pays the entity in advance for future goods or services and the entity recognizes revenue when those future goods or services are transferred or when the option expires.

AG128. If a resource provider has the option to acquire an additional good or service at a price that would reflect the stand-alone value for that good or service, that option does not provide the resource provider with a material right even if the option can be exercised only by entering into a previous binding arrangement. In those cases, the entity has made a marketing offer that it shall account for in accordance with this Standard only when the resource provider exercises the option to purchase the additional goods or services.

AG129. Paragraph 134 requires an entity to allocate the transaction consideration to compliance obligations on a relative stand-alone value basis. If the stand-alone value for a resource provider's option to acquire additional goods or services is not directly observable, an entity shall estimate it. That estimate shall reflect the discount that the resource provider would obtain when exercising the option, adjusted for both of the following:

(a) Any discount that the resource provider could receive without exercising the option; and

(b) The likelihood that the option will be exercised.

AG130. If a resource provider has a material right to acquire future goods or services and those goods or services are similar to the original goods or services in the binding arrangement and are provided in accordance with the terms of the original binding arrangement, then an entity may, as a practical alternative to estimating the stand-alone value of the option, allocate the transaction consideration to the optional goods or services by reference to the goods or services expected to be provided and the corresponding expected consideration. Typically, those types of options are for renewals of a binding arrangement.

Resource Providers' Unexercised Rights

AG131. In accordance with paragraph 163, upon receipt of a prepayment from a resource provider, an entity shall recognize a binding arrangement liability in the amount of the prepayment for its compliance obligation. An entity shall derecognize its binding arrangement liability (and recognize revenue) when it satisfies the compliance obligation associated with the consideration previously received from the resource provider.

AG132. A resource provider's non-refundable prepayment to an entity gives the resource provider a right to have the resource recipient satisfy its obligations (or face consequences outlined in the binding arrangement). However, resource providers may not exercise all of their rights in the binding arrangement. Those unexercised rights are often referred to as breakage.

AG133. If an entity expects to be entitled to a breakage amount in a binding arrangement liability, the entity shall recognize the expected breakage amount as revenue in proportion to the pattern of rights exercised by the resource provider. If an entity does not expect to be entitled to a breakage amount, the entity shall recognize the expected breakage amount as revenue when the likelihood of the resource provider exercising its remaining rights becomes remote. To determine whether an entity expects to be entitled to a breakage amount, the entity shall consider the requirements in paragraphs 119–121 on constraining estimates of variable consideration.

AG134. An entity shall recognize a liability (and not revenue) for any consideration received that is attributable to a resource provider's unexercised rights for which the entity is required to remit to another party, for example, a government entity in accordance with applicable unclaimed property laws.

Non-Refundable Upfront Fees (and some Related Costs) for a Transfer of Goods or Services to Another Party

AG135. In some binding arrangements, an entity charges a resource provider a non-refundable upfront fee at or near the inception of the binding arrangement. Examples include joining fees for a healthcare membership,

activation fees from telecommunication companies, setup fees for some services and initial fees for some supplies.

AG136. To identify compliance obligations in such binding arrangements, an entity shall assess whether the fee relates to the transfer of a promised good or service. In many cases, even though a non-refundable upfront fee relates to an activity that the entity is required to undertake at or near the inception of the binding arrangement to satisfy the binding arrangement, that activity does not result in the transfer of a promised good or service to the purchaser or third-party beneficiary (see paragraph 72). Instead, the upfront fee is an advance payment for future goods or services and, therefore, would be recognized as revenue when those future goods or services are provided. The revenue recognition period would extend beyond the initial period of the binding arrangement if the entity grants the resource provider the option to renew the binding arrangement and that option provides the resource provider with a material right as described in paragraph AG127.

AG137. If the non-refundable upfront fee relates to a good or service, the entity shall evaluate whether to account for the good or service as a separate compliance obligation in accordance with paragraphs 68–77.

AG138. An entity may charge a non-refundable fee in part as compensation for costs incurred in setting up a binding arrangement (or other administrative tasks as described in paragraph 72). If those setup activities do not satisfy a compliance obligation, the entity shall disregard those activities (and related costs) when measuring progress in accordance with paragraph AG95. That is because the costs of setup activities do not depict the transfer of services to a purchaser or third-party beneficiary. The entity shall assess whether costs incurred in setting up a binding arrangement have resulted in an asset that shall be recognized in accordance with paragraph 152.

Application of Principles to Specific Transactions

AG139. Public sector entities receive various types of transfers. Transfers may or may not arise from a binding arrangement. Subject to paragraph AG143, an entity shall recognize an asset in respect of transfer revenue when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset.

Capital Transfers

AG140. This Standard defines a capital transfer as a transaction that arises from a binding arrangement where a resource provider provides cash or another asset with a specification that the entity acquires or constructs a non-financial asset that will be controlled by the entity. A capital transfer imposes at least one compliance obligation on the entity.

AG141. An entity shall recognize revenue as it satisfies its compliance obligations in its capital transfer transaction by applying paragraphs 87–104. An entity shall separately determine whether any inflow of resources from a capital transfer is to be recognized as an asset by applying paragraph 80, and whether its compliance obligation is to be recognized as a liability by applying paragraphs 81–86. The carrying amount of any such liability is reduced as revenue is recognized.

AG142. Some capital transfer transactions may include a compliance obligation for the operation of the acquired or constructed asset, which would not meet the capital transfer definition. The entity determines whether the binding arrangement includes one or more compliance obligations relating to the operation of the asset by assessing whether the transaction consideration is associated with the operation of the asset, once acquired or constructed. Any compliance obligations related to the operation of the asset would be accounted for in accordance with the requirements of this Standard.

Services In-Kind

AG143. An entity may, but is not required to, recognize services in-kind as revenue and as an asset.

AG144. Although recognition of services in-kind is not required by this Standard, entities are strongly encouraged to disclose services in-kind received particularly if they are integral to an entity's operations.

AG145. Services in-kind are services provided by individuals to public sector entities for no consideration. Some services in-kind meet the definition of an asset because the entity controls a resource from which future economic benefits or service potential are expected to flow to the entity. These assets are, however, immediately consumed, and a transaction of equal value is also recognized to reflect the consumption of these services in-kind. For example, a public school that receives volunteer services from teachers' aides, the fair value of which can be reliably measured, may recognize an increase in an asset and revenue, and a decrease in an asset and an expense. In many cases, the entity will recognize an expense for the consumption of services in-kind. However, services in-kind may also be utilized to construct an asset, in which case the amount recognized in respect of services in-kind is included in the cost of the asset being constructed.

AG146. Public sector entities may be recipients of services in-kind under voluntary or non-voluntary schemes operated in the public interest. For example:

(a) Technical assistance from other governments or international organizations;

(b) Persons convicted of offenses may be required to perform community service for a public sector entity;

(c) Public hospitals may receive the services of volunteers;

(d) Public schools may receive voluntary services from parents as teachers' aides or as board members; and

(e) Local governments may receive the services of volunteer fire fighters.

AG147. Some services in-kind do not meet the definition of an asset because the entity has insufficient control over the services provided. In other circumstances, the entity may have control over the services in-kind, but may not be able to measure them reliably, and thus they fail to satisfy the criteria for recognition as an asset. Entities may, however, be able to measure the fair value of certain services in-kind, such as professional or other services in-kind that are otherwise readily available in the national or international marketplace. When determining the fair value of the types of services in-kind described in paragraph AG146, the entity may conclude that the value of the services is not material. In many instances, services in-kind are rendered by persons with little or no training, and are fundamentally different from the services the entity would acquire if the services in-kind were not available.

AG148. Due to the many uncertainties surrounding services in-kind, including the ability to exercise control over the services, and measuring the fair value of the services, this Standard does not require the recognition of services in-kind. Paragraph 175, however, strongly encourages the disclosure of qualitative information on the nature and type of services in-kind received during the reporting period. As for all disclosures, disclosures relating to services in-kind are only made if they are material. For some public sector entities, the services provided by volunteers are not material in amount, but may be material by nature.

AG149. In developing an accounting policy addressing a class of services in-kind, various factors would be considered, including the effects of those services in-kind on the financial position, performance, and cash flows of the entity. The extent to which an entity is dependent on a class of services in-kind to meet its objectives may influence the accounting policy an entity develops regarding the recognition of assets. For example, an entity that is dependent on a class of services in-kind to meet its objectives may be more likely to recognize those services in-kind that meet the definition of an asset and satisfy the criteria for recognition.

In determining whether to recognize a class of services in-kind, the practices of similar entities operating in a similar environment are also considered.

Pledges

AG150. Pledges are unenforceable promises to transfer assets to the entity in the future. Pledges do not meet the definition of an asset, because the entity is unable to control the access of the resource provider to the future economic benefits or service potential embodied in the item pledged. Entities do not recognize pledged items as assets or revenue. If the pledged item is subsequently transferred to the entity, it is recognized as a gift or donation, in accordance with paragraphs AG164–AG167. Pledges may warrant disclosure as contingent assets under the requirements of IPSAS 19.

Advance Receipts of Transfers

AG151. Where an entity receives resources before a transfer arrangement becomes binding, the resources are recognized as an asset when they meet the definition of an asset and satisfy the criteria for recognition as an asset. The entity will also recognize an advance receipt liability if the transfer arrangement is not yet binding. Advance receipts in respect of transfers are not fundamentally different from other advance receipts. This liability (advance receipt) may be recognized as a liability (deferred revenue), in accordance with paragraphs 81–86, when the event that makes the transfer arrangement binding occurs, and is subsequently extinguished when (or as) all compliance obligations under the agreement are satisfied.

Concessionary Loans

AG152. Concessionary loans are loans received by an entity at below-market terms. The portion of the loan that is repayable, along with any interest payments, is accounted for in accordance with IPSAS 41. An entity considers whether any difference between the transaction consideration (loan proceeds) and the fair value of the loan on initial recognition (see IPSAS 41) is revenue that should be accounted for in accordance with this Standard.

AG153. Where an entity determines that the difference between the transaction consideration (loan proceeds) and the fair value of the loan on initial recognition is revenue, an entity recognizes the difference as revenue, except if a compliance obligation exists, for example, where specific requirements are imposed on the transferred assets by the entity result in a compliance obligation. Where a compliance obligation exists, the entity considers if it gives rise to the existence and recognition of a liability. As the entity satisfies the compliance obligation, the liability is reduced and an equal amount of revenue is recognized.

Concessionary Leases for Lessees

AG153A. Concessionary leases are leases received by a lessee at below-market terms. The portion of the lease that is payable, along with any interest payments, is accounted for in accordance with IPSAS 43, *Leases*. A lessee considers whether any difference between the present value of payments for the lease at market rates based on the current use of the underlying asset and the present value of contractual payments on initial recognition is revenue that should be accounted for in accordance with this Standard.

AG153B. Where a lessee determines that the difference between the present value of payments for the lease at market rates based on the current use of the underlying asset and the present value of contractual payments on initial recognition is revenue, a lessee recognizes the difference as revenue, except if a compliance obligation exists. Where a compliance obligation exists, the lessee considers if it gives rise to the existence and recognition of a liability. As the lessee satisfies the compliance obligation, the liability is reduced, and an equal amount of revenue is recognized.

Measurement of Transferred Assets

AG154. As required by paragraph 106, transferred assets are measured at their transaction consideration as at the date of recognition. When an entity receives consideration in a form other than cash, the non-cash consideration is initially measured at its current value in accordance with relevant IPSAS;

(a) Assets such as inventories, investment property, and intangible assets acquired through revenue transactions are to be initially measured at their fair value at the acquisition date;

(b) Property, plant, and equipment assets acquired through revenue transactions are to be measured at their deemed cost as at the acquisition date. The primary objective for which an entity holds property, plant, and equipment determines the current value measurement basis used to determine deemed cost (where such assets held for their operational capacity are measured at current operational value, and assets held for their financial capacity are measured at fair value);

(c) Financial instruments, including cash and transfers receivable that satisfy the definition of a financial instrument are to be measured at their transaction consideration as at the acquisition date in accordance with paragraph 109 and the appropriate accounting policy; and

(d) Right-of-use assets held by a lessee acquired through concessionary leases are to be initially measured at the present value of payments for the lease at market rates based on the current use of the underlying asset in accordance with IPSAS 43.

Debt Forgiveness and Assumptions of Liabilities

AG155. Lenders will sometimes waive their right to collect a debt owed by a public sector entity, effectively canceling the debt. For example, a national government may cancel a loan owed by a local government. In circumstances when a creditor forgives a liability, the local government decreases the carrying amount of the existing liability and recognizes an increase in net assets.

AG156. Entities recognize revenue in respect of debt forgiveness when the former debt no longer meets the definition of a liability or satisfies the criteria for recognition as a liability, provided that the debt forgiveness does not satisfy the definition of a contribution from owners.

AG157. Where a controlling entity forgives debt owed by a wholly-owned controlled entity, or assumes its liabilities, the transaction may be a contribution from owners, as described in paragraphs AG7–AG9.

AG158. Revenue arising from debt forgiveness is measured at the carrying amount of the debt forgiven.

Fines

AG159. Fines are economic benefits or service potential received or receivable by a public sector entity, from an individual or other entity, as determined by a court or other law enforcement body, as a consequence of the individual or other entity breaching the requirements of laws and/or regulations. In some jurisdictions, law enforcement officials are able to impose fines on individuals considered to have breached the law. In these cases, the individual will normally have the choice of paying the fine, or going to court to defend the matter. Where a defendant reaches an agreement with a prosecutor that includes the payment of a penalty instead of being tried in court, the payment is recognized as a fine.

AG160. Fines normally require an entity to transfer a fixed amount of cash to the government, and do not impose on the government any obligations which may be recognized as a liability. As such, fines are recognized as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset set out in paragraph 18. As noted in paragraph 5, where an entity collects fines in the capacity of an agent, the fine will not be revenue of the collecting entity. Assets arising from fines are measured at the best estimate of the inflow of resources to the entity.

Bequests

AG161. A bequest is a transfer of resources made according to the provisions of a deceased person's will. The past event giving rise to the control of resources embodying future economic benefits or service potential for a bequest occurs when the entity has an enforceable claim, for example on the death of the testator, or the granting of probate, depending on the laws and/or regulations of the jurisdiction.

AG162. Bequests that satisfy the definition of an asset are recognized as assets and revenue when it is probable that the future economic benefits or service potential will flow to the entity, and the transaction consideration of the assets can be measured reliably. Determining the probability of an inflow of future economic benefits or service potential may be problematic if a period of time elapses between the death of the testator and the entity receiving any assets. The entity will need to determine if the deceased person's estate is sufficient to meet all claims on it, and satisfy all bequests. If the will is disputed, this will also affect the probability of assets flowing to the entity.

AG163. The transaction consideration of bequeathed assets is determined in the same manner as for gifts and donations, as is described in paragraph AG166. In jurisdictions where deceased estates are subject to taxation, the tax authority may already have determined the transaction consideration of the asset bequeathed to the entity, and this amount may be available to the entity. Bequests are measured at the transaction consideration of the resources received or receivable.

Gifts and Donations, including Goods In-kind

AG164. Gifts and donations are voluntary transfers of assets, including cash or other monetary assets, goods in-kind, and services in-kind that one entity makes to another, normally free from requirements. The resource provider may be an entity or an individual. For gifts and donations of cash or other monetary assets and goods in-kind, the past event giving rise to the control of resources embodying future economic benefits or service potential is normally the receipt of the gift or donation. The making of the gift or donation and the transfer of legal title are often simultaneous; in such circumstances, there is no doubt as to the future economic benefits or service potential flowing to the entity.

AG165. Goods in-kind are tangible assets transferred to an entity in a transaction that do not require a transfer of distinct goods or services to an external party but may be subject to certain obligations. External assistance provided by multilateral or bilateral development organizations often includes a component of goods in-kind.

AG166. Recognition of gifts or donations of services in-kind are addressed in paragraphs AG143–AG149. Gifts and donations other than services in-kind and goods in-kind are recognized as assets in accordance with paragraphs 18–25, and the recognition of revenue depends on whether they arise from a transaction with a binding arrangement.

AG167. On initial recognition, gifts and donations (including goods in-kind) are measured at their transaction consideration as at the acquisition date, in accordance with paragraph 30.

Licensing

AG168. A license establishes a resource provider's rights to the intellectual property of an entity. Licenses of intellectual property may include, but are not limited to, licenses of any of the following:

(a) Software and technology;

(b) Motion pictures, music and other forms of media and entertainment;

(c) Franchises; and

(d) Patents, trademarks and copyrights.

AG169. In addition to a promise to grant a license (or licenses) to a resource provider, an entity may also promise to transfer other goods or services to the purchaser or third-party beneficiary. Those promises may be explicitly stated in the binding arrangement or implied by an entity's customary practices, published policies or specific statements (see paragraph 71). As with other types of binding arrangements, when a binding arrangement with a resource provider includes a promise to grant a license (or licenses) in addition to other promised goods or services, an entity applies paragraphs 68–77 to identify each of the compliance obligations in the binding arrangement.

AG170. If the promise to grant a license is not distinct from other promised goods or services in the binding arrangement in accordance with paragraphs 73–77, an entity shall account for the promise to grant a license and those other promised goods or services together as a single compliance obligation. Examples of licenses that are not distinct from other goods or services promised in the binding arrangement include the following:

(a) A license that forms a component of a tangible good and that is integral to the functionality of the good; and

(b) A license that the purchaser or third-party beneficiary can generate economic benefits or service potential from only in conjunction with a related service (such as an online service provided by the entity that enables, by granting a license, the purchaser or third-party beneficiary to access content).

AG171. If the license is not distinct, an entity shall apply paragraphs 87–97 to determine whether the compliance obligation (which includes the promised license) is a compliance obligation that is satisfied over time or satisfied at a point in time.

AG172. If the promise to grant the license is distinct from the other promised goods or services in the binding arrangement and, therefore, the promise to grant the license is a separate compliance obligation, an entity shall determine whether the license transfers to a purchaser or third-party beneficiary either at a point in time or over time. In making this determination, an entity shall consider whether the nature of the entity's promise in granting the license to a purchaser or third-party beneficiary is to provide the resource provider with either:

(a) A right to access the entity's intellectual property as it exists throughout the license period; or

(b) A right to use the entity's intellectual property as it exists at the point in time at which the license is granted.

Determining the Nature of the Entity's Promise

AG173. The nature of an entity's promise in granting a license is a promise to provide a right to access the entity's intellectual property if all of the following criteria are met:

(a) The binding arrangement requires, or the resource provider reasonably expects, that the entity will undertake activities that significantly affect the intellectual property to which the resource provider has rights (see paragraphs AG174–AG175);

(b) The rights granted by the license directly expose the purchaser or third-party beneficiary to any positive or negative effects of the entity's activities identified in paragraph AG173(a); and

(c) Those activities do not result in the transfer of a good or a service to the purchaser or third-party beneficiary as those activities occur (see paragraph 72).

AG174. Factors that may indicate that a resource provider could reasonably expect that an entity will undertake activities that significantly affect the intellectual property include the entity's customary practices, published policies or specific statements. Although not determinative, the existence of a shared economic interest (for example, a sales-based royalty) between the entity and the resource provider related to the intellectual

property to which the resource provider has rights may also indicate that the resource provider could reasonably expect that the entity will undertake such activities.

AG175. An entity's activities significantly affect the intellectual property to which the resource provider has rights when either:

(a) Those activities are expected to significantly change the form (for example, the design or content) or the functionality (for example, the ability to perform a function or task) of the intellectual property; or

(b) The ability of the resource provider to obtain economic benefits or service potential from the intellectual property is substantially derived from, or dependent upon, those activities. For example, the economic benefits or service potential from a brand is often derived from, or dependent upon, the entity's ongoing activities that support or maintain the value of the intellectual property.

AG176. Accordingly, if the intellectual property to which the resource provider has rights has significant stand-alone functionality, a substantial portion of the economic benefits or service potential of that intellectual property is derived from that functionality. Consequently, the ability of the purchaser or third-party beneficiary to obtain economic benefits or service potential from that intellectual property would not be significantly affected by the entity's activities unless those activities significantly change its form or functionality. Types of intellectual property that often have significant stand-alone functionality include software, biological compounds or drug formulas, and completed media content (for example, films, television shows and music recordings).

AG177. If the criteria in paragraph AG173 are met, an entity shall account for the promise to grant a license as a compliance obligation satisfied over time because the purchaser or third-party beneficiary will simultaneously receive and consume the economic benefits or service potential from the entity's performance of providing access to its intellectual property as the performance occurs (see paragraph (a)). An entity shall apply paragraphs 98–104 to select an appropriate method to measure its progress towards complete satisfaction of that compliance obligation to provide access.

AG178. If the criteria in paragraph AG173 are not met, the nature of an entity's promise is to provide a right to use the entity's intellectual property as that intellectual property exists (in terms of form and functionality) at the point in time at which the license is granted to the resource provider. This means that the resource provider can direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the license at the point in time at which the license transfers. An entity shall account for the promise to provide a right to use the entity's intellectual property as a compliance obligation satisfied at a point in time. An entity shall apply paragraph 97 to determine the point in time at which the license transfers to the purchaser or third-party beneficiary. However, revenue cannot be recognized for a license that provides a right to use the entity's intellectual property before the beginning of the period during which the purchaser or third-party beneficiary is able to use and to derive the economic benefits or service potential from the license. For example, if a software license period begins before an entity provides (or otherwise makes available) to the purchaser or third-party beneficiary a code that enables the purchaser or third-party beneficiary to immediately use the software, the entity would not recognize revenue before that code has been provided (or otherwise made available).

AG179. An entity shall disregard the following factors when determining whether a license provides a right to access the entity's intellectual property or a right to use the entity's intellectual property:

(a) Restrictions of time, geographical region or use—those restrictions define the attributes of the promised license, rather than define whether the entity satisfies its compliance obligation at a point in time or over time.

(b) Guarantees provided by the entity that it has a valid patent to intellectual property and that it will defend that patent from unauthorized use—a promise to defend a patent right is not a compliance obligation because the act of defending a patent protects the value of the entity's intellectual property assets and

provides assurance to the resource provider that the license transferred meets the specifications of the license promised in the binding arrangement.

Sales-Based or Usage-Based Royalties

AG180. Notwithstanding the requirements in paragraphs 119–121, an entity shall recognize revenue for a sales-based or usage-based royalty promised in exchange for a license of intellectual property only when (or as) the later of the following events occurs:

(a) The subsequent sale or usage occurs; and

(b) The compliance obligation to which some or all of the sales-based or usage-based royalty has been allocated has been satisfied (or partially satisfied).

AG181. The requirement for a sales-based or usage-based royalty in paragraph AG180 applies when the royalty relates only to a license of intellectual property or when a license of intellectual property is the predominant item to which the royalty relates (for example, the license of intellectual property may be the predominant item to which the royalty relates when the entity has a reasonable expectation that the resource provider would ascribe significantly more value to the license than to the other goods or services to which the royalty relates).

AG182. When the requirement in paragraph AG181 is met, revenue from a sales-based or usage-based royalty shall be recognized wholly in accordance with paragraph AG180. When the requirement in paragraph AG181 is not met, the requirements on variable consideration in paragraphs 113–122 apply to the sales-based or usage-based royalty.

Repurchase Agreements

AG183. When evaluating whether an entity transfers control of an asset to the purchaser or an identified third-party beneficiary, an entity shall consider any agreement to repurchase the asset.

AG184. A repurchase agreement is a binding arrangement in which an entity provides an asset and also promises or has the option (either in the same binding arrangement or in another binding arrangement) to repurchase the asset. The repurchased asset may be the asset that was originally provided to the resource provider, an asset that is substantially the same as that asset, or another asset of which the asset that was originally provided is a component.

AG185. Repurchase agreements generally come in three forms:

(a) An entity's obligation to repurchase the asset (a forward);

(b) An entity's right to repurchase the asset (a call option); and

(c) An entity's obligation to repurchase the asset at the resource provider's request (a put option).

A Forward or a Call Option

AG186. If an entity has an obligation or a right to repurchase the asset (a forward or a call option), a resource provider does not obtain control of the asset because the resource provider is limited in its ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the asset even though the purchaser or third-party beneficiary may have physical possession of the asset. Consequently, the entity shall account for the binding arrangement as either of the following:

(a) A lease in accordance with IPSAS 43, *Leases*, if the entity can or must repurchase the asset for an amount that is less than the original price of the asset; or

(b) A financing arrangement in accordance with paragraph AG188 if the entity can or must repurchase the asset for an amount that is equal to or more than the original price of the asset.

AG187. When comparing the repurchase price with the price, an entity shall consider the time value of money.

AG188. If the repurchase agreement is a financing arrangement, the entity shall continue to recognize the asset and also recognize a financial liability for any consideration received from the resource provider. The entity shall recognize the difference between the amount of consideration received from the resource provider and the amount of consideration to be paid to the resource provider as interest and, if applicable, as processing or holding costs (for example, insurance).

AG189. If the option lapses unexercised, an entity shall derecognize the liability and recognize revenue.

A Put Option

AG190. If an entity has an obligation to repurchase the asset at the resource provider's request (a put option) at a price that is lower than the original price of the asset, the entity shall consider at the inception of the binding arrangement whether the resource provider has a significant economic incentive to exercise that right. The resource provider's exercising of that right results in the resource provider effectively paying the entity consideration for the right to use a specified asset for a period of time. Therefore, if the resource provider has a significant economic incentive to exercise that right, the entity shall account for the agreement as a lease in accordance with IPSAS 43.

AG191. To determine whether a resource provider has a significant economic incentive to exercise its right, an entity shall consider various factors, including the relationship of the repurchase price to the expected market value of the asset at the date of the repurchase and the amount of time until the right expires. For example, if the repurchase price is expected to significantly exceed the market value of the asset, this may indicate that the resource provider has a significant economic incentive to exercise the put option.

AG192. If the resource provider does not have a significant economic incentive to exercise its right at a price that is lower than the original price of the asset, the entity shall account for the agreement as if it were the sale of a product with a right of return as described in paragraphs AG96–AG103.

AG193. If the repurchase price of the asset is equal to or greater than the original price and is more than the expected market value of the asset, the binding arrangement is in effect a financing arrangement and, therefore, shall be accounted for as described in paragraph AG188.

AG194. If the repurchase price of the asset is equal to or greater than the original price and is less than or equal to the expected market value of the asset, and the resource provider does not have a significant economic incentive to exercise its right, then the entity shall account for the agreement as if it were the sale of a product with a right of return as described in paragraphs AG96–AG103.

AG195. When comparing the repurchase price with the price, an entity shall consider the time value of money.

AG196. If the option lapses unexercised, an entity shall derecognize the liability and recognize revenue.

Consignment Arrangements

AG197. When an entity delivers a product to another party (such as a dealer or a distributor) for sale to end purchasers, the entity shall evaluate whether that other party has obtained control of the product at that point in time. A product that has been delivered to another party may be held in a consignment arrangement if that other party has not obtained control of the product. Accordingly, an entity shall not recognize revenue upon delivery of a product to another party if the delivered product is held on consignment.

AG198. Indicators that an arrangement is a consignment arrangement include, but are not limited to, the following:

(a) The product is controlled by the entity until a specified event occurs, such as the sale of the product to a resource provider of the dealer or until a specified period expires;

(b) The entity is able to require the return of the product or transfer the product to a third party (such as another dealer); and

(c) The dealer does not have an unconditional obligation to pay for the product (although it might be required to pay a deposit).

Bill-and-Hold Arrangements

AG199. A bill-and-hold arrangement is a binding arrangement under which an entity bills a resource provider for a product, but the entity retains physical possession of the product until it is transferred to the purchaser or third-party beneficiary at a point in time in the future. For example, a purchaser may request an entity to enter into such a binding arrangement because of the resource provider's lack of available space for the product or because of delays in the resource provider's production schedules.

AG200. An entity shall determine when it has satisfied its compliance obligation to transfer a product by evaluating when a resource provider obtains control of that product (see paragraph 97). For some binding arrangements, control is transferred either when the product is delivered to the purchaser or third-party beneficiary's site or when the product is shipped, depending on the terms of the binding arrangement (including delivery and shipping terms). However, for some binding arrangements, a resource provider may obtain control of a product even though that product remains in an entity's physical possession. In that case, the resource provider has the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, the product even though it has decided not to exercise its right to take physical possession of that product. Consequently, the entity does not control the product. Instead, the entity provides custodial services to the resource provider over the resource provider's asset.

AG201. In addition to applying the requirements in paragraph 97, for a resource provider to have obtained control of a product in a bill-and-hold arrangement, all of the following criteria must be met:

(a) The reason for the bill-and-hold arrangement must be substantive (for example, the resource provider has requested the arrangement);

(b) The product must be identified separately as belonging to the resource provider;

(c) The product currently must be ready for physical transfer to the purchaser or third-party beneficiary; and

(d) The entity cannot have the ability to use the product or to direct it to another resource provider.

AG202. If an entity recognizes revenue for the sale of a product on a bill-and-hold basis, the entity shall consider whether it has remaining compliance obligations (for example, for custodial services) in accordance with paragraphs 68–77 to which the entity shall allocate a portion of the transaction consideration in accordance with paragraphs 133–143.

Right-of-Use Assets In-kind

Identification

AG202A. Right-of-use assets in-kind are right-of-use assets received without consideration. An entity identifies a right-of-use asset in-kind in accordance with the requirements of paragraphs 10–12 and AG10–AG34 of IPSAS 43 for identifying a lease, with the necessary adaptations in the absence of payments.

AG202B. Right-of-use assets in-kind are transfers of assets that one entity makes to another entity subject to certain obligations. The resource provider may be an entity or an individual.

Recognition

AG202C. Right-of-use assets in-kind are recognized as assets in accordance with IPSAS 16 or IPSAS 45 if they meet the definition of investment property, or property, plant, and equipment, respectively. The timing of revenue recognition depends on the fulfillment of the compliance obligations.

Measurement

AG202D. On initial recognition, right-of-use assets in-kind are measured at the present value of payments at market rates based on the current use of the underlying asset in accordance with paragraphs 26A and 26B of IPSAS 43. If payments for the right-of-use assets in-kind at market rates based on the current use of the underlying asset are not readily available, the right-of-use assets in-kind shall be measured in accordance with paragraphs 24–26 of IPSAS 43.

AG202E. After initial recognition, an entity shall subsequently measure right-of-use assets in-kind in accordance with paragraphs 30–36 of IPSAS 43 for right-of-use assets.

Presentation

Display

AG202F. An entity shall display in the statement of financial position, or disclose in the notes to the general purpose financial statements right-of-use assets in-kind separately from other assets. If an entity does not display right-of-use assets in-kind separately in the statement of financial position, the entity shall:

(a) Include right-of-use assets in-kind within the same line item as either:

(i) The corresponding underlying assets presented if they were owned; or

(ii) Other right-of-use assets; and

(b) Disclose which line items in the statement of financial position include those right-of-use assets in-kind.

Disclosure

AG202G. An entity shall disclose in the notes to the general purpose financial statements the nature and type of major classes of right-of-use assets in-kind, showing separately major classes of right-of-use assets in-kind received.

AG202H. For right-of-use assets in-kind, an entity shall disclose in the notes to the general purpose financial statements the:

(a) Depreciation charge for right-of-use assets in-kind by class of underlying asset; and

(b) Carrying amount at the end of the reporting period by class of underlying asset.

AG202I. If right-of-use assets in-kind meet the definition of investment property, an entity shall apply the disclosure requirements in IPSAS 16. In that case, an entity is not required to provide disclosures in paragraph AG202H for those right-of-use assets in-kind.

AG202J. If an entity measures right-of-use assets in-kind at revalued amounts applying IPSAS 45, an entity shall disclose the information required by paragraph 74 of IPSAS 45 for those right-of-use assets in-kind.

Disclosure (paragraphs 167–193)

AG203. An entity need not disclose information in accordance with this Standard if it has provided the information in accordance with another Standard.

AG204. In making the disclosures required by this Standard, an entity shall consider the requirements of paragraphs 45–47 of IPSAS 1, which provide guidance on materiality and aggregation. A specific disclosure requirement in this Standard need not be satisfied if the information is not material.

Disclosure of Disaggregated Revenue (paragraphs 179–180)

AG205. Paragraph 179 requires an entity to disaggregate revenue from binding arrangements into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. Consequently, the extent to which an entity's revenue is disaggregated for the purposes of this disclosure depends on the facts and circumstances that pertain to the entity's binding arrangements. Some entities may need to use more than one type of category to meet the objective in paragraph 179 for disaggregating revenue. Other entities may meet the objective by using only one type of category to disaggregate revenue.

AG206. When selecting the type of category (or categories) to use to disaggregate revenue, an entity shall consider how information about the entity's revenue has been presented for other purposes, including all of the following:

(a) Disclosures presented outside the financial statements (for example, in press releases, annual reports or stakeholder presentations);

(b) Information regularly reviewed for evaluating the financial performance of segments; and

(c) Other information that is similar to the types of information identified in paragraphs AG206(a) and (b) and that is used by the entity or users of the entity's financial statements to evaluate the entity's financial performance or make resource allocation decisions.

AG207. Examples of categories that might be appropriate include, but are not limited to, the following:

(a) Type of compliance obligation;

(b) Geographical region (for example, country or region);

(c) Market or type of purchaser resource provider (for example, government and non-government resource providers);

(d) Type of binding arrangement (for example, fixed-price and time-and-materials binding arrangements);

(e) Duration of the binding arrangement (for example, short-term and long-term binding arrangements);

(f) Timing of transfer of goods or services (for example, revenue from goods or services transferred to purchasers or third-party beneficiaries at a point in time and revenue from goods or services transferred over time);

(g) Sales channels (for example, goods provided directly to purchasers or third-party beneficiaries and goods provided through intermediaries); and

(h) Revenue earned from the provision of goods or services to third-party beneficiaries.

Appendix B

Amendments to Other IPSAS

[Deleted]

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 47.

Introduction

BC1. IPSAS 23, *Revenue from Non-Exchange Transactions (Taxes and Transfers)* was issued in December 2006 and was developed to provide guidance on how to account for revenue that arose from non-exchange transactions, which account for a large proportion of public sector revenue. The issuance of IPSAS 23 completed the suite of revenue standards, together with IPSAS 9, *Revenue from Exchange Transactions*, and IPSAS 11, *Constructions Contracts* which were both issued in July 2001. IPSAS 9 and IPSAS 11 were based on IAS 18, *Revenue* and IAS 11, *Constructions Contracts*, respectively, which were both issued by the International Accounting Standards Board (IASB).

BC2. Since IPSAS 23 became applicable, the IPSASB became aware of constituents' concerns regarding the application of the Standard, in particular:

(a) Difficulty in making the distinction between exchange and non-exchange transactions;

(b) Difficulty in making the distinction between a condition and a restriction;

(c) Lack of guidance on multi-year funding arrangements;

(d) Lack of guidance on taxation received in advance of the period in which it is intended to be used;

(e) Lack of guidance on accounting for capital grants; and

(f) Lack of guidance on accounting for services in-kind.

BC3. In May 2014, the IASB published the final version of IFRS 15, *Revenue from Contracts with Customers*, which provides a comprehensive framework for recognizing revenue from contracts with customers. IFRS 15 replaces IAS 11, IAS 18, IFRIC 13, *Customer Loyalty Programs*, IFRIC 15, *Agreements for the Construction of Real Estate*, IFRIC 18, *Transfers of Assets from Customers* and SIC-31, *Revenue—Barter Transactions Involving Advertising Services*.

BC4. In 2015, the IPSASB commenced work on a project to update IPSAS that dealt with accounting for revenue as part of the IPSASB's alignment program which aims to align IPSAS with IFRS® Standards. In August 2017, the IPSASB issued Consultation Paper (CP), *Accounting for Revenue and Non-Exchange Expenses*. In addition to potential alignment with IFRS 15, the CP also gave the IPSASB an opportunity to re-evaluate and address some of the application issues with the guidance for non-exchange revenue transactions in IPSAS 23. In particular, the IPSASB considered the question of whether accounting approaches based on whether a revenue transaction is with or without performance obligations are more appropriate than distinguishing between exchange and non-exchange transactions. Based on this new thinking, the CP classified public sector revenue transactions into the following categories:

(a) Transactions with no performance obligations or stipulations. Under the current framework in IPSAS 23[8], revenue transactions with stipulations involved the transfer of assets to a resource recipient with the expectation and/or understanding that they will be used in a particular way and, therefore, that the resource recipient entity will act or perform in a particular way;

[8] IPSAS 23 included the concept of stipulations, which are terms in laws or regulations, or a binding arrangement, that are imposed on the use of a transferred asset. Stipulations may be in the form of conditions (stipulations that specify that the future economic benefits or service potential embodied in the asset is required to be (1) consumed by the recipient as specified, or (2) returned to the transferor), or restrictions (stipulations that limit or direct the purposes for which a transferred asset may be used, but do not specify that future economic benefits or service potential is required to be returned to the transferor if not deployed as specified).

(b) Transactions with stipulations, as described in IPSAS 23, that do not meet all the requirements of IFRS 15; and

(c) Transactions that meet all the requirements of IFRS 15 that involve the transfer of promised goods or services to customers and arise from a contract with a customer which establishes performance obligations.

BC5. The majority of CP respondents agreed that there are different types of revenues in the public sector, and supported a classification approach based on whether the revenue transaction has performance obligations. In addition, respondents noted, and the IPSASB agreed, that the concepts of stipulations, which could be in the form of restrictions or conditions, in the exchange/non-exchange approach in IPSAS 23 was difficult to apply in practice.

Development of Exposure Draft (ED) 70, Revenue with Performance Obligations, and ED 71, Revenue without Performance Obligations

BC6. Based on responses to the CP and subsequent discussions, the IPSASB decided to move away from the exchange/non-exchange distinction and develop accounting approaches based on whether the transaction is with or without performance obligations.

BC7. The accounting approaches were presented in two revenue Exposure Drafts (EDs), ED 70, *Revenue with Performance Obligations* and ED 71, *Revenue without Performance Obligations*. The issuance of two separate EDs enabled the IPSASB to explicitly demonstrate IFRS alignment and maintain the existing allocation of guidance for different revenue transaction types:

(a) ED 70 presented guidance for exchange-type transactions, akin to those in the private sector, and is based on the requirements of IFRS 15, modified as appropriate for public sector entities and to reflect the requirements of other IPSAS. ED 70 would replace IPSAS 9 and IPSAS 11, which were principally based on IAS 18 and IAS 11 respectively; and

(b) ED 71 presented guidance for non-exchange-type transactions, which are the majority of transactions in the public sector. ED 71 would replace IPSAS 23.

BC8. In developing the proposed Standards, the IPSASB:

(a) Considered the guidance on revenue in the *Government Finance Statistics Manual 2014 (GFSM 2014)* with the aim of avoiding unnecessary differences;

(b) Considered guidance developed by national standard setters and bodies with oversight responsibilities for public sector entities in developing additional examples that illustrated the public sector environment;

(c) Considered the aspects of IPSAS 9 and IPSAS 11 that had been developed specifically to address public sector issues or circumstances that are more prevalent in the public sector than in other sectors. The IPSASB focused on addressing these issues in the Standard;

(d) Made changes to aspects of IPSAS 23 to address the concerns noted by constituents[9];

(e) Applied its *Process for Reviewing and Modifying IASB Documents*. Modifications to IFRS 15 were made in circumstances where public sector issues were identified that warranted a departure. As part of its development process, the IPSASB debated a number of issues and whether departure was justified; and

(f) Agreed to retain the existing text of IFRS 15 wherever consistent with existing IPSAS and made the following modifications:

[9] As a result, Basis for Conclusions paragraphs from IPSAS 23 that relate to retained IPSAS 23 text have been incorporated.

(i) Changes to the definitions and terminology in IFRS 15 to ensure consistency with The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework), consistency with definitions and terminology in existing IPSAS, and to reflect the public sector;

(ii) Addition of application guidance on public sector-specific issues or issues which may be more prevalent in the public sector;

(iii) "Amendments to Other Standards" in IFRS 15 were replaced with "Amendments to Other IPSAS" to reflect IPSAS literature. Where applicable, references to other specific IFRS Standards were also amended to reflect references to the corresponding IPSAS;

(iv) Deletion of illustrative examples which had limited or no applicability to the public sector; and

(v) Modification of IFRS 15 examples to reflect the public sector context, as well as the addition of public sector-specific examples to assist with the application of ED 70.

BC9. In February 2020, the IPSASB published ED 70 and ED 71, together with ED 72, *Transfer Expenses*. The three exposure drafts were released together to highlight the linkages between the accounting for revenue and transfer expenses.

Feedback from Constituents on ED 70 and ED 71

BC10. The IPSASB received a broad and diverse set of comment letters in response to ED 70, ED 71, and ED 72, respectively. During its review of ED responses, the IPSASB noted that, overall, the comments did not point to substantial concerns about the revenue accounting principles; rather, the responses generally encouraged clarifications of and additional guidance for the accounting principles, and further consideration on the structure and flow of guidance, to support application in practice.

BC11. The IPSASB also noted that constituents continued to support that there are different types of revenues in the public sector, and different transactions may warrant separate accounting principles. The IPSASB considered feedback from the CP and ED processes together and acknowledged that, while the exchange/non-exchange distinction is considered difficult to apply in practice for the purposes of classifying and accounting for revenue, the distinction still exists as an underlying economic concept. Put differently, while the IPSASB decided to move away from using exchange/non-exchange as defined terms to classify revenue, it remains an appropriate concept to describe the economic substance of transactions in the public sector.

BC12. Some ED respondents noted that it was difficult to determine the applicable ED for their revenue transactions, and sought clarity on the interrelation between ED 70 and ED 71, and the application of the proposed standards in practice. Some of this confusion was attributed to the distinction between performance obligations and present obligations, which are in the scope of ED 70 or ED 71, respectively.

Discussion with the IPSASB Consultative Advisory Group (CAG)

BC13. The IPSASB consulted the CAG at its December 2020 and June 2021 meetings on significant issues highlighted by respondents. CAG members provided input and advice that helped the IPSASB consider and address issues.

IPSASB's Response to Feedback on ED 70 and ED 71

BC14. In light of the responses to ED 70 and ED 71, the IPSASB decided to revisit its decisions on the proposed structure of revenue guidance and how it can better clarify the proposed accounting principles and related disclosure requirements for revenue transactions in the public sector. Key changes include:

(a) Retaining binding arrangement as a fundamental concept for revenue accounting, which dictates the applicable accounting model (paragraphs BC15–BC17);

(b) Presenting accounting guidance for revenue transactions in a single IPSAS, to more clearly communicate the prevalence of revenue types in the public sector and the fundamental concepts for revenue accounting (paragraphs BC18–BC19); and

(c) Using a single concept, compliance obligation, for an entity's legally binding obligation arising from a binding arrangement (paragraphs BC20–BC30).

The Concept of a Binding Arrangement

BC15. The majority of respondents to ED 70 and ED 71 supported the use and concept of binding arrangements in the public sector. Considering constituent comments, the IPSASB also noted that while revenue without performance obligations and revenue with performance obligations differ in economic substance, the latter is expected to be a very small subset of public sector transactions and the existence of a binding arrangement is of greater importance in revenue accounting. Thus, the IPSASB decided to retain the concept of a binding arrangement as a fundamental concept for revenue accounting.

BC16. The IPSASB also confirmed that enforceability is an integral component of a binding arrangement, and the specific details within binding arrangements would clearly specify each party's rights and obligations (i.e., what each party is held accountable to satisfy, and how they will be held accountable). The enforceability of binding arrangements necessitates differences in accounting principles to capture the unique nature and risks of transactions with binding arrangements compared to transactions without binding arrangements. The IPSASB also clarified that enforceability can arise from various mechanisms, as long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the arrangement and hold the parties accountable for the satisfaction of their obligations, by imposing consequences on parties that do not satisfy their obligations.

BC17. The focus on assessing the ability to enforce a binding arrangement is integral for the overall goal of better public financial management. From the broader public financial management perspective, the purpose and intention of enforceable transactions, such as binding arrangements, is to allow the parties in the arrangement to achieve specific objectives. The ability to enforce these arrangements ensures that an entity is held accountable and is able to hold other engaged parties accountable, thereby facilitating strong public financial management. Appropriate reporting and disclosure of information related to these arrangements enables public sector entities to be transparent to their constituents.

One Revenue IPSAS

BC18. Based on its review of constituent concerns, discussions on key revenue accounting concepts and principles, and subsequent analysis of presentation options, the IPSASB decided to restructure and present the accounting guidance, previously proposed in ED 70 and ED 71, as a single standard that:

(a) Is titled "*Revenue*", with clear structure and references, which presents a single source of guidance for all public sector revenues;

(b) Requires an entity to consider up front whether the transaction is without or with a binding arrangement, based on its conclusion in BC15; and

(c) Has separate guidance for revenue without binding arrangements, and revenue with binding arrangements.

BC19. The IPSASB concluded that this revised structure and presentation would better reflect the prevalence of public sector revenues, with guidance related to the majority of public sector revenues presented first, and overall be more appropriate from a public sector perspective.

Compliance Obligation

BC20. The IPSASB noted that most respondents to ED 70 and ED 71 acknowledged that there are separate types of revenue in the public sector and generally agreed with the distinction between “performance obligations”, as defined in ED 70, and “present obligations”, as described in ED 71. However, some ED respondents indicated that the distinction is not clear or is difficult to apply in practice, and as a consequence, it was unclear which proposed standard and set of principles would apply to a specific transaction.

BC21. As a result of these comments, the IPSASB:

(a) Reflected on the similarities and differences between “present obligations” as proposed in ED 71 and “performance obligations” as proposed in ED 70;

(b) Considered whether the differences warranted different accounting principles for revenue with present obligations compared with revenue with performance obligations; and

(c) Clarified the proposed guidance to better explain the concepts in a principled manner.

Similarities and Differences

BC22. During its review of comments from respondents, the IPSASB acknowledged that present obligations and performance obligations both:

(a) Arise from transactions with binding arrangements, and thus are legally binding obligations (i.e., enforceable through legal or equivalent means);

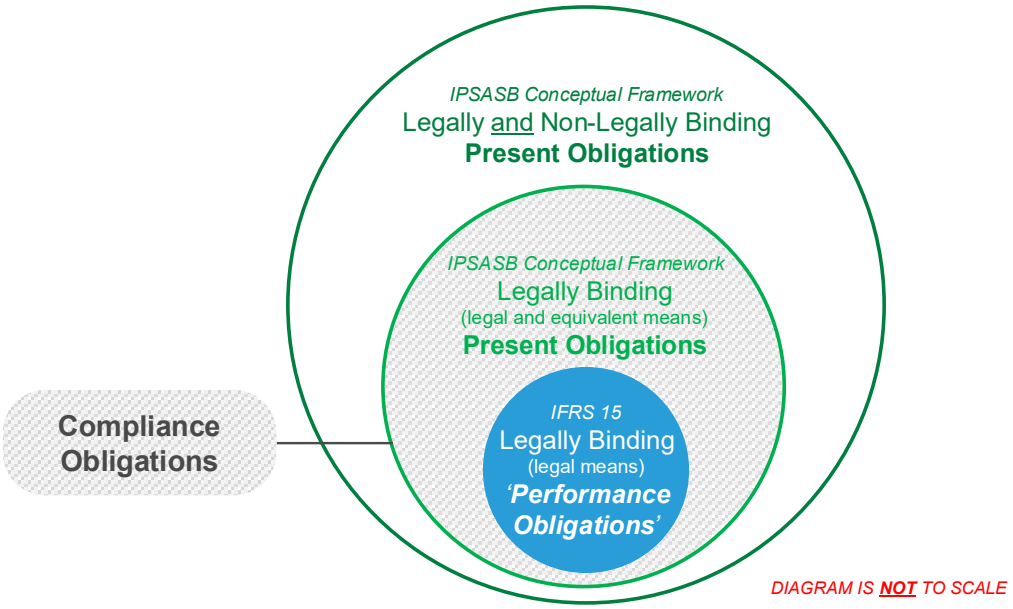
(b) Are described with sufficient specificity in the binding arrangement in order to enable each party in the binding arrangement to hold the other party or parties accountable to satisfy their respective obligations in a specified manner, in compliance with the terms and conditions of that binding arrangement; and

(c) Are units of account to determine distinct components in a binding arrangement, which are used as mechanisms to recognize and measure revenue as an entity satisfies its obligations in that binding arrangement.

BC23. Reflecting on the differences, the IPSASB clarified that the notion of a present obligation was intended to reflect non-exchange type public sector transactions arising from binding arrangements previously covered by IPSAS 23, whereas a performance obligation was intended to reflect exchange-type public sector transactions previously covered by IPSAS 9 and IPSAS 11 (and comparable to commercial transactions in the private sector, in scope of IFRS 15). Consistent with its decision to acknowledge the economic substance of these transactions, but to move away from using exchange and non-exchange to classify revenue, the IPSASB further considered how to better distinguish the two types of obligations in a binding arrangement.

BC24. A performance obligation as presented in ED 70 is an entity’s obligation that requires a transfer to an external party (i.e., from the entity back to the transfer provider (purchaser) or to an identified third-party beneficiary). The outputs from the entity’s use of resources in a performance obligation as presented in ED 70 are transferred out of the entity in the form of distinct goods or services to another party. This would not capture public sector revenue transactions, like capital transfers, where the promise to use resources in a specified manner, on their own or together with other resources, results in using resources for specific goods or services internally. A legally binding obligation which requires a transfer out of the entity to an external party generally requires greater specificity and clearly identifiable actions for the entity to perform, thereby providing more objective and potentially more specific identification, recognition, and measurement of revenue.

Impact on Accounting Principles



BC25. The IPSASB noted that, while there are identifiable differences between these two types of revenue and the party receiving the distinct goods or services from the entity's satisfaction of its obligations in a binding arrangement may differ, the underlying concept for present obligations and performance obligations are the same: both require the entity to use resources in a specified manner. Of significance is the enforceability of the binding arrangement from which the revenue arises, as this enforceability informs the recognition and measurement accounting principles to appropriately reflect the economic substance of revenue from binding arrangements. As such, the key accounting principles are consistent for both types of obligations in a binding arrangement.

Presenting Revised Guidance

BC26. The IPSASB's conclusion that the performance obligations in ED 70 are a subset of present obligations in ED 71 that comprise a minority of public sector revenues, and that key accounting principles are consistent for both types of obligations, were contributing factors to its decision to combine revenue guidance into a single IPSAS.

BC27. When considering how to clarify accounting guidance, the IPSASB noted that the concept of a "present obligation" in the revenue context is narrower than in the Conceptual Framework. A present obligation is a unit of account in revenue accounting, and is a legally binding obligation in a binding arrangement to use resources in compliance with the terms of the binding arrangement. Present obligations in the Conceptual Framework are legally or non-legally binding obligations, and are used more generally to describe an entity's obligations. A term other than "present obligation" would more clearly describe and define the concept for revenue accounting purposes.

BC28. Since performance obligations in ED 70 are a subset of present obligations, and both represent the notion of an enforceable promise or requirement arising from a transaction with a binding arrangement, the IPSASB decided to adopt the new term "compliance obligation" to describe all obligations arising from revenue transactions with binding arrangements. This notion of compliance is in relation to compliance with the terms and conditions in the entity's binding arrangement. This term and concept would encompass performance obligations (as presented in ED 70 and in alignment with IFRS 15, to capture revenues from transactions that transfer distinct goods or services to an external party) and present obligations (as presented in ED 71, and consistent with legally binding present obligations in the Conceptual Framework, to also capture revenues from public sector transactions that do not transfer distinct goods or services to an external party). The following diagram illustrates the relationship between "compliance obligation" and the previously used terms:

BC29. The IPSASB provided further guidance to highlight any additional considerations for the entity in applying the accounting principles to compliance obligations which require a transfer of specific distinct goods or services to an external party. Such compliance obligations to transfer goods or services to an external party generally entail a clear discharge of an entity's obligation in the binding arrangement. These additional considerations are intended to help an entity account for the deferral and recognition of revenue to better reflect the nature of such obligations.

BC30. The IPSASB's decision to have a single concept for obligations arising from revenue transactions with binding arrangements, along with the decision to present revenue guidance in a single IPSAS, also prompted the removal of redundant guidance proposed in the EDs related to scope considerations and measurement of transactions with components under the two proposed revenue standards.

Scope (paragraph 3)

Modification of IFRS 15 for Applicability to the Public Sector

BC31. The IPSASB modified the requirements of IFRS 15 to address public sector-specific transactions. This included using the concept of a binding arrangement, which is broader than a contract, in IPSAS 47 to allow for jurisdictions where government and public sector entities cannot enter into legal contracts but do enter into binding arrangements which are in substance the same as contracts.

BC32. The IPSASB modified enforceability to include mechanisms that are outside the legal system that are equivalent to legal means. This change was made because some binding arrangements in the public sector may arise and become enforceable through exercise of executive authority, legislative authority, cabinet or ministerial directives, and these binding arrangements would not be considered "contracts". The IPSASB also noted that legal or equivalent means is consistent with "legal obligation" as described in Chapter 5 of the Conceptual Framework, and is not a "non-legally binding obligation".

BC33. Public sector transactions may involve three parties: the resource provider, which provides the consideration; the entity, which receives the consideration and is responsible for using or transferring goods or services; and the third-party beneficiary, which can be an entity, individual or household, receiving those goods or services. While the IASB's educational materials refer to such three-party arrangements, they are not

explicitly highlighted in IFRS 15. The third-party beneficiary concept was made more explicit in IPSAS 47, as three-party transactions are expected to be much more prevalent in the public sector.

Modification of IFRS 15 Illustrative Examples

BC34. Illustrative Examples are non-authoritative guidance which illustrate accounting principles using general fact patterns prevalent globally amongst public sector entities. The IPSASB adapted the Illustrative Examples from IFRS 15 using the following approach for ED 70 and ED 71:

(a) Where the underlying concepts illustrated by an example is applicable to the public sector, the example was modified to incorporate realistic fact patterns which could apply to public sector entities such as governments and intergovernmental organizations;

(b) Where the underlying concepts in an example only had limited or no applicability to the public sector, the example was removed. This applied to examples involving price concessions granted by suppliers to distributors to preserve the supply chain relationship, additional goods or services in the telecommunications sector, “slotting fees” paid by a supplier to a retailer, warranties, franchise rights, and costs incurred in a competitive bidding scenario; and

(c) Developed new public sector-specific examples to illustrate the additional application guidance on scope, three-party arrangements, enforceability, and the additional disclosure requirements.

BC35. After addressing comments from ED respondents, the IPSASB reviewed the proposed Illustrative Examples and:

(a) Retained examples that use general case facts to illustrate principles which remain relevant in the Standard’s accounting models and application of complex principles to transactions that are both relevant and prevalent in the public sector. The retained examples were revised as necessary to better reflect the accounting principles in IPSAS 47;

(b) Removed examples that did not meet the retention criteria in BC35(a); and

(c) Added examples, using general fact patterns, to illustrate the application of accounting principles for capital transfers.

BC36. The IPSASB acknowledged that while the Illustrative Examples are not authoritative, an entity applying IPSAS 47 may find examples dealing with commercial transactions to be helpful if it is a party to such transactions. While commercial transactions may be relevant (i.e., may occur) in the public sector, the IPSASB expects such situations to be less prevalent (i.e., uncommon and thus with limited applicability) and decided to remove examples of relevant but not prevalent transactions to the public sector. The IPSASB noted that if a public sector entity is a party to commercial transactions, it may refer to IFRS 15 for additional Illustrative Examples of how an entity might apply the requirements of the Standard.

Non-monetary Exchanges between Entities in the Same Line of Business

BC37. In the discussion of non-monetary exchanges in paragraph (h) of IPSAS 47, the IPSASB replaced the example of non-monetary exchanges of oil between entities in the same line of business to facilitate sales to potential customers used in IFRS 15 with the exchange of electricity, because it is more relevant to the public sector.

Highlighting the Relationship Between IPSAS 47, Revenue, and IPSAS 48, Transfer Expenses

BC38. The IPSASB considered clarifying the scope and interaction between IPSAS 47 and IPSAS 48, *Transfer Expense*s, by defining the term “Transfer Revenue” in order to mirror the definition of “Transfer Expense” in IPSAS 48. Specifically, the IPSASB considered defining “Transfer Revenue” as a transaction, other than

taxes, in which an entity receives a good, service, or other asset from another entity without directly providing any good, service, or other asset in return.

BC39. While the IPSASB acknowledged that the definition was accurate and that it would be conceptually sound to highlight the mirroring relationship between transfer revenue and transfer expenses, the IPSASB ultimately decided not to introduce this term as a formal definition for the following reasons:

(a) A number of members were concerned that introducing a new definition relating to revenue may confuse constituents; and

(b) Transfer revenue would have been a subset of revenue in IPSAS 47. Separately defining this term when their recognition and measurement would have been the same as other types of revenue seemed to add an unnecessary level of complexity and duplication of guidance.

Onerous Contracts

BC40. The IPSASB considered if IPSAS 47 should include explicit guidance for binding arrangements that become onerous and noted that IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*, which was developed based on IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*, applies to onerous contracts. While this guidance refers to "contracts", the IPSASB noted that IPSAS 19 would still be applicable for binding arrangements with compliance obligations that transfer goods or services to another party. Furthermore, binding arrangements with compliance obligations to use resources for goods or services internally would not meet the definition of an onerous contract because there are no exchange of assets or services. Therefore, the IPSASB concluded that the scope exclusion in paragraph 3 of IPSAS 47 and paragraph 1(c) of IPSAS 19 are sufficient, and incorporated a specific reference to IPSAS 19 in paragraph 79.

Compulsory Contributions and Levies to Social Security and Other Schemes

BC41. There is a variety of different arrangements for funding social security schemes across jurisdictions. Constituents commented that IPSAS 23 did not address the accounting for these funding arrangements. The IPSASB considered the issue in developing IPSAS 42, *Social Benefits*.

BC42. The IPSASB concluded that such contributions are revenue transactions without binding arrangements, and should be accounted for in accordance with this Standard. The one exception to this is where an entity elects to account for a social benefit scheme using the insurance approach in IPSAS 42. The insurance approach takes into account both cash inflows and cash outflows, and hence contributions to a social benefit scheme accounted for under the insurance approach are not accounted for as revenue under this Standard.

BC43. In developing IPSAS 42, the IPSASB also noted that some government programs that do not meet the definition of a social benefit in that Standard (for example, healthcare benefits in some jurisdictions) may also involve compulsory contributions or levies. The IPSASB concluded that the same principles of revenue recognition applied to these transactions as applied to contributions for social benefits and to taxation. The IPSASB agreed to extend the requirement for recognizing taxation revenue to cover other compulsory contributions and levies, whether arising from social benefits or other government programs. The amended requirements were incorporated into this Standard.

Definitions (paragraphs 4–8)

General Alignment with Public Sector Terminology

BC44. In adapting IFRS 15 for use in the public sector, the IPSASB modified the following terms in IPSAS 47 to better align with terminology used in the public sector:

(a) All the references to “sell” or “sold” were replaced with the terms “provide” and “provided”, respectively. In addition to general alignment with public sector terminology, this change also accommodates the fact that in three-party revenue arrangements, goods or services are provided, rather than sold, by an entity to a third-party beneficiary;

(b) “Stand-alone selling price” was replaced with “stand-alone value”;

(c) “Customary business practices” was replaced with an entity’s “customary practices”;

(d) “Industry” was replaced with “sector”; and

(e) Editorial changes were made to the definition of “transaction consideration”.

Other changes in terminology and new definitions were added for public sector-specific reasons. These changes and additions are explained in paragraphs BC45–BC62.

Binding Arrangements

BC45. The IPSASB replaced all references to “contracts” in IFRS 15 with references to the term “binding arrangements”. This change acknowledges that in some jurisdictions, entities may not have the power to enter into legal contracts but nevertheless may have the authority to enter into binding arrangements. The IPSASB agreed that binding arrangements, for the purpose of IPSAS 47, should encompass rights that arise from legislative or executive authority, cabinet or ministerial directives. For clarity, the IPSASB also decided to explicitly specify in the definition that a binding arrangement confers both enforceable rights and enforceable obligations on the parties to the arrangement. To assist with the expanded concept of binding arrangements, Application Guidance was added to IPSAS 47 in paragraphs AG10–AG31. As the concept of a contract may still be applicable in the public sector, the IPSASB specified in the binding arrangement definition that a contract is a type of binding arrangement. The definition of “contract” is in IPSAS 43, *Leases*, which was approved prior to IPSAS 47.

BC46. Considering constituent comments from ED respondents on the concept and definition of a binding arrangement, the IPSASB:

(a) Acknowledged that multi-party arrangements, where more than two parties in the arrangement each have their own enforceable rights and enforceable obligations, are common in the public sector. The IPSASB revised the definition of a binding arrangement to better reflect that at least two parties must each have their own respective enforceable rights and enforceable obligations, thereby conferring at least two-way enforceability; and

(b) Reconfirmed its decision that a binding arrangement includes both rights and obligations, and each party’s enforceable right and enforceable obligation are interdependent and inseparable.

BC47. The IPSASB concluded that the use and definition of the term “binding arrangement” in IPSAS 47 is conceptually consistent with existing IPSAS and the difference in wording is intentional for the purposes of IPSAS 47. The definition was retained, with minor wording revisions to clarify the concept and application in IPSAS 47.

BC48. Since a binding arrangement is, by definition, enforceable, and includes both rights and obligations for the parties, the IPSASB concluded that all binding arrangements will include at least one compliance obligation. In other words, a binding arrangement always includes at least one compliance obligation because the enforceability of binding arrangements provides each party with the ability to enforce obligations agreed upon in that binding arrangement.

Unenforceable Transactions

BC49. The IPSASB discussed how to account for transactions that do not arise from a binding arrangement but have an implied requirement for how those resources are to be used (for example, limitations on the use of property taxes). The IPSASB concluded that an implied requirement needed to be enforceable by the resource provider. For example, taxpayers do not normally have enforceable rights, and the implied requirements may give rise to enforceable obligations of the resource recipient.

BC50. The IPSASB also noted that transactions which are not binding arrangements are not automatically unenforceable. For example, certain fines and taxes are not binding arrangements because they lack two-way enforceability, but these transactions are still enforceable by the authority imposing the fines or taxes.

Appropriations

BC51. The IPSASB noted that, in some jurisdictions, a revenue transaction might be made subject to authorization of an appropriation. The IPSASB considered whether such a limitation should affect the recognition of revenue. The IPSASB concluded that the impact of such a limitation would depend on whether the limitation had substance. The IPSASB agreed that where the limitation has substance, the entity has no enforceable claim and should not recognize an asset prior to the appropriation being authorized. The IPSASB also agreed to include guidance on determining whether the limitation has substance.

Compliance Obligation

BC52. As outlined in BC26–BC28, the IPSASB decided to adopt the new term “compliance obligation” to describe all obligations arising from revenue transactions with binding arrangements. The definition of “compliance obligation” reflects that an entity’s obligation in a binding arrangement requires the entity to either use resources internally for a distinct good or service or transfer a distinct good or service to an external party (purchaser or third-party beneficiary). This definition is intended to encapsulate the concept as presented in IFRS 15 (and proposed in ED 70 as "performance obligations”), but revised to better capture public sector transactions arising from binding arrangements where an entity does not transfer distinct goods or services to an external party (proposed in ED 71 as "present obligations”).

Binding Arrangement Asset and Binding Arrangement Liability

BC53. As a consequence of replacing all references to “contract” with references to “binding arrangement”, the IPSASB also replaced the terms “contract asset” and “contract liability” with “binding arrangement asset” and “binding arrangement liability”, respectively.

Resource Provider

BC54. To more clearly describe the other party in a revenue transaction, the IPSASB introduced the term “resource provider” as part of its decision to present guidance for all public sector revenue transactions in a single standard. This party provides a resource, which encompasses various goods, services, and assets, including in the form of transfers, to the entity applying IPSAS 47. A resource provider may or may not be the party receiving goods or services from the reporting entity.

BC55. This Standard refers to the party providing resources in a revenue transaction as the “resource provider”, while IPSAS 48 refers to the party providing resources in a transfer expense transaction as the “transfer provider”. The IPSASB considered whether the same term should be used in both Standards and decided that because the scope of IPSAS 47 is broader and encompasses revenue from transfers and other transactions, a more generic term (resource provider) should be used for revenue.

Purchaser and Third-Party Beneficiary

BC56. The IPSASB replaced the term “customer” with “purchaser”, because the use of the term “purchaser” is widespread in IPSAS literature and is a broader term more suited to transactions involving the transfer of goods or services to either the purchaser or agreed third-party beneficiary. The IPSASB revised the definition of a “purchaser” to clarify that it is a resource provider that receives goods or services from the entity. As the term “customer” may still be applicable in certain circumstances in the public sector, the IPSASB also retained the definition of a customer but clarified that a customer is a type of purchaser.

BC57. The IPSASB added the term “third-party beneficiary” following the term “purchaser”, where appropriate, to describe the transfer of goods or services in three-party arrangements, which are common in the public sector. The term “third-party beneficiary” was defined so that its meaning can be consistently applied to IPSAS 47 as well as IPSAS 48.

Revenue and Customer

BC58. The IASB’s definition of revenue refers to income arising in the course of an entity’s ordinary activities, and income encompasses both revenues and gains. The IASB’s definition of “customer” also refers to obtaining goods or services that are an output of the entity’s ordinary activities. To be consistent with IPSAS 1, the IPSASB decided not to adopt the IASB’s definition of revenue. As a result, IPSAS 47 uses the definition of “revenue” in IPSAS 1 and does not refer to “income arising in the course of an entity’s ordinary activities”.

BC59. As the IASB’s definition of “revenue”, which refers to “ordinary activities”, was not adopted, the IPSASB replaced the references to “ordinary activities” in the definition of “customer” with references to “activities” to ensure consistency with the Conceptual Framework. The current IPSAS literature does not make a distinction between ordinary activities and activities outside the ordinary course of operations, primarily because of the multi-functional nature of many public sector entities.

BC60. The IPSASB decided to replace the term “commercial substance” with “economic substance” which encompasses commercial substance. The public sector entities which apply IPSAS generally do not have commercial objectives. Therefore, the term “commercial substance” was considered to be inappropriate. As a result of this change, the IPSASB added application guidance on economic substance in paragraphs AG32–AG34.

Combining Binding Arrangements

BC61. When considering the criteria for when an entity shall combine two or more binding arrangements, the IPSASB considered replacing the term “commercial objective”, with “economic objective”, because the term “commercial objective” refers to the objective to make a profit, whereas the primary objective of most public sector entities is to deliver services to the public. However, the IPSASB decided to simply replace the term “commercial objective” with “objective” because the term “economic objective” could have a different connotation for the public sector than the objective of delivering services to the public.

Economic Benefits and Service Potential from Distinct Goods or Services

BC62. According to the Conceptual Framework, a resource provides benefits in the form of service potential or the capability to generate economic benefits. The IPSASB acknowledged that the explanation of a resource should include both the terms “service potential” and “economic benefits”. This approach acknowledges that the primary objective of most public sector entities is to deliver services, but also that public sector entities may carry out activities with the sole objective of generating net cash inflows. Therefore, the IPSASB replaced the term “benefits” with “economic benefits or service potential” in IPSAS 47.

Retained Terminology and Definitions

BC63. The IPSASB considered whether any modification was required to the following terms and definitions but ultimately decided to retain them without modification, as there was no public sector-specific reason to modify them:

(a) Goods or services;

(b) Consideration;

(c) Exchange;

(d) Distinct; and

(e) Fair value.

Identifying the Revenue Transaction (paragraphs 9–16)

BC64. In response to constituent comments in response to the EDs, outlined in paragraphs BC14–BC17, the IPSASB restructured the guidance in IPSAS 47 to require an entity to consider up front whether the transaction is without or with a binding arrangement. The enforceability of a binding arrangement necessitates different accounting principles in order to capture the nature and risks of such transactions (in comparison with transactions without binding arrangements). The IPSASB also added Implementation Guidance to support the accounting principles presented in the authoritative text, as this is an important and complex area of the revenue guidance.

Revenue from Transactions without Binding Arrangements (paragraphs 17–55)

BC65. The definition of a binding arrangement specifically requires each party in the arrangement to have both an enforceable right and enforceable obligation. If one of these components is not present in the arrangement, then it is not a binding arrangement. This means that various transactions are to be accounted for as revenue from transactions without binding arrangements, where the entity has:

(a) An enforceable right, and an unenforceable obligation;

(b) An unenforceable right, and an enforceable obligation; or

(c) An unenforceable right and an unenforceable obligation.

BC66. The IPSASB has included more explicit guidance to prompt an entity to consider whether any of its rights or obligations in the transaction may meet the definition of an asset or liability, respectively, in accordance with the Conceptual Framework. This additional guidance is consistent with existing accounting principles, and is included to better balance the accounting model for revenue without binding arrangements and overall ensures that the two accounting models are comprehensive and stand-alone for users of this Standard.

BC67. This Standard also does not establish different recognition requirements in respect of revenue received or receivable as monetary assets and revenue received or receivable as non-monetary assets. The IPSASB is of the view that, while non-monetary assets raise additional measurement concerns, they do not, of themselves, justify a different recognition point.

Entity Bank Accounts

BC68. This Standard assumes the requirement that all money deposited in a bank account of an entity satisfies the definition of an asset and meets the criteria for recognition of an asset of the entity. The IPSASB established this principle in paragraphs 1.2.6 and 1.2.7 of the Cash Basis IPSAS, *Financial Reporting under the Cash Basis of Accounting*. The Standard also requires the recognition of a liability in respect of any amount the entity has collected and deposited in its own bank account while acting as an agent of another entity.

Measurement of Assets and Liabilities

BC69. This Standard requires assets acquired in revenue transactions to be initially measured at their transaction consideration as at the acquisition date. The IPSASB was of the view that this is appropriate to reflect the substance of the transaction and its consequences for the entity. The cost of acquisition is usually a measure of the fair value of the asset acquired. However, the consideration provided for the acquisition of an asset may not be equal to the fair value of the asset acquired. Transaction consideration most faithfully represents the actual value the entity accrues as a result of the transaction. Initial measurement of non-monetary assets acquired at their transaction consideration, which is the current value for non-monetary assets, is consistent with the approach taken in IPSAS 16, *Investment Property* for assets acquired at no cost or for a nominal cost. The IPSASB made consequential amendments to IPSAS 12, *Inventories*, and IPSAS 16 to fully align those IPSAS with the requirements of this Standard.

BC70. As part of the development of IPSAS 46, *Measurement*, the IPSASB decided that, in the case of non-monetary assets in the scope of IPSAS 45, *Property, Plant, and Equipment*, held for its operational capacity, deemed cost should be clarified to include current operational value. The IPSASB agreed to require the use of current operational value on initial measurement where the transaction price does not faithfully reflect the substance of the transaction for property, plant, and equipment held for their operational capacity. While fair value continues to faithfully represent the value to the public sector entity of property, plant, and equipment held for its financial capacity, current operational value faithfully represents the value of property, plant, and equipment held for its operational capacity.

BC71. This Standard requires that where an entity recognizes a liability in respect of an inflow of resources, that liability will initially be measured as the best estimate of the amount required to settle the obligation at the reporting date. This measurement basis is consistent with IPSAS 19. The IPSASB was also cognizant of the amendments proposed for IAS 37, *Provisions, Contingent Liabilities and Contingent Assets* (to be retitled *Non-financial Liabilities*), on which IPSAS 19 is based, and will monitor, and in due course consider, its response to any developments in IAS 37.

Taxable Event

BC72. This Standard defines a taxable event as the past event that the government, legislature, or other authority has determined to be subject to taxation. The Standard notes that this is the earliest possible time to recognize assets and revenue arising from a taxation transaction, and is the point at which the past event that gives rise to control of the asset occurs. The IPSASB considered an alternative view that an entity only gains control of resources arising from taxation when those resources are received. While recognizing that there can be difficulties in reliably measuring certain taxation streams, the IPSASB rejected such an approach as inappropriate for the accrual basis of financial reporting.

Advance Receipts of Taxes

BC73. This Standard requires an entity that receives resources in advance of the taxable event, or of an arrangement becoming enforceable, to recognize an asset and a liability of an equivalent amount. This is consistent with the principles of accrual accounting to recognize revenue in the period in which the underlying event that gives rise to the revenue occurs. In the event that the taxable event does not occur, or the arrangement does not become enforceable, the entity may need to return part or all of the resources. One common view is that, where resources are received in advance of the taxable event, an entity should only recognize a liability where it considers it probable that there will be a subsequent transfer of resources. The IPSASB supported the view that revenue should not be recognized until the taxable event occurs, and extends the principle to transfers, so that where resources are received prior to an arrangement becoming binding, the entity recognizes an asset and a liability for the advance receipt.

Expenses Paid Through the Tax System and Tax Expenditures

BC74. This Standard requires that expenses paid through the tax system be distinguished from tax expenditures, and that the former should be recognized separately from revenue in the general purpose financial statements. This is because, as defined in this Standard, expenses paid through the tax system satisfy the definition of expenses and, according to the principles established in IPSAS 1, offsetting of expenses against revenue is generally not permitted. As defined in this Standard, tax expenditures are one of the many factors used to determine the amount of tax revenue received or receivable and are not recognized separately from revenue. The IPSASB concluded that this treatment was consistent with the principles established in this Standard.

BC75. The treatment prescribed in this Standard for expenses paid through the tax system is different to that currently prescribed by the Organization for Economic Co-operation and Development (OECD) for member country statistical returns. The OECD currently requires tax revenue to be shown net of expenses paid through the tax system (or non-wastable tax credits) to the extent that an individual taxpayer's liability for tax is reduced to zero, payments to a taxpayer are shown as expenses.[10] The IPSASB noted that the current OECD treatment does not conform to the conceptual principles underpinning the IPSAS and the IPSAS 1 requirement not to offset items of revenue and expense.

The Tax Gap

BC76. For some taxes, government entities will be aware that the amount it is entitled to collect under the tax law is higher than the amount that will be collected, but will not be able to reliably measure the amount of this difference. The amount collected is lower due to the underground economy (or black market), fraud, evasion, non-compliance with the tax law, and error. The difference between what is legally due under the law and what the government will be able to collect is referred to as the tax gap. Amounts previously included in tax revenue that are determined as not collectible do not constitute part of the tax gap.

BC77. The IPSASB concluded that the tax gap does not meet the definition of an asset, as it is not expected that resources will flow to the government in respect of these amounts. Consequently, assets, liabilities, revenue, or expenses will not be recognized in respect to the tax gap.

Revenue from Transactions with Binding Arrangements (paragraphs 56–161)

Accounting for the Binding Arrangement

BC78. The IPSASB noted that the title and structure of Step 1 of the five-step model proposed in ED 70, previously titled "Identifying the Binding Arrangement", caused confusion for some constituents. The criteria in paragraph 56 are not intended to identify whether an arrangement is a binding arrangement; an entity should identify a binding arrangement by assessing whether an arrangement meets the definition of a binding arrangement. Rather, an entity is to consider the criteria in paragraph 56 when determining if revenue from a binding arrangement should be accounted for using the five-step accounting model in IPSAS 47. The IPSASB decided to reorder the authoritative guidance on binding arrangements and clarify when the five-step model should be considered in accounting for revenue transactions arising from binding arrangements.

Probability of Collection of Consideration to which an Entity is Entitled (Paragraph (e))

BC79. Paragraph (e) is part of the criteria that must be met before an entity can apply the five-step accounting model in IPSAS 47. Paragraph (e) requires the collection of consideration to which an entity is entitled to be probable.

[10] OECD, Revenue Statistics (Paris: OECD, 2000): p. 267, §20-21.

BC80. One of the underlying assumptions in IFRS 15 is that collectability of consideration from customers is likely in the private sector because:

(a) Entities generally only enter into contracts in which it is probable that the entity will collect the amount to which it is entitled; and

(b) Unless there are significant penalties for exiting a contract, most entities would not continue to be in a contract with a customer in which there was significant credit risk associated with that customer without adequate economic protection to ensure that it would collect the consideration.

BC81. The IPSASB acknowledged that the probability criterion for certain binding arrangements with resource providers is an issue for the public sector in some jurisdictions. Some public sector entities are required to enter into binding arrangements to provide certain goods or services (such as water and electricity) to all citizens in accordance with their legislative mandate, regardless of the resource provider's ability or intention to pay. As a result, public sector entities may enter into some binding arrangements where collectability of the consideration is not probable.

BC82. When the collection of consideration is not probable, (which can occur when an entity is compelled to deliver a good or service), application of paragraph (e) without modification could result in revenue not being recognized until the consideration has been collected and the conditions in paragraph 58 of IPSAS 47 are met.

BC83. The IPSASB decided to retain paragraph (e) because:

(a) Transactions where the collection of consideration is not probable do not meet the definitions of revenue in paragraph 4 of IPSAS 47, paragraph 7 of IPSAS 1, and paragraph 5.29 of the Conceptual Framework; and

(b) The probability criterion aligns with IFRS 15 requirements and prevents entities from recognizing revenue and large impairment losses at the same time.

BC84. The IPSASB acknowledged that arrangements into which an entity is compelled to enter, where the collectability of the consideration is in question, could be prevalent and material in certain jurisdictions. The IPSASB noted that there is information value in disclosing in the notes to the financial statements the amounts invoiced for such binding arrangements where collection of consideration is not probable or only considered probable after accepting a price concession as described in paragraph AG37 (see paragraph BC110).

BC85. To assist with the application of paragraph (e), the IPSASB added paragraph AG37, which states that when an entity is providing goods or services and accepts a lower amount of consideration, the acceptance of the lower amount of consideration is generally considered an implicit price concession. This guidance is based on the concepts illustrated in Illustrative Examples 2 and 3 of IFRS 15, and the IPSASB decided that it would be appropriate to elevate the concept from these examples due to the potential prevalence of transactions with collections risk in the public sector. Once an entity has concluded that it has provided a price concession, the binding arrangement with the lowered transaction consideration may meet the collectability criterion in paragraph (e) and the entity would apply the five-step accounting model to the binding arrangement. The IPSASB also enhanced paragraph AG37 to address comments from ED respondents on how an entity should consider implicit price concessions in the assessment of collectability, and use its best estimate of risks associated with the resource provider at the inception of the binding arrangement.

Recognition of Consideration Received as Revenue when the Criteria in Paragraph 56 are not Met (Amendment of Paragraph 58)

BC86. In IFRS 15, if a transaction does not meet all of the criteria for revenue recognition using the five-step accounting model and the entity receives consideration from a customer, the consideration is recognized as revenue when either:

(a) The entity has no remaining obligations to transfer goods or services to the customer and all, or substantially all, of the consideration promised by the customer has been received by the entity and is non-refundable; or

(b) The contract has been terminated and the consideration received from the customer is non-refundable.

BC87. In the public sector, because an entity may be compelled to continue to provide goods or services to parties who cannot pay for these goods or services, the IPSASB was concerned that the application of paragraph 15 of IFRS 15 may lead to situations where revenue is never recognized, even if an entity has collected a portion of the promised consideration and the amounts collected are non-refundable. To address this concern, the IPSASB clarified in paragraph (a) of IPSAS 47 that an entity shall recognize the consideration received as revenue when the entity has fully satisfied the compliance obligation related to the consideration received, and the consideration received is non-refundable.

Overall Impact from the Application of Paragraphs (e), 58 and AG37

BC88. The IPSASB noted that the application of paragraphs (e), 58 and AG37 would lead to the following possible outcomes, and considered the accounting and disclosure implications of the outcomes when the requirements of this Standard are applied:

(a) Criterion (e) is met and there are no collectability issues – In this scenario, the binding arrangement will be accounted for using the five-step accounting model and no specific disclosures regarding compelled transactions are required. As required by paragraph 57, if facts and circumstances have changed significantly since the initial assessment, the entity is required to reassess if the binding arrangement continues to meet all the criteria in paragraph 56.

(b) Criterion (e) is met, but only after the transaction consideration has been reduced for the implicit price concession as noted in paragraph AG37 – In this scenario, the binding arrangement will be accounted for using the five-step accounting model but at the reduced transaction consideration. Specific disclosures regarding compelled transactions will be required by paragraph 171 (see paragraph BC110 below). Similar to the scenario in paragraph BC88(a), if facts and circumstances have changed significantly since the initial assessment, the entity is required by paragraph 57 to reassess if the binding arrangement continues to meet all the criteria in paragraph 56.

(c) Criterion (e) is not met, and the entity has collected a portion of the consideration – This scenario can arise when there is not enough information to formulate an expectation of the amounts to be collected or when there is no discernible pattern of collection based on past history. In this scenario, paragraph 58 requires the entity to continue to reassess whether the binding arrangement meets all the criteria in paragraph 56. Any consideration received is subject to the revenue recognition criteria in paragraphs 58 and 86. Specific disclosures regarding compelled transactions will be required by paragraph 171.

(d) Criterion (e) is not met, and no consideration has been collected – In this scenario, paragraph 58 requires the entity to continue to reassess whether the binding arrangement meets all the criteria in paragraph 56. Specific disclosures regarding compelled transactions will be required by paragraph 171.

Based on the above, the IPSASB was satisfied that paragraphs 58, 171 and AG37 address the concerns discussed in paragraphs BC84, BC87 and BC110.

Breach of the Terms and Conditions of a Binding Arrangement

BC89. The IPSASB considered the accounting consequences arising from the breach of the terms and conditions of a binding arrangement. The IPSASB concluded that the guidance in IPSAS 3, *Accounting Policies, Changes in Accounting Estimates, and Errors,* should be considered to determine whether the breach

resulted in an error as defined in IPSAS 3. Where the circumstances of the breach are such that the guidance in IPSAS 3 is not applicable, guidance included in this Standard should be applied.

Identifying Compliance Obligations in a Binding Arrangement

BC90. Further to its discussions outlined in paragraphs BC20–BC29, the IPSASB confirmed that a binding arrangement has at least one compliance obligation, and each compliance obligation is a unit of account to determine a distinct component within the binding arrangement and is a mechanism for the recognition and measurement of revenue. Since an entity's binding arrangement may have multiple compliance obligations, the IPSASB decided to revise existing guidance to help entities identify and account for each of its obligations in a binding arrangement separately, in accordance with the nature of each distinct obligation, and added Implementation Guidance to support the principles presented in the authoritative text. The IPSASB also confirmed that principles in this Standard are consistent with the Unit of Account guidance proposed in Chapter 5*, Elements in Financial Statements* of the *Conceptual Framework*.

Existence and Recognition of a Liability

BC91. Some respondents to ED 71 provided comments related to the existence of a liability in a binding arrangement: for example, what gives rise to a liability in a binding arrangement, whether and when a liability is recognized, and if that liability only arises when there is a return (i.e., repayment) obligation, as previously presented in IPSAS 23. The IPSASB considered these comments in conjunction with the guidance proposed in Chapter 5*, Elements in Financial Statements* of the *Conceptual Framework*.

BC92. Through its discussions, the IPSASB confirmed that the enforceability of a binding arrangement is a key element which may give rise to a liability (specifically, deferred revenue) for the entity, to the extent that the terms of the arrangement are not yet satisfied. An entity recognizes a liability (deferred revenue) in its transaction with a binding arrangement when it has received resources prior to satisfying its compliance obligation(s), and the resource provider can enforce the terms of the binding arrangement, specifically, to enforce its right and require the entity to transfer resources to another party if it does not satisfy its compliance obligation(s). If the criterion in paragraph (b) is not met, it may indicate that the arrangement is not a binding arrangement and the entity should reconsider its analysis.

BC93. The IPSASB also confirmed that, after initial recognition, the liability (deferred revenue) is reduced over time as (or fully extinguished at a point in time when) the entity satisfies the compliance obligation(s) associated with resources previously received and earns revenue.

Recognition of Revenue Transactions with Binding Arrangements

BC94. The IPSASB confirmed that for revenue transactions with binding arrangements, there is no initial recognition when no party has started to satisfy its obligations under the binding arrangement, unless the binding arrangement is onerous, as the combined right and obligation constitute a single asset or liability in the statement of financial position. The accounting begins when the binding arrangement is at least partially satisfied (i.e., at least one party begins to satisfy one or more of its obligations).

BC95. In ED 71, the IPSASB proposed that the present obligations in enforceable transactions would either be a specified activity, or a requirement to incur eligible expenditure. Neither a specified activity nor eligible expenditure requires the entity to transfer a good or service to either the transfer provider or a third-party beneficiary. The entity would recognize an asset and a liability when it had control of, or right to, the resource transferred and the revenue would be recognized (and the liability decreased) when (or as) the present obligation was satisfied.

BC96. Some respondents to ED 71 did not agree that specified activities and eligible expenditures were present obligations and gave rise to liabilities as defined in the Conceptual Framework. Upon reflection, the IPSASB

acknowledged that the intention was not that the specified activities or eligible expenditures in and of themselves give rise to a present [compliance] obligation, but that they are an entity's actions or spending to satisfy a specific promise it agreed to by willingly entering into a binding arrangement. Specified activities and eligible expenditures are examples of ways in which an entity may satisfy its obligations in a binding arrangement in accordance with the requirements in that binding arrangement, thereby informing the recognition of earned revenue. An entity should apply the guidance in paragraphs 98–104 of the accounting model for binding arrangements to determine which method is appropriate for measuring its progress towards complete satisfaction of its compliance obligation. The IPSASB also added Implementation Guidance to support the principles presented in the authoritative text.

Determining the Transaction Consideration

BC97. In responding to constituent's concerns relating to the fair value measurement of receivables where the amount collectible is uncertain, the IPSASB incorporated a constraint requiring measurement of revenue and the associated receivable only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur.

BC98. Constituents noted that there are a number of revenue transactions within the scope of IPSAS 47 that are difficult to measure at fair value because of the uncertainty in timing and amount of cash flows. In general, this uncertainty is associated with long dated transactions where the amounts will be determined at a later date. For example, the time taken after a death (the tax point) to identify all assets liable to an inheritance tax can be considerable where the deceased's estate is complex. As a result, the amount of inheritance tax to which the tax authority is entitled is uncertain at the reporting date, even though there is certainty in collection.

BC99. The IPSASB agreed these transactions presented measurement challenges. Incorporating a constraint limiting measurement to when it is highly probable that a significant reversal in the amount of revenue recognized will not occur satisfied the IPSASB's objectives by limiting the onerous task of estimating uncertain future cash flows until they become certain, which addressed concerns raised by constituents.

Allocating the Transaction Consideration to Compliance Obligations

BC100. IFRS 15 states that an entity should allocate the transaction price (consideration) to all performance obligations in proportion to the stand-alone selling prices of the goods or services. The best evidence of a stand-alone selling price is the observable price of a good or service when the entity provides that good or service separately in similar circumstances and to similar customers. If a stand-alone selling price is not directly observable, an entity shall estimate the stand-alone selling price using either the:

(a) **Adjusted market assessment approach** – an entity could evaluate the market in which it sells goods or services and estimate the price that a customer in that market would be willing to pay for those goods or services;

(b) **Expected cost plus a margin approach** – an entity could forecast its expected costs of satisfying a performance obligation and then add an appropriate margin for that good or service; or

(c) **Residual approach** – an entity may estimate the stand-alone selling price by reference to the total transaction price less the sum of the observable stand-alone selling prices of other goods or services promised in the contract.

BC101. The IPSASB retained the methods of determining a stand-alone value in IPSAS 47, as they were appropriate for the transactions that would be covered in the Standard and added Implementation Guidance to provide additional guidance on application in the public sector. However, the IPSASB replaced the term "expected cost plus a margin approach", with the term "expected cost approach", because certain goods or services

are purchased or produced by public sector entities for no charge or for a nominal charge (“cost recovery” or “non-commercial basis”). The IPSASB noted that the expected cost approach is likely more relevant in the public sector for non-exchange-type transactions, whereas the adjusted market assessment approach is likely more relevant for exchange-type transactions.

BC102. These methods are used to estimate the stand-alone value in order to allocate the transaction consideration to each compliance obligation.

Considering Changes in an Entity’s Revenue Arrangement

BC103. Although an entity has the ability to enforce its binding arrangement, a change in internal or external factors, such as the entity’s choice to partially or fully exercise its ability to enforce, may have accounting implications. These factors may vary based on the relationship with the other party or parties in the binding arrangement, jurisdictional considerations, specific circumstances subsequent to initially entering into the binding arrangement, or other considerations.

BC104. The IPSASB highlighted the importance of appropriately assessing the implications of changes in internal and external factors from a public financial management perspective. Appropriately reporting and disclosing information related to these arrangements enables public sector entities to be transparent to its constituents. Changes that do not impact the economic substance of the arrangement (i.e., whether the entity has a binding arrangement) would inform the subsequent remeasurement of any receivables or binding arrangement assets. This assessment requires professional judgment and consideration of all elements of the transaction in order to determine whether and how factors impact subsequent measurement. The IPSASB also added Implementation Guidance to support the principles presented in the authoritative text.

Subsequent Measurement of Non-Contractual Receivables

BC105. Receivables arising from contractual agreements would be within the scope of the financial instrument standards. However, it is possible for receivables to arise from other revenue arrangements (specifically, revenue from binding arrangements that are not contracts, or arrangements that are not binding arrangements), which would fall outside the scope of IPSAS 41, *Financial Instruments*. To address the lack of guidance for subsequent measurement of these receivables, the IPSASB proposed guidance in ED 70 and ED 71 that an entity should initially measure such receivables at the transaction consideration, as required by paragraphs 57–60 and AG115–AG117 of IPSAS 41.

BC106. While the majority of respondents to ED 70 and ED 71 agreed with the proposed measurement of receivables, some respondents noted that the application of IPSAS 41 to subsequently measure non-contractual receivables was unclear and potentially difficult in practice. The IPSASB acknowledged that while a non-contractual receivable would not strictly meet the definition of a financial asset, the substance and risks are consistent with those of contractual receivables, and these receivables should be accounted for with a consistent set of principles. The IPSASB reaffirmed that consistency in accounting for transactions with the same substance is necessary from a stronger public financial management perspective, and noted that constituents did not challenge the IPSASB’s conclusion that there are no public sector-specific reasons which warrant a different accounting treatment for subsequent measurement of non-contractual receivables compared to contractual receivables. The IPSASB also reaffirmed that, as previously expressed by CP respondents, these receivables are generally expected to be classified and measured at amortized cost, as the entity’s management model is likely to hold financial assets to collect cash flows (consideration owed in the revenue arrangement) and not to sell financial assets, and the cash flows are solely payments of the principal and any interest outstanding.

BC107. A few constituents also requested a simplified approach or practical expedient for non-contractual receivables, to address potential difficulties in applying IPSAS 41 in practice. The IPSASB acknowledged

that the availability of certain information may pose some difficulties in applying amortized cost which may not be sufficiently eased by the use of the simplified approach for receivables in paragraphs 87-89 of IPSAS 41. However, non-contractual receivables, by nature of the revenue arrangements from which they arise, are typically held to collect expected cash flows related to the revenue transaction (rather than to sell and trade), and have shorter maturity periods (i.e., when consideration becomes due from the resource provider), similar to short-term receivables, and the required estimates would not span a long uncertain time period. Consideration of the time value of money and expected credit losses are necessary to appropriately reflect the economic substance of both contractual and non-contractual receivables. The IPSASB concluded that another simplified approach or practical expedient would not be appropriate, as an inconsistent application of accounting principles for transactions of the same substance and risks would not reflect the economic substance of these transactions.

BC108. Based on its analysis, the IPSASB added Implementation Guidance to support the principles presented in the authoritative text, and address constituent comments and clarify how IPSAS 41 principles can be applied by analogy to subsequently measure non-contractual receivables.

Presentation (paragraphs 162–193)

Approach to Disclosure Requirements

BC109. The IPSASB noted that the objective of the disclosure requirements is to provide information which enables users of the financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows. As all of the concepts from IFRS 15 on recognition and measurement of revenue were retained in ED 70, the IPSASB decided that there was no public sector-specific reason to remove any of the disclosure requirements from IFRS 15, and were also incorporated into ED 71 for consistent disclosure of revenues from binding arrangements with present obligations. The IPSASB acknowledged that the retention of all disclosure requirements from IFRS 15 will result in significantly more requirements than required in the existing IPSAS 23.

BC110. In response to the concerns noted in paragraph BC84 regarding the potential loss of information on transactions where an entity is compelled to enter into a transaction by legislation or other governmental policy decisions, and where the collection of consideration is not probable or only assessed as probable after accepting a price concession as noted in paragraph AG37, the IPSASB decided to require disclosure of the information (in IPSAS 47 as paragraph 171). The IPSASB noted that these additional disclosures will provide users of the financial statements with details on why an entity was compelled to enter into such transactions, as well as the level of goods or services that were provided by the entity in such transactions for which revenue was not recognized.

BC111. As part of the exposure drafts, the IPSASB requested constituent responses on whether they agreed with the inclusion of disclosure requirements aligned with IFRS 15, and a public sector-specific disclosure requirement for transactions which an entity is compelled to enter into by legislation or other governmental policy decisions.

BC112. The majority of respondents to ED 70 and ED 71 generally agreed with the proposed disclosures and the assertion that there was no public sector-specific reason to deviate from IFRS 15 alignment for transactions with the same substance. At the same time, the IPSASB acknowledged feedback from respondents about the volume of disclosures in the two EDs, and decided to take a principle-based approach in reassessing disclosure requirements, focusing on the nature of the transactions and their risks. With this approach in mind, the IPSASB noted that its decisions since the issuance of ED 70 and ED 71, in particular to present revenue guidance in a single standard with a revised order, partially address constituent comments as the overall volume of disclosures has been reduced and has resulted in a more succinct and clear set of disclosures.

BC113. The IPSASB noted that the key purpose of disclosures, as presented in the IPSASB's Conceptual Framework, is to provide financial information that supports accountability and is useful for decision-making purposes. In the context of revenue, an entity's disclosures should provide information that is useful in understanding the nature, amount, timing, and uncertainty of the entity's revenue for material revenue transactions, and disclosure requirements should prompt entities to disclose (or consider disclosing) such information about its revenue transactions. This means that, similar to other IPSAS, not all disclosure requirements in IPSAS 47 may be applicable for an entity in its preparation of financial statement note disclosures. In practice, it is likely that fewer than the full range of possible disclosures may be made by an entity.

BC114. Furthermore, under a principle-based approach, disclosures should align with the accounting principles set by the IPSASB within the respective accounting models.

(a) Transactions arising without binding arrangements are expected to comprise a majority of public sector revenues. IPSAS 23 disclosures (all brought into ED 71) remain relevant, useful, and appropriate for public sector revenues arising without binding arrangements; and

(b) Transactions arising with binding arrangements are accounted for under the same model because the enforceability of binding arrangements drives the accounting principles to capture the substance and risks of revenue with binding arrangements. To maintain a principle-based approach, all transactions accounted for under the binding arrangement model should be subject to the same set of disclosure requirements. The proposed disclosures, based on IFRS 15 and adapted for the public sector, are consistent with the concepts and principles in the binding arrangement accounting model that may be applied to public sector revenue transactions with binding arrangements. Thus, they remain relevant, useful, and appropriate for public sector revenue arising with binding arrangements.

BC115. Based on its analysis, the IPSASB decided to retain the disclosures previously proposed in ED 70 and ED 71, as they meet the disclosure objective and remain appropriate and consistent with the principles for the respective accounting models. An entity may apply all disclosure requirements if they are relevant for any specific transaction, but need not apply any requirements that are not relevant. This is consistent with the application of the accounting models themselves, where an entity may apply the principles and guidance in each accounting model for any revenue transaction, but need not apply those that are not relevant for a specific transaction. A public sector entity will need to consider and determine which disclosure requirements apply to their revenue transactions.

BC116. The IPSASB acknowledged that a few respondents requested specific additional disclosures and highlighted that IPSAS disclosure requirements do not prohibit entities from disclosing any information not formally required in any IPSAS. An entity can choose to provide additional disclosures at its own discretion, for example, if it deems the information would meet the overall objective of disclosure requirements and would provide relevant, useful, and appropriate information for decision-making purposes.

BC117. The IPSASB noted that some entities which provide goods, services, or other assets to third-party beneficiaries would like to disclose information in their financial statements regarding their programs. As a result, the IPSASB decided to revise paragraph AG207, which provides suggestions for the categories used to disaggregate revenue disclosures, to include a category for revenue earned from the provision of goods or services to third-party beneficiaries.

Application Guidance (paragraphs AG1–AG207)

Scope Exclusions

BC118. This Standard identifies examples of some types of documentation that may evidence contributions from owners in the public sector (paragraph AG7). Many public sector entities receive inflows of resources from

entities that control them, own them, or are members of them. In certain circumstances, the inflow of resources will be designated as a contribution from owners. Notwithstanding the documentation that evidences the form of the inflow of resources or its designation by a controlling entity, this Standard reflects the view that for an inflow of resources to be classified as a contribution from owners, the substance of the transaction must be consistent with that classification.

Enforceability

Assessment of Enforceability

BC119. Some respondents to ED 70 and ED 71 noted that the accounting guidance mentioned several mechanisms or factors of enforceability, but were unclear on whether certain factors are considered more demonstrative than others. The IPSASB considered these comments and debated whether the presence or absence of specific factors, such as past history of enforceability, demonstrates the enforceability of a binding arrangement. The IPSASB concluded that the impact of specific factors on the assessment of enforceability will be specific to each jurisdiction and the respective binding arrangement. In other words, the principle related to enforceability of a binding arrangement remains appropriate but application of this principle in practice may vary depending on the relevant mechanisms for the entity.

BC120. The IPSASB also confirmed that the assessment of enforceability is based on the ability to enforce. This assessment is to be completed when the entity first enters into the arrangement and when a significant change in external or internal factors indicates that there may be a change in the enforceability of that binding arrangement (i.e., a change in the substance of the arrangement).

BC121. Based on these discussions, the IPSASB decided to revise guidance to emphasize that an entity should assess all relevant factors at the transaction date to determine whether the parties in the arrangement have the ability to enforce the rights and obligations in the arrangement. Judgment is required to determine which factors of enforceability are more demonstrative in the respective jurisdiction and binding arrangement. The IPSASB decided to provide additional authoritative guidance on the concept of enforceability in a binding arrangement.

Enforceability through Equivalent Means

BC122. The IPSASB noted that some binding arrangements in the public sector are enforceable not by legal means but by equivalent means (i.e., “like legal”) through other enforcement mechanisms. Equivalent means of enforceability are legally binding, as described in the Conceptual Framework, and are intended to capture ways in which entities that cannot enter into legal arrangements can still enforce similar to the force of law. The CP proposed the following as possible enforcement mechanisms by equivalent means:

(a) Legislation;

(b) Cabinet and ministerial decisions; and

(c) Reduction of future funding.

BC123. The IPSASB agreed that cabinet and ministerial decisions, including executive authority, may be subsets of legislation and may in some circumstances be valid enforcement mechanisms. Paragraphs AG18–AG23 of this Standard discusses the equivalent enforcement mechanisms.

BC124. Constituents were generally supportive but questioned the validity of a reduction of future funding as an enforcement mechanism. The IPSASB decided that a reduction of future funding could only be used to enforce a binding arrangement if the resource provider had a compliance obligation to provide future funding in another binding arrangement. Without this binding arrangement and its compliance obligation, the threat

of a reduction of future funding is not a valid enforcement mechanism, as there is no future funding that could be reduced.

BC125. The IPSASB also discussed sovereign rights and agreed that by themselves, sovereign rights do not establish a valid enforcement mechanism. However, if details on how sovereign rights would be used to enforce an agreement were included in the binding arrangement, then this could create a valid enforcement mechanism.

BC126. In addition, the IPSASB discussed whether economic coercion or political necessity could be a valid enforcement mechanism. The IPSASB noted that paragraph 5.17D of the Conceptual Framework states that "economic coercion, political necessity or other circumstances may give rise to situations where, although the public sector entity is not legally obliged to incur a transfer of resources, the economic or political consequences of refusing to do so are such that the entity may have little or no realistic alternative to avoid a transfer of resources. Economic coercion, political necessity or other circumstances may lead to a liability arising from a non-legally binding obligation".

BC127. However, the IPSASB was of the view that a liability arising from a non-legally binding obligation is not equivalent to a binding arrangement for the purposes of IPSAS 47 because a non-legally binding obligation as cited in the Conceptual Framework is binding only for the party to whom the obligation exists, whereas a binding arrangement as used in IPSAS 47 requires both parties to agree to both the enforceable rights and obligations within that agreement.

BC128. The IPSASB also discussed whether a statement made by a government to spend money or use assets in a particular way (e.g., a general policy statement or announcement following a natural disaster) would create a binding arrangement for a potential resource recipient. The IPSASB decided that such an announcement does not create enforceable rights and obligations on parties as there is no agreement with other parties, and therefore there is no binding arrangement. Such an announcement may be accounted for by the government under IPSAS 19.

Determination of Stand-Alone Value

BC129. The determination of the stand-alone selling price in IFRS 15 is largely based on the price at which an entity would sell a promised good or service separately to a customer. The IPSASB noted that in the public sector, the determination of stand-alone value may be challenging in situations where an entity is providing goods or services to third-party beneficiaries for no consideration, and some may interpret the requirements for the determination of stand-alone value to only consider amounts received directly from the party receiving the goods or services. To address the issue, the IPSASB added guidance in paragraph AG110, which states that a stand-alone value in such situations shall be estimated based on the amount the resource provider would need to pay in market terms to acquire the economic benefits or service potential of the goods or services provided. Where market information is not available, the stand-alone value is based on an estimate using the expected cost approach.

Capital Transfers

BC130. The CP noted that there was little guidance in IPSAS 23 on accounting for capital grants (now referred to as capital transfers). The CP gave a preliminary view from the IPSASB that accounting for capital transfers should be explicitly addressed within IPSAS, which respondents to the CP supported. This Standard includes guidance on accounting for capital transfers. The IPSASB noted that the accounting for capital transfers, which by definition arise from binding arrangements, would be the same as for any other revenue transaction from a binding arrangement: revenue from capital transfers would be recognized as the compliance obligations are satisfied.

BC131. When developing the approach above, the IPSASB decided not to adopt the IAS 20, *Accounting for Government Grants and Disclosure of Government Assistance* accounting requirements for capital transfers. This approach provides accounting for "grants related to assets" which is defined as: "Government grants whose primary condition is that an entity qualifying for them should purchase, construct or otherwise acquire long-term assets. Subsidiary conditions may also be attached restricting the type or location of the assets or the periods during which they are to be acquired or held".

BC132. IAS 20 requires government grants to be recognized in profit or loss on a systematic basis over the period in which the entity recognizes as expenses the related costs for which the grants are intended to compensate. Under IAS 20, grants relating to assets may be presented as either deferred income or as a reduction of the carrying amount of the related asset. The grant is only recognized in profit or loss as deferred income is amortized or as the related asset is depreciated.

BC133. The IPSASB agreed that this approach did not provide useful or representationally faithful information for users. An entity earns revenue in a capital transfer by acquiring or constructing a non-financial asset as specified in the binding arrangement from which it arises. In other words, the nature of the revenue in the capital transfer is directly associated with the acquisition or construction, rather than the subsequent use and depreciation, of the non-financial asset. The IPSASB therefore decided to develop an accounting approach for capital transfers which recognized revenue as the non-financial asset (capital asset) is either acquired or constructed as specified in the binding arrangement.

BC134. As the IPSASB revised revenue guidance in response to constituent comments on ED 70 and ED 71, the IPSASB assessed whether the accounting principles in the binding arrangement model remain appropriate for capital transfers. The IPSASB concluded that the accounting principles remain appropriate, and that revenue should be recognized as the compliance obligation to acquire or construct the non-financial asset is satisfied. The entity applying the guidance will also need to consider whether any requirement to operate the non-financial asset is an individual compliance obligation to be accounted for separately. The IPSASB revised and enhanced the Illustrative Examples to help illustrate the application of the accounting principles.

BC135. The IPSASB considered that some capital transfers may include multiple compliance obligations, one being the acquisition or construction of a capital asset and another being the operation of the capital asset in a particular way for a specified period of time. In these circumstances, the IPSASB decided that the accounting for each compliance obligation should be considered separately in accordance with the nature of each obligation.

Services In-Kind

BC136. This Standard permits, but does not require, recognition of services in-kind. This Standard takes the view that many services in-kind do meet the definition of an asset and should, in principle, be recognized. In such cases there may, however, be difficulties in obtaining reliable measurements. In other cases, services in-kind do not meet the definition of an asset because the entity has insufficient control of the services provided. The IPSASB concluded that due to difficulties related to measurement and control, recognition of services in-kind should be permitted but not required.

BC137. However, the IPSASB encourages entities to disclose qualitative information about services in-kind received, particularly if those services were integral to the operations of the entity.

Disclosures: Materiality and Aggregation

BC138. The IPSASB also discussed the need for entities to apply the concept of materiality when providing the disclosures required by IPSAS 47. Based on feedback from constituents on previously issued IPSAS and in response to ED 70 and ED 71, the IPSASB noted that it would be helpful to include an explicit reference to

the materiality and aggregation guidance from paragraphs 45–47 of IPSAS 1. This reference was added to paragraph AG204 of IPSAS 47.

Consideration of Re-Exposure

BC139. The IPSASB considered whether there had been a substantial change to the EDs such that re-exposure may be necessary:

(a) The IPSASB discussed the differences between IPSAS 47, and ED 70 and ED 71 issued in 2020. In particular, the IPSASB noted that key differences include the revised structure of guidance, based on whether there is a binding arrangement, and the use of the term "compliance obligation" for the unit of account for revenue accounting, as summarized in BC14–BC30. The IPSASB agreed the changes made since the exposure draft process addressed issues raised by constituents, and resulted in a clearer Standard that retains the principles set out in the EDs. Thus, the IPSASB was of the view that there were no substantial changes to the substance of the guidance or the principles in the original EDs.

(b) The IPSASB noted that issuance of IPSAS 47 would address issues identified by constituents with the existing suite of revenue IPSAS. The IPSASB also agreed that, from a public interest perspective, the expected costs of re-exposure, including delayed implementation of the Standard that constituents are actively seeking, outweigh the potential benefits of re-exposure.

BC140. Based on its assessment, the IPSASB decided to approve IPSAS 47 without re-exposure, as there were no substantial changes, and to finalize and issue the Standard, as that was in the public interest.

Revision of IPSAS 47 as a result of Concessionary Leases and Other Arrangements Conveying Rights over Assets (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48) issued in October 2024

Introduction

BC141. In January 2021, the IPSASB issued the Request for Information (RFI), *Concessionary Leases and Other Arrangements Similar to Leases*. The RFI included a set of arrangements similar to leases that are common in the public sector[11].

BC142. Based on the information received from respondents to the RFI, in January 2023, the IPSASB issued Exposure Draft (ED) 84, *Concessionary Leases and Right-of-Use Assets In-kind* (Amendments to IPSAS 43 and IPSAS 23). ED 84 proposed new public sector specific accounting requirements for two of the six types of arrangements identified in the RFI. Regarding the RFI remaining arrangements, the IPSASB had taken the view that the applicable IPSAS at the time of publication of ED 84 already provided the principles on how to account for those arrangements.

BC143. During the review of responses to ED 84, the IPSASB noted that some respondents raised some issues that were related to arrangements that do not meet the definition of a lease or a right-of-use asset in-kind. The IPSASB also noted that this may be related to the fact that ED 84 did not propose accounting for the remaining types of arrangements included in the RFI that do not meet the definition of a lease or right-of-use asset in-kind. Therefore, respondents did not have a comprehensive view on the accounting for these types of arrangements that convey rights over assets.

[11] The Request for Information included six types of arrangements, as follows: (i) Concessionary Leases, (ii) Leases for Zero or Nominal Consideration, (iii) Access Rights (or Rights of Access to Property and/or Land), (iv) Arrangements Allowing Right-of-Use, (v) Social Housing Rental Arrangements, and (vi) Shared Properties with or without a Lease-Arrangement in Place.

BC144. In May 2023, the IPSASB published IPSAS 45, *Property, Plant, and Equipment*[12], IPSAS 46, *Measurement*, IPSAS 47, *Revenue*[13], and IPSAS 48, *Transfer Expenses*. As IPSAS 47 supersedes IPSAS 23, the ED 84 proposals of amendments to IPSAS 23 will no longer be applicable from 2026 onwards.

BC145. In March 2024, the IPSASB published ED 88, *Arrangements Conveying Rights over Assets* (Amendments to IPSAS 47 and IPSAS 48) with proposed authoritative and non-authoritative guidance for lessees in IPSAS 47 for the concession in concessionary leases to update the proposals in ED 84 related to IPSAS 23, as well as non-authoritative proposals to update IPSAS 48 with guidance on other arrangements conveying rights over assets.

BC146. This Basis for Conclusions present the IPSASB's main considerations and decisions when developing *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48) regarding the amendments to IPSAS 47, including respondents' feedback to ED 88.

Accounting for the Concession in Concessionary Leases and Right-of-Use Assets In-kind

BC147. The IPSASB noted that IPSAS 47 already has guidance on the accounting for the concession in concessionary loans. The IPSASB decided to develop similar guidance in IPSAS 47 to help preparers account for the concession in concessionary leases and right-of-use assets in-kind applying IPSAS 47 principles in a consistent way.

BC148. The IPSASB noted that some respondents to the RFI had identified in their jurisdiction arrangements that conveyed the right to use an underlying asset for zero consideration. As this type of arrangement does not meet the definition of a lease because it lacks consideration, and with the approval of IPSAS 43, the IPSASB decided to create a new type of asset -the right-of-use asset in-kind- that did not exist at the time of approval of IPSAS 47, and to amend IPSAS 47 to provide guidance on accounting for this type of arrangement.

BC149. The IPSASB decided that accounting for right-of-use assets in-kind should follow the same principles as for right-of-use assets acquired through a concessionary lease because both have types of non-cash consideration.

BC150. The IPSASB noted that the recognition of services in-kind is elected rather than a requirement. The IPSASB considered whether to allow an election for recognizing right-of-use assets in-kind. The IPSASB decided to require recognition of right-of-use assets in-kind to be aligned with the accounting of both right-of-use assets under concessionary leases and donated assets.

BC151. The IPSASB also decided to add non-authoritative guidance on access rights, arrangements allowing the right to use an asset, and shared properties for preparers to have comprehensive guidance on the types of arrangements that convey rights over assets in the public sector.

Responses to ED 88, Arrangements Conveying Rights over Assets

BC152. The majority of respondents supported the ED 88 proposals on the accounting for the concession in concessionary leases and right-of-use assets in-kind, while a minority of respondents disagreed with the ED 88 proposals.

BC153. The respondents that disagreed with the ED 88 proposals for amendments to IPSAS 47 raised mostly the same reasons as for the disagreement with the amendments to IPSAS 43 in ED 84 (see Basis for Conclusions to IPSAS 43).

---

[12] IPSAS 45 will be effective on January 1, 2025, and supersedes IPSAS 17, *Property, Plant, and Equipment*.

[13] IPSAS 47 will be effective on January 1, 2026, and supersedes IPSAS 9, *Revenue from Exchange Transactions*, IPSAS 11, *Construction Contracts*, and IPSAS 23, *Revenue from Non-Exchange Transactions* (Taxes and Transfers).

BC154. Several respondents requested additional guidance or clarifications on the:

(a) Subsequent measurement of the right-of-use asset in-kind in the situation where new information appears that makes it possible to recognize it;

(b) Scoping of arrangements that convey right-of-use assets in-kind; and

(c) Fact that, in concessionary leases, lessors are not required to recognize the concession but in other arrangements that convey rights over assets with concessions the transferors are required to recognize the concession.

BC155. The IPSASB decided to provide clarification in this Basis for Conclusions and not to provide more guidance in IPSAS 47 and in IPSAS 48 on the above topics for the following reasons:

(a) IPSAS 3, *Accounting Policies, Changes in Accounting Estimates, and Errors* already provides guidance on changes in accounting estimates when new information occurs;

(b) The new guidance on right-of-use assets in-kind is only related to contracts or arrangements that are in substance contracts;

(c) Both lessors in concessionary leases and transferors in other arrangements that convey rights over assets under IPSAS 48:

(i) The transfer of right-of-use assets in-kind is a transaction similar to a lease, except that there is no contractual lease payment in the transfer of right-of-use assets in-kind;

(ii) Do not have separate accounting for the concession at the inception of the arrangement because in a:

a. Concessionary finance lease, the lessor loses control of the transferred resources which entails an expense upon its derecognition;

b. Concessionary operating lease, the lessor retains control of the underlying asset, and it is consumed by the lessor as the lessee uses the asset; and

(d) Are required to disclose the costs of the asset transferred.

BC156. Some respondents suggested adding more information in the illustrative examples on how the assets will be used. The IPSASB decided not to add more information in the illustrative examples on how the assets will be used because it will not provide additional information for the accounting in the illustrative examples.

BC157. The IPSASB also considered suggestions to add an illustrative example on concessionary finance leases for lessors and guidance on donated assets and decided not to proceed with these suggestions because the accounting for these arrangements is the same as for finance leases and it was outside of the scope of ED 88 to provide illustrative examples on donated assets.

Effective Date

BC158. The IPSASB considered the effective date of the amendments to IPSAS 47 in the context of effective dates of IPSAS 43 to IPSAS 49.

BC159. The IPSASB decided that the effective date of the amendments to IPSAS 43 should be January 1, 2027, with earlier application permitted, because it:

(a) Is broadly consistent with the three-year application period of IPSAS 43 to which the amendments to IPSAS 47 are related;

(b) Does not overwhelm preparers with more changes to be effective at the same time as IPSAS 43 to IPSAS 49; and

(c) Allows preparers an additional year for planning and implementation of the amendments to IPSAS 43 and IPSAS 47 after implementing IPSAS 43 to IPSAS 49 in the previous years.

Implementation Guidance

This guidance accompanies, but is not part of, IPSAS 47.

Section A: Definitions

A.1 Capital Transfers

When is a transfer of a physical asset a "capital transfer"?

It depends. Public sector entities receive resources through various types of transfer transactions, in the form of cash or another asset, and which may arise with or without a binding arrangement. An entity should consider whether there are any specifications related to the transfer of the physical asset to determine whether it meets the definition of a "capital transfer" in paragraph 4 of this Standard.

A transfer of a physical asset is a "capital transfer" if the entity received this transfer within a binding arrangement and is required by the binding arrangement to use that physical asset to acquire or construct another non-financial asset that will be controlled by the entity. A transfer of a physical asset which only has a requirement to be used or operated in a specific manner would not meet the definition of a "capital transfer"; rather, such a transfer of a physical asset would constitute a "transfer" as defined in paragraph 4. An entity should clearly consider the specific terms within the binding arrangement.

Section B: Identifying the Revenue Transaction

B.1 Identify Whether a Binding Arrangement Exists

Does the way in which an entity transacts with others impact the accounting?

Yes. Public sector entities may transact in different ways. These may vary in form, include multiple parties, confer rights and/or obligations on one or more of the parties in the arrangement, and have varying degrees of enforceability, which overall determine the economic substance of the transaction. Binding arrangements, in particular, confer both enforceable rights and enforceable obligations on the parties to the arrangement through legal or equivalent means. The enforceability of binding arrangements necessitates differences in accounting principles to capture the unique nature and risks of such transactions (in comparison with transactions without binding arrangements), thereby informing the recognition and measurement of revenue to ensure fair presentation of such transactions.

It is important to correctly identify whether the revenue transaction arises from a binding arrangement. The entity is required to determine what type of arrangement it has entered into, by considering the terms of its revenue transaction and all relevant facts and circumstances, to apply the appropriate accounting principles to reflect the economic substance of the transaction (see paragraphs 11–16).

B.2 Enforceability

What should an entity consider in assessing enforceability?

Determining whether an arrangement, and each party's rights and obligations in that arrangement, are enforceable may be complex and requires professional judgment. This assessment is integral to identifying whether an entity has a binding arrangement (i.e., with both enforceable rights and enforceable obligations), only enforceable rights, or only enforceable obligations, through legal or equivalent means. In cases where an entity does not have a binding arrangement, it may still have an enforceable right, or an enforceable obligation, which should be accounted for appropriately. Enforceability may arise from various mechanisms, so long as the

mechanism(s) provide(s) the entity with the ability to enforce the terms of the arrangement and hold the parties accountable for the satisfaction of their obligations in accordance with the terms of the arrangement.

At inception, an entity shall use its judgment and objectively assess all relevant factors and details to determine if it has enforceable rights and/or obligations (i.e., what is enforced), and the implicit or explicit consequences of not satisfying those rights and/or satisfying those obligations (i.e., how it is enforced). Relevant factors include, but are not limited to:

(a) The substance, rather than the form, of the arrangement;

(b) Terms that are written, oral, or implied by an entity's customary practices;

(c) Whether it is legally binding through legal means (e.g., by the legal system, enforced through the courts, judicial rulings, and case law precedence), or compliance through equivalent means (e.g., by legislation, executive authority, cabinet or ministerial directives);

(d) Implicit or explicit consequences of not satisfying the obligations in the arrangement;

(e) The specific jurisdiction, sector, and operating environment; and

(f) Past experience with the other parties in the arrangement.

Some mechanisms (for example, sovereign rights or reductions of future funding) may constitute a valid mechanism of enforcement. An entity should apply judgment and consider all facts and circumstances objectively, within the context of its jurisdiction, sector, and operating environment, in making this assessment. Paragraphs AG14–AG25 provide further guidance on assessing enforceability through legal or equivalent means.

B.3 Enforceability: Revenue Subject to Appropriations

How should an entity consider the impact of appropriations on its revenue transactions?

An appropriation is defined in IPSAS 24, *Presentation of Budget Information in Financial Statements*, as an authorization granted by a legislative body (i.e., the enabling authority) to allocate funds for purposes specified by the legislature or similar authority. Appropriations may come in different forms and vary by jurisdiction, for example as capped funding amounts, or as a tool to rescind funding at the discretion of the resource provider (which would be similar in substance to a unilateral termination clause without penalty).

Appropriations on their own do not prove nor refute the existence of enforceability within an arrangement. An entity should consider any appropriation clauses as one of the relevant factors in its overall assessment of enforceability, in the context of its specific jurisdiction and the unique terms and conditions of each arrangement.

A binding arrangement may specify that the resources to be transferred are subject to the completion of an appropriation process as an explicit term or condition (either in writing, orally, or implied through customary practices). In such circumstances, the entity considers whether, in substance, the arrangement is enforceable because mechanisms of enforceability enable the entity to require the resource provider to transfer resources, or, if the resource provider fails to do so, to impose consequences on the resource provider, prior to the completion of the appropriation process. The limitation (that the resources to be transferred are subject to the completion of the appropriation process) does not have substance when the entity can establish an enforceable right to those resources, before the appropriation process is completed. In such cases, the arrangement is enforceable and may be a binding arrangement.

In some jurisdictions, the authorization for a transfer of resources may go through a multiple step process. For example:

(a) The enabling authority to provide a transfer is in place, which is conveyed through approved legislation, regulations or by-laws of a resource provider;

(b) The exercise of that authority has occurred. In essence, a decision has been made by the resource provider under the approved enabling authority that clearly demonstrates that it has lost its discretion to avoid proceeding with the transfer, for example through entering into a binding arrangement; and

(c) The authority to pay is evidenced by the completion of an appropriation process.

The enabling authority together with the exercise of that authority may be sufficient for an entity to conclude that it has an enforceable right to resources in the arrangement to require the resource provider to transfer the resources or, if the resource provider fails to do so, to impose consequences on the resource provider prior to the completion of the appropriation process. In such a circumstance, the limitation (that the future transfer is subject to the completion of the appropriation process) does not have substance.

In other cases, the completion of the appropriation process may determine when a resource provider has lost its discretion to avoid proceeding with the transfer of resources. In such a circumstance, the limitation (that the future transfer is subject to the appropriation process being completed) has substance.

B.4 Changes in Factors Related to the Enforceability of a Binding Arrangement

Does a change in internal or external factors, after the inception of a binding arrangement, have accounting implications?

At inception, an entity considers the terms and conditions of an arrangement to determine whether it meets the definition of a binding arrangement in paragraph 4. If it meets the definition, the entity accounts for revenue arising from the binding arrangement in accordance with paragraphs 56–147.

After inception, an entity should assess whether any changes in internal or external factors affect the enforceability of the binding arrangement (i.e., the substance of the arrangement), or the likelihood of enforcing the binding arrangement (i.e., the subsequent measurement of any assets or liabilities associated with the entity's right(s) and obligation(s) in the binding arrangement). Examples of such factors include, but are not limited to:

(a) Changes in the legal framework impacting the ability of the entity, or other party or parties in the arrangement, to enforce their respective rights through legal or equivalent means; and

(b) Changes in the entity's assessment of any party's choice to partially or fully exercise its ability to enforce its rights in the binding arrangement.

The implication on subsequent measurement of the respective asset or liability depends on whether the impact is not likely to be reversed and should be accounted for in accordance with IPSAS 41, *Financial Instruments*. For example, an entity that completely satisfied its compliance obligation and has an unconditional right to consideration would partially impair and derecognize its receivable asset if it intends to only enforce a portion of its right (and does not expect to reverse this decision), but would fully impair and derecognize the asset if it fully loses the ability to enforce its right due to legislative changes. The respective impairment loss would be recognized in accordance with IPSAS 41.

Section C: Revenue from Transactions without Binding Arrangements

C.1 Recognition of Revenue from Various Types of Taxes

What is the taxable event that triggers the recognition of revenue from various types of taxes levied in a jurisdiction?

An entity recognizes revenue from a transaction without binding arrangements when it receives or has the right to receive an inflow of resources that meets the definition of an asset (paragraphs 18–25), and there are no unsatisfied enforceable obligations associated with those resources (paragraph 29).

Resources arising from taxes that are presently controlled by the entity as a result of past events meet the definition of an asset. An entity should assess the taxation law in its own jurisdiction to determine the past event for these transactions (i.e., the taxable event), and consider all relevant facts and circumstances to determine when tax revenue should be recognized. The following table provides a non-exhaustive list of examples of tax revenues, and the likely taxable event (unless otherwise specified in laws and/or regulations):

Revenue Type	Likely Taxable Event
Tax on personal income earned within a jurisdiction.	The earning of assessable income by taxpayers in the current reporting period.
Tax imposed on businesses for the value added from sales of goods or services.	The sale of value-added goods or services (i.e., undertaking of taxable activity) during the reporting period.
Tax imposed on sales of goods or services.	The sale of taxable goods or services during the reporting period.
Duty on imports of specific goods to ensure that domestically produced goods are cheaper in the retail market.	The movement of goods subject to duties across the customs boundary during the reporting period.
Duty on taxable property.	The death of the person owning taxable property.
Tax on assessed property within a jurisdiction.	The passing of the date on which the taxes are levied, or the period for which the tax is levied (if the tax is levied on a periodic basis).

C.2 Measurement of Revenue from Various Types of Taxes

How does an entity measure the amount of revenue it has earned from its tax transactions without binding arrangements?

In many circumstances, the taxation period will not coincide with the entity's reporting period. An entity may also receive estimated tax payments in installments on a periodic basis before the taxable amount is finalized, which may require additional taxes owed, or a refund to the taxpayer for any excess. An entity shall recognize the inflow of resources (or the right to an inflow of resources) as an asset, and recognize revenue earned in the current reporting period, to the extent that it can be reliably measured. The best estimate is consistent with the most likely amount (see paragraphs 45–50).

To reliably measure the asset and revenue, the entity should consider all relevant data from various sources to arrive at its best estimate. Paragraph 46 describes factors that an entity should take into account in its estimation models. Sources of relevant data and inputs for an entity's estimation model include, but are not limited to: historical data (e.g., collection history and other taxation statistics), observable and other phenomena (e.g., forecasts, economic and banking statistics, installments), and the use of experts.

Estimates of tax revenue for the reporting period may be revised in a subsequent period. Changes in estimates are recognized prospectively in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.

Section D: Revenue from Transactions with Binding Arrangements

D.1 Identifying Compliance Obligations in a Binding Arrangement

Binding arrangements in the public sector vary substantially. Some binding arrangements may require the entity, as the resource recipient, to achieve a specific holistic service objective, while other binding

arrangements may impose requirements related to specific goods and services. How does an entity determine the individual compliance obligations in a binding arrangement in order to appropriately apply the accounting model for transactions with binding arrangements?

A binding arrangement has at least one compliance obligation. A compliance obligation, as defined in paragraph 4, is a unit of account to determine distinct components or elements within a binding arrangement. Identifying a meaningful unit of account is fundamental to the appropriate recognition and measurement of revenue. An entity must use professional judgment as it applies paragraphs 68–77 to determine the individual compliance obligations in its binding arrangement.

An entity should first identify all of the promises in its binding arrangement to use resources in a specified manner. Promises are goods or services promised in a binding arrangement with a resource provider, and may be explicit or implicit in the binding arrangement. A promise may require the entity to use resources internally for a good or service, or to transfer a good or service to an external party or parties (i.e., the purchaser or third-party beneficiary). A thorough assessment is necessary to identify all promises of goods or services in the binding arrangement (paragraphs 71–72).

An entity then considers each identified promise to determine if a promise is itself a compliance obligation, or whether it should be grouped with other promises to be a compliance obligation. In other words, a compliance obligation is a unit of account that represents a distinct promise or distinct group of promises to which recognition criteria and measurement concepts are applied (paragraph 73). A good or service (or a bundle of goods or services) promised in a binding arrangement is distinct if both criteria are met:

(a) The promised good or service (or a bundle of goods or services) is *capable of being distinct*; and

(b) The promise is *distinct within the context of the binding arrangement*.

Whether a good or service is *capable of being distinct* is generally based on the characteristics of the good or service (see paragraph 75 for additional guidance). However, determining whether the promise is *distinct within the context of the binding arrangement* will require judgment to ensure that the grouping of promises, and thus identification of individual compliance obligations, will meaningfully represent the nature of the entity's transaction with the resource provider and provide a useful depiction of the entity's performance (see paragraph 76 for additional guidance).

Any distinct promise, or distinct group of promises, identified by the entity through this analysis would be an individual compliance obligation.

In cases where multiple parties are involved in the arrangement, the entity will also need to consider whether the nature of its promise in a compliance obligation indicates that the entity is a principal or agent (in accordance with paragraphs AG117–AG125).

D.2 Satisfaction of Compliance Obligations: Methods of Measuring Progress

When an entity satisfies a compliance obligation over time, how does it determine a measure of progress that depicts the entity's performance to satisfy its compliance obligation?

Methods of measuring progress include output methods and input methods (see paragraphs AG86–AG95). After the entity identifies its compliance obligations in its binding arrangement, an entity shall consider the nature of the entity's promise and the specific terms of the binding arrangement to determine the appropriate method of measuring progress.

An entity may first consider all observable and available information associated with satisfying the compliance obligation. This information would be useful for all parties in the binding arrangement to confirm whether the terms of the binding arrangement are being met, and may be explicitly required in the binding arrangement. Observable and available information includes, but is not limited to:

(a) The performance of specified activities;

(b) The incurrence of eligible expenditures;

(c) The requirement to track progress towards achieving outlined milestones;

(d) The production or delivery of specific quantities of goods or services; and

(e) The volume of resources consumed (e.g., labor, materials, machine hours, etc.).

Some types of information are output methods (as they are based on the outputs and outcomes from the satisfaction of the compliance obligation), while other types of information are input methods (as they are based on the entity's efforts or inputs into the satisfaction of the compliance obligation).

The entity should use professional judgment to determine what information, and thus method of measuring progress, most faithfully depicts the entity's performance towards complete satisfaction of the compliance obligation. In making this assessment, the entity should also consider which method of measuring progress:

(a) Better reflects the nature and intent of the entity's promise in the binding arrangement;

(b) More clearly captures the relationship with, and communicates the progress toward, the satisfaction of the compliance obligation;

(c) Uses information that is more reliable and directly observable;

(d) Reflects all relevant performance associated with satisfying the compliance obligation; and

(e) Provides benefits that outweigh the costs of obtaining and tracking the necessary information.

There may be situations in the public sector where resources are passed through a series of entities before being received by the ultimate resource recipient. In these situations, where the entity is one of multiple parties involved in the arrangement, the entity will need to consider whether the nature of its promise and satisfaction of its compliance obligation depends on satisfaction by other parties in the binding arrangement, thereby informing revenue recognition as a principal or agent.

D.3 Satisfaction of Compliance Obligations: Measuring Progress for Capital Transfers

Public sector entities often receive capital transfers for multi-year capital projects. These projects generally include multiple stages of completion and deliverables. Are different principles required to measure an entity's progress on capital transfers?

No. Capital transfers, which arise from transactions with binding arrangements, typically include substantial detail about the various stages in the project (e.g., conception and planning, design, procurement, construction, etc.). As such, these binding arrangements typically entail a large range of available information related to the inputs and outputs of the transaction. For example, the binding arrangement may include specific detailed activities related to the construction, such as clearing the site, building foundations and framing, and pouring concrete. However, the application of the accounting principles for capital transfers is consistent with the accounting for other revenue transactions with binding arrangements. The entity must first identify the individual compliance obligations in the binding arrangement, and carefully determine the appropriate measure of progress for each compliance obligation. The entity shall apply the accounting guidance in paragraphs 98–104 and paragraphs AG86–AG95 to consider all observable and available information. The use of professional judgment is crucial in determining what information, and thus method of measuring progress, most faithfully depicts the entity's progress to fully satisfy the compliance obligation. An entity should also consider revenue recognition independently from the timing of the receipt of resources from the resource provider.

D.4 Allocation Based on Stand-Alone Values

An entity is required to allocate the transaction consideration to each compliance obligation on a relative stand-alone value basis. However, stand-alone value is not always directly observable, and must then be estimated. How should a public sector entity determine the suitable method for estimating the stand-alone value of a good or service?

To estimate stand-alone value, an entity shall first consider all reasonably available information (including, but not limited to, reasonably available data points, entity-specific factors, information about the resource provider or class of resource provider, and the effects of market considerations where relevant).

Based on the reasonably available information, the entity shall determine which method for estimating the stand-alone value most faithfully represents the value of the goods or services promised in the binding arrangement. Paragraph 139 includes examples of suitable methods for estimating the stand-alone value and is not a prescriptive list.

The most suitable method will depend on the quality and type of information available to the entity. For example, the adjusted market assessment approach may be more suitable when the binding arrangement promises goods or services that are readily available in the market, as the price that other entities in the market would be willing to pay may provide a proxy for the value of those goods or services in the binding arrangement. However, the expected cost approach may be more suitable when the binding arrangement promises goods or services that are unique to the entity or the binding arrangement, or which are not readily available in the market. In such cases, the entity's expected costs of satisfying a compliance obligation may provide a more useful estimation of the value of the goods or services in the binding arrangement.

The entity shall be comprehensive in its assessment to maximize the use of observable inputs and be consistent in its application of estimation methods to similar circumstances.

Paragraph 139 also notes that the entity may incorporate a margin in its estimation approach, if appropriate. This may occur if the public sector entity has engaged in a revenue transaction that is exchange-type in nature.

Section E: Multi-Year Arrangements

E.1 Accounting for Multi-Year Arrangements

Are different principles required to account for, and recognize revenue from, multi-year arrangements?

Multi-year arrangements, which may arise from transactions with binding arrangements, generally involve the provision of resources over multiple years for a specific purpose (for example, the publication of research findings on a specified topic). The provision of resources (i.e., funding) may occur at multiple dates throughout a year and/or across multiple years.

While these arrangements are longer term, the application of accounting principles is consistent with the accounting for other revenue transactions. An entity shall consider whether the multi-year arrangement is a binding arrangement and apply the principles in the applicable accounting model to reflect the substance of the transaction. The entity shall consider whether an inflow, or a right to a future inflow, of resources gives rise to an asset in accordance with paragraphs 18–25, and carefully consider revenue recognition independently from the timing of funding when applying paragraph 29 (if without a binding arrangement) or paragraphs 87-104 (if with a binding arrangement). The entity may need to consider whether any expected inflow of resources in subsequent years meets the definition of an asset, and whether it is interdependent and inseparable from any associated unsatisfied obligations in accordance with paragraph AG57.

Section F: Subsequent Measurement

F.1 Subsequent Measurement for Non-Contractual Receivables

How should an entity subsequently account for receivables from revenue transactions arising outside of contracts?

An entity may recognize a contractual receivable (i.e., a receivable asset that arises from a contract) or a non-contractual receivable. A non-contractual receivable is a receivable asset that does not arise from a contract, such as a binding arrangement that is not a contract or a revenue transaction that is not a binding arrangement (e.g., taxes and other statutory receivables).

After initial recognition, a contractual receivable, which meets the definition of a financial asset per IPSAS 28, *Financial Instruments: Presentation*, is subsequently measured by applying IPSAS 41.

A non-contractual receivable does not strictly meet the definition of a financial asset because it does not arise from a contract. While non-contractual receivables and contractual receivables arise from different types of arrangements, they are consistent in substance and risk exposure, and non-contractual receivables should be subsequently measured by applying IPSAS 41 by analogy to ensure that transactions with the same substance are accounted for using consistent principles. When applying IPSAS 41 principles by analogy, the entity should use judgment to consider the substance of the receivable, and all relevant and readily available data, to form the basis of the revenue “contract by analogy” for which it has a receivable (e.g., legislation, payment terms, etc.). To determine whether its non-contractual receivable meets the criteria in paragraph 40 of IPSAS 41 to be subsequently measured at amortized cost, the entity should consider whether it holds the receivable to collect expected cash flows (in lieu of contractual cash flows) which represent its right to consideration in the transaction. If met, the entity should consider inputs into its impairment analysis under IPSAS 41 accordingly to ensure it appropriately reflects the economic substance of the receivable, including but not limited to the passage of time before the consideration is collectable (i.e., maturity period) and any receivable amounts the entity no longer expects to collect (i.e., expected credit losses). If the criteria in paragraph 40 of IPSAS 41 are not met, the entity would subsequently measure the non-contractual receivable at fair value in accordance with paragraph 31 of this Standard.

Illustrative Examples

These examples accompany, but are not part of, IPSAS 47.

IE1. These examples portray hypothetical situations illustrating how an entity might apply the requirements in IPSAS 47, *Revenue*, to particular revenue transactions on the basis of the limited facts presented. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific sector illustrated. Although some aspects of the examples may be presented in actual fact patterns, all relevant facts and circumstances of a particular fact pattern would need to be evaluated when applying IPSAS 47.

Scope

IE1A. Examples 0A–0C illustrate the requirements in paragraph 3(d) of IPSAS 47 to assess whether the arrangement is in the scope of IPSAS 47, rather than in the scope of IPSAS 43, Leases.

Example 0A – Access Rights

IE1B. *A Government Agency (Entity) enters into an arrangement with a public sector entity (Customer) to convey the right of access to land in a forest and to small station cabins for use by the Customer's employees in the course of its operations for a period of five years. The Customer uses the land to feed sheep and cows that are to be sold in the course of its operations. From season to season, the Entity has the discretion to change the portion of land and the small station cabins used by the Customer depending on other Entity's activities that take place on the land. The Customer pays the transaction consideration upfront to the Entity for the use of the land and small station cabins.*

IE1C. The Entity has determined that this arrangement is not a lease because there are no identified assets as the assets may be determined by the Entity.

IE1D. In accordance with paragraph 3(d) of IPSAS 47, the Entity determined that this arrangement is a revenue transaction in the scope of IPSAS 47. The Entity confirms that the arrangement is a binding arrangement because it has an enforceable obligation to provide access to the land and small station cabins (as may be determined by the Entity), in exchange for an enforceable right to receive payment from the Customer. Thus, the Entity would account for the arrangement by applying paragraphs 56–147 of IPSAS 47.

Example 0B – Arrangements Allowing the Right to Use an Asset

IE1E. *Municipality A (Entity) enters into an arrangement to provide Government Agency X (Customer) the right to use the Entity's properties, which are specifically designed to deliver education services as part of a national program for certifying the qualifications of the labor force, in exchange for transaction consideration that is paid monthly. The arrangement is for a period of seven years. Throughout the seven-year period, the Entity can and will change the buildings where the certification occurs according to its needs, as long as it gives the Customer a 30-day notice for the Customer's planning purposes.*

IE1F. The Entity has determined that this arrangement is not a lease because the Entity has substantive substitution rights.

IE1G. In accordance with paragraph 3(d) of IPSAS 47, the Entity determined that this arrangement is a revenue transaction in the scope of IPSAS 47. The Entity confirms that the arrangement is a binding arrangement because it has an enforceable obligation to provide the right to use its properties for the Customer to deliver education services in exchange for an enforceable right to receive payments from the Customer. Thus, the Entity would account for the arrangement by applying paragraphs 56–147 of IPSAS 47.

Example 0C – Shared Properties

IE1H. *Municipality A (Entity) enters into an arrangement with Government Agency B (Customer) to share the use of a floor in an office building for three years. The Entity will continue to use the floor for the majority of the time and coordinates with the Customer the dates that each can use it for its own activities. The Customer pays transaction consideration upfront to the Entity each month, based on the number of days it plans to use the office space.*

IE1I. The Entity has determined that this arrangement is not a lease because the Entity has not transferred to the Customer the right to obtain substantially all of the economic benefits or service potential from the use of the floor.

IE1J. In accordance with paragraph 3(d) of IPSAS 47, the Entity determined that this arrangement is a revenue transaction in the scope of IPSAS 47. The Entity confirms that the arrangement is a binding arrangement because it has an enforceable obligation to share the use of the office space with the Customer, in exchange for an enforceable right to payment from the Customer. Thus, the Entity would account for the arrangement by applying paragraphs 56–147 of IPSAS 47.

Identify the Revenue Transaction

IE2. Examples 1–2 illustrate the requirements in paragraphs 9–16 of IPSAS 47 on the determination of whether an entity has entered into a revenue transaction with or without a binding arrangement.

Example 1 – Transaction Arose from an Arrangement that is Not Binding

Case A – No Obligations, No Specified Time Period, and No Reporting to the Government

IE3. A social development entity (the Entity) receives funding of CU5[14] million from a government body (the Government) to fund its employment programs. The agreement requires funding to be spent on programs with the goal of improving employment in the region. If the Entity incurs expenditures to improve employment in the region, it is able to enforce its right to receive funding from the Government. The agreement does not specify the time period in which the funds are to be spent, any requirement to fund specific employment programs, nor how the Government will receive or verify information on how the funds were spent.

IE4. The Entity concludes that the funding agreement is not a binding arrangement in accordance with paragraph 4 of IPSAS 47. Although the Entity has an enforceable right to resources from the Government if it incurs eligible expenditures, it does not have an enforceable obligation because the Government does not have the ability to enforce how the Entity uses funds in a specific way (e.g., specific programs) or within a specific time period. The Government also has no realistic way to enforce the requirement to spend all of the funds. As a result, the entity shall apply the accounting principles in paragraphs 18–55 to account for this revenue from a transaction without a binding arrangement.

Case B – Specified Time Period to Spend Funds

IE5. The same facts as in Case A apply to Case B, except the agreement specifies that the funds are to be spent within a five-year period. In this scenario, the requirement to spend the CU5 million within five years does not change the Entity's conclusion that it has an enforceable right in the funding agreement, but does not have an enforceable obligation. This is because the Government is not able to confirm if and when the Entity spends the funds as stated in the agreement. As a result, this arrangement is not binding and the Entity shall apply the accounting principles in paragraphs 18–55 to account for this revenue.

[14] In these examples, monetary amounts are denominated in 'currency units' (CU).

Case C – Specified Time Period to Spend Funds and Specific Reporting to the Government is Required

IE6. The same facts as in Case B apply to Case C, except the agreement also specifies how the Entity is to report its spending to the Government, and that any misused or unused funds are to be returned to the Government. The Entity continues to have full discretion over how to use the funds, as long as the funds are spent within five years on activities that reasonably relate to improving employment in the region. The Entity concludes that it has both an enforceable right and an enforceable obligation. This is because the Government is able to confirm and enforce its requirement for the Entity to spend the funds on improving employment in the region within the five-year period. The Entity shall apply the accounting principles in paragraphs 56–147 to account for this revenue from a transaction with a binding arrangement.

Example 2 – Research Grant Arising from a Binding Arrangement

IE7. A research lab (the Lab) enters into an arrangement and receives CU10 million from a local government (the Government) to conduct research into a potential cure for a widespread disease. This research project is expected to result in the development of intellectual property that consists of a drug formula and manufacturing knowhow. The agreement contains specific and measurable milestones that must be met by the Lab; if these milestones are not met, the Lab is required to return all, or a portion, of the funds to the Government. Once the research is complete, there is no requirement in the agreement for the Lab to transfer the findings or any resulting intellectual property to the Government. The Lab is also able to ensure that payment is received from the Government for research work planned or completed.

IE8. Based on these terms, the Lab has concluded that the agreement is a binding arrangement in accordance with paragraph 4 of IPSAS 47, as it has an enforceable obligation to conduct the research project in accordance with the specified milestones in order to retain the funds, and an enforceable right to consideration for conducting this research project. The Lab shall apply the accounting principles in paragraphs 56–147 to account for this revenue from a transaction with a binding arrangement.

Enforceability

IE9. Examples 3–7 illustrate the requirements in paragraphs AG14–AG25 of IPSAS 47 on enforceability, which complement the requirements in paragraphs 11–14.

Example 3 – Enforceability by Legal Means

IE10. Pursuant to a ministerial directive, a state government (the Government) signed a memorandum of understanding with the Department of Public Works (Public Works), for Public Works to receive funds to build a government office building. The memorandum is not binding in the court of law, does not impose a refund obligation for Public Works in the event that it fails to perform under the terms of the memorandum, nor does it refer to any other enforcement mechanisms. Although the memorandum is not legally binding, the Government and Public Works relied upon it during their contract negotiations. Public Works commenced providing construction services in accordance with the terms of the memorandum of understanding. In addition, Public Works has reported to the Government on its first month of work, and the Government has accepted the work performed to date.

IE11. The parties have relied on the memorandum of understanding, as follows:

(a) Public Works has performed construction services in accordance with the terms of the memorandum; and

(b) The work performed to date has been reported to and accepted by the Government.

IE12. Thus, the memorandum is enforceable by law in the parties' jurisdiction based on the concept of promissory estoppel. That is, the Government has the right to use its court of law to ensure that Public Works satisfies the promises in the memorandum or seek redress should they not be satisfied. Similarly, Public Works has

the right to use the court of law to enforce the receipt of funds from the Government for work performed to date. As a result, the memorandum is considered enforceable through legal means in accordance with paragraphs AG14–AG18 of IPSAS 47.

Example 4 – Arrangement does not include an Enforceable Obligation

IE13. The national government (the Government) transfers 200 hectares of land in a major city to a university (the University) to establish a university campus. The arrangement specifies that the land is to be used for a campus, but does not specify that the land is to be returned if not used for a campus or incur another form of compensation.

IE14. The University recognizes the land as an asset in the statement of financial position of the reporting period in which it obtains control of that land. The University considers paragraphs AG14–AG25 of IPSAS 47 and concludes that the arrangement does not include an enforceable obligation because there is no mechanism to ensure that the University uses the land for a campus, and thus is not a binding arrangement. The University recognizes revenue when it recognizes the land as an asset in accordance with IPSAS 45, *Property, Plant, and Equipment*.

Example 5 – Enforceable Right to Revenue of Aid Agency

Case A – Right to Receive Resources is not Enforceable

IE15. Green-Aid Agency (Agency) is an intergovernmental organization which relies on annual funding from a group of governments to deliver on its initiatives. The Agency has a signed agreement with the government of a sovereign state (State) which specifies the percentage of the Agency's approved budget that the State will fund in 20X2. The agreement indicates that the funds received from the State can only be used to incur eligible expenditures, per the approved 20X2 budget. If funds are not used to incur eligible expenses (e.g., misused or unused), such funds must be repaid to the State at the end of its financial year on December 31, 20X2. The Agency's budget is approved in the preceding October.

IE16. As a result of the terms and conditions in the signed arrangement, the State is able to enforce the appropriate use and any repayment of funds provided to the Agency. The Agency therefore has an enforceable obligation to use resources received from the State for the eligible expenditures approved in the budget year, which meets the definition of a liability.

IE17. Based on past experience, the State is very unlikely to pay what it owes, either during the financial year or at any future time, and the Agency is not able to force the State to pay any amounts owed. Therefore, the Agency does not have an enforceable right to receive an inflow of resources from the State and the arrangement is not binding. The Agency will only recognize an asset when it receives and controls the inflow of resources from the State.

Case B – Right to Receive Resources is Enforceable

IE18. The same facts as Case A apply to Case B, except the Agency is able to prevent the State from participating in the Agency's voting processes if it does not transfer resources in accordance with the signed arrangement after the budget is approved. In this scenario, the Agency has the ability to enforce its right to receive resources (i.e., an enforceable right). As a result, each party in the arrangement has both an enforceable right and an enforceable obligation, and the arrangement is thus a binding arrangement.

Example 6 – Obligation in a Revenue Arrangement is not in Substance Enforceable

IE19. National Park Department of Country A (the Department) enters into an arrangement and receives a transfer of CU500,000 from the Bilateral Aid Agency of Country B (the Agency). The arrangement specifies that the transferred resources are required to be used to rehabilitate deforested areas of Country A's existing wilderness reserves, and returned to the Agency if the money is not used for the stated purpose. The terms

of the agreement are enforceable in the courts of Country A, and in international courts of justice. This is the thirteenth year that the Department has received a transfer of this type from this Agency. In prior years, the transferred resources have not been used as specified; rather, they have been used to acquire additional land adjacent to national parks for expansion purposes. The Department has not conducted any rehabilitation of deforested areas in the past thirteen years. The Agency is aware of the previous breaches of the agreement terms.

IE20. The Department analyzes the transaction and concludes that, although the terms of the agreement are enforceable, such terms do not in substance hold the Department accountable to using the transfer as specified. This is because the Agency has not previously enforced the requirements of its transfers, and given no indication that it ever would. Thus, the arrangement includes the form but not the substance of an enforceable obligation (see paragraph AG25), and the arrangement would not be a binding arrangement. Therefore, the Department recognizes an increase in an asset (for the transfer received) and revenue.

Example 7 – Revenue Subject to Completion of the Appropriations Process

IE21. A national government (Government N) and local government (Government L) both have a financial year end of December 31. On March 15, 20X2, Government N enters into a two-year arrangement with Government L to transfer CU15 million (CU10 million in 20X2 and CU5 million in 20X3) to Government L, to be used to reduce air pollution in accordance with Government N's policy. The arrangement includes a term that it is subject to the completion of the appropriation process.

IE22. Parliament completes the appropriation process for CU10 million on March 31, 20X2, and transfers the resources on April 15, 20X2. The appropriation for CU5 million is not completed in March 20X2 but is considered at a later date as part of the appropriation process for 20X3. Once resources are transferred, Government L is required to use the resources to reduce air pollution or be required by law to repay, which constitutes an enforceable obligation.

Case A – Requirement to Complete the Appropriation Process has Substance

IE23. The reduction in air pollution is a local government responsibility, and there is no authorizing legislation that requires Government N to fund such initiatives. The arrangement is clear that the funding is subject to the completion of the appropriation process, which is not certain, and that the amount may be reduced. Government L applies paragraphs AG14–AG25 of IPSAS 47 to determine whether its right is enforceable, given the term in the arrangement that the funding is subject to the completion of the appropriation process.

IE24. Government L considers substance over form to determine the effect of this term. Government L concludes that it is not able to require Government N to transfer resources nor impose consequences of not doing so. Consequently, the term has substance, and Government L does not have an enforceable right to resources until the appropriation process is completed for each year's amount. The enforceable right to resources would meet the definition of an asset on March 31, 20X2 when the appropriation process is completed, and the arrangement now meets the definition of a binding arrangement. However, Government L would not recognize an asset or liability in its statement of financial position as at March 31, 20X2 because the binding arrangement is wholly unsatisfied.

IE25. On April 15, 20X2, Government L recognizes an asset of CU10 million, and an equivalent liability, when it receives the resources. It does not recognize an asset for the CU5 million, as the appropriation process for the 20X3 amount has not been completed. Government L considers whether to disclose the CU5 million as a contingent asset in accordance with paragraph 24 in the 20X2 notes to its general purpose financial statements. Government L will assess the accounting implications of the authorization process in 20X3 for the remaining CU5 million.

Case B – Requirement to Complete the Appropriation Process does not have Substance

IE26. Authorizing legislation requires Government N to invest in measures to reduce air pollution, and the arrangement is a firm commitment by Government N to meet its legislative obligations by investing in specific measures, set out in the arrangement, to be undertaken by Government L. Government L applies paragraphs AG14–AG25 of IPSAS 47 to determine whether its right is enforceable, given the term in the arrangement that the funding is subject to the completion of the appropriation process.

IE27. Government L considers substance over form to determine the effect of this term. Government L concludes that it has an enforceable right prior to the completion of the appropriation process because the legislation to invest in measures to reduce air pollution provides enforceability through equivalent means. Consequently, the term does not have substance. Thus, Government L has an enforceable right to resources on March 15, 20X2, which would meet the definition of an asset and the arrangement meets the definition of a binding arrangement. However, Government L would not recognize an asset or liability in its statement of financial position as at March 15, 20X2 because the binding arrangement is wholly unsatisfied.

IE28. On April 15, 20X2, Government L recognizes an asset of CU10 million, and an equivalent liability. It does not recognize an asset for the CU5 million. Government L will assess the accounting implications of the authorization process in 20X3 for the remaining CU5 million.

Revenue from Transactions without Binding Arrangements

Example 8 – Advance Receipts of Income Tax

IE29. The Government levies income tax on all residents within its jurisdiction. The tax period and the reporting period are January 1 to December 31. Self-employed taxpayers are required to pay an estimate of their income tax for the year by December 24 of the year immediately preceding the commencement of the tax year. The tax law sets the estimate as the amount due for the most recently completed assessment, plus one tenth, unless the taxpayer provides an explanation prior to December 24 of a lower amount (penalties apply if the taxpayer's assessment proves to be materially lower than the final amount owed). After the end of the tax period, self-employed taxpayers file their tax returns and receive refunds, or pay additional tax to the Government.

IE30. The resources received from self-employed taxpayers by December 24 are advance receipts against taxes due for the following year because the taxable event is the earning of income during the taxation period, which has not commenced. The Government recognizes an increase in an asset (cash in bank) and an increase in a liability (advance receipts) in accordance with paragraph 44 of IPSAS 47.

Revenue from Transactions with Binding Arrangements

Criteria to Apply the Binding Arrangement Model

IE31. Examples 9–12 illustrate the requirements in paragraphs 56–61 of IPSAS 47 on whether to use the binding arrangement model. In addition, the following requirements are illustrated in these examples:

(a) The interaction of paragraph 146 of IPSAS 47 with paragraphs 109 and 115 of IPSAS 47 on estimating variable consideration (Examples 10–11); and

(b) Paragraph AG180 of IPSAS 47 on consideration in the form of sales-based or usage-based royalties on licenses of intellectual property (Example 12).

Example 9 – Collectability of the Consideration

IE32. A local government (the Government) has a portfolio of properties that are rented at below-market prices to qualifying residents (Residents). After a number of years, a Resident is able to purchase the unit as part of a

rent-to-own housing program. The price of the unit will be based on the then current market value less the accumulated rent paid to date by the Resident. The program allows the Residents to pay the price over a period of 20 years, but the payments may cease once Residents have reached the age to begin collecting their superannuation, and the future payments will depend on the Resident's level of income at that time. At the inception of the binding arrangement to purchase the unit, a Resident is required to pay a non-refundable deposit of CU5,000 and enter into a long-term financing agreement with the Government for the remaining balance of the promised consideration.

IE33. As part of this rent-to-own program, the Government enters into a binding arrangement with a Resident for the sale of a residential unit with a market price of CU400,000. Up to the time of the purchase, the Resident had cumulatively paid CU150,000 in rent to the Government, so the purchase price for the unit was CU250,000. The Resident pays the non-refundable deposit of CU5,000 at the inception of the binding arrangement and enters into a long-term financing agreement with the Government for the remaining CU245,000 of the promised consideration. However, the Resident is only expected to pay CU180,000 (including the CU5,000 deposit) until they begin to collect their superannuation, and at that time, their expected level of income will result in payments ceasing. The Resident obtains control of the unit at the inception of the binding arrangement and payment of the CU5,000 deposit.

IE34. In assessing whether the binding arrangement meets the criteria in paragraph 56 of IPSAS 47, the Government concludes that the criterion in paragraph (e) of IPSAS 47 is not met for the full CU250,000 because it is not probable that it will collect the consideration to which it is entitled in exchange for the transfer of the building. In reaching this conclusion, the Government observes that the Resident may only pay up to CU180,000 based on the terms of the program.

IE35. Because the criteria in paragraph 56 of IPSAS 47 are not all met, the Government applies paragraphs 58 and 81–86 of IPSAS 47 to determine the accounting for the non-refundable deposit of CU5,000. The Government observes that the events described in paragraph (a) have occurred—that is, the Government has transferred control of the building to the Resident, and the Government has no obligation to transfer additional goods or services for the CU5,000 payment received, and the payment is non-refundable. Consequently, in accordance with paragraph 58, the Government recognizes the non-refundable CU5,000 payment as revenue upon receipt.

Example 10 – Consideration is not the Stated Price—Implicit Price Concession

IE36. A government pharmaceutical agency (the Agency) provides 1,000 units of a prescription drug to a hospital for promised consideration of CU1 million. The price of the drugs is regulated, so the Agency has no discretion on pricing. The Agency expects that it will not be able to collect from the hospital the full amount of the promised consideration due to a medical crisis occurring in the region which is diverting the hospital's resources.

IE37. When assessing whether the criterion in paragraph (e) of IPSAS 47 is met, the Agency also considers paragraphs 109 and (b) of IPSAS 47. Based on the assessment of the facts and circumstances, the Agency determines that it expects to provide a price concession and accept a lower amount of consideration from the hospital. Accordingly, the Agency concludes that the transaction consideration is not CU1 million and the promised consideration is variable. The Agency estimates the variable consideration and determines that it expects to be entitled to CU400,000.

IE38. The Agency considers the hospital's ability and intention to pay the consideration and concludes that even though the region is experiencing economic difficulty, it is probable that it will collect CU400,000 from the hospital. Consequently, the Agency concludes that the criterion in paragraph (e) of IPSAS 47 is met based on an estimate of variable consideration of CU400,000. In addition, on the basis of an evaluation of the binding arrangement terms and other facts and circumstances, the Agency concludes that the other criteria

in paragraph 56 of IPSAS 47 are also met. Consequently, the Agency accounts for the binding arrangement with the hospital, with a transaction consideration of CU400,000, in accordance with paragraphs 56–147 in IPSAS 47.

Example 11 – Compelled Revenue Transaction—Implicit Price Concession

IE39. A government hospital (the Hospital) provides medical services to an uninsured patient in the emergency room. The Hospital is required by law to provide medical services to all emergency room patients, and patients are required to pay, and the arrival of a patient in the emergency room constitutes the initiation of a binding arrangement. Because of the patient's condition upon arrival at the Hospital, the Hospital was compelled under legislation to provide the services immediately and, therefore, before the Hospital can determine whether the patient is committed to satisfying its obligation to pay for services received in exchange for the medical services provided. Consequently, the binding arrangement does not meet all of the criteria in paragraph 56 of IPSAS 47 and, in accordance with paragraph 58 of IPSAS 47, the Hospital will continue to assess its conclusion based on updated facts and circumstances.

IE40. After providing services, the Hospital obtains additional information about the patient including a review of the services provided, standard rates for such services, and the patient's ability and intention to pay the Hospital for the services provided. During the review, the Hospital notes its standard rate for the services provided in the emergency room is CU10,000. The Hospital also reviews the patient's information and, consistent with its policies, designates the patient to a purchaser class based on the Hospital's assessment of the patient's ability and intention to pay.

IE41. The Hospital considers paragraphs 109 and (b) of IPSAS 47. Although the standard rate for the services is CU10,000 (which may be the amount invoiced to the patient), the Hospital expects to accept a lower amount of consideration in exchange for the services. Accordingly, the Hospital concludes that the transaction consideration is not CU10,000 and, therefore, the promised consideration is variable. The Hospital reviews its historical cash collections from this purchaser class and other relevant information about the patient. The Hospital estimates the variable consideration and determines that it expects to collect CU1,000.

IE42. In accordance with paragraph (e) of IPSAS 47, the Hospital evaluates the patient's ability and intention to pay (i.e., the credit risk of the patient). On the basis of its collection history from patients in this purchaser class, the Hospital concludes it is probable that the Hospital will collect CU1,000 (the estimate of variable consideration). In addition, on the basis of an assessment of the binding arrangement terms and other facts and circumstances, the Hospital concludes that the other criteria in paragraph 56 of IPSAS 47 are also met. Consequently, the Hospital accounts for the binding arrangement with the patient, at a transaction consideration of CU1,000, in accordance with the requirements in IPSAS 47.

Example 12 – Reassessing the Criteria to Apply the Binding Arrangement Model

IE43. The Department of Natural Resources (the Department) issues a permit to mine minerals to a private sector mining company (the Company) in exchange for a royalty based on the amount of minerals extracted. At inception, the binding arrangement meets all the criteria in paragraph 56 of IPSAS 47 and the Department accounts for the binding arrangement with the Company in accordance with paragraphs 56–147 in IPSAS 47. The Department recognizes revenue when the Company's subsequent usage (i.e., extraction of minerals) occurs in accordance with paragraph AG180 of IPSAS 47.

IE44. Throughout the first year of the binding arrangement, the Company provides quarterly extraction reports and pays within the agreed-upon period.

IE45. During the second year of the binding arrangement, the Company continues to extract minerals from the property, but its financial condition declines. The Company's current access to credit and available cash on hand are limited. The Department continues to recognize revenue on the basis of the Company's extraction throughout the second year. The Company pays the first quarter's royalties but does not pay the full royalty

payments for the usage of the permit in Quarters 2–4. The Department accounts for any impairment of the existing receivable in accordance with IPSAS 41, *Financial Instruments*.

IE46. During the third year of the binding arrangement, the Company continues to use the permit issued by the Department. However, the Department learns that the Company has lost access to credit and its major customers, and thus the Company's ability to pay significantly deteriorates. The Department therefore concludes that it is unlikely that the Company will be able to make any further royalty payments for ongoing usage of the mining permit. As a result of this significant change in facts and circumstances, in accordance with paragraph 57 of IPSAS 47, the Department reassesses the criteria in paragraph 56 of IPSAS 47 and determines that they are not met because it is no longer probable that the Department will collect the consideration to which it will be entitled. Accordingly, the Department does not recognize any further revenue associated with the Company's future usage of its permit. The Department accounts for any impairment of the existing receivable in accordance with IPSAS 41.

Modifications

IE47. Examples 13–15 illustrate the requirements in paragraphs 63–66 of IPSAS 47 on binding arrangement modifications. In addition, the following requirements are illustrated in these examples:

(a) Paragraphs 68–77 of IPSAS 47 on identifying compliance obligations (Example 15);

(b) Paragraphs 119–121 of IPSAS 47 on constraining estimates of variable consideration (Examples 14 and 15); and

(c) Paragraphs 144–147 of IPSAS 47 on changes in the transaction consideration (Example 14).

Example 13 – Modification of a Binding Arrangement for Goods

IE48. An intergovernmental organization (the Organization) promises to provide 1.2 million textbooks to a national government (the Government) for CU12 million (CU10 per textbook). The textbooks are transferred to the Government over a six-month period. The CU12 million is funded by the Organization's donors. The Organization transfers control of each textbook at a point in time. After the Organization has transferred control of 600,000 textbooks to the Government, the binding arrangement is modified to require the delivery of an additional 300,000 textbooks (a total of 1.5 million identical textbooks) to the Government. The additional 300,000 textbooks were not included in the initial binding arrangement.

Case A—Additional Products for a Price that Reflects the Stand-Alone Value

IE49. When the binding arrangement is modified, the price of the modification to a binding arrangement for the additional 300,000 textbooks is an additional CU2.85 million or CU9.5 per textbook. The pricing for the additional textbooks reflects the stand-alone value of the textbooks at the time of the modification to the binding arrangement and the additional textbooks are distinct (in accordance with paragraph 73 of IPSAS 47) from the original textbooks.

IE50. In accordance with paragraph 65 of IPSAS 47, the modification to a binding arrangement for the additional 300,000 textbooks is, in effect, a new and separate binding arrangement for future textbooks that does not affect the accounting for the existing binding arrangement. The Organization recognizes revenue of CU10 per textbook for the 1.2 million textbooks in the original binding arrangement and CU9.5 per textbook for the 300,000 textbooks in the new binding arrangement.

Case B—Additional Products for a Price that Does not Reflect the Stand-Alone Value

IE51. During the process of negotiating the purchase of an additional 300,000 textbooks, the parties initially agree on a price of CU8.0 per textbook. However, the Government and the donors discover that the initial 600,000 textbooks provided by the Organization contained minor misprints. The Organization promises a partial credit

of CU1.5 per textbook to compensate the donors for the poor quality of those textbooks. The Department and the donors agree to incorporate the credit of CU900,000 (CU1.5 credit × 600,000 textbooks) into the amount that the Organization will require for the additional 300,000 textbooks. Consequently, the modification to the binding arrangement specifies that the price of the additional 300,000 textbooks is CU1.5 million or CU5.0 per product. That price comprises the agreed-upon price for the additional 300,000 textbooks of CU2.4 million, or CU8.0 per textbook, less the credit of CU900,000.

IE52. At the time of modification, the Organization recognizes the CU900,000 as a reduction of the transaction consideration and, therefore, as a reduction of revenue for the initial 600,000 textbooks transferred. In accounting for the sale of the additional 300,000 textbooks, the Organization determines that the negotiated price of CU8.0 per product does not reflect the stand-alone value of the additional textbooks. Consequently, the modification to a binding arrangement does not meet the conditions in paragraph 65 of IPSAS 47 to be accounted for as a separate binding arrangement. Because the remaining textbooks to be delivered are distinct from those already transferred, the Organization applies the requirements in paragraph (a) of IPSAS 47 and accounts for the modification as a termination of the original binding arrangement and the creation of a new binding arrangement.

IE53. Consequently, the amount recognized as revenue for each of the remaining textbooks is a blended price of CU9.33 {[(CU10 × 600,000 textbooks not yet transferred under the original binding arrangement) + (CU8.0 × 300,000 textbooks to be transferred under the modification to a binding arrangement)] ÷ 900,000 remaining textbooks}.

Example 14 – Change in the Transaction Consideration after a Modification of a Binding Arrangement

IE54. On July 1, 20X0, the Department of Defense (the Department) promises to transfer two distinct used military products, a light-armored vehicle and spare parts, to a foreign government (Government F). The light-armored vehicle is transferred to Government F at the inception of the binding arrangement and spare parts are transferred on March 31, 20X1. The consideration promised by Government F includes fixed consideration of CU1.0 million and variable consideration that is estimated to be CU200,000. The Department includes its estimate of variable consideration in the transaction consideration because it concludes that it is highly probable that a significant reversal in cumulative revenue recognized will not occur when the uncertainty is resolved.

IE55. The transaction consideration of CU1.2 million is allocated equally to the compliance obligation for the light-armored vehicle and the compliance obligation for spare parts. This is because both products have the same stand-alone values and the variable consideration does not meet the criteria in paragraph 142 that requires allocation of the variable consideration to one but not both of the compliance obligations.

IE56. When the light-armored vehicle was transferred to Government F at the inception of the binding arrangement, the Department recognizes revenue of CU600,000.

IE57. On November 30, 20X0, the scope of the binding arrangement is modified to include the promise to transfer ammunition (in addition to the undelivered spare parts) to Government F on June 30, 20X1 and the price of the binding arrangement is increased by CU300,000 (fixed consideration), which does not represent the stand-alone value of ammunition. The stand-alone value of ammunition is the same as the stand-alone values of the light-armored vehicle and spare parts.

IE58. The Department accounts for the modification as if it were the termination of the existing binding arrangement and the creation of a new binding arrangement. This is because the remaining spare parts and ammunition are distinct from the light-armored vehicle, which had transferred to Government F before the modification, and the promised consideration for the ammunition does not represent its stand-alone value. Consequently, in accordance with paragraph (a) of IPSAS 47, the consideration to be allocated to the remaining compliance obligations comprises the consideration that had been allocated to the compliance obligation for spare parts

(which is measured at an allocated transaction consideration amount of CU600,000) and the consideration promised in the modification (fixed consideration of CU300,000). The transaction consideration for the modified binding arrangement is CU900,000 and that amount is allocated equally to the compliance obligation for spare parts and the compliance obligation for ammunition (i.e., CU450,000 is allocated to each compliance obligation).

IE59. After the modification but before the delivery of spare parts and ammunition, the Department revises its estimate of the amount of variable consideration to which it expects to be entitled to CU240,000 (rather than the previous estimate of CU200,000). The Department concludes that the change in estimate of the variable consideration can be included in the transaction consideration, because it is highly probable that a significant reversal in cumulative revenue recognized will not occur when the uncertainty is resolved. Even though the modification was accounted for as if it were the termination of the existing binding arrangement and the creation of a new binding arrangement in accordance with paragraph (a) of IPSAS 47, the increase in the transaction consideration of CU40,000 is attributable to variable consideration promised before the modification. Therefore, in accordance with paragraph 147 of IPSAS 47, the change in the transaction consideration is allocated to the compliance obligations for the light-armored vehicle and spare parts on the same basis as at the inception of the binding arrangement. Consequently, the Department recognizes revenue of CU20,000 for the light-armored vehicle in the period in which the change in the transaction consideration occurs. Because the spare parts had not transferred to Government F before the modification to a binding arrangement, the change in the transaction consideration that is attributable to spare parts is allocated to the remaining compliance obligations at the time of the modification to a binding arrangement. This is consistent with the accounting that would have been required by paragraph (a) of IPSAS 47 if that amount of variable consideration had been estimated and included in the transaction consideration at the time of the modification of a binding arrangement.

IE60. The Department then also allocates the CU20,000 increase in the transaction consideration for the modified binding arrangement equally to the compliance obligations for spare parts and ammunition. This is because the products have the same stand-alone values and the variable consideration does not meet the criteria in paragraph 142 that require allocation of the variable consideration to one but not both of the compliance obligations. Consequently, the amount of the transaction consideration allocated to the compliance obligations for spare parts and ammunition increases by CU10,000 to CU460,000 each.

IE61. On March 31, 20X1, the spare parts are transferred to Government F and the Department recognizes revenue of CU460,000. On June 30, 20X1, the ammunition is transferred to the foreign government and the Department recognizes revenue of CU460,000.

Example 15 – Modification Resulting in a Cumulative Catch-up Adjustment to Revenue

IE62. The Department of Public Works (Public Works) enters into a binding arrangement to construct a residential building for the Department of Housing (Housing) on land owned by Housing for promised consideration of CU10 million and a bonus of CU2 million if the building is completed within 24 months. Public Works accounts for the promised bundle of goods and services as a single compliance obligation satisfied over time in accordance with paragraph (b) of IPSAS 47 because Housing controls the building during construction. At the inception of the binding arrangement, Public Works expects the following:

	CU
Transaction consideration	10,000,000
Expected costs	9,000,000
Expected surplus (10%)	1,000,000

IE63. At the inception of the binding arrangement, Public Works excludes the CU2 million bonus from the transaction consideration because it cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur. Completion of the building is highly susceptible to factors outside Public Works' influence, including weather and regulatory approvals. In addition, Public Works has limited experience with similar types of binding arrangements.

IE64. Public Works determines that the input measure, on the basis of costs incurred, provides an appropriate measure of progress towards complete satisfaction of the compliance obligation. By the end of the first year, Public Works has satisfied 60 percent of its compliance obligation on the basis of costs incurred to date (CU5.4 million) relative to total expected costs (CU9 million). Public Works reassesses the variable consideration and concludes that the amount is still constrained in accordance with paragraphs 119–121 of IPSAS 47. Consequently, the cumulative revenue and costs recognized for the first year are as follows:

	CU
Revenue	6,000,000
Costs	5.400,000
Surplus	600,000

IE65. In the first quarter of the second year, the parties to the binding arrangement agree to modify the binding arrangement by changing the floor plan of the building. As a result, the fixed consideration and expected costs increase by CU1.5 million and CU1.2 million, respectively. Total potential consideration after the modification is CU13.5 million (CU11.5 million fixed consideration + CU2 million completion bonus). In addition, the allowable time for achieving the CU2 million bonus is extended by 6 months to 30 months from the original date of inception of the binding arrangement. At the date of the modification, on the basis of its experience and the remaining work to be performed, which is primarily inside the building and not subject to weather conditions, Public Works concludes that it is highly probable that including the bonus in the transaction consideration will not result in a significant reversal in the amount of cumulative revenue recognized in accordance with paragraph 119 of IPSAS 47 and includes the CU2 million in the transaction consideration. In assessing the modification to a binding arrangement, Public Works evaluates paragraph (b) of IPSAS 47 and concludes (on the basis of the factors in paragraph 76 of IPSAS 47) that the remaining goods and services to be provided using the modified binding arrangement are not distinct from the goods and services transferred on or before the date of modification to a binding arrangement; that is, the binding arrangement remains a single compliance obligation.

IE66. Consequently, Public Works accounts for the modification to a binding arrangement as if it were part of the original binding arrangement (in accordance with paragraph (b) of IPSAS 47). Public Works updates its measure of progress and estimates that it has satisfied 52.9 percent of its compliance obligation (CU5.4 million actual costs incurred ÷ CU10.2 million total expected costs). Public Works recognizes additional revenue of CU1.14 million [(52.9 percent complete × CU13.5 million modified transaction consideration) – CU6 million revenue recognized to date] at the date of the modification as a cumulative catch-up adjustment in the statement of financial performance.

Identifying Compliance Obligations in a Binding Arrangement

IE67. Examples 16–19 illustrate the requirements in paragraphs 68–77 of IPSAS 47 on identifying compliance obligations.

Example 16 – Determining Whether Goods or Services are Distinct

Case A – Distinct Goods or Services

IE68. A government shared IT services agency (the Agency) enters into a binding arrangement with a state government (the State Government) to transfer a software license, perform an installation service and provide unspecified software updates and technical support (online and telephone) for a two-year period. The Agency provides the license, installation service and technical support separately. The installation service includes changing the web screen for each type of user (for example, marketing, inventory management and information technology). The installation service is routinely performed by other entities and does not significantly modify the software. The software remains functional without the updates and the technical support.

IE69. The Agency assesses the goods and services promised to the State Government to determine which goods and services are distinct in accordance with paragraph 73 of IPSAS 47. The Agency observes that the software is delivered before the other goods and services, and remains functional without the updates and the technical support. The State Government can generate economic benefits or service potential from the updates together with the software license transferred at the start of the binding arrangement. Thus, the Agency concludes that the State Government can generate economic benefits or service potential from each of the goods and services either on their own or together with the other goods and services that are readily available and the criterion in paragraph (a) of IPSAS 47 is met.

IE70. The Agency also considers the principle and the factors in paragraph 76 of IPSAS 47 and determines that the promise to transfer each good and service to the State Government is separately identifiable from each of the other promises (thus the criterion in paragraph (b) of IPSAS 47 is met). In reaching this determination, the Agency considers that, although it integrates the software into the State Government's system, the installation services do not significantly affect the State Government's ability to use and generate economic benefits or service potential from the software license because the installation services are routine and can be obtained from alternative providers. The software updates do not significantly affect the State Government's ability to use, and benefit or receive service potential from, the software license during the license period. The Agency further observes that none of the promised goods or services significantly modify or customize one another, nor is the Agency providing a significant service of integrating the software and the services into a combined output. Lastly, the Agency concludes that the software and the services do not significantly affect each other and, therefore, are not highly interdependent or highly interrelated, because the Agency would be able to satisfy its promise to transfer the initial software license independently from its promise to subsequently provide the installation service, software updates or technical support.

IE71. On the basis of this assessment, the Agency identifies four compliance obligations in the binding arrangement to transfer the following goods or services to another party:

(a) The software license;

(b) An installation service;

(c) Software updates; and

(d) Technical support.

IE72. The Agency applies paragraphs 87–97 of IPSAS 47 to determine whether each of the compliance obligations for the installation service, software updates and technical support is satisfied at a point in time or over time. The Agency also assesses the nature of the Agency's promise to transfer the software license in accordance with paragraph AG173 of IPSAS 47.

Case B – Significant Customization

IE73. The promised goods and services are the same as in Case A, except that the binding arrangement specifies that, as part of the installation service, the software is to be substantially customized to add significant new

functionality to enable the software to interface with other customized software applications used by the State Government. The customized installation service can be provided by other entities.

IE74. The Agency assesses the goods and services promised to the State Government to determine which goods and services are distinct in accordance with paragraph 73 of IPSAS 47. The Agency first assesses whether the criterion in paragraph (a) has been met. For the same reasons as in Case A, the Agency determines that the software license, installation, software updates and technical support each meet that criterion. The Agency next assesses whether the criterion in paragraph (b) has been met by evaluating the principle and the factors in paragraph 76 of IPSAS 47. The Agency observes that the terms of the binding arrangement result in a promise to provide a significant service of integrating the licensed software into the existing software system by performing a customized installation service as specified in the binding arrangement. In other words, the Agency is using the license and the customized installation service as inputs to produce the combined output (i.e., a functional and integrated software system) specified in the binding arrangement (see paragraph (a) of IPSAS 47). The software is significantly modified and customized by the service (see paragraph (b) of IPSAS 47). Consequently, the Agency determines that the promise to transfer the license is not separately identifiable from the customized installation service and, therefore, the criterion in paragraph (b) of IPSAS 47 is not met. Thus, the software license and the customized installation service are not distinct.

IE75. On the basis of the same analysis as in Case A, the Agency concludes that the software updates and technical support are distinct from the other promises in the binding arrangement.

IE76. On the basis of this assessment, the Agency identifies three compliance obligations in the binding arrangement to transfer the following goods or services to another party:

(a) Software customization (which comprises the license for the software and the customized installation service);

(b) Software updates; and

(c) Technical support.

IE77. The Agency applies paragraphs 87–97 of IPSAS 47 to determine whether each compliance obligation is satisfied at a point in time or over time.

Case C – Promises are Separately Identifiable (Installation)

IE78. A shared IT services agency (the Agency) enters into a binding arrangement with a state government office (State Government) to provide a piece of equipment and installation services. The equipment is operational without any customization or modification. The installation required is not complex and is capable of being performed by several alternative service providers.

IE79. The Agency identifies two promised goods and services in the binding arrangement: (a) equipment and (b) installation. The Agency assesses the criteria in paragraph 73 of IPSAS 47 to determine whether each promised good or service is distinct. The Agency determines that the equipment and the installation each meet the criterion in paragraph (a) of IPSAS 47. The State Government can generate economic benefits or service potential from the equipment on its own, by using it or reselling it, or together with other readily available resources (for example, installation services available from alternative providers). The State Government also can generate economic benefits or service potential from the installation services together with other resources that the State Government will already have obtained from the Agency (i.e., the equipment).

IE80. The Agency further determines that its promises to transfer the equipment and to provide the installation services are each separately identifiable (in accordance with paragraph (b) of IPSAS 47). The Agency considers the principle and the factors in paragraph 76 of IPSAS 47 in determining that the equipment and the installation services are not inputs to a combined item in this binding arrangement. In this case, each of

the factors in paragraph 76 of IPSAS 47 contributes to, but is not individually determinative of, the conclusion that the equipment and the installation services are separately identifiable as follows:

(a) The Agency is not providing a significant integration service. That is, the Agency has promised to deliver the equipment and then install it; the Agency would be able to satisfy its promise to transfer the equipment separately from its promise to subsequently install it. The Agency has not promised to combine the equipment and the installation services in a way that would transform them into a combined output.

(b) The Agency's installation services will not significantly customize or significantly modify the equipment.

(c) Although the State Government can generate economic benefits or service potential from the installation services only after it has obtained control of the equipment, the installation services do not significantly affect the equipment because the Agency would be able to satisfy its promise to transfer the equipment independently of its promise to provide the installation services. Because the equipment and the installation services do not each significantly affect the other, they are not highly interdependent or highly interrelated.

IE81. On the basis of this assessment, the Agency identifies two compliance obligations in the binding arrangement to transfer the following goods or services to another party:

(a) The equipment; and

(b) Installation services.

IE82. The Agency applies paragraphs 87–97 of IPSAS 47 to determine whether each compliance obligation is satisfied at a point in time or over time.

Case D – Promises are Separately Identifiable (Restrictions to a Binding Arrangement)

IE83. Assume the same facts as in Case C, except that the State Government is required to use the Agency's installation services in the binding arrangement.

IE84. The binding arrangement requirement to use the Agency's installation services does not change the evaluation of whether the promised goods and services are distinct in this case. This is because the binding arrangement requirement to use the Agency's installation services does not change the characteristics of the goods or services themselves, nor does it change the Agency's promises to the State Government. Although the State Government is required to use the Agency's installation services, the equipment and the installation services are capable of being distinct (i.e., they each meet the criterion in paragraph (a) of IPSAS 47) and the Agency's promises to provide the equipment and to provide the installation services are each separately identifiable (i.e., they each meet the criterion in paragraph (b) of IPSAS 47). The Agency's analysis in this regard is consistent with that in Case C.

Case E – Promises are Separately Identifiable (Consumables)

IE85. A shared IT services agency (the Agency) enters into a binding arrangement with a state government office (State Government) to provide a piece of off-the-shelf equipment (i.e., the equipment is operational without any significant customization or modification) and to provide specialized consumables for use in the equipment at predetermined intervals over the next three years. The consumables are produced only by the Agency but are provided separately by the Agency.

IE86. The Agency determines that the State Government can generate economic benefits or service potential from the equipment together with the readily available consumables. The consumables are readily available in accordance with paragraph 75 of IPSAS 47, because they are regularly provided separately by the Agency (i.e., through refill orders to purchasers that previously purchased the equipment). The State Government can generate economic benefits or service potential from the consumables that will be delivered under the

binding arrangement, together with the delivered equipment that is transferred to the State Government initially under the binding arrangement. Therefore, the equipment and the consumables are each capable of being distinct in accordance with paragraph (a) of IPSAS 47.

IE87. The Agency determines that its promises to transfer the equipment and to provide consumables over a three-year period are each separately identifiable in accordance with paragraph (b) of IPSAS 47. In determining that the equipment and the consumables are not inputs to a combined item in this binding arrangement, the Agency considers that it is not providing a significant integration service that transforms the equipment and consumables into a combined output. In addition, neither the equipment nor the consumables are significantly customized or modified by the other. Lastly, the Agency concludes that the equipment and the consumables are not highly interdependent or highly interrelated because they do not significantly affect each other. Although the State Government can generate economic benefits or service potential from the consumables in this binding arrangement only after it has obtained control of the equipment (i.e., the consumables would have no use without the equipment) and the consumables are required for the equipment to function, the equipment and the consumables do not each significantly affect the other. This is because the Agency would be able to satisfy each of its promises in the binding arrangement independently of the other. That is, the Agency would be able to satisfy its promise to transfer the equipment, even if the State Government did not purchase any consumables, and would be able to satisfy its promise to provide the consumables, even if the State Government acquired the equipment separately.

IE88. On the basis of this assessment, the Agency identifies two compliance obligations in the binding arrangement to transfer the following goods or services to another party:

(a) The equipment; and

(b) The consumables.

IE89. The Agency applies paragraphs 87–97 of IPSAS 47 to determine whether each compliance obligation is satisfied at a point in time or over time.

Example 17 – Goods and Services are not Distinct

Case A – Significant Integration Service: Hospital Construction

IE90. The Department of Public Works (Public Works) enters into a binding arrangement with the Department of Health to build a hospital. Public Works is responsible for the overall management of the project and identifies various promised goods and services, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment and finishing.

IE91. The promised goods and services are capable of being distinct in accordance with paragraph (a) of IPSAS 47. That is, the Department of Health can generate economic benefits or service potential from the goods and services either on their own or together with other readily available resources. This is evidenced by the fact that Public Works regularly provides many of these goods and services separately to other purchasers, as do comparable construction entities. In addition, the Department of Health could generate economic benefits or service potential from the individual goods and services by using, consuming, selling or holding those goods or services.

IE92. However, the promises to transfer the goods and services are not separately identifiable in accordance with paragraph (b) of IPSAS 47 (on the basis of the factors in paragraph 76 of IPSAS 47). This is evidenced by the fact that Public Works provides a significant service of integrating the goods and services (the inputs) into the hospital (the combined output) for which the Department of Health has entered into a binding arrangement.

IE93. Because the criterion in paragraph (b) of IPSAS 47 is not met, the goods and services are not distinct. Public Works accounts for all of the goods and services promised in the binding arrangement as a single compliance obligation.

Case B – Significant Integration Service: Road Trains Production and Delivery

IE94. The Department of Research Sciences (the Department) enters into a binding arrangement with a local government (the Government) that will result in the delivery of multiple highly complex, specialized road trains. The terms of the binding arrangement require the Department to establish a manufacturing process in order to produce the road trains. The specifications are unique to the Government, based on a custom design that is owned by the Government and that were developed under the terms of a separate binding arrangement that is not part of the current negotiated exchange. The Department is responsible for the overall management of the binding arrangement, which requires the performance and integration of various activities including procurement of materials, identifying and managing subcontractors, and performing manufacturing, assembly and testing.

IE95. The Department assesses the promises in the binding arrangement and determines that each of the promised road trains is capable of being distinct in accordance with paragraph (a) of IPSAS 47 because the Government can generate economic benefits or service potential from each road train on its own. This is because each road train can function independently of the other road trains.

IE96. The Department observes that the nature of its promise is to establish and provide a service of producing the full complement of road trains for which the Government has entered into a binding arrangement in accordance with the Government's specifications. The Department considers that it is responsible for the overall management of the binding arrangement and for providing a significant service of integrating various goods and services (the inputs) into its overall service and the resulting road trains (the combined output). Therefore, the road trains and the various promised goods and services inherent in producing those road trains are not separately identifiable in accordance with paragraph (b) and paragraph 76 of IPSAS 47. In this case, the manufacturing process provided by the Department is specific to its binding arrangement with the Government. In addition, the nature of the Department's performance and, in particular, the significant integration service of the various activities means that a change in one of the Department's activities to produce the road trains has a significant effect on the other activities required to produce the highly complex, specialized road trains such that the Department's activities are highly interdependent and highly interrelated.

IE97. Because the criterion in paragraph (b) of IPSAS 47 is not met, the goods and services that will be provided by the Department are not distinct. The Department accounts for all of the goods and services promised in the binding arrangement as a single compliance obligation.

Case C – Significant Integration Service: Emergency Response

IE98. An Emergency Aid Agency (the Agency) enters into an arrangement with an International Development Organization (the Organization) and receives CU1 million to provide emergency flood response services to the citizens in an affected region which did not have sufficient resources to respond to the crisis. The Agency has applied paragraphs 9–16 of IPSAS 47 and determined that the arrangement is a binding arrangement. Under the terms of the binding arrangement, the Agency is required to acquire blankets and shelter sheets, and to purchase various types of equipment such as water pumps, reservoirs, buckets, and brooms to provide cleanup services. The terms of the binding arrangement stated that the Agency may also need to engage in other activities or incur eligible expenditures that are not explicitly listed but are necessary to meet the overall objective of providing emergency flood response services to affected citizens. The Agency noted that, in the context of the binding arrangement, the transport and distribution of the purchased blankets and shelter sheets are not explicitly listed in the binding arrangement but would qualify as an eligible expenditure that is necessary and therefore is an implicit promised service.

IE99. The promised goods and services are capable of being distinct in accordance with paragraph (a) of IPSAS 47 because the citizens in the affected region are able to generate economic benefits or service potential from the supplies and cleanup services either on their own or together with other resources readily available.

IE100. However, the Agency determines that the promised goods and services to be transferred to the citizens are not separately identifiable in accordance with paragraph (b) of IPSAS 47 on the basis of the factors in paragraph 76 of IPSAS 47. This is because the nature of its promise in the binding arrangement is to meet the immediate emergency needs and provide prompt humanitarian assistance to citizens in the affected region. The Agency notes that in order to meet the terms of the binding arrangement, it is required to provide a significant service of integrating the goods or services (the inputs) to provide emergency flood response services (the combined output).

IE101. Because the criterion in paragraph (b) of IPSAS 47 is not met, the goods and services are not distinct. Rather, the combined bundle of goods and services in the binding arrangement is distinct. The Agency accounts for all of the goods and services promised in the binding arrangement as a single compliance obligation.

Example 18 – Transfer of Resources to Another Level of Government with Compliance Obligations

IE102. The national government (Government N) provides CU10 million to a provincial government (Government P) to be used to improve and maintain mass transit systems. Specifically, the money is required to be used as follows: 40 percent for existing railroad and tramway system modernization, 40 percent for a new railroad or tramway system, and 20 percent for the purchase of rolling stock. Under the terms of the binding arrangement, the money can only be used as specified and any misused or unused amounts must be repaid to Government N. Furthermore, Government P is required to include a note in its audited general purpose financial statements detailing how the transferred resources were spent. The binding arrangement requires the resources to be spent as specified in the current year or be returned to Government N.

IE103. Government P recognizes the inflow of CU10 million as an asset, and an equivalent liability because it is required to transfer resources back to Government N if it does not satisfy the compliance obligations in the binding arrangement.

IE104. Government P notes that various goods and services not explicitly stated in the binding arrangement are required to satisfy the binding arrangement. For example, certain goods and services would be required to modernize the existing railroad and tramway system, while other goods and services would be required to build a new railroad or tramway system. Thus, Government P conducts a thorough assessment to identify all goods and services inherently promised in the binding arrangement. It then determines that the promised goods and services are capable of being distinct in accordance with paragraph (a) of IPSAS 47 because Government N can generate economic benefits or service potential from each good and service on its own or together with other readily available resources.

IE105. Considering the context of the binding arrangement, Government P observes that the nature of its promise in the binding arrangement is to use the resources in three individually specific ways rather than in a combined manner:

(a) The goods and services to modernize the existing railroad and tramway system represent a single combined output: the modernization of the existing system. Government P provides a significant service of integrating these goods and services into a single output that is separately identifiable from other goods or services in the binding arrangement. Similarly, the goods and services to build a new railroad or tramway system represent a single combined output, and the purchase of rolling stock represents a single output; and

(b) Government P is not significantly integrating these three combined outputs, nor do the outputs significantly modify, customize, or depend on each other. Rather, Government P is responsible for

generating three separately identifiable outputs in accordance with paragraphs (b) and 76 of IPSAS 47: the modernization work, the new system, and the rolling stock.

IE106. Because both criteria in paragraph 73 of IPSAS 47 are met, the binding arrangement contains three separate compliance obligations;

(a) The compliance obligation to use CU4 million for modernizing the existing railroad and tramway system;

(b) The compliance obligation to use CU4 million for a new railroad or tramway system; and

(c) The compliance obligation to use CU2 million for purchasing rolling stock.

IE107. Government P reduces the liability as or when it satisfies the compliance obligations, and recognizes revenue in the statement of financial performance of the reporting period.

Example 19 – Explicit and Implicit Promises in a Binding Arrangement

IE108. A government entity (the Government), with the objective of providing broadband internet services to citizens in rural areas, provides modem equipment to a telecommunications company (the Telecom) (i.e., the Government's purchaser) who will then resell it to members of the public (i.e., the Telecom's customers) for below-market prices.

Case A—Explicit Promise of Service

IE109. In the binding arrangement with the Telecom, the Government promises to provide maintenance services for no additional consideration (i.e., 'free') to any end customer (i.e., members of the public) who purchased a modem from the Telecom. The Government outsources the performance of the maintenance services to the Telecom and pays the Telecom an agreed-upon amount for providing those services on the Government's behalf. If the end customer does not use the maintenance services, the Government is not obligated to pay the Telecom.

IE110. The binding arrangement with the Telecom includes two promised goods or services: (a) the modem and (b) the maintenance services. The promise of maintenance services is a promise to transfer goods or services in the future and is part of the negotiated exchange between the Government and the Telecom. The Government assesses whether each good or service is distinct in accordance with paragraph 73 of IPSAS 47. The Government determines that both the product and the maintenance services meet the criterion in paragraph (a) of IPSAS 47. The Government provides the modem on a stand-alone basis, which indicates that the Telecom can generate economic benefits or service potential from the modem on its own. The Telecom can generate economic benefits or service potential from the maintenance services together with a resource the Telecom already has obtained from the Government (i.e., the modem).

IE111. The Government further determines that its promises to transfer the modem and to provide the maintenance services are separately identifiable (in accordance with paragraph (b) of IPSAS 47 on the basis of the principle and the factors in paragraph 76 of IPSAS 47). The modem and the maintenance services are not inputs to a combined item in the binding arrangement. The Government is not providing a significant integration service because the presence of the modem and the services together in this binding arrangement do not result in any additional or combined functionality. In addition, neither the modem nor the services modify or customize the other. Lastly, the modem and the maintenance services are not highly interdependent or highly interrelated because the Government would be able to satisfy each of the promises in the binding arrangement independently of its efforts to satisfy the other (i.e., the Government would be able to transfer the modem even if the Telecom (through the individual end customers) declined maintenance services, and would be able to provide maintenance services in relation to modems provided previously through other distributors). The Government also observes, in applying the principle in paragraph 76 of IPSAS 47, that the Government's promise to provide maintenance is not necessary for the product to

continue to provide significant economic benefits or service potential to the Telecom. Consequently, the Government concludes that there are two compliance obligations (i.e., the modem and the maintenance services) in the binding arrangement.

Case B—Implicit Promise of Service

IE112. Continuing with the fact pattern in Case A, the Government has historically provided maintenance services for no additional consideration (i.e., 'free') to end customers in rural areas who purchased the Government's modem from the Telecom. The Government is now rolling out a similar program to urban areas. During the negotiations on this new urban program, the Government does not explicitly promise maintenance services during negotiations with the Telecom and the final binding arrangement between the Government and the Telecom does not specify terms or conditions for those services.

IE113. However, on the basis of its customary practice, the Government determines at the inception of the new binding arrangement that it has made an implicit promise to provide maintenance services as part of the negotiated exchange with the Telecom. That is, the Government's past practices of providing these services in rural areas create valid expectations of the Government's purchasers (i.e., the Telecom) in accordance with paragraph 71 of IPSAS 47. Consequently, the Government assesses whether the promise of maintenance services is a compliance obligation. For the same reasons as in Case A, the Government determines that the product and maintenance services are separate compliance obligations.

Case C—Services are not a Promised Service

IE114. As a further variation from Cases A and B, in the binding arrangement with the Telecom, the Government does not promise to provide any maintenance services. In addition, the Government typically does not provide maintenance services and, therefore, the Government's customary practices, published policies and specific statements at the time of entering into the binding arrangement have not created an implicit promise to provide goods or services to its purchasers. The Government transfers control of the modem to the Telecom and, therefore, the binding arrangement is completed. However, before the sale to the Telecom's end customers, the Government makes an offer to provide maintenance services to any party that purchases a modem from the Telecom for no additional promised consideration.

IE115. The promise of maintenance is not included in the binding arrangement between the Government and the Telecom at the inception of the binding arrangement. That is, in accordance with paragraph 71 of IPSAS 47, the Government does not explicitly or implicitly promise to provide maintenance services to the Telecom or the end customers. Consequently, the Government does not identify the promise to provide maintenance services as a compliance obligation. Instead, the obligation to provide maintenance services is accounted for in accordance with IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*.

IE116. Although the maintenance services are not a promised service in the current binding arrangement, in future binding arrangements with the Telecom or other telecommunications companies, the Government would assess whether it has created a business practice resulting in an implied promise to provide maintenance services.

Recognition of Revenue Transactions with a Binding Arrangement

Satisfied Over Time or at a Point in Time

IE117. Examples 20–22 illustrate the requirements in paragraphs 92–93 and 95 of IPSAS 47 on the satisfaction of compliance obligations over time. In addition, the following requirements are illustrated in these examples:

(a) Paragraphs (a) of IPSAS 47 for transactions with compliance obligations to use resources for goods or services internally on when an entity simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (Example 20 Case A);

(b) Paragraphs (a) of IPSAS 47 for transactions with compliance obligations to transfer goods or services to another party on when a purchaser or third-party beneficiary simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs (Example 20 Case B, and Example 21);

(c) Paragraphs (c) and 96–97 of IPSAS 47 on an entity's performance that does not create an asset with an alternative use and an entity's enforceable right to receive consideration for performance completed to date (Examples 21–22); and

(d) Paragraph 97 of IPSAS 47 on compliance obligations satisfied at a point in time (Example 22).

Example 20 – Resource Provider Simultaneously Receives and Consumes the Economic Benefits or Service Potential

Case A – Satisfaction of Compliance Obligation to Use Resources for Goods or Services Internally

IE118. A regional government (the Government) enters into a binding arrangement to provide CU1.2 million to the regional hospital network (the Hospital). The Government requires the Hospital to use the CU1.2 million in the operation of its medical imaging department.

IE119. The use of funds in the medical imaging department is a single compliance obligation in accordance with paragraph (b) of IPSAS 47. The compliance obligation is satisfied over time in accordance with paragraph (a) of IPSAS 47 because the Hospital simultaneously receives and consumes the economic benefits or service potential of the received resources as it is used. The Hospital recognizes revenue over time by measuring its progress towards complete satisfaction of that compliance obligation in accordance with paragraphs 98–104 of IPSAS 47.

Case B – Satisfaction of Compliance Obligation to Transfer Goods or Services to Another Party

IE120. A public payroll service center (the Payroll Center) enters into a binding arrangement to provide monthly payroll processing services to a local government's Department of Education (the Department) for one year.

IE121. The promised payroll processing services are accounted for as a single compliance obligation in accordance with paragraph (b) of IPSAS 47. The compliance obligation is satisfied over time in accordance with paragraph (a) of IPSAS 47 because the Department simultaneously receives and consumes the economic benefits or service potential of the Payroll Center's performance in processing each payroll transaction as and when each transaction is processed. The fact that another entity would not need to re-perform payroll processing services for the service that the Payroll Center has provided to date also demonstrates that the Department simultaneously receives and consumes the economic benefits or service potential of the Payroll Center's performance as the Payroll Center performs. The Payroll Center disregards any practical limitations on transferring the remaining compliance obligation, including setup activities that would need to be undertaken by another entity. The Payroll Center recognizes revenue over time by measuring its progress towards complete satisfaction of that compliance obligation in accordance with paragraphs 98–104 of IPSAS 47.

Example 21 – Assessing Alternative Use and Right to Consideration

IE122. The Office of the Auditor General (the Auditor) enters into a binding arrangement with a government agency (the Agency) to provide financial statement audit services that result in the Auditor providing an audit opinion to the Agency. The audit opinion relates to the accounting records and other facts and circumstances that are specific to the Agency. If the Agency were to terminate the audit for reasons other than the Auditor's failure to perform as promised, the binding arrangement requires the Agency to compensate the Auditor for its costs incurred.

IE123. The Auditor considers the criterion in paragraph (a) of IPSAS 47 to determine whether the Agency simultaneously receives and consumes the economic benefits or service potential of the Auditor's

performance. If the Auditor were to be unable to satisfy its compliance obligation and the Agency hired another audit firm to provide the opinion, the other audit firm would need to substantially re-perform the work that the Auditor had completed to date, because the other audit firm would not have the economic benefits or service potential of any work in progress performed by the Auditor. The nature of the audit opinion is such that the Agency will generate economic benefits or service potential of the Auditor's performance only when the Agency receives the audit opinion. Consequently, the Auditor concludes that the criterion in paragraph (a) of IPSAS 47 is not met.

IE124. However, the Auditor's compliance obligation meets the criterion in paragraph (c) of IPSAS 47 because the audit work completed to date would not have any alternative use, as it would be specific to the audit of the Agency. Thus, the Auditor has a compliance obligation satisfied over time because of both of the following factors:

(a) In accordance with paragraphs 96 of IPSAS 47, the development of the audit opinion does not create an asset with an alternative use to the Auditor because the audit relates to facts and circumstances that are specific to the Agency. Therefore, the Auditor cannot use the audit opinion for any other purpose.

(b) In accordance with paragraphs 97 of IPSAS 47, the Auditor has an enforceable right to receive consideration for its performance completed to date for its costs.

IE125. Consequently, the Auditor recognizes revenue over time by measuring the progress towards complete satisfaction of the compliance obligation in accordance with paragraphs 98–104 of IPSAS 47.

Example 22 – Assessing Whether a Compliance Obligation is Satisfied at a Point in Time or Over Time

IE126. The Department of Public Works (Public Works) is developing multi-unit residential complexes to be sold to the Department of Housing (Housing) as well as a variety of commercial entities. Housing enters into a binding arrangement with Public Works for specified units that are under construction. These units have a similar floor plan and are of a similar size, but other attributes of the units are different (for example, the location of the units within the complex).

Case A – Entity does not have an Enforceable Right to Consideration for Performance Completed to Date

IE127. Housing pays a deposit upon entering into the binding arrangement and the deposit is refundable only if Public Works fails to complete construction of the units in accordance with the binding arrangement. The remainder of the consideration is payable on completion of the binding arrangement when Housing obtains physical possession of the units. If Housing defaults on the binding arrangement before completion of the units, Public Works only has the right to retain the deposit.

IE128. At the inception of the binding arrangement, Public Works applies paragraph (c) of IPSAS 47 to determine whether its promise to construct and transfer the units to Housing is a compliance obligation satisfied over time. Public Works determines that it does not have an enforceable right to consideration for performance completed to date because, until construction of the units is complete, it only has a right to the deposit paid by Housing. Because Public Works does not have a right to consideration for work completed to date, its compliance obligation is not a compliance obligation satisfied over time in accordance with paragraph (c) of IPSAS 47. Instead, Public Works accounts for the sale of the units as compliance obligations satisfied at a point in time in accordance with paragraph 97 of IPSAS 47.

Case B – Entity has an Enforceable Right to Consideration for Performance Completed to Date

IE129. Housing pays a non-refundable deposit upon entering into the binding arrangement and will make progress payments during construction of the units. The binding arrangement has substantive terms that preclude Public Works from being able to direct the units to another purchaser. In addition, Housing does not have the right to terminate the binding arrangement unless Public Works fails to perform as promised. If Housing

defaults on its obligations by failing to make the promised progress payments as and when they are due, Public Works would have a right to all of the consideration promised in the binding arrangement if it completes the construction of the units. The courts have previously upheld similar rights that entitle developers to require the purchaser to perform, subject to the entity meeting its compliance obligations under the binding arrangement.

IE130. At the inception of the binding arrangement, Public Works applies paragraph (c) of IPSAS 47 to determine whether its promise to construct and transfer the units to Housing is a compliance obligation satisfied over time. Public Works determines that the units it constructs do not have an alternative use to Public Works because the binding arrangement precludes Public Works from transferring the specified units to another purchaser. Public Works does not consider the possibility of a termination of a binding arrangement in assessing whether it is able to direct the units to another purchaser.

IE131. Public Works also has a right to consideration for performance completed to date in accordance with paragraphs (a) of IPSAS 47. This is because if Housing were to default on its obligations, Public Works would have an enforceable right to all of the consideration promised under the binding arrangement if it continues to perform as promised.

IE132. Therefore, the terms of the binding arrangement and the practices in the legal jurisdiction indicate that there is a right to consideration for performance completed to date. Consequently, the criteria in paragraph (c) of IPSAS 47 are met and Public Works has a compliance obligation that it satisfies over time. To recognize revenue for that compliance obligation satisfied over time, Public Works measures its progress towards complete satisfaction of its compliance obligation in accordance with paragraphs 98–104 of IPSAS 47.

IE133. In the construction of a multi-unit residential complex, Public Works may have many binding arrangements with individual purchasers for the construction of individual units within the complex. Public Works would account for each binding arrangement separately. However, depending on the nature of the construction, Public Works' performance in undertaking the initial construction work (i.e., the foundation and the basic structure), as well as the construction of common areas, may need to be reflected when measuring its progress towards complete satisfaction of its compliance obligations in each binding arrangement.

Case C – Entity has an Enforceable Right to Consideration for Performance Completed to Date, but Binding Arrangement can be Cancelled

IE134. The same facts as in Case B apply to Case C, except that in the event of a default by Housing, either Public Works can require Housing to perform as required under the binding arrangement or Public Works can cancel the binding arrangement in exchange for the asset under construction and an entitlement to a penalty of a proportion of the agreed price in the binding arrangement.

IE135. Notwithstanding that Public Works could cancel the binding arrangement (in which case Housing's obligation to Public Works would be limited to transferring control of the partially completed units to Public Works and paying the penalty prescribed), Public Works has a right to consideration for performance completed to date because it could also choose to enforce its rights to full payment under the binding arrangement. The fact that Public Works may choose to cancel the binding arrangement in the event Housing defaults on its obligations would not affect that assessment (see paragraph AG69 of IPSAS 47), provided that Public Work's rights to require Housing to continue to perform as required under the binding arrangement (i.e., pay the promised consideration) are enforceable.

Measuring Progress Towards Complete Satisfaction of a Compliance Obligation

IE136. Examples 23–24 illustrate the requirements in paragraphs 98–104 of IPSAS 47 on measuring progress towards complete satisfaction of a compliance obligation satisfied over time. Example 24 also illustrates the

requirements in paragraph AG95 of IPSAS 47 on uninstalled materials when costs incurred are not proportionate to the entity's progress in satisfying a compliance obligation.

Example 23 – Measuring Progress when Making Goods or Services Available

IE137. A local government (the Government) owns and manages public swimming pools and enters into a binding arrangement with a member of the public for one year of access to any of its pools. The member of the public has unlimited use of the pools and promises to pay an access fee of CU100 per month.

IE138. The Government determines that its promise to the member of the public is to provide a service of making the pools available for the member of the public to use as and when the member of the public wishes. This is because the extent to which the member of the public uses the pools does not affect the amount of the remaining goods and services to which the member of the public is entitled. The Government concludes that the member of the public simultaneously receives and consumes the economic benefits or service potential of the local government's performance as it performs by making the pools available. Consequently, the Government's compliance obligation is satisfied over time in accordance with paragraph (a) of IPSAS 47.

IE139. The Government also determines that the member of the public consumes economic benefits or service potential from the Government making the pools available throughout the year. That is, the member of the public benefits from having the pools available, regardless of whether the member of the public uses it or not. Consequently, the Government concludes that the best measure of progress towards complete satisfaction of the compliance obligation over time is an output method, specifically a time-based measure, and it recognizes revenue on a straight-line basis throughout the year at CU100 per month.

Example 24 – Measuring Progress for Uninstalled Materials

IE140. In November 20X2, the Department of Public Works (Public Works) enters into a binding arrangement with another department to refurbish a 3-storey building and install new elevators for a total consideration of CU5 million. Public Works concluded that the promised refurbishment service, including the installation of elevators, is a single compliance obligation satisfied over time. Total expected costs are CU4 million, including CU1.5 million for the elevators. Public Works determines that it acts as a principal in accordance with paragraphs AG117–AG125 of IPSAS 47, because it obtains control of the elevators before they are transferred to the other department.

IE141. A summary of the transaction consideration and expected costs is as follows:

	CU
Transaction consideration	5,000,000
Expected costs:	
Elevators	1,500,000
Other costs	2,500,000
Total expected costs	4,000,000

IE142. Public Works uses an input method based on costs incurred to measure its progress towards complete satisfaction of the compliance obligation. Public Works assesses whether the costs incurred to procure the elevators are proportionate to the Public Work's progress in satisfying the compliance obligation, in accordance with paragraph AG95 of IPSAS 47. The other department obtains control of the elevators when they are delivered to the site in December 20X2, although the elevators will not be installed until June 20X3. The costs to procure the elevators (CU1.5 million) are significant relative to the total expected costs to completely satisfy the compliance obligation (CU4 million). Public Works is not involved in designing or manufacturing the elevators.

IE143. Public Works concludes that including the costs to procure the elevators in the measure of progress would overstate the extent of its performance. Consequently, in accordance with paragraph AG95 of IPSAS 47, Public Works adjusts its measure of progress to exclude the costs to procure the elevators from the measure of costs incurred and from the transaction consideration. Public Works recognizes revenue for the transfer of the elevators in an amount equal to the costs to procure the elevators (i.e., at a zero margin).

IE144. As of December 31, 20X2, Public Works observes that:

(a) Other costs incurred (excluding elevators) are CU500,000; and

(b) Performance is 20 percent complete (i.e., CU500,000 ÷ CU2,500,000).

IE145. Consequently, at December 31, 20X2, Public Works recognizes the following:

	CU	
Revenue	2,200,000	(A)
Cost of goods sold	2,000,000	(B)
Profit	200,000	

(A) Revenue recognized is calculated as (20 per cent × CU3,500,000) + CU1,500,000. (CU3,500,000 is CU5,000,000 transaction consideration – CU1,500,000 costs of elevators.)

(B) Cost of goods sold is CU500,000 of costs incurred + CU1,500,000 costs of elevators.

Measurement of Revenue Transactions with a Binding Arrangement

Variable Consideration

Example 25 – Estimating Variable Consideration

IE146. The Department of Public Works (Public Works) enters into a binding arrangement with the Department of Transportation (Transportation) to build a bridge. The promise to transfer the bridge is a compliance obligation that is satisfied over time. The promised consideration is CU25 million, but that amount will be reduced or increased depending on the timing of completion of the bridge. Specifically, for each day after March 31, 20X7 that the bridge is incomplete, the promised consideration is reduced by CU100,000. For each day before March 31, 20X7 that the bridge is complete, the promised consideration increases by CU100,000.

IE147. In addition, upon completion of the bridge, a third party will inspect the bridge and assign a rating based on metrics that are defined in the binding arrangement. If the bridge receives a specified rating, Public Works will be entitled to an incentive bonus of CU1.5 million.

IE148. Public Works determines that the consideration promised in the binding arrangement includes a variable amount, and estimates the amount of consideration it is entitled to in accordance with paragraphs 113–117 of IPSAS 47. In determining the transaction consideration, Public Works prepares a separate estimate for each element of variable consideration to which Public Works will be entitled using the estimation methods described in paragraph 116 of IPSAS 47:

(a) Public Works decides to use the expected value method to estimate the variable consideration associated with the daily penalty or incentive (i.e., CU25 million, plus or minus CU100,000 per day). This is because it is the method that Public Works expects to better predict the amount of consideration to which it will be entitled.

(b) Public Works decides to use the most likely amount to estimate the variable consideration associated with the incentive bonus. This is because there are only two possible outcomes (CU1.5 million or CU0) and it is the method that Public Works expects to better predict the amount of consideration to which it will be entitled.

IE149. Public Works considers the requirements in paragraphs 119–121 of IPSAS 47 on constraining estimates of variable consideration to determine whether it should include some or all of its estimate of variable consideration in the transaction consideration.

The Existence of a Significant Financing Component in the Binding Arrangement

IE150. Examples 26–30 illustrate the requirements in paragraphs 123–128 of IPSAS 47 on the existence of a significant financing component in the binding arrangement. In addition, the following requirements are illustrated in Example 26:

(a) Paragraphs 119–121 of IPSAS 47 on constraining estimates of variable consideration; and

(b) Paragraphs AG96–AG103 of IPSAS 47 on sales with a right of return.

Example 26 – Significant Financing Component and Right of Return

IE151. A government entity (the Government) provides trains to a public sector subway operator (the Operator) for CU121 million that is payable 24 months after delivery. The Operator obtains control of the trains at the inception of the binding arrangement. The binding arrangement permits the Operator to return the trains within 90 days. The trains are new and the Government has no relevant historical evidence of returns or other available market evidence.

IE152. The cash price of the trains is CU100 million, which represents the amount that the Operator would pay upon delivery for the same trains provided under otherwise identical terms and conditions as at the inception of the binding arrangement. The Government's cost of the trains is CU80 million.

IE153. The Government does not recognize revenue when control of the product transfers to the Operator. This is because the existence of the right of return and the lack of relevant historical evidence means that the Government cannot conclude that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur in accordance with paragraphs 119–121 of IPSAS 47. Consequently, revenue is recognized after three months when the right of return lapses.

IE154. The binding arrangement includes a significant financing component, in accordance with paragraphs 123–125 of IPSAS 47. This is evident from the difference between the amount of promised consideration of CU121 million and the cash price of CU100 million at the date that the goods are transferred to the Operator.

IE155. The binding arrangement includes an implicit interest rate of 10 percent (i.e., the interest rate that over 24 months discounts the promised consideration of CU121 million to the cash price of CU100 million). The Government evaluates the rate and concludes that it is commensurate with the rate that would be reflected in a separate financing transaction between the Government and the Operator at the inception of the binding arrangement. The following journal entries illustrate how the Government accounts for this binding arrangement in accordance with paragraphs AG96–AG103 of IPSAS 47:

(a) When the trains are transferred to the Operator, in accordance with paragraph AG97 of IPSAS 47:

Asset for right to recover trains to be returned	CU80 million[15]	
Inventory		CU80 million

[15] This example does not consider expected costs to recover the asset.

(b) During the three-month right of return period, no interest is recognized in accordance with paragraph 128 of IPSAS 47 because no binding arrangement asset or receivable has been recognized.

(c) When the right of return lapses (the trains are not returned):

Receivable	CU100 million[16]	
Revenue		CU100 million
Cost of sales	CU80 million	
Asset for trains to be returned		CU80 million

IE156. Until the Government receives the cash payment from the Operator, interest revenue would be recognized in accordance with IPSAS 41. In determining the effective interest rate in accordance with IPSAS 41, the Government would consider the remaining terms of the binding arrangement.

Example 27 – Withheld Payments on a Long-Term Binding Arrangement is not a Significant Financing Component

IE157. The Department of Public Works (Public Works) enters into a binding arrangement for the construction of a building that includes scheduled milestone payments for the performance by Public Works throughout the binding arrangement term of three years. The compliance obligation will be satisfied over time and the milestone payments are scheduled to coincide with the Public Works' expected performance. The binding arrangement provides that a specified percentage of each milestone payment is to be withheld (i.e., retained) by the resource provider throughout the binding arrangement and paid to Public Works only when the building is complete.

IE158. Public Works concludes that the binding arrangement does not include a significant financing component. The milestone payments coincide with Public Works' performance and the binding arrangement requires amounts to be retained for reasons other than the provision of finance in accordance with paragraph (c) of IPSAS 47. The withholding of a specified percentage of each milestone payment is intended to protect the resource provider from Public Works failing to adequately complete its compliance obligations under the binding arrangement.

Example 28 – Determining the Discount Rate

IE159. The Department of Communications and Information (the Department) enters into a binding arrangement with a foreign government to provide broadband internet equipment. Control of the equipment transfers to the foreign government when the binding arrangement is signed. The consideration stated in the binding arrangement is CU100 million plus a five percent rate of interest in the binding arrangement, payable in 60 monthly instalments of CU1.89 million.

Case A – Discount Rate in the Binding Arrangement Reflects the Rate in a Separate Financing Transaction

IE160. In evaluating the discount rate in the binding arrangement that contains a significant financing component, the Department considers paragraph 127 of IPSAS 47 and observes that the five percent rate of interest in the binding arrangement reflects the rate that would be used in a separate financing transaction between the Department and the foreign government at the inception of the binding arrangement (i.e., the rate of interest of five percent in the binding arrangement reflects the credit characteristics of the foreign government).

[16] The receivable recognized would be measured in accordance with IPSAS 41. This example assumes there is no material difference between the fair value of the receivable at the inception of the binding arrangement and the fair value of the receivable when it is recognized at the time the right of return lapses. In addition, this example does not consider the impairment accounting for the receivable.

IE161. The market terms of the financing mean that the cash price of the equipment is CU100 million. This amount is recognized as revenue and as a loan receivable when control of the equipment transfers to the foreign government. The Department accounts for the receivable in accordance with IPSAS 41.

Case B – Discount Rate in the Binding Arrangement does not Reflect the Rate in a Separate Financing Transaction

IE162. In evaluating the discount rate in the binding arrangement that contains a significant financing component, the Department observes that the five percent rate of interest in the binding arrangement is significantly lower than the 12 percent interest rate that would be used in a separate financing transaction between the Department and the foreign government at the inception of the binding arrangement (i.e., the rate of interest in the binding arrangement of five percent does not reflect the credit characteristics of the foreign government). This suggests that the cash price is less than CU100 million.

IE163. In accordance with paragraph 127 of IPSAS 47, the Department determines the transaction consideration by adjusting the promised amount of consideration to reflect the payments in the binding arrangement using the 12 percent interest rate that reflects the credit characteristics of the foreign government. Consequently, the Department determines that the transaction consideration is CU84.83 million (60 monthly payments of CU1.89 million discounted at 12 percent). The Department recognizes revenue and a loan receivable for that amount. The Department accounts for the loan receivable in accordance with IPSAS 41.

Example 29 – Advance Payment and Assessment of Discount Rate

IE164. The national government will hold an international summit in two years and needs to invest in vehicles for the event. At the conclusion of the event, the national government plans to sell the surplus vehicles. To achieve this objective, the national government enters into a binding arrangement with a state government to provide the surplus vehicles in two years (i.e., the compliance obligation will be satisfied at a point in time). The binding arrangement includes two alternative payment options: payment of CU5 million in two years when the state government obtains control of the vehicles or payment of CU4 million when the binding arrangement is signed. The state government elects to pay CU4 million when the binding arrangement is signed.

IE165. The national government concludes that the binding arrangement contains a significant financing component because of the length of time between when the state government pays for the vehicle and when the national government transfers the vehicles to the state government, as well as the prevailing interest rates in the market.

IE166. The interest rate implicit in the transaction is 11.8 percent, which is the interest rate necessary to make the two alternative payment options economically equivalent. However, the national government determines that, in accordance with paragraph 127 of IPSAS 47, the rate that should be used in adjusting the promised consideration is six percent, which is the national government's incremental borrowing rate.

IE167. The following journal entries illustrate how the national government would account for the significant financing component:

(a) Recognize a binding arrangement liability for the CU4 million payment received at inception of the binding arrangement:

Cash	CU4 million	
Binding arrangement liability		CU4 million

(b) During the two years from inception of the binding arrangement until the transfer of the vehicle, the national government adjusts the promised amount of consideration (in accordance with paragraph 128

of IPSAS 47) and builds up the binding arrangement liability by recognizing interest on CU4 million at six percent for two years:

Interest expense	CU494,000[17]	
Binding arrangement liability		CU494,000

(c) Recognize revenue for the transfer of the vehicles:

Binding arrangement liability	CU4,494,000	
Revenue		CU4,494,000

Example 30 – Advance Payment

IE168. A private sector telecommunications company (the Telecom) has set up cellular phone towers on government-owned properties. Under the arrangement, access to the towers can only be made by appropriately skilled telecommunications specialists. The Telecom enters into a binding arrangement with a government entity that provides specialist telecommunications services (the Government Entity) to provide maintenance and repair services for three years. The Telecom purchases this support service at the time of setting up the cellular phone towers. Consideration for the service is CU300,000, and the Telecom must pay for it upfront (i.e., a monthly payment option is not available).

IE169. To determine whether there is a significant financing component in the binding arrangement, the Government Entity considers the nature of the service being offered and the purpose of the payment terms. The Government Entity charges a single upfront amount, not with the primary purpose of obtaining financing from purchasers but, instead, to better manage its resources, taking into consideration the risks associated with providing the service. Specifically, if the Telecom could pay monthly, it may change to another provider of the specialist service, leaving the Government Entity with costs for which it cannot earn revenue.

IE170. In assessing the requirements in paragraph (c) of IPSAS 47, the Government Entity determines that the payment terms were structured primarily for reasons other than the provision of finance to the Government Entity. The Government Entity charges a single upfront amount for the services because other payment terms (such as a monthly payment plan) would affect the nature of the risks assumed by the Government Entity to provide the service and may make it uneconomical to provide the service. As a result of its analysis, the Government Entity concludes that there is not a significant financing component.

Non-Cash Consideration

IE171. Example 31 illustrates the requirements in paragraphs 129–132 of IPSAS 47 on non-cash consideration, as well as the requirements in paragraph 68 of IPSAS 47 on identifying compliance obligations.

Example 31 – Entitlement to Non-Cash Consideration

IE172. A public broadcaster (the Broadcaster) enters into a binding arrangement with a private media company (the Media Company) to provide production services for one year. The binding arrangement is signed on January 1, 20X1 and work begins immediately. The Broadcaster concludes that the production services are a single compliance obligation in accordance with paragraph (b) of IPSAS 47. This is because the Broadcaster is providing a series of distinct production services that are substantially the same and have the same pattern of transfer (the production services transfer to the Media Company over time and use the same method to measure progress—that is, a time-based measure of progress).

[17] CU494,000 = CU4 million binding arrangement liability × (6 per cent interest per year for two years).

IE173. In exchange for the production services, the Media Company promises to provide the Broadcaster with the right to air one of the Media Company's popular sports programs once per week of production services.

IE174. The Broadcaster measures its progress towards complete satisfaction of the compliance obligation as each week of production service is complete. To determine the transaction consideration (and the amount of revenue to be recognized), the Broadcaster first considers the fair value of the right to air the popular sports program. However, as the right to air the program is not typically sold by the Media Company or traded in the market, the Broadcaster concludes that it cannot reasonably estimate the fair value of the non-cash consideration. As a result, the Broadcaster measures the transaction consideration indirectly by reference to the stand-alone value of the production services promised to the Media Company.

Allocation Based on Stand-Alone Values

IE175. Examples 32–34 illustrate the requirements in paragraphs 133–143 of IPSAS 47 on allocating the transaction consideration to compliance obligations. In addition, the following requirements are illustrated in these examples:

(a) Paragraph 116 of IPSAS 47 on variable consideration (Example 34);

(b) Paragraphs AG107–AG109 of IPSAS 47 on the allocation of a discount (Examples 32-33); and

(c) Paragraph AG182 of IPSAS 47 on consideration in the form of sales-based or usage-based royalties on licenses of intellectual property (Example 34).

Example 32 – Allocation Methodology

IE176. A Department of Defense (the Department) enters into a binding arrangement with another country to provide a fighter jet, specialized spare parts, and a specialized engine in exchange for CU100 million. The Department will satisfy the compliance obligations for the jet, spare parts, and engine at different points in time. The Department can provide fighter jets separately and therefore the stand-alone value is directly observable. The stand-alone values of the specialized spare parts and specialized engine are not directly observable.

IE177. Because the stand-alone values for the specialized spare parts and specialized engine are not directly observable, the Department must estimate them. To estimate the stand-alone values, the Department uses the adjusted market assessment approach for the specialized spare parts and the expected cost approach for the specialized engines. In making those estimates, the Department maximizes the use of observable inputs (in accordance with paragraph 138 of IPSAS 47). The Department estimates the stand-alone values as follows:

Product	Stand-alone value	Method
	CU (millions)	
Fighter jet	90	Directly observable (see paragraph 137 of IPSAS 47)
Spare parts	10	Adjusted market assessment approach (see paragraph (a) of IPSAS 47)
Specialized Engine	20	Expected cost approach (see paragraph (b) of IPSAS 47)
Total	120	

IE178. The other country receives a discount for purchasing the bundle of goods because the sum of the stand-alone values (CU120 million) exceeds the promised consideration (CU100 million). The Department considers whether it has observable evidence about the compliance obligation to which the entire discount belongs (in accordance with paragraph AG108 of IPSAS 47) and concludes that it does not. Consequently, in accordance with paragraphs 136 and AG107 of IPSAS 47, the discount is allocated proportionately across the fighter jet, spare parts and the specialized engine. The discount, and therefore the transaction consideration, is allocated as follows:

Product	Allocated Transaction Consideration	
	CU (millions)	
Fighter jet	75	(CU90 ÷ CU120 × CU100)
Spare parts	8	(CU10 ÷ CU120 × CU100)
Engine	17	(CU20 ÷ CU120 × CU100)
Total	100	

Example 33 – Allocating a Discount

IE179. A government procurement agency (the Agency) regularly provides common-use supplies, including Supplies A, B and C individually, to government entities. The Agency establishes the following stand-alone values:

Product	Stand-alone value
	CU
Supply A	40
Supply B	55
Supply C	45
Total	140

IE180. In addition, the Agency regularly provides Supplies B and C together for CU60.

Case A – Allocating a Discount to One or More Compliance Obligations

IE181. The Agency enters into a binding arrangement with a government entity to provide Supplies A, B and C in exchange for CU100. The Agency will satisfy the compliance obligations for each of the supplies at different points in time.

IE182. The binding arrangement includes a discount of CU40 on the overall transaction, which would be allocated proportionately to all three compliance obligations when allocating the transaction consideration using the relative stand-alone value method (in accordance with paragraph AG107 of IPSAS 47). However, because the Agency regularly provides Supplies B and C together for CU60 and Supply A for CU40, it has evidence that the entire discount should be allocated to the promises to transfer Supplies B and C in accordance with paragraph AG108 of IPSAS 47.

IE183. If the Agency transfers control of Supplies B and C at the same point in time, then the Agency could, as a practical matter, account for the transfer of those supplies as a single compliance obligation. That is, the

Agency could allocate CU60 of the transaction consideration to the single compliance obligation and recognize revenue of CU60 when Supplies B and C simultaneously transfer to the government entity.

IE184. If the binding arrangement requires the Agency to transfer control of Supplies B and C at different points in time, then the allocated amount of CU60 is individually allocated to the promises to transfer Supply B (stand-alone value of CU55) and Supply C (stand-alone value of CU45) as follows:

Product	Allocated transaction consideration	
	CU	
Supply B	33	(CU55 ÷ CU100 total stand-alone value × CU60)
Supply C	27	(CU45 ÷ CU100 total stand-alone value × CU60)
Total	60	

Case B – Residual Approach is Appropriate

IE185. The Agency enters into a binding arrangement with a government entity to provide Supplies A, B and C as described in Case A. The binding arrangement also includes a promise to transfer Supply D. Total consideration in the binding arrangement is CU130. The stand-alone value for Supply D is highly variable (see paragraph (c) of IPSAS 47) because the Agency provides Supply D to different purchasers for a broad range of amounts (CU15 – CU45). Consequently, the Agency decides to estimate the stand-alone value of Supply D using the residual approach.

IE186. Before estimating the stand-alone value of Supply D using the residual approach, the Agency determines whether any discount should be allocated to the other compliance obligations in the binding arrangement in accordance with paragraphs AG108–AG109 of IPSAS 47.

IE187. As in Case A, because the Agency regularly provides Supplies B and C together for CU60 and Supply A for CU40, it has observable evidence that CU100 should be allocated to those three supplies and a CU40 discount should be allocated to the promises to transfer Supplies B and C in accordance with paragraph AG108 of IPSAS 47. Using the residual approach, the Agency estimates the stand-alone value of Supply D to be CU30 as follows:

Product	Stand-alone value	Method
	CU	
Supply A	40	Directly observable (see paragraph 137 of IPSAS 47)
Supplies B and C	60	Directly observable with discount (see paragraph AG108 of IPSAS 47)
Supply D	30	Residual approach (see paragraph (c) of IPSAS 47)
Total	130	

IE188. The Agency observes that the resulting CU30 allocated to Supply D is within the range of its observable prices (CU15–CU45). Therefore, the resulting allocation (see above table) is consistent with the allocation objective in paragraph 133 of IPSAS 47 and the requirements in paragraph 138 of IPSAS 47.

Case C – Residual Approach is Inappropriate

IE189. The same facts as in Case B apply to Case C except the transaction consideration is CU105 instead of CU130. Consequently, the application of the residual approach would result in a stand-alone value of CU5 for Supply D (CU105 transaction consideration less CU100 allocated to Supplies A, B and C). The Agency concludes that CU5 would not faithfully depict the amount of consideration to which it expects to be entitled in exchange for satisfying its compliance obligation to transfer Supply D, because CU5 does not approximate the stand-alone value of Supply D, which ranges from CU15–CU45. Consequently, the Agency reviews its observable data, including procurement and cost recovery reports, to estimate the stand-alone value of Supply D using another suitable method. The Agency allocates the transaction consideration of CU105 to Supplies A, B, C and D using the relative stand-alone values of those products in accordance with paragraphs 133–140 of IPSAS 47.

Example 34 – Allocation of Variable Consideration

IE190. A government-owned university (the University) enters into a binding arrangement with a pharmaceutical manufacturing company (the Company) for two intellectual property licenses for two drug formulations (Formulation X and Y), developed by the University's research lab. The University determines that the formulations represent two compliance obligations each satisfied at a point in time. The stand-alone values of Formulation X and Y are CU800,000 and CU1,000,000, respectively.

Case A – Variable Consideration Allocated Entirely to One Compliance Obligation

IE191. The price stated in the binding arrangement for Formulation X is a fixed amount of CU800,000 and for Formulation Y, the consideration is three percent of the Company's future sales of the medication developed from Formulation Y. For purposes of allocation, the University estimates its sales-based royalties (i.e., the variable consideration) to be CU1,000,000, in accordance with paragraph 116 of IPSAS 47.

IE192. To allocate the transaction consideration, the University considers the criteria in paragraph 142 of IPSAS 47 and concludes that the variable consideration (i.e., the sales-based royalties) should be allocated entirely to Formulation Y. The University concludes that the criteria in paragraph 142 of IPSAS 47 are met for the following reasons:

(a) The variable payment relates specifically to an outcome from the compliance obligation to transfer Formulation Y (i.e., the Company's subsequent sales of medication developed from Formulation Y).

(b) Allocating the expected royalty amount of CU1,000,000 entirely to Formulation Y is consistent with the allocation objective in paragraph 133 of IPSAS 47. This is because the University's estimate of the amount of sales-based royalties (CU1,000,000) approximates the stand-alone value of Formulation Y and the fixed amount of CU800,000 approximates the stand-alone value of Formulation X. The University allocates CU800,000 to Formulation X in accordance with paragraph 143 of IPSAS 47. This is because, based on an assessment of the facts and circumstances relating to both licenses, allocating to Formulation Y some of the fixed consideration in addition to all of the variable consideration would not meet the allocation objective in paragraph 133 of IPSAS 47.

IE193. The University transfers Formulation Y at the inception of the binding arrangement and transfers Formulation X one month later. Upon the transfer of Formulation Y, the University does not recognize revenue because the consideration allocated to Formulation Y is in the form of a sales-based royalty. Therefore, in accordance with paragraph AG180 of IPSAS 47, the University recognizes revenue for the sales-based royalty when those subsequent sales occur.

IE194. When Formulation X is transferred, the University recognizes as revenue the CU800,000 allocated to Formulation X.

Case B – Variable Consideration Allocated on the Basis of Stand-Alone Values

IE195. The price stated in the binding arrangement for Formulation X is a fixed amount of CU300,000 and for Formulation Y the consideration is five percent of the Company's future sales of medication developed from Formulation Y. The University's estimate of the sales-based royalties (i.e., the variable consideration) is CU1,500,000 in accordance with paragraph 116 of IPSAS 47.

IE196. To allocate the transaction consideration, the University applies the criteria in paragraph 142 of IPSAS 47 to determine whether to allocate the variable consideration (i.e., the sales-based royalties) entirely to Formulation Y. In applying the criteria, the University concludes that even though the variable payments relate specifically to an outcome from the compliance obligation to transfer Formulation Y (i.e., the Company's subsequent sales of medication developed from Formulation Y), allocating the variable consideration entirely to Formulation Y would be inconsistent with the principle for allocating the transaction consideration. Allocating CU300,000 to Formulation X and CU1,500,000 to Formulation Y does not reflect a reasonable allocation of the transaction consideration on the basis of the stand-alone values of Formulations X and Y of CU800,000 and CU1,000,000, respectively. Consequently, the University applies the general allocation requirements in paragraphs 136–140 of IPSAS 47.

IE197. The University allocates the transaction consideration of CU300,000 to Formulations X and Y on the basis of relative stand-alone values of CU800,000 and CU1,000,000, respectively. The University also allocates the consideration related to the sales-based royalty on a relative stand-alone value basis. However, in accordance with paragraph AG180 of IPSAS 47, when an entity licenses intellectual property in which the consideration is in the form of a sales-based royalty, the entity cannot recognize revenue until the later of the following events: the subsequent sales occur or the compliance obligation is satisfied (or partially satisfied).

IE198. Formulation Y is transferred to the Company at the inception of the binding arrangement and Formulation X is transferred three months later. When Formulation Y is transferred, the University recognizes as revenue the CU167,000 (CU1,000,000 ÷ CU1,800,000 × CU300,000) allocated to Formulation Y. When Formulation X is transferred, the University recognizes as revenue the CU133,000 (CU800,000 ÷ CU1,800,000 × CU300,000) allocated to Formulation X.

IE199. In the first month, the royalty due from the Company's first month of sales is CU200,000. Consequently, in accordance with paragraph AG180 of IPSAS 47, the University recognizes as revenue the CU111,000 (CU1,000,000 ÷ CU1,800,000 × CU200,000) allocated to Formulation Y (which has been transferred to the purchaser and is therefore a satisfied compliance obligation). The University recognizes a binding arrangement liability for the CU89,000 (CU800,000 ÷ CU1,800,000 × CU200,000) allocated to Formulation X. This is because, although the subsequent sale by the Company has occurred, the compliance obligation to which the royalty has been allocated is not satisfied until Formulation X is transferred three months later.

Multi-Party Arrangements and the Determination of Stand-Alone Value

IE200. Example 35 illustrates the application of paragraph AG29 of IPSAS 47 on assessing binding arrangements which include the provision of goods or services to third-party beneficiaries and paragraph AG110 of IPSAS 47 on the determination of the stand-alone value of these goods or services.

Example 35 – Provision of Vaccines to Third-Party Beneficiaries

Case A – Binding Arrangement Includes a Compliance Obligation to Transfer Goods or Services to Another Party

IE201. A health clinic (the Clinic) receives CU100,000 from the government to provide free vaccinations in the local community. The government requires the Clinic to provide 150 doses of vaccine A, which is a vaccine that the Clinic has previously provided for a stand-alone value of CU500 per dose. In addition, the Clinic is also required to provide 350 doses of vaccine B, a new vaccine with limited information regarding observable prices.

IE202. The Clinic concludes that this binding arrangement includes two compliance obligations to transfer two distinct goods to another party, specifically 150 doses of vaccine A and 350 doses of vaccine B. This is because the government, which is acting as the purchaser, is paying the Clinic to provide vaccination services to local individuals, who are third-party beneficiaries. This is consistent with the requirements in paragraph AG29 of IPSAS 47.

IE203. In determining the stand-alone value for each dose of the vaccines, the Clinic estimates that each dose of vaccine A has a stand-alone value of CU500, based on the historical stand-alone value for that vaccine. For vaccine B, the Clinic applies paragraph AG110 of IPSAS 47 and estimates that the stand-alone value of each dose is CU100, based on the expected cost approach for the Clinic to acquire each vaccination, as well as the labor costs for the administration of vaccines.

IE204. Using the stand-alone value of CU500 per dose for vaccine A and CU100 per dose for vaccine B will result in the following allocation of the transaction consideration to the two vaccines:

Total Stand-Alone Value of All Compliance Obligations:

Vaccine A: CU500 stand-alone value × 150 doses = CU75,000

Vaccine B: CU100 stand-alone value (based on replacement cost + labor) × 350 doses = CU35,000

Total Stand-Alone Value: CU75,000 + CU35,000 = CU110,000

Allocation of Transaction Consideration of CU100,000 to the Two Vaccines:

Vaccine A: CU100,000 × CU75,000 ÷ CU110,000 = CU68,182 or CU454.55 per dose

Vaccine B: CU100,000 × CU35,000 ÷ CU110,000 = CU31,818 or CU90.91 per dose

IE205. Based on the above, the Clinic would recognize revenue using the above allocated transaction consideration and measure its progress in satisfying its compliance obligations based on the number of vaccines A or B administered.

Case B – Binding Arrangement Includes a Compliance Obligation to Use Resources for Goods or Services Internally

IE206. Similar to Case A, the Clinic receives CU100,000 from the government. However, in this case, the funding was provided to the Clinic for the purposes of running their vaccination program in the local community. The terms of the binding arrangement specify that the Clinic has discretion to spend the funds on expenditures that are directly related to the vaccination program and may include: an allocation of salaries paid to staff who work on vaccination-related activities such as the administration of the vaccines or the development of educational materials regarding vaccines; an allocation of rent for premises used to conduct these vaccination-related activities; and the acquisition cost of vaccinations themselves.

IE207. The Clinic considers the terms and conditions of the binding arrangement and concludes that while the arrangement includes third-party beneficiaries in accordance with AG29 of IPSAS 47, its compliance obligation is to use resources internally for goods or services to run its vaccination program. This is because the binding arrangement does not specify that the CU100,000 is restricted to fund the provision of vaccines to local individuals (i.e., third-party beneficiaries). Based on its assessment, the Clinic concludes that the compliance obligation is satisfied over time as eligible expenditures are incurred because this measure of

progress best depicts the entity's performance to satisfy this compliance obligation. The Clinic recognizes revenue as eligible expenditures are incurred.

Principal versus Agent Considerations

IE208. Examples 36–38 illustrate the requirements in paragraphs AG117–AG125 of IPSAS 47 on principal versus agent considerations.

Example 36 – Promise to Provide Goods or Services (Entity is a Principal)

IE209. A shared maintenance services agency (the Agency) enters into a binding arrangement with the Department of Social Welfare (the Department) to provide office maintenance services on the Department's properties. The Agency and the Department define and agree on the scope of the maintenance services and negotiate the price. The Agency is responsible for ensuring that the services are performed in accordance with the terms and conditions in the binding arrangement. The Agency invoices the Department for the agreed-upon price on a monthly basis with 10-day payment terms.

IE210. The Agency regularly engages third-party service providers to provide maintenance services to its purchasers. When the Agency obtains a binding arrangement from a purchaser, the Agency enters into a binding arrangement with one of those service providers, directing the service provider to perform office maintenance services for the Department. The payment terms in the binding arrangements with the service providers are generally aligned with the payment terms in the Agency's binding arrangements with purchasers. However, the Agency is obligated to pay the service provider even if the Department fails to pay.

IE211. To determine whether the Agency is a principal or an agent, the Agency identifies the specified good or service to be provided to the Department and assesses whether it controls that good or service before the good or service is transferred to the Department.

IE212. The Agency observes that the specified services to be provided to the Department are the office maintenance services for which the Department entered into a binding arrangement, and that no other goods or services are promised to the Department. While the Agency obtains a right to office maintenance services from the service provider after entering into the binding arrangement with the Department, that right is not transferred to the Department. That is, the Agency retains the ability to direct the use of, and obtain substantially all of the remaining economic benefits or service potential from, that right. For example, the Agency can decide whether to direct the service provider to provide the office maintenance services for the Department, or for another purchaser, or at its own facilities. The Department does not have a right to direct the service provider to perform services that the Agency has not agreed to provide. Therefore, the right to office maintenance services obtained by the Agency from the service provider is not the specified good or service in its binding arrangement with the Department.

IE213. The Agency concludes that it controls the specified services before they are provided to the Department. The Agency obtains control of a right to office maintenance services after entering into the binding arrangement with the Department but before those services are provided to the Department. The terms of the Agency's binding arrangement with the service provider give the Agency the ability to direct the service provider to provide the specified services on the Agency's behalf (see paragraph (b)). In addition, the Agency concludes that the following indicators in paragraph AG123 of IPSAS 47 provide further evidence that the Agency controls the office maintenance services before they are provided to the Department:

(a) The Agency is primarily responsible for satisfying the promise to provide office maintenance services. Although the Agency has hired a service provider to perform the services promised to the Department, it is the Agency itself that is responsible for ensuring that the services are performed and are acceptable to the Department (i.e., the Agency is responsible for satisfying the promise in the binding arrangement,

regardless of whether the Agency performs the services itself or engages a third-party service provider to perform the services).

(b) The Agency has discretion in setting the price for the services to the Department.

IE214. The Agency observes that it does not commit itself to obtain the services from the service provider before obtaining the binding arrangement with the Department. Thus, the Agency has mitigated inventory risk with respect to the office maintenance services. Nonetheless, the Agency concludes that it controls the office maintenance services before they are provided to the Department on the basis of the evidence in paragraph IE213.

IE215. Thus, the Agency is a principal in the transaction and recognizes revenue in the amount of consideration to which it is entitled from the Department in exchange for the office maintenance services.

Example 37 – Promise to Provide Goods or Services (Entity is a Principal)

IE216. A local government negotiates with hospitals to purchase vaccines for individual citizens in the jurisdiction at reduced rates compared with the price of vaccines provided directly by the hospitals to the individual citizens. The local government agrees to buy a specific number of vaccines and must pay for those vaccines regardless of whether it is able to use them. The reduced rate paid by the local government for each vaccine purchased is negotiated and agreed in advance.

IE217. The local government determines the prices at which the vaccines will be provided to the individual citizens. The local government provides the vaccines and collects the consideration from citizens when the vaccines are purchased.

IE218. The local government also assists the individual citizens in resolving complaints with the service provided by the hospitals. However, each hospital is responsible for satisfying obligations associated with the vaccines, including remedies to a citizen for dissatisfaction with the service.

IE219. To determine whether the local government's compliance obligation is to provide the specified goods or services itself (i.e., the local government is a principal) or to arrange for those goods or services to be provided by another party (i.e., the local government is an agent), the local government identifies the specified good or service to be provided to the individual citizens and assesses whether it controls that good or service before the good or service is transferred to the citizens.

IE220. The local government concludes that, with each vaccine that it commits itself to purchase from the hospitals, it obtains control of a right to the vaccine that the local government then transfers to an individual citizen, who in turn is one of the local government's purchasers (see paragraph (a)). Consequently, the local government determines that the specified good or service to be provided to the individual citizen is that right to a unit of the vaccine that the local government controls. The local government observes that no other goods or services are promised in this arrangement to the individual citizens.

IE221. The local government controls the right to each unit of vaccine before it transfers that specified right to one of its citizens because the local government has the ability to direct the use of that right by deciding whether to use the vaccine to fulfill a binding arrangement with a citizen and, if so, which binding arrangement it will fulfill. The local government also has the ability to obtain the remaining benefits or service potential from that right by either reselling the vaccine and obtaining all of the proceeds from the sale or, alternatively, providing the vaccine to another individual.

IE222. The indicators in paragraphs (b)–(c) of IPSAS 47 also provide relevant evidence that the local government controls each specified right (to the vaccine) before it is transferred to the citizen. The local government has inventory risk with respect to the vaccine because the local government committed itself to obtaining the vaccine from the hospital before entering into a binding arrangement with a citizen to purchase the vaccine. This is because the local government is obligated to pay the hospital for that right regardless of whether it is

able to obtain a purchaser to redirect the vaccine to or whether it can obtain a favorable price for the vaccine. The local government also establishes the price that the individual citizen will pay for the specified vaccine.

IE223. Thus, the local government concludes that it is a principal in the transactions with the individual citizens. The local government recognizes revenue in the gross amount of consideration to which it is entitled in exchange for the vaccines transferred to the citizens.

Example 38 – Arranging for the Provision of Goods or Services (Entity is an Agent)

IE224. The Department of Health (the Department) provides vouchers that entitle qualifying individuals (the patients) to subsidized vaccination services at specified clinics. The sales price of the voucher provides the patient with a significant discount (i.e., a subsidy) when compared with the normal prices of the vaccination services (for example, a patient pays CU10 for a voucher that entitles the patient to a vaccine at a clinic that would otherwise cost CU20). The Department does not purchase or commit itself to purchasing vouchers in advance of the sale of a voucher to a patient; instead, it purchases vouchers only as they are requested by the patients. The Department provides the vouchers through its website and the vouchers are non-refundable.

IE225. The Department and the clinics jointly determine the prices at which the vouchers will be provided to patients. Under the terms of its binding arrangements with the clinics, the Department is entitled to 30 percent of the voucher price when it provides the voucher.

IE226. The Department also assists the patients in resolving complaints about the vaccination services and has a patient satisfaction program. However, the clinics are responsible for satisfying obligations associated with the voucher, including remedies to a patient for dissatisfaction with the vaccination.

IE227. To determine whether the Department is a principal or an agent, the Department identifies the specified good or service to be provided to the patient and assesses whether it controls the specified good or service before that good or service is transferred to the patient.

IE228. A patient obtains a voucher for the clinic that it selects. The Department does not engage the clinics to provide vaccinations to patients on the Department's behalf as described in the indicator in paragraph (a) of IPSAS 47. Therefore, the Department observes that the specified service to be provided to the patient is the right to a vaccination (in the form of a voucher) at a specified clinic or clinics, which the patient purchases and then can use itself or transfer to another person. The Department also observes that no other goods or services (other than the vouchers) are promised to the patients.

IE229. The Department concludes that it does not control the voucher (right to a vaccination) at any time. In reaching this conclusion, the Department principally considers the following:

(a) The vouchers are created only at the time that they are transferred to the patients and, thus, do not exist before that transfer. Therefore, the Department does not at any time have the ability to direct the use of the vouchers, or obtain substantially all of the remaining economic benefits or service potential from the vouchers, before they are transferred to patients.

(b) The Department neither purchases, nor commits itself to purchase, vouchers before they are provided to patients. The Department also has no responsibility to accept any returned vouchers. Therefore, the Department does not have inventory risk with respect to the vouchers as described in the indicator in paragraph (b) of IPSAS 47.

IE230. Thus, the Department concludes that it is an agent with respect to the vouchers. The Department recognizes revenue in the net amount of consideration to which the Department will be entitled in exchange for arranging for the clinics to provide vouchers to patients for the clinics' vaccination services, which is the 30 percent fee it is entitled to upon the sale of each voucher.

Non-Refundable Upfront Fees (and some Related Costs) for a Transfer of Goods or Services to Another Party

IE231. Example 39 illustrates the requirements in paragraphs AG135–AG138 of IPSAS 47 on non-refundable upfront fees for a transfer of goods or services to another party (i.e., the purchaser (resource provider) or third-party beneficiary).

Example 39 – Non-refundable Upfront Fee

IE232. A public swimming pool (the Pool) enters into a binding arrangement with an individual to provide one year of access to the pools. The Pool's binding arrangements have standard terms that are the same for all individuals. The binding arrangement requires the individual to pay an upfront administration fee to set up the individual on the Pool's systems. The fee is a nominal amount and is non-refundable. The individual can renew the binding arrangement each year without paying an additional fee.

IE233. The Pool's setup activities do not transfer a good or service to the individual and, therefore, do not give rise to a separate compliance obligation.

IE234. The Pool concludes that the renewal option does not provide a material right to the individual that it would not receive without entering into that binding arrangement (see paragraph AG127 of IPSAS 47). The upfront fee is, in effect, an advance payment for the future transaction processing services. Consequently, the Pool determines the transaction consideration, which includes the non-refundable upfront fee, and recognizes revenue for the transaction processing services as those services are provided in accordance with paragraph AG136 of IPSAS 47.

Other Assets from Revenue Transactions with Binding Arrangement Costs

IE235. Example 40 illustrates the requirements in paragraphs 152–155 of IPSAS 47 on costs to fulfill a binding arrangement and paragraphs 156–161 of IPSAS 47 on amortization and impairment of binding arrangement costs.

Example 40 – Costs that Give Rise to an Asset

IE236. A shared services agency (the Agency) enters into a binding arrangement for a service to manage a local government's information technology data center for five years. The binding arrangement is renewable for subsequent one-year periods. The average term is seven years. Before providing the services, the Agency designs and builds a technology platform for the Agency's internal use that interfaces with the local government's systems. That platform is not transferred to the local government but will be used to deliver services to the local government.

IE237. The initial costs incurred to set up the technology platform are as follows:

	CU
Design services	40,000
Hardware	120,000
Software	90,000
Migration and testing of data centre	100,000
Total costs	350,000

IE238. The initial setup costs relate primarily to activities to fulfill the binding arrangement but do not transfer goods or services to the local government. The Agency accounts for the initial setup costs as follows:

(a) Hardware costs—accounted for in accordance with IPSAS 45.

(b) Software costs—accounted for in accordance with IPSAS 31.

(c) Costs of the design, migration and testing of the data center—assessed in accordance with paragraph 152 of IPSAS 47 to determine whether an asset can be recognized for the costs to fulfill the binding arrangement. Any resulting asset would be amortized on a systematic basis over the seven-year period (i.e., the five-year term of the binding arrangement and two anticipated one-year renewal periods) that the Agency expects to provide services related to the data center.

IE239. In addition to the initial costs to set up the technology platform, the Agency also assigns two employees who are primarily responsible for providing the service to the local government. Although the costs for these two employees are incurred as part of providing the service to the local government, the Agency concludes that the costs do not generate or enhance resources of the Agency (see paragraph (b) of IPSAS 47). Therefore, the costs do not meet the criteria in paragraph 152 of IPSAS 47 and cannot be recognized as an asset using IPSAS 47. In accordance with paragraph 155, the Agency recognizes the payroll expense for these two employees when incurred.

Presentation

Display

IE240. Examples 41–43 illustrate the requirements in paragraphs 162–166 of IPSAS 47 on the presentation of binding arrangement balances, and the consequences of applying paragraphs 119–121 on constraining estimates of variable consideration, paragraphs 123–128 on significant financing components, and AG96–AG103 on the sale of a right of return.

Example 41 – Binding Arrangement Liability and Receivable

Case A – Cancellable Binding Arrangement

IE241. On January 1, 20X9, a government procurement agency (the Agency) enters into a binding arrangement that is cancellable to transfer a product to another government entity on March 31, 20X9. The binding arrangement requires the government entity to pay consideration of CU1,000 in advance on January 31, 20X9. The government entity pays the consideration on March 1, 20X9. The Agency transfers the product on March 31, 20X9. The following journal entries illustrate how the Agency accounts for the binding arrangement:

(a) The Agency receives cash of CU1,000 on March 1, 20X9 (cash is received in advance of performance):

Cash	CU1,000	
Binding Arrangement Liability		CU1,000

(b) The Agency satisfies the compliance obligation on March 31, 20X9:

Binding Arrangement Liability	CU1,000	
Revenue		CU1,000

Case B – Non-Cancellable Binding Arrangement

IE242. The same facts as in Case A apply to Case B except that the binding arrangement is non-cancellable and the advance transfer on January 31, 20X9 is required regardless of whether the Agency has started to satisfy its compliance obligation. The following journal entries illustrate how the entity accounts for the binding arrangement:

(a) The amount of consideration is due on January 31, 20X9 (which is when the Agency recognizes a receivable because it has an unconditional and enforceable right to consideration):

Receivable	CU1,000	
Binding Arrangement Liability		CU1,000

(b) The Agency receives the cash on March 1, 20X9:

Cash	CU1,000	
Receivable		CU1,000

(c) The Agency satisfies the compliance obligation on March 31, 20X9:

Binding Arrangement Liability	CU1,000	
Revenue		CU1,000

IE243. If the Agency issued the invoice before January 31, 20X9 (the due date of the consideration), the Agency would not present the Receivable and the Binding Arrangement Liability on a gross basis in the statement of financial position because the Agency does not yet have a right to consideration that is unconditional.

Example 42 – Binding Arrangement Asset Recognized for the Entity's Performance

IE244. On January 1, 20X8, a government shared services IT agency (the Agency) enters into a binding arrangement to transfer computer software and configuration services to a small government department (the Department) in exchange for CU1,000,000. The binding arrangement requires the software to be delivered first and states that payment for the delivery of the software is conditional on configuration. In other words, the consideration of CU1,000,000 is due only after the Agency has transferred both the software and configuration services to the Department. Consequently, the Agency does not have a right to consideration that is unconditional (a receivable) until the software is transferred to the Department and configured.

IE245. The Agency identifies the promises to transfer the software and complete the configuration as separate compliance obligations and allocates CU400,000 to the compliance obligation to transfer the software and CU600,000 to the compliance obligation to complete the configuration on the basis of their relative stand-alone values. The Agency recognizes revenue for each respective compliance obligation when control of the product transfers to the Department.

IE246. The Agency satisfies the compliance obligation to transfer the software:

Binding Arrangement Asset	CU400,000	
Revenue		CU400,000

IE247. The Agency satisfies the compliance obligation to configure the software and to recognize the unconditional right to consideration:

Receivable	CU1,000,000	
Binding Arrangement Asset		CU400,000
Revenue		CU600,000

Example 43 – Receivable Recognized for the Entity's Performance

IE248. A government hospital (the Hospital) enters into a binding arrangement with the Department of Correctional Services (Correctional Services) on January 1, 20X9 to perform medical examinations for inmates for CU150 per examination. If Correctional Services requires more than 10,000 examinations to be performed in a calendar year, the binding arrangement indicates that the price per examination is retrospectively reduced to CU125 per product.

IE249. Consideration is due when the examinations are performed. Therefore, the Hospital has an unconditional right to consideration (i.e., a receivable) for CU150 per examination until the retrospective price reduction applies (i.e., after 10,000 examinations are completed).

IE250. In determining the transaction consideration, the Hospital concludes at the inception of the binding arrangement that Correctional Services will meet the 10,000-examination threshold and therefore estimates

that the transaction consideration is CU125 per product. Consequently, upon the completion of the first 100 examinations for Correctional Services, the Hospital recognizes the following:

Receivable	CU15,000[18]	
Revenue		CU12,500[19]
Refund Liability (Binding Arrangement Liability)		CU2,500

IE251. The refund liability (see paragraph 118 of IPSAS 47) represents a refund of CU25 per examination, which is expected to be provided to Correctional Services for the volume-based rebate (i.e., the difference between the CU150 price stated in the binding arrangement that the Hospital has an unconditional right to receive and the CU125 estimated transaction consideration).

Disclosure

IE252. Examples 44–50 illustrate the requirements in paragraphs 167–193 of IPSAS 47 on disclosures. In addition, the following requirements are illustrated in these examples:

(a) Paragraphs 175–176 of IPSAS 47 on services in-kind (Examples 44–45);

(b) Paragraphs 179–180 of IPSAS 47 on the disaggregation of revenue disclosure (Example 47);

(c) Paragraphs 185–187 of IPSAS 47 for the disclosure of transaction consideration allocated to the remaining compliance obligations (Examples 48–49);

(d) Paragraph 120 of IPSAS 47 on constraining estimates of variable consideration (Example 48);

(e) Paragraph AG90 of IPSAS 47 on methods for measuring progress towards complete satisfaction of a compliance obligation (Example 48); and

(f) Paragraph 171 of IPSAS 47 for situations where an entity was compelled by legislation or other governmental policy decisions to enter into a binding arrangement with compliance obligations regardless of the purchaser's ability to pay for the goods or services (Example 50).

Example 44 – Disclosure of Services In-kind not Recognized

IE253. A public hospital's accounting policies are to recognize voluntary services received as assets and revenue when they meet the definition of an asset and satisfy the criteria for recognition as assets. The hospital enlists the services of volunteers as part of an organized program. The principal aim of the program is to expose volunteers to the hospital environment, and to promote nursing as a career. Volunteers must be at least sixteen years of age and are initially required to make a six-month commitment to work one four-hour morning or afternoon shift per week. The first shift for each volunteer consists of a hospital orientation training session. Many local high schools permit students to undertake this work as part of their education program. Volunteers work under the direction of a registered nurse and perform non-nursing duties such as visiting patients and reading to patients. The public hospital does not pay the volunteers, nor would it engage employees to perform volunteers' work if volunteers were not available.

IE254. The hospital analyzes the agreements it has with the volunteers and concludes that, at least for a new volunteer's first six months, it has sufficient control over the services to be provided by the volunteer and that it receives service potential from the volunteers, satisfying the definition of an asset. However, it concludes that it cannot reliably measure the fair value of the services provided by the volunteers, because there are no equivalent paid positions either in the hospital or in other health or community care facilities in the region. The hospital does not recognize the services in-kind provided by the volunteers. In accordance with

[18] CU150 per examinations × 100 examinations

[19] CU125 transaction consideration per examinations × 100 examinations

paragraphs 175–176 of IPSAS 47, the hospital discloses the number of hours of service provided by volunteers during the reporting period and a description of the services provided.

Example 45 – Disclosures Made in the Financial Statements of Government A

IE255. For the year ended December 31, 20X2, Government A prepares and presents financial statements prepared in accordance with IPSAS for the first time. It makes the following disclosures in its financial statements:

Statement of Financial Performance		
	20X2	20X1
	(CU',000)	(CU',000)
Revenue from Transactions without Binding Arrangements		
Taxation Revenue		
Income Tax Revenue (notes 4 and 8)	XXX	XXX
Goods and Services Tax (note 5)	XXX	XXX
Estate Taxes (notes 6 and 9)	XX	XX
Transfer Revenue		
Transfers from Other Governments (note 7)	XXX	XXX
Gifts, Donations, Goods In-kind (note 13)	X	X
Services In-kind (notes 15 and 16)	X	X
Statement of Financial Position		
Current Assets		
Cash at Bank	XX	XX
Taxes Receivable		
Goods and Services Taxes Receivable (note 5)	XX	XX
Transfers Receivable		
Transfers Receivable from Other Governments (note 7)	X	X
Noncurrent Assets		
Land (note 11)	XXX	XXX

Plant and Equipment (notes 12 and 14)	XX	XX
Current Liabilities		
Liabilities Recognized Under Transfer Arrangements (note 10)	XX	XX
Advance Receipts		
Taxes	X	X
Transfers	X	X

Notes to the Financial Statements

Accounting Policies

Recognition of Revenue from Transactions without Binding Arrangements

1. Assets and revenue arising from taxation transactions are recognized as revenue from transactions without binding arrangements in accordance with the requirements in paragraphs 18–55 of IPSAS 47. However, the Government takes advantage of the transitional provisions in IPSAS 33 in respect of income taxes and estate taxes.

   Apart from income taxes and estate taxes, assets and revenue arising from taxation transactions are recognized in the period in which the taxable event occurs, provided that the assets satisfy the definition of an asset and meet the criteria for recognition as an asset. Income taxes and estate taxes are recognized in the period in which payment for taxation is received (see notes 4 and 6).

2. Assets and revenue arising from transfer transactions are recognized in the period in which the rights in a transfer arrangement are enforceable, except for some services in-kind. The Government recognizes only those services in-kind that are received as part of an organized program and for which it can determine a fair value by reference to market rates. Other services in-kind are not recognized.

3. Where a transfer is subject to an enforceable obligation that, if unsatisfied, requires the return of the transferred resources, the Government recognizes a liability until the requirements are satisfied.

Basis of Measurement of Major Classes of Revenue Transactions

Taxes

4. Income tax revenue is measured at the nominal value of cash and cash equivalents, received during the reporting period. The Government is currently developing a statistical model for measuring income tax revenue on an accrual basis. This model uses taxation statistics compiled since 19X2 as well as other statistical information, including average weekly earnings, gross domestic product, and the consumer and producer price indexes. The Government anticipates that the model will enable it to reliably measure income tax revenue on an accrual basis for the reporting period ended December 31, 20X4. The Government does not recognize any amount in respect of income taxes receivable.

5. Assets and revenue accruing from goods and services tax are initially measured at the transaction consideration of assets accruing to the Government during the reporting period, principally cash and cash equivalents, and goods and services tax receivable. The information is compiled from the goods and services tax returns submitted by taxpayers during the year and other amounts estimated to be due to the Government. Taxpayers have a high compliance rate and a low error rate, using the electronic return system

established in 20X0. The high compliance and low error rates have enabled the Government to develop a reliable statistical model for measuring the revenue accruing from the tax.

Goods and services taxes receivable is the estimate of the amount due from taxes attributable to the reporting period that remain unpaid at December 31, 20X2, less a provision for bad debts.

6. An estate tax of 40 percent is levied on all deceased estates; however, the first CU400,000 of each estate is exempt from the tax. Assets and revenue from estate taxes are measured at the nominal value of the cash received during the reporting period, or the transaction consideration as at the acquisition date of other assets received during the period, as determined by reference to market valuations or by independent appraisal by a member of the valuation profession.

Transfer Revenue

7. Assets and revenue recognized as a consequence of a transfer are measured at the transaction consideration of the assets recognized as at the date of recognition. Monetary assets are measured at their nominal value unless the time value of money is material, in which case present value is used, calculated using a discount rate that reflects the risk inherent in holding the asset. Non-monetary assets are measured at their transaction consideration, which is determined by reference to observable market data or by independent appraisal by a member of the valuation profession. Receivables are recognized when the entity has an enforceable right in a transfer arrangement but cash or other assets have not been received.

Taxes not Reliably Measurable in the Period in which the Taxable Event Occurs

8. The Government is unable to directly measure the assets arising from income tax during the period in which all taxpayers earn income and is, therefore, taking advantage of the transitional provisions of IPSAS 33, to develop a model to indirectly measure taxation revenue in the period in which taxpayers earn income. The Government estimates that it will be able to reliably measure income tax on an accrual basis using the model for the reporting period ending December 31, 20X4.

9. In respect of estate taxes, due to current high levels of non-compliance with the law, the government is unable to measure the amount of assets and revenue accruing in the period in which persons owning taxable property die. The Government therefore recognizes estate taxes when it receives payment for the tax. The tax department is continuing work to develop a reliable method of measuring the assets receivable and revenue in the year in which the taxable event occurs.

Liabilities Recognized in Respect of Transfers

10. At December 31, 20X2, the Government recognized a liability of CUXX,000 related to a transfer to build a public hospital. As at December 31, the Government had received a cash payment; however, construction of the hospital had not commenced, although tenders for construction were called for on November 30, 20X2.

Assets Subject to Enforceable Obligations

11. Land with a fair value of CUXX,000 was received as part of a binding arrangement in 20X2. The binding arrangement included a compliance obligation which requires the entity to use the land for public health purposes and cannot be sold for 50 years.

12. Plant and equipment includes an amount of CUXX,000, which is the carrying amount of a painting donated in 19X2 to an art gallery controlled by the Government. The painting was received as part of an arrangement that included an enforceable obligation (but did not include an enforceable right). Under the agreement, the entity cannot sell the painting for a period of 40 years. The painting is measured at its fair value, determined by independent appraisal.

Major Classes of Bequests, Gifts, Donations, and Goods In-Kind Received

13. Transfers are received in the form of gifts, donations and goods in-kind – most notably medical and school supplies (inventory), medical and school equipment, and works of art (classified as equipment). Gifts and donations are received primarily from private benefactors. Hospitals, schools, and art galleries controlled by the Government recognize these assets when control passes to them, usually on receipt of the resources, either as cash or plant and equipment. The Government does not accept these transfers with either conditions or restrictions attached unless the value of the transfer exceeds CUXX,000.

14. During 20X2, as part of an external assistance agreement with Government C, computer equipment with a fair value of CUXX,000 was provided to the Government on the condition that it will be used by the education department or be returned to Government C.

Services In-kind

15. Hospitals controlled by the Government received medical services in-kind from medical practitioners as part of the medical profession's organized volunteer program. These services in-kind are recognized as revenue and expenses in the statement of financial performance at their fair value, as determined by reference to the medical profession's published schedule of fees.

16. Hospitals, schools, and art galleries controlled by the Government also received support from volunteers as part of organized programs for art gallery greeters and guides, teachers' aides, and hospital visitor guides. These volunteers provide valuable support to these entities in achieving their objectives; however, the services provided cannot be reliably measured, as there are no equivalent paid positions available in the local market and, in the absence of volunteers, the services would not be provided. The Government does not recognize these services in the statements of financial position or financial performance.

Example 46 – Disclosure of a Transfer Subject to Appropriations

IE256. The facts are the same as in Case A of Example 7. The local government does not recognize an asset for the CU5 million to be transferred in 20X3 as at December 31, 20X2. Rather, the local government considers whether it should disclose a contingent asset, in accordance with paragraph 105 of IPSAS 19.

IE257. The local government concludes that the inflow of economic benefits is probable because the first payment of CU10 million was received in 20X2. Consequentially, the local government makes the following disclosure in its financial statements for the reporting period ended December 31, 20X2:

On March 15, 20X2, the local government entered into a binding arrangement with the national government to receive CU15 million in total (CU10 million in 20X2 and CU5 million in 20X3). The binding arrangement requires the funds to be used to reduce air pollution. The binding arrangement made it clear that the transfer was subject to the completion of the appropriation process, and that approval was not certain and that funding could be reduced. The local government has not recognized an asset in respect of the CU5 million to be received in 20X3 because, as at December 31, 20X2, the appropriation process for this amount had not been completed and therefore the local government does not have an enforceable right to the funds.

Example 47 – Disaggregation of Revenue—Quantitative Disclosure

IE258. A State Government reports the following segments: emergency services, public transit and energy, in accordance with IPSAS 18, *Segment Reporting*. When the State Government prepares its stakeholder presentations, it disaggregates revenue into primary geographical markets, major product lines and timing of revenue recognition (i.e., goods or services transferred at a point in time or services transferred over time).

IE259. The State Government determines that the categories used in the stakeholder presentations can be used to meet the objective of the disaggregation disclosure requirement in paragraph 179 of IPSAS 47, which is to disaggregate revenue from binding arrangements with purchasers into categories that depict how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. The following table illustrates the disaggregation disclosure by primary geographical market, major product or service line

and timing of revenue recognition, including a reconciliation of how the disaggregated revenue ties in with the emergency services, public transit and energy segments, in accordance with paragraph 180 of IPSAS 47.

Segments	Emergency Services	Public Transit	Energy	Total
	CU (million)	CU (million)	CU (million)	CU (million)
Primary geographical markets				
Region A	990	2,250	4,000	7,240
Region B	300	1,010	1,000	2,310
Region C	700	–	1,250	1,950
	1,990	3,260	6,250	11,500
Major goods/service lines				
Healthcare services – clinic	600	–	–	600
Healthcare services – hospital	990	–	–	990
Medical supplies	400	–	–	400
Public transit – bus	–	500	–	500
Public transit – rail	–	2,760	–	2,760
Solar panels	–	–	1,000	1,000
Power plant	–	–	5,250	5,250
	1,990	3,260	6,250	11,500
Timing of revenue recognition				
Goods transferred at a point in time	1,000	3,260	–	4,260
Services transferred over time	990	–	6,250	7,240
	1,990	3,260	6,250	11,500

Example 48 – Disclosure of the Transaction Consideration Allocated to the Remaining Compliance Obligations

IE260. On June 30, 20X7, a centralized training agency (the Agency) enters into three binding arrangements (Binding Arrangements A, B and C) with a government department (the Department) to provide training services. Each binding arrangement has a two-year non-cancellable term. The Agency considers the requirements in paragraphs 185–187 of IPSAS 47 in determining the information in each binding arrangement to be included in the disclosure of the transaction consideration allocated to the remaining compliance obligations at December 31, 20X7.

Binding Arrangement A

IE261. Training services are to be provided over the next two years, typically at least once per month. For services provided, the Department pays an hourly rate of CU25.

IE262. Because the Agency bills a fixed amount for each hour of service provided, the Agency has a right to invoice the resource provider in the amount that corresponds directly with the value of the Agency's performance completed to date in accordance with paragraph AG90 of IPSAS 47. Consequently, no disclosure is necessary if the Agency elects to apply the practical expedient in paragraph (b) of IPSAS 47.

Binding Arrangement B

IE263. Training and onboarding services are to be provided as and when needed with a maximum of four visits per month over the next two years. The Department pays a fixed price of CU400 per month for both services. The Agency measures its progress towards complete satisfaction of the compliance obligation using a time-based measure.

IE264. The Agency discloses the amount of the transaction consideration that has not yet been recognized as revenue in a table with quantitative time bands that illustrates when the Agency expects to recognize the amount as revenue. The information for Binding Arrangement B included in the overall disclosure is as follows:

	20X8	**20X9**	**Total**
	CU	**CU**	**CU**
Revenue expected to be recognized on this binding arrangement as of December 31, 20X7	4,800[20]	2,400[21]	7,200

Binding Arrangement C

IE265. Training services are to be provided as and when needed over the next two years. The Department pays a fixed consideration of CU100 per month plus a one-time variable consideration payment ranging from CU0–CU1,000 corresponding to a one-time regulatory review and certification of the Department's employees (i.e., a performance bonus). The Agency estimates that it will be entitled to CU750 of the variable consideration. On the basis of the Agency's assessment of the factors in paragraph 120 of IPSAS 47, the Agency includes its estimate of CU750 of variable consideration in the transaction consideration because it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur. The Agency measures its progress towards complete satisfaction of the compliance obligation using a time-based measure.

IE266. The Agency discloses the amount of the transaction consideration that has not yet been recognized as revenue in a table with quantitative time bands that illustrates when the Agency expects to recognize the amount as revenue. The Agency also includes a qualitative discussion about any significant variable consideration that is not included in the disclosure. The information for Binding Arrangement C included in the overall disclosure is as follows:

[20] CU4,800 = CU400 × 12 months.

[21] CU2,400 = CU400 × 6 months

	20X8	20X9	Total
	CU	CU	CU
Revenue expected to be recognized on this binding arrangement as of December 31, 20X7	1,575[22]	788[23]	2,363

IE267. In addition, in accordance with paragraph 187 of IPSAS 47, the Agency discloses qualitatively that part of the performance bonus has been excluded from the disclosure because it was not included in the transaction consideration. That part of the performance bonus was excluded from the transaction consideration in accordance with the requirements for constraining estimates of variable consideration in paragraphs 119–121.

Example 49 – Disclosure of the Transaction Consideration Allocated to the Remaining Compliance Obligation—Qualitative Disclosure

IE268. On January 1, 20X2, the Department of Public Works (Public Works) enters into a binding arrangement with another department to refurbish a building for a fixed consideration of CU10 million. The refurbishment of the building is considered a single compliance obligation that Public Works satisfies over time. As of December 31, 20X2, Public Works has recognized CU3.2 million of revenue. Public Works estimates that the refurbishment will be completed in 20X3, but it is possible that the project will be completed in the first half of 20X4.

IE269. At December 31, 20X2, Public Works discloses the amount of the transaction consideration that has not yet been recognized as revenue in its disclosure of the transaction consideration allocated to the remaining unsatisfied portion of the compliance obligation. Public Works also discloses an explanation of when it expects to recognize that amount as revenue. The explanation can be disclosed either on a quantitative basis using time bands that are most appropriate for the duration of the remaining compliance obligation or by providing a qualitative explanation. Because Public Works is uncertain about the timing of revenue recognition, Public Works discloses this information qualitatively as follows, in accordance with paragraph 185 of IPSAS 47:

As of December 31, 20X2, the aggregate amount of the transaction consideration allocated to the remaining compliance obligation is CU6.8 million and the entity will recognize this revenue as the building is completed, which is expected to occur over the next 12–18 months.

Example 50 – Disclosures of Transactions that an Entity was Compelled to Enter by Legislation or Other Governmental Policy Decisions

IE270. A government-owned utility operates a number of power plants and provides electricity to residential households. The energy sector in the jurisdiction is highly regulated, and under its Power and Energy Act, all utility companies which provide electricity to residential households are required to provide electricity regardless of the households' ability to pay. Typically, a household would apply to the utility to connect electricity to their location. As part of the connection process, the household would enter into a power purchase agreement with the utility to document the payment terms and any economic consequences of non-payment, such as interest or penalties.

[22] Transaction consideration = CU3,150 (CU100 × 24 months + CU750 variable consideration) recognized evenly over 24 months at CU1,575 per year.

[23] CU1,575 ÷ 2 = CU788 (i.e., for 6 months of the year).

IE271. The power purchase agreement is considered a binding arrangement with compliance obligations, as the utility has agreed to provide a distinct good (electricity) to a purchaser (the household) in exchange for the consideration. Given the regulations, the utility may not deny the initial connection nor suspend the provision of electricity even if a household is in default – i.e., the utility is compelled to satisfy the compliance obligation to provide electricity regardless of a household's ability to pay.

IE272. During the year, the utility provided electricity that would have resulted in total revenue of CU100 million if revenue had been recognized at the utility's standard rates for 100 percent of the electricity provided. However, throughout the year, a number of households were unable to pay their amounts owed to the utility in full.

IE273. The utility applies paragraph AG37 of IPSAS 47, and based on historical data, estimates that only CU90 million of the amount is collectible. For the remaining CU10 million, the utility accepts that it has implicitly provided a price concession of CU10 million due to the regulations compelling the utility to continue to provide electricity. As a result, the utility recognizes revenue based on a transaction consideration of CU90 million. (See Example 11 for more guidance on implicit price concessions.)

IE274. To comply with the disclosure requirements in paragraph 171 of IPSAS 47, the utility discloses the following information in the notes to its annual financial statements:

The utility is subject to the provisions of the Power and Energy Act, which requires all utilities to provide electricity to residential households regardless of the purchasers' ability to pay. As a result, the utility is compelled to connect all residential purchasers to its power grid and to continue to provide electricity even in the event of non-payment.

During the year, the utility provided and billed CU100 million of electricity to the households, but only recognized revenue of CU90 million, as this was the amount expected to be collected based on historical data. Therefore, CU10 million of the amount billed was not recognized as revenue.

Application of Principles to Specific Transactions

Capital Transfers

IE275. Example 51 illustrates the application of paragraphs AG140–AG142 of IPSAS 47 on capital transfers. Example 52 illustrates the initial measurement of a transfer of a physical asset.

Example 51 – Capital Transfers

Case A – Transfer Only Relates to the Construction of an Asset

IE276. Entity R enters into a binding arrangement with Entity P. The terms of the binding arrangement are as follows:

(a) Entity R is to receive a capital transfer of CU22 million in cash from Entity P, to be used by Entity R to construct a building. There are no terms specifying how the building is to be used after construction;

(b) This amount is based on budgeted construction and related costs. The funding is to be fully paid to Entity R at the beginning of the construction period;

(c) To facilitate Entity P's enforcement of the binding arrangement, the terms require Entity R to:

(i) Have a detailed construction plan outlining the activities to be completed in each significant phase of construction (e.g., clearing the site, foundations, framing, etc.) along with the budgeted costs of these activities;

(ii) Provide detailed progress reports at each significant stage of construction; and

(d) Upon completion of construction, Entity R obtains control of the building. If construction of the building is not completed within five years, Entity R retains control of any construction in progress, but any funds that have not been spent on construction are to be returned to Entity P.

IE277. Entity R has determined that the binding arrangement has only one compliance obligation and that completion of the construction activities noted in the construction plan, as measured by the costs spent on these activities, is an appropriate measure of progress towards complete satisfaction of the compliance obligation.

IE278. In this example, the substance of the binding arrangement is to receive funding for the construction of the building, and there was no transfer relating to the subsequent use of the building by Entity R. Therefore, upon receipt of the CU22 million, Entity R recognizes cash and liability for the full amount of CU22 million because it has not yet started satisfying its compliance obligation (i.e., construction of the building) and is required to return any funds not spent on construction.

IE279. As Entity R completes the construction activities in its construction plan, the costs incurred in completing these activities is used to determine the percentage of construction completed. Entity R applies this percentage to the CU22 million to determine the amount of deferred revenue that should be derecognized from liabilities and recognized as earned revenue throughout the construction period.

Case B – Transfer Relates to the Construction and Operation of an Asset

IE280. Building on Case A, the binding arrangement now states that:

(a) The funding amount has been increased to CU32 million. The amount is based on budgeted construction costs of CU20 million, construction-related overhead costs of CU2 million, and a subsidy of CU10 million to cover some of the costs of operating the building as a public library for the first 10 years after completion of the building;

(b) Throughout the 10-year period, Entity R is required to provide evidence to Entity P that the building has been operated as a public library. The evidence can include documentation such as audited financial statements which provide details on the operating costs incurred by Entity R;

(c) If Entity R stops operating the building as a library at any time during the 10-year period, it is required to repay a portion of the CU10 million operating transfer to Entity P based on the amount of time remaining in the 10-year period. For example, if Entity R stops operating the building as a library at two years into the 10-year period, it is required to return CU8 million to Entity P; and

(d) Similar to Case A, Entity P transfers the entire CU32 million to Entity R at the beginning of the construction period. Entity R is also required to provide information regarding construction progress to Entity P.

IE281. In this scenario, Entity R considers the substance of the transaction in accordance with the terms of the binding arrangement and concludes that the binding arrangement consists of two compliance obligations: the construction of the building and the operation of the building as a library for a 10-year period. Applying the requirements from IPSAS 47, Entity R has allocated CU22 million to the construction of the building and CU10 million to its operation as a public library.

IE282. For the compliance obligation relating to the construction of the building, as in Case A, Entity R recognizes a liability of CU22 million upon receipt of the funds. Entity R then derecognizes the CU22 million liability (and recognizes the amounts as earned revenue) over the construction period based on its construction progress as determined by the direct construction costs incurred.

IE283. For the compliance obligation relating to the operation of the building as a library, Entity R has determined that this compliance obligation is satisfied as the building is being operated as a library during the 10-year

period, and therefore would recognize a CU10 million liability upon initial receipt of the funds. After construction has been completed, Entity R derecognizes CU1 million liability per year as it operates the building as a public library and recognizes the amount as earned revenue.

Case C – Transfer Relates to the Construction and Operation of an Asset, and an Additional Penalty is Payable if the Entity Ceases Operation of the Asset

IE284. In this scenario, the binding arrangement includes all of the terms from Case B, with the addition of the following:

(a) The binding arrangement now imposes a penalty of CU5 million under specific conditions. If Entity R stops operating the building as a library within the 10-year period, it is required to pay a penalty of CU5 million to Entity P.

(b) The CU5 million penalty is payable in addition to the return of funds for not complying with the terms of the binding arrangement related to the construction or operation of the asset. For clarity, if Entity R has completed construction of the building and operated it as a library for nine years but stops operating the library at the beginning of the 10th year, it is required to pay CU6 million (repayment of CU1 million of unearned revenue related to the operating subsidy and the CU5 million penalty) to Entity P.

IE285. In this scenario, the accounting for the CU22 million and CU10 million portions of the transfer for construction and operation of the building as a library will be the same as Cases A and B. That is, the CU32 million will be recognized as a liability upon receipt. Subsequently, the CU22 million liability will be derecognized and recognized as earned revenue as the building is constructed, and the CU10 million liability will be derecognized and recognized as earned revenue over the 10-year operating period.

IE286. The additional CU5 million penalty is not recognized by Entity R because it is a contingent liability (as defined in IPSAS 19) that is not a present obligation (as described in Chapter 5*, Elements in Financial Statements* of the *Conceptual Framework*). This penalty only becomes a present obligation once the past event (breaching the terms of the agreement by not operating the building as a library) has occurred. Entity R will need to consider if disclosure of the contingent liability is required by IPSAS 19.

Case D – Transfer Only Relates to the Operation of an Asset

IE287. The following scenario is independent from Cases A-C, and illustrates the accounting for revenue from an operating transfer to highlight the differences with accounting for revenue from capital transfers.

IE288. In this scenario:

(a) Entity R already owns the building;

(b) The binding arrangement includes the terms relating to a CU10 million transfer to subsidize the operation of the building as a public library for the next 10 years. The transfer of funds is required to occur upon finalization of the binding arrangement;

(c) Throughout the 10-year period, Entity R is required to provide evidence to Entity P that the building has been operated as a public library; and

(d) If Entity R stops operating the building as a library at any time during the 10-year period, it is required to repay a portion of the CU10 million operating transfer to Entity P based on the amount of time remaining in the 10-year period.

IE289. In this scenario, the CU10 million transfer only relates to the compliance obligation to operate the existing building as a public library over a 10-year period. Upon initial receipt, Entity R recognizes the CU10 million as a liability.

IE290. Entity R has determined that this compliance obligation is satisfied as the building is being operated as a library throughout the 10-year period. Therefore, Entity R derecognizes the liability and recognizes earned revenue of CU1 million per year as it operates the building as a public library.

Example 52 – Transfers of Physical Assets

IE291. A public health network (Public Health) enters into a binding arrangement on January 1, 20X2 with the regional government (Government) and agrees to the following:

(a) The Government will transfer ownership of an X-ray machine to Public Health upon finalization of the binding arrangement;

(b) Public Health will use the machine to provide X-ray imaging services to the citizens in the region for 10 years. After this 10-year period, Public Health retains ownership of the machine;

(c) If Public Health stops using the machine to provide imaging services during the 10-year period, it is required to return the machine to the Government; and

(d) At the time of transfer, the remaining useful life of the machine is 15 years.

IE292. In this scenario, the transaction constitutes a transfer as defined in paragraph 4 of IPSAS 47, but is not a capital transfer as Public Health is not required to use the physical asset received to acquire or construct a non-financial asset.

IE293. Upon transfer of the X-ray machine, Public Health applies paragraph 129 of the IPSAS 47 and recognizes and measures the asset at its deemed cost at the acquisition date in accordance with IPSAS 45. The entity also recognizes an equivalent liability, which is derecognized (and earned revenue is recognized) over the 10 years as the compliance obligation is satisfied over time. Public Health would also amortize the X-ray machine over its remaining useful life of 15 years in accordance with IPSAS 45.

Pledges

Example 53 – Television Appeal for Public Hospital

IE294. On the evening of June 30, 20X5, a local television station conducts a fundraising appeal for a public hospital (the Hospital). The annual reporting date of the Hospital is June 30. Television viewers telephone or e-mail, promising to send donations of specified amounts of money. At the conclusion of the appeal, CU2 million has been pledged. The pledged donations are not binding on those making the pledge. Experience with previous appeals indicates approximately 75 percent of pledged donations will be made.

IE295. The Hospital does not recognize any amount in its general purpose financial statements in respect of the pledges. The Hospital does not control the resources related to the pledge, because it does not have the ability to exclude or regulate the access of others to the economic benefits or service potential of the pledged resources; therefore it cannot recognize the asset or the related revenue until the donation is binding on the donor in accordance with paragraph AG150 of IPSAS 47.

Concessionary Loans

Example 54 – Concessionary Loans

IE296. An Entity receives CU6 million funding from a multi-lateral development agency (Agency) to build 10 schools over the next 5 years. The funding is provided on the following conditions:

(a) CU1 million of the funding need not be repaid, provided that the schools are built;

(b) CU5 million of the funding is to be repaid as follows:

Year	Capital to be repaid

1	0%
2	10%
3	20%
4	30%
5	40%

(c) Interest is charged at five percent per annum over the period of the loan (assume interest is paid annually in arrears). The market rate of interest for a similar loan is 10 percent;

(d) To the extent that schools have not been built, the funding provided should be returned to the donor (assume that the donor has effective monitoring systems in place and has a past history of requiring any unspent funds to be returned); and

(e) The Entity built the following schools over the period of the loan;

Year	Status
1	1 school completed
2	3 schools completed
3	5 schools completed
4	10 schools completed

IE297. The Entity determined that the substance of the CU1 million is revenue, and not a contribution from owners. In substance, the Entity has received a concessionary loan which includes a transfer of CU1 million and a loan of CU5 million, and an additional transfer of CU784,550 (which is the difference between the proceeds of the loan of CU5 million and the present value of the contractual cash flows of the loan, discounted using the market related rate of interest of 10 percent).

IE298. Considering paragraphs AG152–AG153 of IPSAS 47, the Entity accounts for the transfer of CU1 million + CU784,550 in accordance with this Standard, and the loan with its related contractual interest and capital payments in accordance with IPSAS 41.

IE299. The journal entries are illustrated below:

1. On initial recognition, the resource recipient will recognize the following:				
Dr		Bank	CU6,000,000	
	Cr	Loan		CU4,215,450
	Cr	Liability		CU1,784,550

2. Year 1: the resource recipient will recognize the following:				
Dr		Liability	CU178,455	
	Cr	Revenue		CU178,455
(1/10 of the schools built x CU1,784,550) (Note: The journal entries for the repayment of interest and capital and interest accruals, have not been reflected in this example, as it is intended to illustrate the recognition of revenue arising from concessionary loans. Comprehensive examples are included in the Illustrative Examples to IPSAS 41).				

3. Year 2: the resource recipient will recognize the following (assuming that the resource recipient subsequently measures the concessionary loan at amortized cost):				
Dr		Liability	CU356,910	
	Cr	Revenue		CU356,910
(3/10 schools built x CU1,784,550 – CU178,455 already recognized)				

4. Year 3: the resource recipient will recognize the following:				
Dr		Liability	CU356,910	
	Cr	Revenue		CU356,910
(5/10 schools built x CU1,784,550 – CU535,365 already recognized)				

5. Year 4: the resource recipient will recognize the following:				
Dr		Liability	CU892,275	
	Cr	Revenue		CU892,275
(All schools built, CU1,784,550 – CU892,275) If the concessionary loan was granted with no conditions, the resource recipient would recognize the following on initial recognition:				
Dr		Bank	CU6,000,000	
	Cr	Loan		CU4,215,450
	Cr	Revenue		CU1,784,550

Concessionary Leases

Example 54A – Concessionary Lease (Lessee)–Concession Results from 30% Lower Contractual Payments than Payments for the Lease at Market Rates

IE296A. Public sector entity X (Lessee) enters into a lease with Municipality Y (Lessor) to use a building to provide medical services to the population over a period of five years. The Lessor does not regulate the types of medical services provided to the population.

The annual payment for the lease at market rates based on the current use of the underlying asset is CU5,312,420.

The lease stipulates that it should be paid for over the five-year period as follows:

Year 1: CU3,718,694

Year 2: CU3,718,694

Year 3: CU3,718,694

Year 4: CU3,718,694

Year 5: CU3,718,694

This represents an agreed reduction of 30% to the lease payments at market rates. The lessee's incremental borrowing rate is 5 percent per annum, which is readily determinable by the lessee.

The lease includes a compliance obligation, specifically to use the building to provide medical services to the population for five years. The compliance obligation is met on a straight-line basis.

Analysis

It is a concessionary lease, as the present value of the payments for the lease at market rates based on the current use of the underlying asset is higher than the present value of the contractual payments. The lessee has effectively received a concession of CU6,900,000, which is the difference between the present value of the payments for the lease at market rates and the present value of the contractual payments. (Note: An entity would consider whether the substance of the CU6,900,000 is a contribution from owners or revenue; assume for purposes of this example that the CU6,900,000 is revenue).

The revenue of CU6,900,000 is accounted for in accordance with IPSAS 47, and the lease, with its related contractual interest and lease payments, in accordance with IPSAS 43.

The journal entries to account for the concessionary lease are as follows:

1. On initial recognition, the lessee will recognize the following:

Dr	Right-of-use asset	CU23,000,000		
Cr	Lease liability			CU16,100,000
Cr	Binding arrangement liability			CU6,900,000

2. Year 1: the lessee will recognize the following:

Dr	Binding arrangement liability	CU1,380,000		
Cr	Revenue			CU1,380,000

(1/5 of the compliance obligation met by the lessee CU6,900.000)

(Note: The journal entries for the repayment of interest and capital and interest accruals have not been reflected in this example, as it is intended to illustrate the recognition of revenue arising from concessionary leases. A comprehensive example is included in the Illustrative Examples to IPSAS 43.)

3. Year 2: the lessee will recognize the following (the lessee subsequently measures the concessionary lease at amortized cost):

Dr	Binding arrangement liability	CU1,380,000		
Cr	Revenue			CU1,380,000

(1/5 of the compliance obligation met X CU6,900,000)

4. Year 3: the lessee will recognize the following:

Dr	Binding arrangement liability	CU1,380,000		
Cr	Revenue			CU1,380,000

(1/5 of the compliance obligation met X CU6,900,000)

5. Year 4: the lessee will recognize the following:

Dr		Binding arrangement liability	CU1,380,000	
	Cr	Revenue		CU1,380,000

(1/5 of the compliance obligation met X CU6,900,000)

6. Year 5: the lessee will recognize the following:

Dr		Binding arrangement liability	CU1,380,000	
	Cr	Revenue		CU1,380,000

(1/5 of the compliance obligation met X CU6,900,000)

If the concessionary lease was granted with a compliance obligation that is met in the first year, the lessee would recognize the following on initial recognition:

Dr		Right-of-use asset	CU23,000,000	
	Cr	Lease liability		CU16,100,000
	Cr	Revenue		CU6,900,000

Debt Forgiveness

Example 55 – Debt Forgiveness

IE300. The national government (Government N) entered into a binding arrangement to lend a local government (Government L) CU20 million to enable Government L to build a water treatment plant. After a change in policy, Government N decides to forgive the loan and advises the local government in writing. It also encloses the loan documentation, which has been annotated to the effect that the loan has been waived.

IE301. Upon receipt of this letter and documentation from Government N, Government L derecognizes the liability for the loan and recognizes revenue in the statement of financial performance in the reporting period in which the liability is derecognized in accordance with paragraphs AG155–AG158 of IPSAS 47.

Bequests

Example 56 – Proposed Bequest

IE302. A 25-year-old recent graduate (the Graduate) of a public university names the public university (the University) as the primary beneficiary in her will. This is communicated to the university. The graduate is unmarried and childless and has an estate currently valued at CU500,000.

IE303. The University does not recognize any asset or revenue in its general purpose financial statements for the period in which the will is made, in accordance with paragraphs AG161–AG163 of IPSAS 47. The past event for a bequest is the death of the testator (i.e., the Graduate), which has not occurred.

Gifts and Donations, including Goods In-kind

Example 57 – Goods In-kind

IE304. A Defense Force Agency of Government A (Defense Agency) agrees to provide an Aid Agency of Government B (Aid Agency) with its obsolete canvas tents for use as emergency relief housing after a natural

disaster. Defense Agency purchased the tents for CU100 per unit two years prior to transferring them to Aid Agency. The agreement states that the tents are valued at CU100 per unit.

IE305. Aid Agency concludes that it has received a donation in the form of goods in-kind and applies paragraphs AG164–AG167 of IPSAS 47. Upon receipt, Aid Agency determines that IPSAS 45 is the relevant IPSAS, and the tents are held for operational capacity. Aid Agency determines that the current operational value for this obsolete version of the tent is CU50. Therefore, Aid Agency recognizes revenue at the value of CU50 per unit received instead of the CU100 as stated in the agreement.

Example 58 – External Assistance

IE306. National Government A (Government A) enters into an external assistance agreement with National Government B (Government B), which provides Government A with development assistance to support Government A's health objectives over a two-year period. The external assistance agreement is binding on both parties through an international court of law. The agreement specifies the details of the development assistance receivable by Government A and the types of items or expenditures the funds can be spent on to further its health objectives. Government A measures the transaction consideration of the development assistance at CU5 million. Any funding not used over the two-year period is to be returned to Government B.

IE307. At inception of the binding arrangement, Government A has a combined right and obligation which constitute a single asset or liability, which is measured at zero because the binding arrangement is wholly unsatisfied. Government A will recognize an asset on its statement of financial position in accordance with paragraphs 18–25 (for example, when Government A receives an inflow of resources from Government B, or if Government A begins satisfying its compliance obligation by incurring eligible expenditures in accordance with the terms of the external assistance agreement). Government A would also recognize a liability, which is derecognized (and earned revenue is recognized) as the compliance obligation is satisfied.

Right-of-Use Assets In-kind

Example 59 – Right-of-Use Assets In-kind

IE308. Public sector entity Z (Entity Z) enters into an arrangement with a Government Agency (Agency) for five years to have the right to use for free a sports field to be used specifically by youth. The Agency does not regulate the types or pricing of sports services that Entity Z provides.

A similar sports field built at the same time and with the same characteristics at a different location is being leased by the same government agency to a private sector entity for CU300,000 annually for five years and is considered market rates. This information is publicly available on the Agency's website.

Entity Z's incremental borrowing rate is 5 percent per annum.

Case A – A Binding Arrangement with Compliance Obligation Met Over Five Years

Entity Z determines that under the arrangement, it has an enforceable right to use the sports field for free, and that it has an enforceable obligation (because the Agency can terminate the arrangement if that field is not being used by youth at any time in the five years). Entity Z determines that the arrangement meets the definition of a binding arrangement, and it includes a compliance obligation to ensure that only youth use the sports field. The compliance obligation is satisfied over time, on a straight-line basis.

Entity Z confirmed that the substance of the right-of-use is not a contribution from owners.

Analysis

Entity Z acquired a right-of-use asset in-kind for zero consideration. The present value of payments at market rates is CU1,298,843 (refer to Table 1), which corresponds to the value of the right-of-use asset in-kind and total revenue. IPSAS 45 is applied to subsequently account for the right-of-use asset in-kind.

The journal entries to account for the right-of-use asset in-kind and revenue are as follows:

1. On initial recognition, the Entity Z will recognize the following:

	Right-of-use asset	CU1,298,843	
Cr	Binding arrangement liability		CU1,298,843

2. Year 1: Entity Z will recognize the following:

	Binding arrangement liability	CU259,769	
Cr	Revenue		CU259,769

(1/5 of the compliance obligation met by Entity Z CU1,298,843)

3. Year 2: Entity Z will recognize the following:

	Binding arrangement liability	CU259,769	
Cr	Revenue		CU259,769

(1/5 of the compliance obligation met CU1,298,843)

4. Year 3: Entity Z will recognize the following:

	Binding arrangement liability	CU259,769	
Cr	Revenue		CU259,769

(1/5 of the compliance obligation met CU1,298,843)

5. Year 4: Entity Z will recognize the following:

	Binding arrangement liability	CU259,769	
Cr	Revenue		CU259,769

(1/5 of the compliance obligation met CU1,298,843)

6. Year 5: Entity Z will recognize the following:

	Binding arrangement liability	CU259,769	
Cr	Revenue		CU259,769

(1/5 of the compliance obligation met CU1,298,843)

Case B – A Binding Arrangement with a Compliance Obligation Met in the First Year

Entity Z determines that under the arrangement, it has an enforceable right to use the sports field for free an enforceable obligation that is met in the first year.

Dr	Right-of-use asset	CU1,298,843	
Cr	Revenue		CU1,298,843

Table 1: Annual Payments (Using Incremental Borrowing Rate of Entity Z at 5%)

	Undiscounted Annual Payments for the Lease at Market Rates	Present Value of Payments at Market Rates (Value of Right-of-use asset and total revenue)
	(1)	(2)
Year 1	300,000	285,714
Year 2	300,000	272,109
Year 3	300,000	259,151
Year 4	300,000	246,811
Year 5	300,000	235,058
Total	**1,500,000**	**1,298,843**

COMPARISON WITH IFRS 15

The binding arrangement accounting requirements in IPSAS 47, *Revenue* are drawn primarily from IFRS 15, *Revenue from Contracts with Customers* (issued in 2014, including amendments up to March 2018). The main differences between IPSAS 47 and IFRS 15 are as follows:

- IPSAS 47 applies to all revenue transactions in the public sector, which may arise from transactions with or without binding arrangements. IFRS 15 applies to a subset of binding arrangements, specifically contracts to deliver goods or services to customers.
- IPSAS 47 explicitly requires an entity to determine whether the revenue arises from a transaction with or without a binding arrangement. IFRS 15 does not explicitly require an entity to determine whether the revenue arises from a contract.
- IPSAS 47 uses the term “compliance obligation” as the unit of account for revenue recognition in a binding arrangement, which is a promise to either use resources internally for distinct goods or services, or to transfer distinct goods or services to another party (i.e., a purchaser or third-party beneficiary). IFRS 15 uses the term “performance obligation” as the unit of account for revenue recognition in a contract, which is a promise to transfer distinct goods or services to a customer.
- The concept of compliance obligations in IPSAS 47 is broader than performance obligations in IFRS 15. As a result, IAS 20, *Accounting for Government Grants and Disclosure of Government Assistance* is not applicable for public sector organizations because IPSAS 47 includes principles to account for capital transfers and other transfers arising from binding arrangements.
- IPSAS 47 requires an entity to disclose any transactions where it is compelled to satisfy an obligation, regardless of the counterparty’s ability or intention to pay and the probability of collection of consideration. IFRS 15 does not require this disclosure.
- IPSAS 47 uses different terminology from IFRS 15. For example, IPSAS 47 uses the terms "compliance obligation", “resource provider”, “stand-alone value”, and “economic substance”, while IFRS 15 uses the terms “performance obligation”, “customer”, “stand-alone selling price”, and “commercial substance”, respectively.

COMPARISON WITH GFS

In developing IPSAS 47, *Revenue*, the IPSASB considered Government Finance Statistics (GFS) reporting guidelines.

Key similarities and differences with GFS are as follows:

- The similarities and differences between the accounting under IPSAS 47 and GFS will depend on the facts and circumstances of the revenue transactions.
- Both IPSAS 47 and GFS require an entity to account for revenue on an accrual basis. However, IPSAS 47 uses accounting terminology whereas GFS uses economic terminology, which may lead to the same accounting outcome.
- IPSAS 47 distinguishes between revenue arising from transactions with or without a binding arrangement. GFS distinguishes revenue transactions by their characteristics, including whether it is a market transaction.
- IPSAS 47 considers the enforceability of the entity's individual rights and/or obligations in order to identify whether the revenue arises from a transaction with a binding arrangement. GFS considers different characteristics to identify the type of revenue, including whether it is a market transaction.
- Under IPSAS 47, an entity recognizes revenue when (or as) it satisfies any enforceable obligations associated with an inflow (or right to an inflow) of resources, as specified in the arrangement. Under GFS, the timing of revenue recognition is based on the type of revenue.
- IPSAS 47 includes disclosure requirements that are not present in GFS.

IPSAS 48, *TRANSFER EXPENSES*

History of IPSAS Accounting Standard

This version includes amendments resulting from IPSAS Accounting Standards issued up to January 31, 2026.

IPSAS 48, *Transfer Expenses* was issued in May 2023.

Since then, IPSAS 48 has been amended by the following IPSAS Accounting Standards:

- IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards* (issued November 2025)
- *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (issued October 2024)

Table of Amended Paragraphs in IPSAS 48

Paragraph Affected	How Affected	Affected By
63	Amended	IPSAS 33 November 2025
IE2	Amended	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024
Heading above paragraph IE12A	Added	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024
IE12A	Added	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024
IE12B	Added	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024
IE12C	Added	*Concessionary Leases and Other Arrangements Conveying Rights over Assets* October 2024

Comparison with GFS	

International Public Sector Accounting Standard 48, *Transfer Expenses*, is set out in paragraphs 1–64. All the paragraphs have equal authority. IPSAS 48 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*. IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provides a basis for selecting and applying accounting policies in the absence of explicit guidance.

Objective

1. **The objective of this Standard is to establish the principles that a transfer provider (an entity) shall apply to report useful information to users of financial statements about the nature, amount, timing, and uncertainty of expenses and cash flows arising from transfer expense transactions.**

2. To meet the objective in paragraph 1, this Standard:

   (a) Requires an entity to consider the terms of the transaction and all relevant facts and circumstances to determine the type of transfer expense transaction; and

   (b) Sets out the accounting requirements for the transfer expense transaction.

Scope

3. **An entity that prepares and presents financial statements under the accrual basis of accounting shall apply this Standard in accounting for transfer expenses as defined in this Standard, including transfer expenses incurred for capital transfers.**

4. **This Standard does not apply to:**

   (a) **Leases as defined in IPSAS 43, *Leases*;**

   (b) **Contributions from, and distributions to, owners;**

   (c) **Service concession arrangements as defined in IPSAS 32, *Service Concession Arrangements: Grantor*;**

   (d) **Employee benefits as defined in IPSAS 39, *Employee Benefits*;**

   (e) **Financial instruments, including concessionary loans, as defined in IPSAS 41, *Financial Instruments*;**

   (f) **Social benefits as defined in IPSAS 42, *Social Benefits*;**

   (g) **Insurance contracts (see the international or national accounting standard dealing with insurance contracts);**

   (h) **Share-based payments (see the international or national accounting standard dealing with share-based payments); and**

   (i) **Income taxes (see the international or national accounting standard dealing with income taxes).**

5. A binding arrangement may be partially within the scope of this Standard and partially within the scope of other Standards:

   (a) If the other Standards specify how to separately recognize and/or initially measure one or more parts of the binding arrangement, then an entity shall first apply the separation and/or measurement requirements in those Standards. An entity shall exclude from the transfer consideration or other transfer of resources the amount of the part (or parts) of the binding arrangement that are initially measured in accordance with other Standards and shall apply paragraphs 18-43 to account for the amount of the transfer consideration or other transfer of resources that remains (if any); and

   (b) If the other Standards do not specify how to separate and/or initially measure one or more parts of the binding arrangement, then the entity shall apply this Standard to the entirety of the binding arrangement.

   Paragraphs AG2-AG3 provide additional guidance on the scope of this Standard.

Definitions

6. **The following terms are used in this Standard with the meanings specified:**

From the perspective of a transfer provider, a capital transfer is an outflow of cash or another asset that arises from a binding arrangement with a specification that the transfer recipient acquires or constructs a non-financial asset that will be controlled by the transfer recipient. (Paragraph AG53 provides additional guidance).

The stand-alone consideration is the amount that an entity intends to compensate the transfer recipient for satisfying each of its obligations in a binding arrangement.

For the purposes of this Standard, the transfer consideration represents the total amount of resources[1] which an entity expects to transfer.

A transfer expense is an expense arising from a transaction, other than taxes, in which an entity provides a good, service, or other asset to another entity (which may be an individual) without directly receiving any good, service, or other asset in return (paragraphs 8-9 provide additional guidance).

A transfer obligation is an entity's obligation in a binding arrangement to transfer resources in a specified manner.

A transfer obligation liability is the liability recognized for the existence of one or more transfer obligations arising from a binding arrangement.

A transfer provider is an entity that provides a good, service, or other asset to another entity without directly receiving any good, service or other asset in return.

A transfer recipient is an entity that receives a good, service, or other asset from another entity without directly providing any good, service or other asset to that entity.

A transfer right is an entity's enforceable right to have the transfer recipient satisfy its obligation in a manner as specified in a binding arrangement or face the consequences as specified in the binding arrangement.

A transfer right asset is the asset recognized for the existence of one or more transfer rights arising from a binding arrangement.

7. The following terms are defined in IPSAS 47, *Revenue*:

(a) Binding arrangement;

(b) Compliance obligation;

(c) Taxes; and

(d) Third-party beneficiary.

A constructive obligation is defined in IPSAS 19, Provisions, Contingent Liabilities and Contingent Assets.

Expenses are defined in IPSAS 1, Presentation of Financial Statements.

Paragraphs AG4-AG9 provide additional guidance on the definitions in this Standard.

Terms defined in other IPSAS are used in this Standard with the same meaning as in those Standards, and are reproduced in the *Glossary of Defined Terms* published separately.

[1] In this Standard, the term resources includes goods, services, and other assets, and may encompass cash or non-current assets.

Identifying the Transfer Expense Transaction

8. **An entity accounts for a transfer based on whether or not the transaction results in the recognition of an asset. When a transfer results in the recognition of an asset, the asset is derecognized when (or as) the entity's rights from the transfer arrangement are extinguished.[2] For transfers which do not result in the recognition of an asset, a transfer expense is recognized:**

   (a) **When the entity loses control of the transferred resources; or**

   (b) **When the entity has incurred an obligation to transfer resources and recognizes a liability for the obligation.**

   The identification of whether the transaction arises from a binding arrangement impacts this determination, as the rights and obligations from a binding arrangement provide inputs into the assessment of the asset recognition criteria and whether an obligation to transfer resources exists.

9. An entity will apply the guidance on recognition and measurement in this Standard as follows:

   (a) Transfer expenses from transactions without binding arrangements (hereby referred to as transfer expenses without binding arrangements) are accounted for using paragraphs 18-20; and

   (b) Transfer expenses from transactions with binding arrangements (hereby referred to as transfer expenses with binding arrangements) are accounted for using paragraphs 21-43.

   Paragraph AG10 provides additional guidance on identifying the transfer expense transaction.

Binding Arrangements and Enforceability

10. **For an arrangement to be binding, it must be enforceable through legal or equivalent means. Enforceability can arise from various mechanisms, so long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the binding arrangement and hold the parties accountable for the satisfaction of stated obligations.**

11. In determining whether an arrangement is enforceable, the entity considers the substance rather than the legal form of the arrangement. The assessment of whether an arrangement is enforceable is based on an entity's ability to enforce the specified terms and conditions of the arrangement and the satisfaction of the other parties' stated obligations.

12. A binding arrangement includes both rights and obligations that are enforceable for two or more of the involved parties. Each party's enforceable right and obligation within the binding arrangement are interdependent and inseparable.

13. Binding arrangements can be evidenced in several ways. A binding arrangement can be written, oral or implied by an entity's or a sector's customary practices. The practices and processes for establishing binding arrangements with transfer recipients vary across legal jurisdictions, sectors, and entities. In addition, they may vary within an entity (for example, they may depend on the class of transfer recipient or third-party beneficiary, or the nature of the promised goods or services). An entity shall consider those practices and processes in determining whether and when an agreement with a transfer recipient creates enforceable rights and obligations.

14. A binding arrangement has at least one obligation because its enforceability holds the entity accountable for satisfying the stated obligations of the arrangement, and the accountability imposes little or no realistic alternative for the entity to avoid the transfer of resources.

[2] The asset may be derecognized at a point in time or over a period of time depending on the terms of the arrangement.

15. When the binding arrangement is wholly unsatisfied, an entity shall not recognize any asset, liability, or expense associated with the binding arrangement. The recognition of assets, liabilities, and expenses commences when one party to the binding arrangement starts to satisfy its obligations under the arrangement.

16. A binding arrangement is wholly unsatisfied if both of the following criteria are met:

    (a) The entity has not yet paid, and is not yet obligated to pay, any consideration to the transfer recipient for the transfer recipient satisfying any of its compliance obligations in the binding arrangement; and

    (b) The transfer recipient has not started satisfying any of its compliance obligations in the binding arrangement.

    Paragraphs AG11-AG29 provide additional guidance on enforceability and binding arrangements.

Combination of Binding Arrangements

17. An entity shall combine two or more binding arrangements entered into at or near the same time with the same transfer recipient (or related parties of the transfer recipient) and account for the binding arrangements as a single binding arrangement if one or more of the following criteria are met:

    (a) The binding arrangements are negotiated as a package with a single objective;

    (b) The amount of resources to be transferred in one binding arrangement depends on the consideration or performance of the other binding arrangement; or

    (c) The transfer recipient's obligations under the binding arrangements (or some of the transfer recipient's obligations under each of the binding arrangements) are a single transfer right in accordance with paragraph 21.

Transfer Expenses from Transactions without Binding Arrangements

Recognition

18. **For transfer expenses without binding arrangements, an entity shall recognize expenses as follows:**

    (a) **At the point when a constructive obligation or legal obligation to transfer resources arises and results in the recognition of a provision in accordance with paragraph 22 of IPSAS 19. In such cases, the recognition of the provision results in the recognition of an expense, and the subsequent transfer of resources settles the recognized provision; or**

    (b) **If a constructive or legal obligation to transfer resources does not exist, when the entity ceases to control the resources; this will usually be the date at which it transfers the resources to the transfer recipient. In such cases, the entity derecognizes the resources it ceases to control in accordance with other Standards.**

    Paragraph AG30 provides additional guidance on the derecognition of the transferred resources.

Measurement

19. **When a provision is recognized in the situation described by paragraph 18(a), the provision is initially and subsequently measured in accordance with paragraphs 44-72 of IPSAS 19.**

20. **When an entity recognizes an expense at the time it ceases to control the resources, the entity shall measure the expense at the carrying amount of the transferred resources.**

Transfer Expenses from Transactions with Binding Arrangements

Identifying Transfer Rights

21. **At the inception of a binding arrangement to transfer resources, an entity shall consider its rights in the binding arrangement and shall identify each distinct transfer right as:**

    (a) **A right to have the transfer recipient satisfy an obligation that is separate from the satisfaction of other obligations in the binding arrangement; or**

    (b) **A series of rights to have the transfer recipient satisfy its obligation that have substantially the same characteristics and risks and that have the same pattern of satisfaction.**

    Paragraphs AG31-AG34 provide additional guidance on identifying transfer rights.

Recognition of Transfer Expenses

22. When (or as) an entity transfers resources in accordance with a binding arrangement prior to the transfer recipient satisfying its obligations, the transferred resources are derecognized, and a transfer right asset is recognized for the transfer rights arising from the binding arrangement.

    Paragraph AG30 provides additional guidance on the derecognition of the transferred resources.

23. Conversely, when (or as) a transfer recipient satisfies its obligations in the binding arrangement prior to the entity transferring resources, the arrangement gives rise to a transfer obligation for the entity. The existence of a transfer obligation results in the recognition of a transfer obligation liability. A transfer obligation liability is also recognized when it is more likely than not that a present obligation exists for the transfer of variable consideration (see paragraphs 35-37).

24. **For transfer expenses with binding arrangements, an entity shall recognize expenses:**

    (a) **When (or as) a transfer right asset is derecognized; or**

    (b) **When a transfer obligation liability is recognized.**

25. The derecognition of the transfer right asset results from the extinguishment of the transfer rights in accordance with the terms of the binding arrangement. For each transfer right identified in paragraph 21, the transfer right is extinguished when (or as) the entity no longer has enforceable rights in accordance with the binding arrangement.

    Paragraphs AG35-AG49 provide additional guidance on the recognition of transfer expenses.

Derecognition of a Transfer Right Asset Due to Non-Performance by the Transfer Recipient

26. After the recognition of a transfer right asset by the entity, the transfer recipient may become unable or unwilling to satisfy its obligations under the binding arrangement. Where the entity has an enforceable and unconditional right to the receipt of cash or other financial assets arising from the terms of the binding arrangement, the legal system in the jurisdiction, and/or other circumstances, the entity shall derecognize the transfer right asset and recognize a financial asset. Subsequent to its recognition, the entity shall measure the financial asset in accordance with IPSAS 41. (See paragraph 43 for situations where a transfer right asset still exists but is impaired.)

Modifications to a Binding Arrangement

27. A modification to a binding arrangement is a change in the rights and obligations of a binding arrangement that is approved by the parties to the binding arrangement. A modification to a binding arrangement exists when the parties to a binding arrangement approve a modification that either creates new enforceable rights and obligations, or changes the existing enforceable rights and obligations of the parties to the binding

arrangement. A modification to a binding arrangement could be approved in writing, by oral agreement, or implied by an entity's customary practices. If the parties to the binding arrangement have not approved a modification to a binding arrangement, an entity shall continue to apply this Standard to the original binding arrangement until the modification to the binding arrangement is approved.

28. An entity shall account for a modification to a binding arrangement as a separate binding arrangement if both of the following conditions exist:

    (a) The scope of the binding arrangement increases, providing the entity with one or more additional transfer rights (see paragraphs AG31-AG34), because the transfer recipient accepts one or more additional obligations, or an increase in one or more existing obligations; and

    (b) The transfer consideration increases by an amount that is intended to reflect the value of the additional transfer rights by compensating the transfer recipient for the additional or increased obligations assumed.

29. If a modification to a binding arrangement is not accounted for as a separate binding arrangement in accordance with paragraph 28, an entity shall account for the modification to the binding arrangement as if it were a part of the original binding arrangement. The entity shall determine the accumulated transfer expense to be recognized as at the date of the modification by revising its estimates of the transfer consideration and the amount of the transfer consideration allocated to extinguished and unextinguished transfer rights. The difference between the accumulated transfer expense determined as at the date of the modification and the accumulated transfer expense previously recognized shall be recognized in surplus or deficit as at the date of the modification.

Measurement

30. **An entity shall consider the terms of the binding arrangement to determine the transfer consideration. Transfer consideration is the total carrying amount of the resources which an entity has transferred, or is obligated to transfer, to the transfer recipient in accordance with the binding arrangement and includes the effects of variable consideration (see paragraphs 35-37).**

31. **When an entity transfers resources to a transfer recipient prior to the transfer recipient starting to satisfy its obligation, the entity shall, at recognition, measure the resulting transfer right asset at the total carrying amount of the resources which have been transferred in accordance with the binding arrangement.**

32. **When a transfer expense is recognized from the extinguishment of a transfer right, the transfer expense is measured at the amount of the transfer consideration that is allocated to the extinguished transfer right in accordance with paragraph 38.**

33. **When the transfer recipient has satisfied its compliance obligations and the entity has not yet transferred its resources as required by the binding arrangement, the entity measures its transfer obligation liability at the total carrying amount of the resources which the entity is obligated to transfer in accordance with the binding arrangement.**

34. To determine the transfer consideration, an entity shall assume that the transfer recipient will satisfy its obligations in accordance with the existing binding arrangement and that the binding arrangement will not be cancelled, renewed, or modified.

Variable Consideration

35. The resources required to be transferred by a binding arrangement can vary for items such as discounts, rebates, refunds, credits, price concessions, incentives, performance bonuses, penalties, or other similar items. The resources can also vary if the entity's obligation to transfer the resources is contingent on the

occurrence or non-occurrence of a future event. For example, an additional amount of funds may become payable to the transfer recipient if it satisfies its obligations in the binding arrangement within a specified period.

36. For a transfer expense transaction, variable consideration in a binding arrangement may result in a liability of uncertain timing or amount, which meets the definition of a provision in IPSAS 19.

37. If the entity has determined that it is more likely than not that a present obligation exists for the transfer of variable consideration, the entity shall estimate an amount of variable consideration that is initially and subsequently measured in accordance with paragraphs 44-72 of IPSAS 19.

Allocating the Transfer Consideration to Transfer Rights

38. **When a binding arrangement involves multiple distinct transfer rights, the transfer consideration shall be allocated to each distinct transfer right to reflect its stand-alone consideration, adjusted for amounts of variable consideration.**

39. Variable consideration that is agreed in a binding arrangement may be attributable to the entire binding arrangement or to specific transfer rights. An entity shall allocate variable consideration as follows:

    (a) When the variable consideration can be identified with one or more transfer rights, the variable consideration shall be allocated to those transfer rights in accordance with paragraph 38; or

    (b) When the variable consideration cannot be identified with one or more transfer rights, the entity shall allocate the variable consideration to all the transfer rights proportionately to their share of the transfer consideration (excluding variable consideration that cannot be identified with one or more transfer rights).[3]

    Paragraphs AG50-AG51 provide additional guidance on allocating the transfer consideration to transfer rights.

Changes in the Transfer Consideration

40. After the inception of the binding arrangement, the transfer consideration can change for various reasons, including the resolution of uncertain events or other changes in circumstances that change the amount of consideration which an entity is obligated to pay in the binding arrangement.

41. For a change in transfer consideration that did not arise from a modification to the binding arrangement, an entity shall allocate to the transfer right assets and transfer obligation liabilities in the binding arrangement any subsequent changes in the transfer consideration on the same basis as at the inception of the binding arrangement. Amounts allocated to an extinguished transfer right shall be recognized as an expense, or as a reduction of an expense, in the period in which the transfer consideration changes.

42. An entity shall account for a change in the transfer consideration that arises from a modification to the binding arrangement in accordance with paragraphs 27-29.

Impairment of a Transfer Right Asset

43. After the recognition of a transfer right asset by the entity, the transfer recipient may become unable or unwilling to satisfy its obligations under the binding arrangement. When this occurs, and the terms of the binding arrangement, the legal system in the jurisdiction, and/or other circumstances do not support the recognition of a financial asset as noted in paragraph 26, the entity shall assess the transfer right asset for impairment in accordance with IPSAS 21, *Impairment of Non-Cash-Generating Assets*.

[3] This guidance is also applicable to a specific portion of variable consideration that can or cannot be identified with one or more transfer rights.

Presentation

Display

44. **For transfer expenses from transactions without binding arrangement, if an entity recognizes a provision for a constructive or legal obligation to transfer resources, the resulting provision is presented in accordance with the presentation requirements for provisions in paragraphs 88, 94, and 107 of IPSAS 1.**

45. **For transfer expenses from transactions with binding arrangements, when only one party to a binding arrangement has performed and the other parties have yet to perform, an entity shall present the binding arrangement in the statement of financial position as a transfer right asset or transfer obligation liability, based on the guidance in paragraphs 22-23.**

46. An entity shall present a transfer right asset in accordance with the presentation guidance for prepayment assets in paragraphs 76, 90, 91, and 94 of IPSAS 1.

47. When a transfer right asset has been derecognized for non-performance and a financial asset has been recognized (see paragraph 26), the entity presents the financial asset in accordance with the requirements in IPSAS 28, *Financial Instruments: Presentation*.

48. An entity shall present a transfer obligation liability in accordance with the presentation guidance for transfers payable in paragraphs 80 and 88 of IPSAS 1.

49. As required by paragraph 109 of IPSAS 1, an entity shall present, either on the face of the statement of financial performance or in the notes, an analysis of expenses using a classification based on the nature of expenses or their function within the entity. Paragraph 111 of IPSAS 1 also requires the subclassification of expenses to highlight the costs and cost recoveries of particular programs, activities, or other relevant segments of the reporting entity. In the context of transfer expenses, the analysis of expenses by nature results in the presentation of transfer expenses as a separate line item, while the analysis of expenses by function results in the allocation of transfer expenses to the various programs or purposes for which the transfers were made.

    Paragraph AG52 provides additional guidance on the presentation and disclosure of transfer expenses.

Disclosure

50. **The objective of the disclosure requirements is for the entity to disclose sufficient information to enable users of financial statements to understand the nature, amount, timing, and uncertainty of expenses and cash flows arising from transfer expense transactions. To achieve that objective, the entity shall disclose qualitative and quantitative information about all of the following:**

    (a) **Transfer expenses and related balances (see paragraphs 53-58);**

    (b) **Transfer arrangements (see paragraphs 59-60); and**

    (c) **The significant judgments, and changes in the judgments, made regarding the recognition of transfer right assets from transfer expense transactions (see paragraph 61).**

51. In making the disclosures required by this Standard, an entity shall consider the requirements of paragraphs 45-47 of IPSAS 1 which provide guidance on materiality and aggregation. A specific disclosure requirement in this Standard need not be satisfied if the information is not material.

52. An entity shall consider the level of detail necessary to satisfy the disclosure objective and how much emphasis to place on each of the various requirements. An entity shall aggregate or disaggregate disclosures so that useful information is not obscured by either the inclusion of a large amount of insignificant detail or the aggregation of items that have substantially different characteristics.

Transfer Expenses and Related Balances

53. As noted in paragraph 49, an entity shall incorporate transfer expenses in the analysis of expenses required by IPSAS 1. This analysis can be presented on the face of the statement of financial performance or disclosed in the notes.

    Paragraph AG52 provides additional guidance on the presentation and disclosure of transfer expenses.

54. In addition to the analysis of expenses, an entity shall provide qualitative and quantitative information on the significant transfers arising from transactions with and without binding arrangements to enable users to understand how the entity's resources are spent on its programs, activities, and services.

55. When a transfer right asset has been derecognized for non-performance and a financial asset has been recognized (see paragraph 26), the entity applies the disclosure requirements for financial assets from IPSAS 30, *Financial Instruments: Disclosures*.

56. A transfer obligation liability which arises from an obligation to transfer cash meets the definition of a financial liability measured at amortized cost. Therefore, the disclosure requirements from IPSAS 30 for payables are applicable to such liabilities.

57. If a liability has been recognized for variable consideration (see paragraphs 35-37), an entity shall apply the disclosure requirements applicable to provisions in IPSAS 19.

58. For transfers from transactions without binding arrangements, when a liability is recognized for a legal or constructive obligation to transfer resources, an entity shall apply the disclosure requirements applicable to provisions in IPSAS 19.

Transfer Arrangements

59. An entity shall disclose information about its transfer binding arrangements, including a description of the following:

    (a) The purpose of the transfer binding arrangements;

    (b) Significant payment terms;

    (c) The nature of the resources that have been or will be transferred; and

    (d) Significant risks and uncertainties relating to the realization of transfer rights assets.

    The above information can be aggregated for binding arrangements that are of a similar nature.

60. An entity may enter an arrangement for a transfer that is not a binding arrangement. For such arrangements, an entity shall disclose the following:

    (a) The purpose of the transfer arrangements;

    (b) Significant payment terms, if any; and

    (c) The nature of the resources that have been or will be transferred.

    The above information can be aggregated for arrangements that are of a similar nature.

Significant Judgments, and Changes in Judgments, Made Regarding the Recognition of Transfer Right Assets from Transfer Expense Transactions

61. An entity shall disclose the significant judgments, and changes in judgments, made regarding the recognition of transfer right assets from transfer expense transactions. In particular, an entity shall explain the basis for the recognition of its transfer right assets.

Effective Date and Transition

Effective Date

62. **An entity shall apply this Standard for annual financial statements covering periods beginning on or after January 1, 2026. Earlier application is permitted. If an entity applies this Standard for a period beginning before January 1, 2026, it shall disclose that fact and shall apply IPSAS 47, *Revenue*, at the same time.**

63. When an entity adopts accrual basis IPSAS Standards as defined in IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards*, for financial reporting purposes subsequent to this effective date, this Standard applies to the entity's annual financial statements covering periods beginning on or after the date of adoption of IPSAS Standards.

Transition

64. **An entity shall apply this Standard using one of the following two methods:**

    (a) **Prospectively to transfers occurring on or after the date of initial application arising from transactions with and without binding arrangements; or**

    (b) **Retrospectively to each prior reporting period presented in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.**

Appendix A

Application Guidance

This Appendix is an integral part of IPSAS 48.

AG1. This application guidance is organized into the following categories:

(a) Scope (paragraphs AG2-AG3);

(b) Definitions (paragraphs AG4-AG9);

(c) Identifying the Transfer Expense Transaction (paragraph AG10);

(d) Binding Arrangements and Enforceability (paragraphs AG11-AG29);

(e) Derecognition of the Transferred Resources (paragraph AG30);

(f) Identifying Transfer Rights (paragraphs AG31-AG34);

(g) Recognition of Transfer Expenses from Transactions with Binding Arrangements (paragraphs AG35-AG49);

(h) Allocating the Transfer Consideration to Transfer Rights (paragraphs AG50-AG51); and

(i) Presentation: Display and Disclosure (paragraph AG52); and

(j) Application of Principles to Specific Transactions (paragraphs AG53-AG55).

Scope (paragraphs 3-5)

AG2. The scope of this Standard is focused on establishing principles and requirements when accounting for transfer expenses, where an entity provides a good, service, or other asset to another entity without directly receiving any good, service, or other asset in return.

AG3. This Standard does not address transactions where an entity receives any good, service, or other asset in return for the good, service, or other asset that it transfers to another party. Such transactions are accounted for in accordance with other Standards.

Definitions (paragraphs 6-7)

Binding Arrangement

AG4. An entity shall consider the terms of the transfer, and all relevant facts and circumstances, when applying this Standard. An entity shall apply this Standard, including the use of any practical expedients, consistently to transfers with similar characteristics and in similar circumstances.

Transfer Expense

AG5. This Standard defines a transfer expense as an expense arising from a transaction, other than taxes, in which the transfer provider (the entity) provides a good, service, or other asset to another entity (the transfer recipient, which may be a public sector entity, a not-for-profit organization, or an individual) without directly receiving any good, service, or other asset in return.

AG6. As noted in paragraph AG9, a transfer right asset is not considered a good, service, or other asset that is received directly from the transfer recipient.

Transfer Obligation and Transfer Obligation Liability

AG7. Binding arrangements confer rights and obligations on the parties to the arrangement. This Standard refers to the entity's obligations from a binding arrangement to transfer resources as transfer obligations. The liability recognized for the existence of one or more transfer obligations arising from a binding arrangement is referred to as a transfer obligation liability.

Transfer Recipient

AG8. A transfer recipient is an entity (which may be a public sector entity, a not-for-profit organization, an individual or another entity) that receives a good, service, or other asset from the transfer provider without directly providing any good, service, or other asset to that entity. While the transfer recipient does not provide any good or service to the entity, it may provide a good or service to a third-party beneficiary in accordance with a binding arrangement between the transfer recipient and the entity.

Transfer Right and Transfer Right Asset

AG9. An entity's transfer right is the enforceable right to have the transfer recipient satisfy its obligations and arises where the entity has transferred resources to the transfer recipient in accordance with a binding arrangement prior to the transfer recipient satisfying its obligations within the binding arrangement. A transfer right asset is not a good, service, or other asset to be directly received by the entity in return for transferring resources to the transfer recipient because:

(a) A transfer right asset is not a good or service;

(b) The transfer right asset arises because of timing differences between the satisfaction of respective obligations in a binding arrangement, not as a result of any transfer to the entity.

(c) The transfer right asset is not consideration to be provided by the transfer recipient in return for the entity transferring resources to the transfer recipient. It is the enforceable right for the satisfaction by the transfer recipient of its obligations in the binding arrangement.

Identifying the Transfer Expense Transaction (paragraphs 8-9)

AG10. This Standard specifies the accounting for an individual transfer. However, as a practical expedient, an entity may apply this Standard to a portfolio of transfers with similar characteristics if the entity reasonably expects that the effects on the financial statements of applying this Standard to the portfolio would not differ materially from applying this Standard to the individual transfers within that portfolio. Transfers without binding arrangements and transfers with binding arrangements do not have similar characteristics and are not accounted for in the same portfolio. When accounting for a portfolio, an entity shall use estimates and assumptions that reflect the size and composition of the portfolio.

Binding Arrangements and Enforceability (paragraphs 10-16)

Binding Arrangement

AG11. A binding arrangement is an arrangement that confers both enforceable rights and obligations on the parties to the arrangement. Each party in the binding arrangement willingly enters into the arrangement and is able to enforce its respective rights and obligations in the arrangement.

AG12. Binding arrangements can be evidenced in several ways. A binding arrangement is often, but not always, in writing, in the form of a contract or documented discussions between the parties. The binding arrangement may arise from legal contracts or through other equivalent means such as statutory mechanisms (for example, through legislative or executive authority and/or cabinet or ministerial directives). Legislative or

executive authority can create enforceable arrangements, similar to contractual arrangements, either on their own or in conjunction with legal contracts between the parties.

AG13. In accordance with paragraph 11, the assessment of whether an arrangement is enforceable is based on an entity's ability to enforce the specified terms and conditions of the binding arrangement and the satisfaction of the other parties' stated obligations. Consequently, an entity's intentions about enforcing the binding arrangement do not affect the existence of a binding arrangement unless these intentions have been communicated to the transfer recipient such that they affect the enforceability of the binding arrangement.

AG14. Binding arrangements confer both rights and obligations on the parties to the arrangement. This Standard refers to the entity's obligations as transfer obligations. The entity also has rights to have the transfer recipient satisfy its obligations. This Standard refers to these rights as transfer rights.

Enforceability

AG15. The interdependent rights and obligations in an arrangement must be enforceable to meet the definition of a binding arrangement. Enforceability can arise from various mechanisms, so long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the arrangement and hold the involved parties accountable for the satisfaction of stated obligations. An entity should determine whether an arrangement is enforceable based on whether the entity has the ability to enforce the rights and the obligations. The entity's assessment of enforceability occurs at inception and when a significant external change indicates that there may be a change in the enforceability of that arrangement.

AG16. Since enforceability can arise from various mechanisms, an entity should objectively assess all relevant factors to determine whether an arrangement is enforceable. In some jurisdictions, public sector entities cannot enter into legal obligations, because they are not permitted to contract in their own name, but there are alternative processes with equivalent effect to legal arrangements (described as enforceable through equivalent means). For an arrangement to be enforceable through 'equivalent means', the presence of an enforcement mechanism outside the legal systems, that is similar to the force of law without being legal in nature, is required to establish the right of the entity to obligate the transfer recipient to complete the agreed obligation or be subject to remedies for non-completion. Similarly, a mechanism outside the legal system, that is similar to the force of law without being legal in nature, is required to establish the right of the transfer recipient to obligate the entity to pay the agreed consideration. Thus, an entity should identify and assess all relevant factors by considering legal or equivalent means by which the involved parties enforce each of the respective rights and obligations under the arrangement.

AG17. In the public sector, an arrangement is enforceable when each of the involved parties is able to enforce its respective rights and obligations. An arrangement is enforceable by another party if the agreement includes:

(a) Distinct rights and obligations for each involved party; and

(b) Remedies for non-completion by either party which can be enforced through the identified enforcement mechanisms.

AG18. When an entity assesses enforceability, the entity should consider how the identified mechanisms of enforceability impose implicit or explicit consequences on any party or parties that do not satisfy their agreed-upon obligation(s) in the arrangement. If the entity is not able to determine how the mechanisms of enforceability identified at inception would in substance enable the entity to hold the other involved parties accountable for satisfying their stated obligation(s) in cases of non-completion, then the arrangement is not enforceable and does not meet the definition of a binding arrangement.

AG19. Enforceability arises from the compulsion by a legal system, including through legal means (enforced in the courts in a jurisdiction, as well as judicial rulings and case law precedence to comply with the terms of the

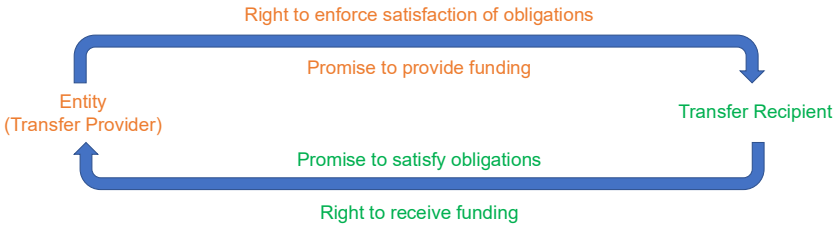
arrangement) or compliance through equivalent means (laws and regulations, including legislation, executive authority, cabinet or ministerial directives).

AG20. Executive authority (sometimes called an executive order) is an authority given to a member or selected members of a government administration to create legislation without ratification by the full parliament. This may be considered a valid enforcement mechanism if such an order was issued directing an entity to satisfy the agreed-upon obligations in the arrangement.

AG21. Cabinet and ministerial directives may create an enforcement mechanism between different government departments or different levels of government of the same government structure. For example, a directive given by a minister or government department to an entity controlled by the government to satisfy the agreed-upon obligations in the arrangement may be enforceable. Each party must be able to enforce both the rights and obligations conferred on them in the arrangement to meet the definition of a binding arrangement. Each party must have the ability and authority to compel the other party or parties to satisfy the promises established within the arrangement or to seek redress should those promises not be satisfied.

AG22. Sovereign rights are the authority to make, amend and repeal legal provisions. On its own, this authority does not establish enforceable rights and obligations for the purposes of applying this Standard. However, if the use of sovereign rights were detailed in the arrangement as a means of enforcing the satisfaction of agreed-upon obligations by an entity, this may result in a valid enforcement mechanism.

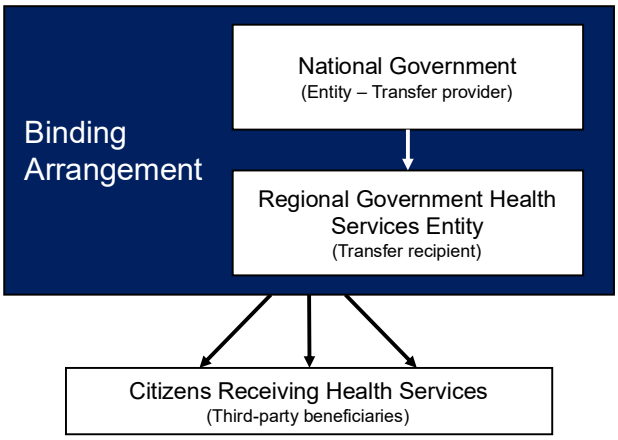
AG23. A transfer recipient may feel compelled to deliver on the obligations in an arrangement because of the risk that it might not receive future funding from the entity. In general, the entity's ability to reduce or withhold future funding to which the transfer recipient is not presently entitled would not be considered a valid enforcement mechanism in the context of this Standard because there is no obligation on the entity to provide such funding. However, if the transfer recipient is presently entitled to funding in the future through another binding arrangement, and the terms of this other binding arrangement specifically allow for a reduction in the future funding if other arrangements are breached, then the potential reduction in future funding could be considered a valid enforcement mechanism.



AG24. When determining if a reduction of future funding would be an enforcement mechanism, the entity shall apply judgment based on the facts and circumstances. Key factors that may indicate the entity would reduce future funding in the event of a breach of promises made in another binding arrangement are the entity's ability to reduce future funding and its past history of doing so.

AG25. A statement of intent or public announcement by an entity such as a government promise to spend money or deliver goods or services in a certain way is not, in and of itself, an enforceable arrangement for the purposes of this Standard. Such a declaration is general in nature and does not create a binding arrangement between an entity and a transfer recipient under which both parties have rights and obligations. An entity considers whether such a public announcement gives rise to a non-legally binding (constructive) obligation in accordance with IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*.

Parties in a Binding Arrangement



AG26. Arrangements in the public sector often include two or more parties. For the arrangement to meet the definition of a binding arrangement for the purposes of this Standard, at least two of the parties to the arrangement must have their own rights and obligations conferred by the arrangement, and the ability to enforce these rights and obligations.

AG27. That is, at a minimum, the entity must be able to enforce satisfaction of the obligations assumed by the entity receiving the consideration, and the entity receiving the consideration (transfer recipient) must be able to enforce the promise to receive funding (consideration). The minimum two-way enforceability in a binding arrangement is illustrated in the diagram below:

AG28. Parties noted within a binding arrangement that do not have enforceable rights and obligations are third-party beneficiaries. Third-party beneficiaries in multi-party binding arrangements do not have any rights to force the transfer recipient to deliver goods and services.

AG29. However, for these multi-party arrangements to be classified as transfer expenses with binding arrangements, the entity must have the ability to compel the transfer recipient to deliver goods, services, or other assets to the third-party beneficiaries. In these multi-party arrangements, the transfer recipient is not an agent of the entity because the transfer recipient gains control of the resources from the entity and is responsible for providing goods, services, or other assets to the third-party beneficiaries. This relationship is illustrated in the following diagram.

Derecognition of the Transferred Resources (paragraphs 18 and 22)

AG30. For both transfer expenses transactions with and without binding arrangements:

(a) Prior to the transfer of a non-financial asset to a transfer recipient, the entity should consider paragraph 27(d) of IPSAS 21, *Impairment of Non-Cash-Generating Assets*, to determine if there has been a significant change in use of the non-financial asset, which could be an indication of impairment;

(b) The consideration in paragraph AG30(a) does not apply to financial assets to be transferred, as the potential impairment of financial assets is assessed continuously in accordance with the requirements of IPSAS 41, *Financial Instruments*; and

(c) When the transferred resources are derecognized, an entity should apply the derecognition guidance from other Standards that are applicable to the assets which have been transferred.

Identifying Transfer Rights (paragraph 21)

AG31. Transfer rights provide the basis of the timing of recognition for transfer expenses. This Standard requires transfer expenses with binding arrangements to be recognized as or when a transfer right is extinguished, and therefore requires the entity to allocate the transfer consideration to transfer rights.

AG32. A transfer right is identified as a distinct right that can be enforced separately from other rights in the binding arrangement. Typically, from the entity's perspective, whether a transfer right is distinct will be evident from the negotiations of the binding arrangement.

AG33. The entity shall aggregate related rights until the aggregation produces a distinct right that can be enforced separately. This aggregation is identified as a transfer right.

AG34. In some binding arrangements, it may not be possible to identify aggregations of rights to have the transfer recipient satisfy its obligations that are distinct. In such cases, the entity shall identify the binding arrangement as a single transfer right.

Recognition of Transfer Expenses from Transactions with Binding Arrangements (paragraphs 22-25)

Recognition at Inception of a Binding Arrangement

AG35. In accordance with paragraph 15, at the inception of a binding arrangement and when the binding arrangement is wholly unsatisfied, an entity shall not recognize any asset, liability, or expense associated with the binding arrangement. The transfer rights and transfer obligations under a wholly unsatisfied binding arrangement are interdependent and inseparable. The combined transfer rights and transfer obligations constitute a single asset or liability that is measured at zero.

AG36. Individual transfer rights and transfer obligations are recognized as items (assets, liabilities and expenses depending on their nature) only when or as one or more parties to the binding arrangement satisfy their stated obligations. An entity shall account for these items in accordance with paragraphs 22-25.

AG37. Where parts of the binding arrangement remain equally unsatisfied, the entity shall not recognize any asset, liability, or expense for the equally unsatisfied parts of the binding arrangement. Such equally unsatisfied parts of the binding arrangement continue to constitute a single asset or liability that is measured at zero.

Derecognition of the Transfer Right Asset

AG38. Typically, a transfer recipient's satisfaction (or lack of satisfaction) of its obligations can serve as an indicator for whether the entity continues to have enforceable rights under the binding arrangement. When the transfer recipient satisfies its obligations, the entity's corresponding transfer right is extinguished.

AG39. A binding arrangement may specify that as the transfer recipient satisfies its obligations, the entity's transfer rights are reduced accordingly. This will result in the gradual derecognition of the transfer right asset and the recognition of an expense in a similar pattern as when the transfer recipient satisfies its obligations. In these situations, an entity shall consider if it can reliably estimate the transfer recipient's progress towards complete satisfaction of its obligations in the binding arrangement. If the entity cannot reliably estimate the transfer recipient's progress towards complete satisfaction of its obligations, the transfer right asset shall be expensed immediately.

AG40. Methods for measuring progress towards complete extinguishment of a transfer right may include surveys of performance completed to date, appraisals of results achieved, milestones reached, time elapsed and units produced or delivered. When an entity evaluates whether to apply a particular method to measure progress towards complete extinguishment of a transfer right, the entity shall consider whether the method selected would faithfully depict the reduction of a transfer right in accordance with the terms of the binding arrangement. A method would not provide a faithful depiction of the progress towards complete

extinguishment of a transfer right if the method selected would fail to measure some aspects of the binding arrangement. For example, in arrangements where a transfer right is extinguished as the transfer recipient satisfies its obligations, methods based on elapsed time would not faithfully depict the transfer recipient's satisfaction of obligations if its performance involved goods or services that are not delivered evenly over time. In evaluating whether to apply a particular method to measure a transfer recipient's progress, an entity should apply judgment.

AG41. In some situations, a transfer right asset may be derecognized when the transfer recipient is unable or unwilling to satisfy its obligations in a binding arrangement. (See paragraph 26). A transfer right asset may also be derecognized if changes in facts and circumstances indicate that the arrangement is no longer binding. (See paragraph AG15).

AG42. If the entity and the transfer recipient both satisfy their obligations from the binding arrangement at the same time, the entity's transfer right will no longer exist at the time of transfer, and an expense is recognized upon the transfer of resources.

Recognition of a Transfer Obligation Liability

AG43. If the transfer recipient has satisfied its obligations and the entity has not yet transferred its resources as required by the binding arrangement, the entity typically no longer has any enforceable rights within the binding arrangement. In these situations, the terms of the binding arrangement, as well as the laws and regulations that apply to the binding arrangement, will typically grant the transfer recipient the enforceable right to payment for the satisfaction of the obligation completed to date. As the transfer recipient has already satisfied its obligations, the obligation to transfer resources is unconditional and the nature of the liability is similar to a payable. Therefore, the entity recognizes a transfer obligation liability and an expense for its transfer obligation, and the subsequent transfer of resources is a settlement of the recognized liability.

AG44. In many cases, a transfer recipient will have an unconditional right to payment only at an agreed-upon milestone or upon complete satisfaction of the obligation. In assessing whether a transfer recipient has a right to payment for satisfaction of the obligation completed to date, an entity shall consider whether the transfer recipient would have an enforceable right to demand or retain payment for satisfaction of its obligation completed to date if the binding arrangement were to be terminated before completion for reasons other than the transfer recipient's failure to satisfy its obligations as promised.

AG45. In some binding arrangements, an entity may or may not have a right to terminate the binding arrangement only at specified times during the life of the binding arrangement. If an entity acts to terminate a binding arrangement without having the right to terminate the binding arrangement at that time (including when the transfer recipient fails to satisfy its obligations as promised), the binding arrangement (or other laws) might entitle the transfer recipient to continue to satisfy its obligations and require the entity to pay the consideration promised in exchange for those obligations being satisfied. In those circumstances, a transfer recipient has a right to payment for satisfaction of its obligations completed to date because the transfer recipient has a right to continue to satisfy its obligations in accordance with the binding arrangement and to require the entity to satisfy its transfer obligations.

AG46. In assessing the existence and enforceability of a right to payment for performance completed to date, an entity shall consider the terms of the binding arrangement as well as any legislation or legal precedent that could supplement or override those terms of the binding arrangement.

AG47. The payment schedule specified in a binding arrangement does not necessarily indicate whether a transfer recipient has an enforceable right to payment for satisfaction of its obligations completed to date. Although the payment schedule in a binding arrangement specifies the timing and amount of consideration that is payable by an entity, the payment schedule might not necessarily provide evidence of the transfer recipient's right to payment for satisfaction of its obligations completed to date. This is because, for example, the binding

arrangement could specify that the consideration transferred by the entity is refundable for reasons other than the transfer recipient failing to satisfy its obligations as promised in the binding arrangement.

Interaction Between Transfer Right Assets and Transfer Obligation Liabilities

AG48. After recognition, the transfer right asset shall be increased by the carrying amount of additional resources transferred and decreased by the amount of expenses or any impairment recognized, until the carrying amount of the transfer right asset is zero. At that point, any further satisfaction of the transfer recipient's compliance obligations will result in the recognition of an expense and a transfer obligation liability.

AG49. After recognition, the transfer obligation liability shall be increased by the amount of additional expenses recognized and decreased by the carrying amount of resources transferred to the transfer recipient, until the carrying amount of the transfer obligation liability is zero. Any further transfer of resources to the transfer recipient at that point shall be recognized as a transfer right asset.

Allocating the Transfer Consideration to Transfer Rights (paragraphs 38-39)

AG50. Where a binding arrangement specifies the amount of stand-alone consideration for each transfer right, the transfer consideration shall be allocated to the transfer rights in accordance with the binding arrangement (adjusted, where necessary, for amounts of variable consideration).

AG51. Where a binding arrangement does not specify the amount of transfer consideration for each transfer right, the entity shall determine the amounts to be allocated to each transfer right based on its best estimates of the amounts that were intended to compensate the transfer recipient for satisfying its obligations when negotiating the binding arrangement.

Presentation: Display and Disclosure (paragraphs 44-61)

AG52. Paragraph 49 requires transfer expenses to be included in the analysis of expenses, either presented on the face of the statement of financial performance or disclosed in the notes. To meet this requirement and the disclosure objective in paragraph 50, an entity shall provide sufficient information in the analysis of expenses, along with a description of the nature of the entity's operations and principal activities as required by paragraph 150 of IPSAS 1, *Presentation of Financial Statements*, to enable users to understand how the entity's resources are spent on its programs, activities and services.

Application of Principles to Specific Transactions

Capital Transfers

AG53. This Standard defines a capital transfer as a transaction that arises from a binding arrangement where the entity provides cash or another asset with a specification that the transfer recipient acquires or constructs a non-financial asset that will be controlled by the transfer recipient. A capital transfer gives rise to at least one transfer right to the entity for the transfer recipient to satisfy its obligation to acquire or construct a non-financial asset or comply with non-compliance requirements as specified in the binding arrangement.

AG54. An entity shall account for a capital transfer transaction by applying paragraphs 21-25. An entity shall identify the transfer rights in the binding arrangement in accordance with paragraph 21 then separately account for each transfer right by applying paragraphs 22-25. In situations where an entity transfers resources prior to the acquisition or construction of the non-financial asset by the transfer recipient, upon the transfer of resources, the entity typically recognizes a transfer right asset, which is then expensed when the non-financial asset is acquired or as it is being constructed by the transfer recipient.

AG55. Some binding arrangements for capital transfers may include a transfer right for the acquisition or construction of a non-financial asset, which meets the definition of a capital transfer, and separate transfer rights for the operation of the asset, which would not meet the capital transfer definition. The entity determines

whether the binding arrangement includes one or more transfer rights relating to the operation of the asset by assessing whether the transfer consideration is intended to compensate the transfer recipient for the operation of the asset once constructed or acquired.

Appendix B

Amendments to Other IPSAS

[Deleted]

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 48.

Introduction

BC1. The primary objective of most public sector entities is to deliver services to the public, rather than to make profits and generate a return on equity to investors. For many governments, the delivery of services to the public through social benefits, collective and individual services, and transfer expenses accounts for a significant portion of their expenditures.

BC2. In March 2015, the IPSASB approved a project brief to develop the requirements for accounting for non-exchange expenses, other than social benefits. The project brief acknowledged that there has been little guidance on non-exchange transactions from the provider's perspective and that this area was a gap in the IPSASB's literature.

BC3. The IPSASB undertook a phased program of work to address non-exchange transactions from the provider's perspective, beginning with IPSAS 42, *Social Benefits*, which was issued in January 2019, then continuing with *Collective and Individual Services* (Amendments to IPSAS 19), issued in January 2020.

BC4. For the remaining non-exchange expenses, the IPSASB released a Consultation Paper (CP), *Accounting for Revenue and Non-Exchange Expenses*, in August 2017 to seek constituent views on potential recognition and measurement for both revenue and non-exchange expenses. The CP:

(a) Proposed replacing the then-current IPSAS dealing with revenue from exchange transactions and construction contracts with an IPSAS based on IFRS 15, Revenue from Contracts with Customers;

(b) Proposed updating IPSAS 23, Revenue from Non-Exchange Transactions (Taxes and Transfers) to address issues identified by users; and

(c) Considered recognition approaches for significant non-exchange expense transactions.

Development of Exposure Draft 72, Transfer Expenses *(ED 72)*

BC5. Based on constituents' feedback on the CP, the IPSASB developed ED 72The ED:

(a) Proposed a definition for transfer expense;

(b) Proposed the classification of transfer expenses based on whether the transfer recipient has at least one performance obligation; and

(c) Proposed accounting and disclosure requirements for:

(i) Transfer expenses without performance obligations; and

(ii) Transfer expenses with performance obligations, which were largely based on application of the Public Sector Performance Obligation Approach (PSPOA) and mirrored the accounting for revenue with performance obligations.

BC6. In February 2020, the IPSASB published ED 72, together with ED 70, *Revenue with Performance Obligations*, and ED 71, *Revenue without Performance Obligations*. The three EDs were released together to highlight the linkages between the accounting for revenue and transfer expenses.

Feedback from Constituents on ED 72

BC7. The IPSASB received a broad and diverse set of comment letters in response to ED 72. While the feedback indicated that some constituents supported the proposals, the following significant concerns were also identified:

(a) The distinction between transfer expenses with and without performance obligations appeared to be unnecessary or artificial, as there was no economic difference between these transactions from a transfer provider's perspective;

(b) The distinction based on performance obligations also did not reflect the way transfer expense transactions were carried out in the public sector, as under ED 72, only transfer expenses where the transfer recipient had at least one performance obligation could result in the recognition of an asset. Many respondents identified examples of transactions where they retained control over the transferred resources (and thus did not immediately derecognize the asset), even if the transfer did not involve performance obligations;

(c) The proposals in ED 72 required a transfer provider to consider the transaction from the transfer recipient's perspective and assumed that the transfer provider has access to information regarding the transfer recipient's performance obligations. Many respondents noted that this assumption is not realistic and will lead to practical difficulties in applying the proposed guidance;

(d) In ED 72, only transfer expenses with performance obligations could result in the recognition of an asset. Respondents noted that this accounting model did not necessarily achieve consistency in accounting principles, particularly with asset recognition principles in The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework); and

(e) The majority of respondents commented that because the proposed disclosures in ED 72 were based on the disclosure requirements from IFRS 15, they did not reflect the nature of transfer expenses, which have different characteristics and risks. Some respondents noted that the proposed disclosures would also impose an administrative burden that is disproportionate to any benefits for users.

Discussion with the IPSASB Consultative Advisory Group (CAG)

BC8. The IPSASB consulted the CAG at its December 2020 and June 2021 meetings on significant issues highlighted by respondents. CAG members provided input and advice that helped the IPSASB consider and address issues.

IPSASB's Response to Feedback on ED 72

BC9. In light of the responses to ED 72, the IPSASB decided not to proceed with the proposals in ED 72 and to revisit the proposed accounting and disclosures for transfer expenses to:

(a) Use the transfer provider's perspective when developing accounting and disclosure requirements;

(b) Move away from the PSPOA and the distinction between transfer expenses with and without performance obligations;

(c) Focus on whether the transfer results in the recognition of an asset when developing accounting requirements;

(d) Use binding arrangements as a fundamental concept for transfer expense accounting;

(e) Where appropriate, simplify presentation and disclosure requirements; and

(f) Revise the illustrative examples to reflect the above changes in the proposed accounting and disclosures for transfer expenses.

Scope (paragraphs 3-5)

BC10. When the IPSASB developed ED 72, the Board had noted that the main group of non-exchange expense transactions which were not already addressed by IPSAS 41, *Financial Instruments*, IPSAS 42 or the amendments to IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*, consisted of grants,

contributions, and other transfers. The IPSASB noted at the time that this group of transactions was covered by the definition of 'transfers' in the statistical reporting frameworks and that aligning the scope of ED 72 with the definition of 'transfers' in the statistical reporting frameworks would be consistent with the IPSASB's Policy Paper, *Process for Considering GFS Reporting Guidelines During Development of IPSAS*. As a result, the IPSASB agreed to align the scope of ED 72 with the definition of 'transfers' (see paragraph 6) in the statistical reporting frameworks. This scoping decision was retained in IPSAS 48, *Transfer Expenses*.

BC11. The IPSASB also decided that contributions from owners and distributions to owners did not meet the definition of transfers and were consequently outside the scope of IPSAS 48.

BC12. The IPSASB considered whether IPSAS 48 should explicitly state that onerous contracts are not applicable to transfer expenses and noted that when IPSAS 19 was developed from IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*, the definition of 'onerous contract' was modified to explicitly refer to the exchange of assets or services. Because transfer expenses are defined as transactions where an entity provides a good, service, or other asset without directly receiving any good, service, or other asset in return, the IPSASB concluded that transfer expenses could not meet the definition of an 'onerous contract'. Therefore, no explicit scope exclusion is required.

Definitions (paragraphs 6-7)

BC13. As noted in paragraph BC10, the IPSASB had decided to align the definition of 'transfer' with the definition in the statistical reporting frameworks. The *Government Finance Statistics Manual 2014* (GFSM 2014) defines a transfer as follows:

A transfer is a transaction in which one institutional unit provides a good, service, or asset to another unit without receiving from the latter any good, service, or asset in return as a direct counterpart.

BC14. Having agreed to use the GFSM 2014 definition of 'transfer' as the basis for the scope of ED 72, the IPSASB had agreed to base the definition of 'transfer expenses' in ED 72 on the GFSM definition. The IPSASB had agreed to adopt the term 'transfer expenses,' as the term 'transfers' had previously been used in IPSAS 23, where the term 'transfers' referred to inflows (i.e., revenue) only. In IPSAS 23, the term 'transfers' also excluded taxes, and the IPSASB had agreed to exclude taxes from the definition of 'transfer expenses' for consistency.

BC15. The definition of 'transfer expense' and the exclusion of taxes was retained in IPSAS 48, as the definition of 'transfer' in IPSAS 47, *Revenue*, also only referred to revenue and excluded taxes.

BC16. As noted in paragraph BC9, the IPSASB decided to revisit the proposed accounting model for transfer expenses. Based on the revisions, as explained in paragraphs BC20-BC30, the IPSASB agreed to define the following terms in IPSAS 48:

(a) Transfer obligation;

(b) Transfer obligation liability;

(c) Transfer right; and

(d) Transfer right asset.

BC17. IPSAS 48 complements IPSAS 47 and relies on certain definitions in IPSAS 47 where possible (see paragraph 7). In some cases, the switch in perspective from recognizing revenue to recognizing an expense required a modification to the definitions. Consequently, the IPSASB agreed to define the following additional terms in IPSAS 48:

(a) Stand-alone consideration; and

(b) Transfer consideration.

These definitions are based on the definitions of ‘stand-alone value’ and ‘transaction consideration’ in IPSAS 47.

BC18. This Standard refers to the party providing resources in a transfer expense transaction as the ‘transfer provider’, while IPSAS 47 refers to the party providing resources in a revenue transaction as the ‘resource provider’. The IPSASB considered whether the same term should be used in both Standards and decided that because the scope of IPSAS 47 is broader and encompasses revenue from transfers and other transactions, a more generic term (resource provider) should be used for revenue.

BC19. The IPSASB also considered the definition of ‘expenses’ in IPSAS 1, *Presentation of Financial Statements*, as well as the definition of ‘constructive obligation’ in IPSAS 19 and concluded that no changes were required. The IPSASB agreed to include cross-references to these definitions in IPSAS 48 (see paragraph 7 of IPSAS 48).

Identifying the Transfer Expense Transaction (paragraphs 8-9)

BC20. Based on the decision to revisit the general accounting model for transfer expenses, the IPSASB decided that the key transfer expense accounting principle is whether the transaction results in the recognition of an asset by the entity. Transfer transactions which do not result in the recognition of an asset are generally recognized as a transfer expense when the entity loses control of the transferred resources or when the entity has incurred an obligation to transfer resources. The IPSASB also decided that when the entity has incurred an obligation to transfer resources, it recognizes a liability and a transfer expense.

BC21. To operationalize the decisions in paragraph BC20, the IPSASB noted that whether the transaction arises from a binding arrangement provides inputs into the assessment of whether the asset recognition criteria is met and whether the entity has an obligation to transfer resources. Therefore, the IPSASB decided to move away from classification based on performance obligations and to classify transfer expenses based on whether they arise from transactions with or without binding arrangements.

Binding Arrangements and Enforceability (paragraphs 10-17)

BC22. The decision to classify transfer expenses based on whether or not the transfer expense arises from a binding arrangement is consistent with the decision on how revenue should be categorized. As outlined in the Basis for Conclusions in IPSAS 47, the IPSASB clarified the impact of binding arrangements and enforceability in IPSAS 47 and agreed that these clarifications also apply to transfer expenses.

BC23. This decision had the following impacts on the development of IPSAS 48:

(a) The definition of a ‘binding arrangement’ was carried over from IPSAS 47;

(b) The guidance on how to determine if an arrangement is enforceable through legal or equivalent means by considering all relevant factors and whether the arrangement meets the definition of a binding arrangement was also carried over;

(c) Enforceability is based on the entity’s ability to enforce the terms of the binding arrangement, including imposing non-compliance requirements on parties that do not fulfill their agreed-upon obligations;

(d) The assessment of enforceability for transfer expenses occurs at the inception of a binding arrangement and when a significant internal or external change indicates that there may be a change in enforceability;

(e) In a binding arrangement, each party will have at least one enforceable right and one obligation;

(f) For transfer expenses with binding arrangements, there is no initial recognition when none of the parties has started to satisfy its stated obligations under the binding arrangement;

(g) Because an entity's right and obligation within a binding arrangement are directly linked and interdependent, when both the entity and transfer recipient begin to perform in accordance with the binding arrangement, the resulting transfer right assets and transfer obligation liabilities arising from the same binding arrangement are presented as a single asset or liability in the statement of financial position; and

(h) Where a transfer expense arises from a transaction that is subject to an appropriation, the appropriation may limit the enforceability of the related arrangements and impact whether they are binding. The IPSASB noted that this conclusion results from the application of the principles on binding arrangements and enforceability, and therefore developed implementation guidance on how appropriations could impact transfer expense transactions.

Transfer Expenses from Transactions without Binding Arrangements (paragraphs 18-20)

BC24. The IPSASB decided that when a transfer expense arises from a transaction without a binding arrangement, there is no basis for the recognition of a transfer right asset from the transfer of resources. (That is, the recognition of a transfer right asset is only possible when a transfer arises from a binding arrangement—see paragraph BC27.) In these cases, the IPSASB decided that when the transfer occurs and control of the asset is lost, the entity derecognizes the transferred asset and recognizes a transfer expense at the asset's carrying amount.

BC25. The IPSASB noted that even when there is no binding arrangement, an entity may still have a one-way enforceable right which results in retaining control of the resources after they are transferred. In these cases, the entity would consider the principles in the Conceptual Framework and IPSAS 1, and whether it should recognize an asset. Because this asset's recognition is driven by the definition of an asset in IPSAS 1, the IPSASB decided to include implementation guidance on these situations, and no additional authoritative text is required.

BC26. The IPSASB also noted that even when there is no binding arrangement, if facts and circumstances result in a legal or constructive obligation to transfer resources, the entity is required to recognize a liability in accordance with IPSAS 19. IPSAS 48 refers to this liability as a transfer obligation liability.

Transfer Expenses from Transactions with Binding Arrangements (paragraphs 21-43)

Recognition

BC27. The IPSASB decided that when an entity begins to transfer resources as specified in a binding arrangement, the transfer results in a transfer right (i.e., the transfer provider's enforceable right to have the transfer recipient fulfill its obligations, or carry out the non-compliance requirements outlined in the binding arrangement) which meets the definition of an asset in the Conceptual Framework. This is because:

(a) The transfer right embodies a resource (i.e., the right to direct how the transfer recipient is to use resources internally);

(b) The binding arrangement provides the transfer provider with control of the transfer right; and

(c) This control arises from a past event (i.e., the transfer of resources within the context of a binding arrangement).

BC28. The IPSASB decided that an asset recognized to reflect the existence of a transfer right shall be referred to as a transfer right asset. When or as the entity's transfer right is extinguished, the basis of asset recognition no longer exists. Therefore, the related transfer right asset is derecognized and expensed.

BC29. The IPSASB also decided that when a transfer recipient has satisfied its obligations in a binding arrangement, the entity is obligated by the terms of the binding arrangement to transfer resources. This obligation results

in the recognition of a liability in accordance with the Conceptual Framework[4], and IPSAS 48 refers to such a liability as a transfer obligation liability.

Measurement

BC30. The IPSASB made the following decisions regarding the measurement of transfer expenses arising from transactions with binding arrangements:

(a) Similar to transfer expenses from transactions without binding arrangements, the transfer consideration is measured based on the total carrying amount of the transferred resources, adjusted for the effects of variable consideration;

(b) The guidance on variable consideration should refer to the existing recognition and measurement guidance for a provision in IPSAS 19. This is because variable consideration for a transfer expense is of a similar nature as a provision (i.e., a liability of uncertain timing and amount);

(c) The requirement in ED 72 to consider the time value of money and the effect of financing was removed. Many respondents to ED 72 noted that transfers are typically funded in tranches rather than one large upfront payment, so it would be rare for the discounting of transfers to have a material impact on the financial statements; and

(d) The allocation of the transfer consideration to the individual transfer rights in a binding arrangement should be based on the amounts stated in the binding arrangement, or if not explicitly stated, the amounts that the entity intends to compensate the transfer recipient for satisfying each of its compliance obligations in the binding arrangement. The IPSASB noted that this simplification is appropriate because:

(i) A transfer provider would be fully aware of how much it is willing to pay for each transfer right when negotiating the binding arrangement with the transfer recipient; and

(ii) The allocation requirements are more robust for revenue because, in addition to potentially changing the timing of revenue recognition, an inappropriate allocation for revenue could obscure the margins for certain goods or services or delay the recognition of losses. These additional concerns are not applicable for transfer expenses.

Presentation (paragraphs 44-61)

BC31. As noted in paragraph (e), respondents to ED 72 raised concerns that the proposed disclosures were overly burdensome and did not focus on the nature and risks of transfer expense transactions. To address these concerns, the IPSASB decided to significantly reduce the required display and disclosures requirements to focus on the following areas:

(a) Display and disclosure of transfer expenses and related balances – The IPSASB noted that many of the display and disclosure requirements in existing IPSAS are applicable to transfer expenses and related balances. These include:

(i) The analysis of expenses, as well as the display and disclosure of prepayment assets and transfers payable in IPSAS 1;

(ii) The display and disclosure requirements in IPSAS 28*, Financial Instruments: Presentation*, and IPSAS 30, *Financial Instruments: Disclosures*, are applicable to financial assets, as well as

[4] The IPSASB referred to the definition of a liability in the Conceptual Framework rather than IPSAS 1 at this stage, as IPSAS 1 has not yet been updated for the proposed changes to the framework.

transfer obligation liabilities which meet the definition of financial liabilities, which arise from a transfer expense transaction; and

(iii) The display and disclosure requirements in IPSAS 19 are applicable to provisions recognized for constructive obligations or variable consideration.

As a result, the IPSASB decided to cross-reference to these requirements rather than develop new display and disclosure requirements;

(b) Qualitative information regarding transfer arrangements – To enable users of the financial statements to understand the nature, amount, timing, and uncertainty arising from transfer expenses, the IPSASB decided to require the disclosure of certain qualitative information for both binding arrangements and non-binding arrangements regarding transfer expenses; and

(c) Significant judgments made regarding the recognition of transfer right assets – Because expenditures for programs and activities are typically expensed in the statement of financial performance, the recognition of a transfer right asset is not in line with general expectations. Therefore, the IPSASB decided to require the disclosure of significant judgments that led to the recognition of transfer right assets.

BC32. In addition, respondents to ED 72 had previously raised concerns over the complexity and value of reconciliations for opening and ending balances of transfer right assets and transfer obligation liabilities. Respondents also noted that these items are similar in nature to prepayment assets and transfers payable, which do not require such disclosures. Based on the feedback received, the IPSASB decided to remove the requirement to disclose these reconciliations.

BC33. The IPSASB decided to use the terms ‘transfer provider’, ‘transfer recipient’, ‘transfer right asset’ and ‘transfer obligation liability’ but this Standard does not prohibit an entity from using alternative descriptions in the financial statements for those terms. In addition, because this Standard refers to the disclosure requirements in other IPSAS as noted in paragraph BC31, an entity need not repeat the disclosure of information in accordance with this Standard if it has provided the information in accordance with another Standard.

Effective Date and Transition (paragraphs 62-64)

BC34. When ED 72 was developed, the transition provisions, including the practical expedients available, largely mirrored those from the revenue EDs. Some respondents noted that even with the practical expedients, the retrospective transitional provisions in ED 72 were onerous, with benefits not outweighing the costs, and could lead to practical difficulties in applying the final standard.

BC35. Based on the feedback received, the IPSASB noted that allowing prospective application of IPSAS 48 would not result in a significant loss of information because:

(a) If a transfer expense was fully expensed in the prior period, the transfer of resources would have already occurred and would have been reported in the prior period financial statements. Even if the expensed amount would have qualified for asset recognition in accordance with the revised guidance, requiring an entity to reverse a transfer expense would not result in any new information regarding the underlying expenditure; and

(b) If an entity recognized an asset or liability for a transfer expense transaction by applying the asset or liability recognition and measurement principles of the Conceptual Framework, these principles are already consistent with the revised accounting model for transfer expenses.

BC36. Based on the above reasons, the IPSASB decided to allow prospective application of IPSAS 48 for all transfers occurring on or after the date of initial application. To provide entities with the flexibility to adjust their prior-period financial statements, the IPSASB also decided to include the option to adopt IPSAS 48 on

a full retrospective basis in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.

Application Guidance

BC37. The IPSASB considered the interaction between transfer expenses and the potential impairment of the assets to be transferred. The IPSASB noted that when a decision has been made to transfer a non-financial asset in the context of a transfer expense transaction, the asset is no longer held for the purposes of generating a commercial return and becomes a non-cash-generating asset for impairment purposes. Before the asset is transferred, the entity should consider if the decision to transfer the asset results in a significant change in use, which is an indicator to consider impairment in IPSAS 21, *Impairment of Non-Cash-Generating Assets*. The IPSASB also noted that this separate consideration of impairment is not applicable to financial assets, as IPSAS 41 requires such assets to be assessed for impairment continuously. These decisions have been reflected in application guidance, as they relate to the application of existing IPSAS rather than new principles.

BC38. The IPSASB noted the revised general accounting model for transfer expenses arising from transactions with binding arrangements fully addresses transactions involving capital transfers. Therefore, the IPSASB decided that capital transfers should be addressed in application guidance and implementation guidance, and that no separate principles are required to be developed.

Consideration of Re-Exposure

BC39. The IPSASB considered whether there had been a substantial change to the ED such that re-exposure may be necessary:

(a) The IPSASB discussed the differences between IPSAS 48 and ED 72 issued in 2020. In particular, the IPSASB discussed the accounting for transfers from the transfer provider's perspective and the use of a rights-based approach to asset recognition rather than the PSPOA. The IPSASB agreed that the changes made since the ED process addresses issues raised by constituents, and results in a clearer Standard. Although there were differences in the drafting and the mechanics in the Standard, there were no significant changes to the intended accounting for transfer expenses.

(b) The IPSASB noted that issuance of IPSAS 48 fills a gap in the IPSAS suite of standards. The IPSASB agreed that, from a public interest perspective, the expected costs of re-exposure, including delayed implementation of the standard that constituents are actively seeking, outweigh the potential benefits of re-exposure.

BC40. Based on the above assessment, the IPSASB decided to approve IPSAS 48 without re-exposure and to finalize and issue the Standard.

Revision of IPSAS 48 as a result of *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48) issued in October 2024.

Introduction

BC41. In January 2021, the IPSASB issued the Request for Information (RFI), *Concessionary Leases and Other Arrangements Similar to Leases*. The RFI included a set of arrangements similar to leases that are common in the public sector[5].

[5] The Request for Information included six types of arrangements, as follows: (i) Concessionary Leases, (ii) Leases for Zero or Nominal Consideration, (iii) Access Rights (or Rights of Access to Property and/or Land), (iv) Arrangements Allowing Right-of-Use, (v) Social Housing Rental Arrangements, and (vi) Shared Properties with or without a Lease-Arrangement in Place.

BC42. Based on the information received from respondents to the RFI, in January 2023, the IPSASB issued Exposure Draft (ED) 84, *Concessionary Leases and Right-of-Use Assets In-kind* (Amendments to IPSAS 43 and IPSAS 23). ED 84 proposed new public sector specific accounting requirements for two of the six types of arrangements identified in the RFI. Regarding the RFI remaining arrangements, the IPSASB had taken the view that the applicable IPSAS at the time of publication of ED 84 already provided the principles on how to account for those arrangements.

BC43. During the review of responses to ED 84, the IPSASB noted that some respondents raised some issues that were related to arrangements that do not meet the definition of a lease or right-of-use asset in-kind. The IPSASB also noted that this may be related to the fact that ED 84 did not propose accounting for the remaining types of arrangements included in the RFI that do not meet the definition of a lease or right-of-use asset in-kind. Therefore, respondents did not have a comprehensive view on the accounting for these types of arrangements that convey rights over assets.

BC44. In May 2023, the IPSASB published IPSAS 45, *Property, Plant, and Equipment*[6], IPSAS 46, *Measurement*, IPSAS 47, *Revenue*[7], and IPSAS 48, *Transfer Expenses*. As IPSAS 47 supersedes IPSAS 23, the ED 84 proposals of amendments to IPSAS 23 will no longer be applicable in 2026 onwards.

BC45. In March 2024, the IPSASB published ED 88, *Arrangements Conveying Rights over Assets* (Amendments to IPSAS 47 and IPSAS 48) with proposed authoritative and non-authoritative guidance for the concession in concessionary leases for lessees in IPSAS 47 to update the proposals in ED 84 related to IPSAS 23, as well as non-authoritative proposals to update IPSAS 48 with guidance on other arrangements conveying rights over assets.

BC46. This Basis for Conclusions present the IPSASB's main considerations and decisions when developing *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48), regarding the amendments to IPSAS 48 including respondents' feedback to ED 88.

Scoping

Responses to ED 84, *Concessionary Leases and Right-of-Use Assets In-kind*

BC47. Some respondents suggested the IPSASB consider the linkages between ED 84 proposals and IPSAS 48 relating to concessionary leases and right-of-use assets in-kind, as this Standard was published after the publication of ED 84.

BC48. The IPSASB considered the linkages between ED 84 proposals and IPSAS 48 relating to concessionary leases and right-of-use assets in-kind and concluded that no changes were required to scoping in IPSAS 48 because:

(a) Leases, which includes concessionary leases, are explicitly scoped out of IPSAS 48; and

(b) Arrangements that convey the right to use an underlying asset for zero consideration are within the scope of IPSAS 48.

Illustrative Examples

BC49. The IPSASB proposed illustrative examples on right-of-use assets in-kind and social housing without consideration to address the need for guidance on these arrangements raised by respondents to the RFI.

---

[6] IPSAS 45 will be effective on January 1, 2025, and supersedes IPSAS 17, *Property, Plant, and Equipment*.

[7] IPSAS 47 will be effective on January 1, 2026, and supersedes IPSAS 9, *Revenue from Exchange Transactions*, IPSAS 11, *Construction Contracts*, and IPSAS 23, *Revenue from Non-Exchange Transactions* (Taxes and Transfers).

Responses to ED 88, *Arrangements Conveying Rights over Assets*

BC50. Respondents to ED 88 suggested removing the illustrative example on social housing without consideration because the accounting outcomes are the same as for the illustrative example on right-of-use assets in-kind. The IPSASB agreed with this suggestion and decided to remove the illustrative example on social housing without consideration when finalizing *Concessionary Leases and Other Arrangements Conveying Rights over Assets* (Amendments to IPSAS 43, IPSAS 47, and IPSAS 48).

BC51. Respondents to ED 88 also suggested adding illustrative examples on concessionary leases for lessors, but the IPSASB decided not to proceed with this suggestion because the accounting for concessionary leases by lessors is the same as for leases at market terms.

Implementation Guidance

This guidance accompanies, but is not part of, IPSAS 48.

Section A: Definitions

A.1 Capital Transfers

When is a transfer of a physical asset a 'capital transfer'?

It depends on what the binding arrangement requires the transfer recipient to do with the asset.

A transfer of a physical asset is a 'capital transfer' if the entity transfers the physical asset within a binding arrangement and the transfer recipient is required by the binding arrangement to use the physical asset received to acquire or construct another non-financial asset that it will subsequently control. A transfer of a physical asset which only has a requirement to be used or operated in specific manner would not meet the definition of a 'capital transfer'.

Section B: Identifying the Transfer Expense Transaction

B.1 Identify Whether a Binding Arrangement Exists

Does the way in which an entity transacts with others impact the accounting?

Yes. Public sector entities may transact in different ways. These may vary in form, include multiple parties, confer rights and/or obligations on one or more of the parties in the arrangement, and have varying degrees of enforceability, which overall determine the economic substance of the transaction. Binding arrangements, in particular, confer both enforceable rights and enforceable obligations on the parties to the arrangement through legal or equivalent means. The enforceability of binding arrangements necessitates differences in accounting principles to capture the unique nature and risks of such transactions (in comparison with transactions without binding arrangements), thereby informing the recognition and measurement of transfer expenses to ensure fair presentation of such transactions.

Correctly identifying whether or not the transfer expense transaction arises from a binding arrangement is integral to correctly applying this Standard. The entity is required to determine what type of arrangement it has entered into, by considering the terms of its transfer expense transaction and all relevant facts and circumstances, to apply the appropriate accounting principles to reflect the economic substance of the transaction (see paragraphs 10-16).

B.2 Enforceability

What should an entity consider in assessing enforceability?

Determining whether an arrangement, and each party's rights and obligations in that arrangement, are enforceable may be complex and requires professional judgment. This assessment is integral to identifying whether an entity has a binding arrangement (i.e., with both enforceable rights and enforceable obligations), only enforceable rights, or only enforceable obligations. In cases where an entity does not have a binding arrangement, it may still have an enforceable right or an enforceable obligation which shall be accounted for appropriately. (See Implementation Guidance C.1 for these scenarios.) Enforceability may arise from various mechanisms, so long as the mechanism(s) provide(s) the entity with the ability to enforce the terms of the arrangement and hold the parties accountable for the satisfaction of their obligations in accordance with the terms of the arrangement.

At inception, an entity shall use its judgment and objectively assess all relevant factors and details to determine if it has enforceable rights and/or obligations (i.e., what is enforced), and the implicit or explicit

consequences of not satisfying those rights and/or satisfying those obligations (i.e., how it is enforced). Relevant factors include, but are not limited to:

(a) The substance, rather than the form, of the arrangement;

(b) Terms that are written, oral, or implied by an entity's customary practices;

(c) Whether it is legally binding through legal (e.g., by the legal system, enforced through the courts, judicial rulings, and case law precedence) or equivalent means (e.g., by legislation, executive authority, cabinet or ministerial directives);

(d) Consequences of not satisfying the obligations in the arrangement;

(e) The specific jurisdiction, sector, and operating environment; and

(f) Past experience with the other parties in the arrangement.

Some mechanisms (for example, sovereign rights or reductions of future funding) may constitute a valid mechanism of enforcement. An entity should apply judgment and consider all facts and circumstances objectively, within the context of its jurisdiction, sector, and operating environment, in making this assessment. Paragraphs AG15-AG25 provide further guidance on assessing enforceability through legal or equivalent means.

B.3 Enforceability: Transfers Subject to Appropriations

Can an appropriation give rise to a transfer expense?

An appropriation is defined in IPSAS 24, *Presentation of Budget Information in Financial Statements*, as an authorization granted by a legislative body (i.e., the enabling authority) to allocate funds for purposes specified by the legislature or similar authority.

An appropriation itself typically does not result in an accounting event or transaction. However, like other transfers that do not arise from a binding arrangement, there may be situations when an appropriation, in combination with external announcements or other communications, may create a valid expectation with other parties that the entity which approved the allocation of funds is accepting and discharging certain responsibilities. In these situations, IPSAS 19, *Provisions, Contingent Liabilities, and Contingent Assets*, is applicable, and a provision is recognized if a legal or constructive obligation exists. If an appropriation does not give rise to a legal or constructive obligation, the entity accounts for the subsequent transfer by applying the principles in this Standard.

How should an entity consider the impact of appropriations on its transfer expense transactions arising from binding arrangements?

Appropriations on their own do not prove, nor refute, the existence of enforceability within an arrangement. An entity should consider any appropriation clauses as one of the relevant factors in its overall assessment of enforceability, in the context of its specific jurisdiction and the unique terms and conditions of each arrangement.

A binding arrangement may specify that the resources to be transferred to a transfer recipient by an entity are subject to an appropriation process being completed by an unrelated third-party in accordance with the laws and regulations in the jurisdiction. The entity considers whether, in substance, the arrangement is enforceable because mechanisms of enforceability enable the transfer recipient to require the entity to transfer the resources or, if the entity fails to do so, enable the transfer recipient to impose consequences on the entity.

If the limitation (that the resources to be transferred are subject to an appropriation) has substance, the arrangement is not enforceable and thus not a binding arrangement, as the transfer recipient cannot establish an enforceable right to those resources before the appropriation process is completed.

In other circumstances, a transfer that is subject to appropriations could still be enforceable if the arrangement is set up in a way that the mechanisms of enforceability enable the transfer recipient to require the entity to transfer the resources or, if the entity fails to do so, enable the transfer recipient to impose consequences on the entity, prior to the appropriation process being completed.

In some jurisdictions, the authorization for a transfer of resources may go through a multiple step process. For example:

(a) The enabling authority to provide a transfer is in place, which is conveyed through approved legislation, regulations or by-laws of an entity;

(b) The exercise of that authority has occurred. In essence, a decision by the approved enabling authority clearly demonstrates that a transfer recipient has an enforceable right to the transfer of the promised resources, and consequently the entity has lost its discretion to avoid proceeding with the transfer, for example through entering into a binding arrangement; and

(c) The authority to pay is evidenced by the completion of an appropriation process.

The enabling authority, together with the exercise of that authority, may be sufficient for an entity to conclude that the transfer recipient has an enforceable right to those resources in the arrangement that enables the transfer recipient to require the entity to transfer the resources or, if the entity fails to do so, enable the transfer recipient to impose non-compliance requirements on the entity, prior to the completion of the appropriation process. In such circumstances, the limitation (that the future transfer is subject to the completion of the appropriation process) does not have substance.

In other cases, the completion of the appropriation process may determine when an entity has lost its discretion to avoid proceeding with a transfer. In such circumstances, the limitation (that the future transfer is subject to the appropriation process being completed) has substance.

B.4 Changes in Factors Related to the Enforceability of a Binding Arrangement

Does a change in internal or external factors, after the inception of a binding arrangement, have accounting implications?

At inception, an entity considers the terms and conditions of an arrangement to determine whether it meets the definition of a binding arrangement in paragraph 7. If it meets the definition, the entity accounts for the transfer expense arising from the binding arrangement in accordance with paragraphs 21-43.

After inception, an entity should assess whether any changes in internal or external factors affect the enforceability of the binding arrangement (i.e., the substance of the arrangement), or the likelihood of enforcing the binding arrangement (i.e., the subsequent measurement of any assets or liabilities associated with the entity's right(s) and obligation(s) in the binding arrangement). Examples of such factors include, but are not limited to:

(a) Changes in the legal framework impacting the ability of the entity, or other party or parties in the arrangement, to enforce their respective rights through legal or equivalent means; and

(b) Changes in the entity's assessment of any party's choice to partially or fully exercise its ability to enforce its rights in the binding arrangement.

The implication on subsequent measurement of the respective asset or liability depends on whether the impact is not likely to be reversed and should be accounted for in accordance with this Standard, IPSAS 19 or IPSAS 41, *Financial Instruments*.

Section C: Transfer Expenses from Transactions without Binding Arrangements

C.1 Accounting for Transfers Arising from Transactions without Binding Arrangements

When the entity transfers resources in a transaction without binding arrangements, is it possible for the transfer to result in the recognition of a transfer right asset?

No. Because a transfer right asset is defined as an asset recognized for the existence of one or more transfer rights arising from a binding arrangement, it will not be possible to recognize a transfer right asset without a binding arrangement.

However, it is possible for an entity to have an enforceable right over transferred assets (for example, the right to direct the recipient on how to use resources) without an enforceable obligation as the result of a transfer expense transaction without binding arrangements. In such cases, the transfer would result in the recognition of an asset which would be derecognized when or as the enforceable right is extinguished.

Section D: Transfer Expenses from Transactions with Binding Arrangements

D.1 Identifying Transfer Rights in a Binding Arrangement

How does an entity determine the individual transfer rights in a binding arrangement in order to appropriately apply the accounting model for transactions with binding arrangements?

From the transfer provider's perspective, a binding arrangement has at least one transfer right. A transfer right, as defined in paragraph 6, is a unit of account to determine the distinct components or elements within a binding arrangement. Identifying a meaningful unit of account is fundamental to the appropriate recognition and measurement of transfer expenses. In practice, since binding arrangements can vary substantially by entity, jurisdiction, sector, and operating environment, an entity must use professional judgment as it applies paragraphs 21 and AG31-AG34 to determine the individual transfer rights in its binding arrangement.

An entity should first identify all the rights to require the transfer recipient to satisfy its compliance obligation(s) in a manner as specified in the binding arrangement. In the context of a binding arrangement for transfer expenses, rights include the ability to require the transfer recipient to use resources for a good or service internally or to transfer a good, service, or other asset (which could include cash) to a third party or third parties. A thorough assessment is necessary for the entity to identify all of its rights in the binding arrangement.

An entity then considers each identified right to determine if a right is itself a distinct transfer right, or whether it should be grouped with other rights to be a single distinct transfer right. Thus, a transfer right is a unit of account that represents a distinct right or group of rights to which recognition criteria and measurement concepts are applied (paragraphs 22-43).

A right in a binding arrangement is distinct if it can be enforced separately from other rights in the arrangement. An entity considers the following factors when assessing whether a right is distinct:

The right relates to the entity's ability to require the transfer recipient to provide a good, service, or other asset that can be provided separately from other goods, services, or assets to be provided under the binding arrangement;

(a) The right relates to the entity's ability to require the transfer recipient to use a good, service, or other asset internally in a specific manner separately from the use of other goods, services, or assets to be used under the binding arrangement; and

(b) The good, service, or other asset that the transfer recipient is required to provide to third parties or use internally is not highly interdependent or highly interrelated with other goods, services, or assets to be provided or used under the binding arrangement.

Any distinct right, or distinct group of rights, identified by the entity through this analysis would be an individual transfer right.

Section E: Recognition of Transfer Expenses from Transactions with Binding Arrangements

E.1 Derecognition of a Transfer Right Asset

An entity has determined that it has one transfer right which is extinguished over time. How does the entity determine a measure of progress that best depicts the extinguishment of its transfer right?

In general, a transfer right is extinguished (and the related transfer right asset is expensed) when or as an entity can no longer require the transfer recipient to act in accordance with the binding arrangement. This often occurs when or as the transfer recipient has satisfied its obligations in the arrangement, so the appropriate method of measuring progress depends on the specific nature of the entity's transfer rights and the specific terms of the binding arrangement. In situations where the binding arrangement consists of one transfer right to have the transfer recipient satisfy various interrelated activities, the transfer right may be partially extinguished as individual activities are being performed by the transfer recipient. Common considerations which could inform when a transfer right has been partially extinguished include:

(a) The transfer recipient has performed activities specified in the binding arrangement;

(b) The transfer recipient has incurred eligible expenditures as outlined in the binding arrangement; and

(c) The transfer recipient has achieved some of the milestones agreed upon in the binding arrangement.

In cases where multiple parties are involved in the arrangement, the entity will need to consider whether a transfer right relates to the right to require another party in the arrangement to satisfy a specific compliance obligation. There may be situations in the public sector where resources are passed through a series of entities before being transferred to the ultimate transfer recipient. In these situations, some binding arrangements may specify that the extinguishment of an entity's transfer right depends on the satisfaction of the ultimate transfer recipient's compliance obligations. Other binding arrangements may result in transfer rights and compliance obligations at each step of the series as resources are being transferred from one entity to the next. An entity will need to consider the terms of the binding arrangements and any relevant facts and circumstance to determine when to derecognize its transfer right assets.

In other cases, a transfer right may be extinguished due to the transfer recipient's inability or unwillingness to satisfy its obligations in the binding arrangement. When this occurs, the entity considers if the terms of the binding arrangement, along with the legal framework in the relevant jurisdiction, give the entity the unconditional right to receive cash (e.g., a refund of the transferred cash). Such an unconditional right results in the derecognition of the transfer right asset and the recognition of a financial asset (see paragraph 26). If the binding arrangement and relevant legal framework do not support the recognition of a financial asset, the transfer right asset is not derecognized, and the entity then considers if the asset has been impaired (see paragraph 43). This topic is further illustrated in Illustrative Example 8 (see paragraphs IE42-IE48).

Section F: Measurement of Transfer Expenses from Transactions with Binding Arrangements

F.1 Allocating the Transfer Consideration to Transfer Rights

How should a public sector entity determine a suitable method for estimating the stand-alone consideration of a transfer right?

Generally, an entity would want to explicitly specify in a binding arrangement the amount of resources it is willing to transfer for each transfer right (i.e., the stand-alone consideration is typically specified for each transfer right). In situations where the stand-alone consideration is not explicitly stated, the Standard requires an entity to determine the best estimate of the amounts that it intends to compensate the transfer recipient for satisfying its obligation when negotiating the binding arrangement.

The most suitable method to estimate the stand-alone consideration will depend on the quality and type of information that is available to the entity. For example, the individuals negotiating a binding arrangement may have contemporaneous records detailing how they estimated the stand-alone consideration for specific transfer rights included in the binding arrangement. Other entities may have detailed internal budget information documenting the resources it is willing to pay for each specific transfer right. In other cases, the individuals negotiating a binding arrangement may be using a standard pricing list from the transfer recipient to estimate the total resources to be transferred. In this situation, the standard prices for each individual deliverable can be used to estimate the stand-alone consideration of each transfer right.

Section G: Multi-Year Arrangements

G.1 Accounting for Multi-Year Arrangements

Are different principles required to account for, and recognize transfer expenses from, multi-year arrangements?

Multi-year arrangements, which may arise from transactions with binding arrangements, generally involve the provision of resources over multiple years for a specific purpose (for example, the publication of research findings on a specified topic). The provision of resources (e.g., funding) may occur at multiple dates throughout a year and/or across multiple years.

While these arrangements span a longer term, the application of accounting principles is consistent with the accounting for other transfer expense transactions. An entity shall consider whether the multi-year arrangement is a binding arrangement and apply the principles in paragraphs 18-20 for transfer expenses arising without binding arrangements, or paragraphs 21-43 for transfer expenses arising from transactions with binding arrangements. The entity shall consider the recognition of a transfer right asset and/or transfer expense independently from the timing of when resources are physically transferred.

Illustrative Examples

These examples accompany, but are not part of, IPSAS 48.

IE1. These examples portray hypothetical situations illustrating how an entity might apply the requirements in IPSAS 48, *Transfer Expenses*, to particular transfer expense transactions on the basis of the limited facts presented. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific sector illustrated. Although some aspects of the examples may be presented in actual fact patterns, all relevant facts and circumstances of a particular fact pattern would need to be evaluated when applying IPSAS 48.

Scope

IE2. Examples 1-2A illustrate the requirements in paragraphs 3-5 of IPSAS 48 on the determination of whether a transaction is within the scope of IPSAS 48.

Example 1: Transfer Where the Other Party Provides Goods and Services

IE3. An international organization enters a binding arrangement to purchase a vehicle from a dealer for CU30,000.[8] Under the terms of the binding arrangement, the dealer will also provide maintenance services for three years after the vehicle has been delivered.

Case A – Vehicle is Provided to the International Organization

IE4. The binding arrangement requires the dealer to transfer the vehicle, and provide the subsequent maintenance services, to the international organization.

IE5. The binding arrangement does not give rise to a transfer expense of the international organization, as the international organization directly receives the vehicle and the maintenance services in return for providing the consideration of CU30,000. Consequently, the binding arrangement is outside the scope of IPSAS 48. The international organization applies IPSAS 45, *Property, Plant, and Equipment*, in accounting for the purchase of the vehicle and subsequent costs incurred for repairs and maintenance.

Case B – Vehicle is Provided to a National Government

IE6. In this separate scenario, the binding arrangement requires the dealer to transfer the vehicle, and provide the subsequent maintenance services, to a national government (a third-party beneficiary) rather than to the international organization.

IE7. The binding arrangement gives rise to a transfer expense of the international organization, as the international organization transfers the consideration of CU30,000 to the dealer without directly receiving any goods or services in return. (The vehicle and maintenance services are transferred to the national government, a third-party beneficiary.) The international organization (the transfer provider) applies paragraphs 21-43 of IPSAS 48 in accounting for the transfer, as it arises from a binding arrangement.

Example 2: Research Grants

IE8. A national government enters a binding arrangement with a university whereby the national government will provide the university with a grant of CU25 million to undertake research into the effects of restrictive diets on general health.

[8] In these examples, monetary amounts are denominated in ‘currency units’ (CU).

Case A—National Government Controls Research

IE9. The binding arrangement includes a requirement that the university will transfer the results of the research to the national government, including rights to any intellectual property and/or patents created.

IE10. The binding arrangement does not give rise to a transfer expense of the national government, as the national government directly receives the results of the research (including rights to any intellectual property and/or patents) from the research in return for providing the grant as consideration. Consequently, the binding arrangement is outside the scope of IPSAS 48. The national government applies IPSAS 31, *Intangible Assets*, in accounting for the binding arrangement.

Case B—University Controls Research

IE11. The binding arrangement does not require the university to transfer the results of the research to the national government. Rather, the university retains control of the research, including rights to any intellectual property and/or patents created.

IE12. The binding arrangement gives rise to a transfer expense of the national government, as the national government transfers the grant (consideration) to the university without directly receiving any goods or services in return. The national government (the transfer provider) applies paragraphs 21-43 of IPSAS 48 in accounting for the transaction, as it arises from a binding arrangement.

Example 2A – Right-of-Use Assets In-kind: Usage of A Sports Field for Zero Consideration

IE12A. A Government Agency (Agency) enters into an arrangement with a public sector entity Z (Entity Z) for five years conveying the right to use for free a sports field to be used specifically by youth. The Agency does not regulate the types and pricing of sports services that Entity Z provides.

IE12B. The binding arrangement includes a compliance obligation, specifically that the sports field should be used by youth. To the extent that the compliance obligation is not met by Entity Z, the binding arrangement is cancelled, and the right to use the sports field returns to the Agency. Entity Z's compliance obligation is met on a straight-line basis.

IE12C. The conveying of the right to use for free a sports field is within the scope of IPSAS 48 because the Agency provides the right to use to Entity Z without directly receiving any good, service, or other asset in return (see paragraph 6). The transfer consideration is already reflected in the cost of resources to be transferred (see paragraph 30), which may include depreciation, maintenance, and other costs. No separate accounting is required.

Binding Arrangements and Enforceability

IE13. Examples 3 and 4 illustrate the consideration of binding arrangements and enforceability from paragraphs 10-16 of IPSAS 48.

Example 3: Identifying Whether a Binding Arrangement Exists

IE14. A local government is required under its constitution to undertake various social programs; however, it has insufficient resources to undertake these programs without assistance. The national government decides to transfer CU10 million of surplus funds to the local government to assist with its social programs. The details of the transfer are documented in a "funding agreement." However, the agreement only results in an obligation for the national government to transfer funds and does not provide the national government with any rights to compel the local government to act in a specific manner.

IE15. Since the agreement does not confer both rights and obligations to the national government, it is not a binding arrangement. The national government shall apply the accounting principles in paragraphs 18-20 to account for the transfer.

Example 4: Agreement for Transfer Subject to Completion of the Appropriations Process

IE16. A national government has a financial year end of December 31. On March 15, 20X2, the national government (the transfer provider) enters into an arrangement with a local government (the transfer recipient) to transfer CU15 million to the local government, to be used to build new infrastructure to reduce air pollution. CU10 million is to be transferred in 20X2, and the remaining CU5 million to be transferred in 20X3. As the reduction of air pollution is a priority for the local government, the local government began to build the new infrastructure as soon as the arrangement was signed.

IE17. The arrangement includes a term that the funding is subject to the completion of an appropriation by parliament. Parliament completed the appropriation for CU10 million in 20X2 on October 31, 20X2 and immediately transferred CU10 million to the local government. By the time the appropriation for the CU10 million was completed, the local government had already satisfied the compliance obligations which related to the CU10 million portion of the total transfer. The appropriation process for the CU5 million was not completed in 20X2 but will be considered in the following year as part of the appropriation process for 20X3.

IE18. In determining the effect of the appropriation on the arrangement, the national government considers substance over form, in accordance with paragraphs 10-16 and AG11-AG25.

Case A –Requirement to Complete the Appropriation Process has Substance

IE19. The reduction in air pollution is a local government responsibility, and there is no authorizing legislation that requires the national government to fund such initiatives. The arrangement states that the funding is subject to the appropriation process being completed by parliament. The arrangement also makes it clear that the completion of the appropriation process is not certain, and that, consequently, the transfer may be reduced or cancelled. Therefore, in this scenario, the arrangement is not binding until the appropriation process has been completed.

IE20. The national government concludes that it does not have an obligation to transfer the CU15 million (CU10 million in 20X2 and CU5 million in 20X3) until the appropriation process is completed. Consequently, in 20X2, the national government only recognizes an expense of CU10 million to reflect the obligation to pay the local government for its satisfaction of the compliance obligations up to October 31, 20X2. Had the local government not satisfied any of its compliance obligations at the time the CU10 million is transferred, the national government would instead recognize a transfer right asset of CU10 million.

IE21. On March 31, 20X3, parliament completes the appropriation process for the remaining CU5 million. At this date, the national government applies paragraphs 21-26 of IPSAS 48 to assess the accounting implications for the remaining CU5 million.

Case B – Requirement to Complete the Appropriation Process does not have Substance

IE22. In this scenario, the reduction of air pollution is a priority of both the national and local governments, and there is legislation in place which requires the national government to invest in certain measures to reduce air pollution. The infrastructure to be built by the local government falls within the scope of this legislation, so the national government is required by law to complete the appropriation for the CU15 million transfer.

IE23. The national government concludes that although the agreement states that the funding is subject to the completion of an appropriation process, this term has no substance, as the national government is required by law to complete the appropriation for the CU15 million transfer. Upon execution of the binding arrangement, the national government applies paragraphs 21-26 of IPSAS 48 in determining when to recognize a transfer right asset or a transfer expense.

Transfer Expenses from Transactions with Binding Arrangements

IE24. Example 5 illustrates the principles regarding identification of transfer rights from paragraph 21 of IPSAS 48.

Example 5: Determining Whether Goods or Services are Distinct

Case A – Goods or Services are not Distinct

IE25. The Department of Health (the Department) enters a binding arrangement with the Department of Public Works (Public Works) for Public Works to build a hospital for the Provincial Government, a third-party beneficiary. Under the terms of the binding arrangement, Public Works has agreed to perform the overall management of the project, as well as design and engineering, site clearance, foundation, procurement, construction of the structure, piping, electrical wiring, installation of equipment, and finishing.

IE26. To determine if the binding arrangement has more than one transfer right, the Department applies paragraphs 21, AG31-AG34 and considers the factors discussed in Implementation Guidance D.1 of IPSAS 48 to determine whether the right to have each service performed can be enforced separately from the other rights in the binding arrangement.

IE27. Without the context of the overall arrangement, the rights to have Public Works perform the individual activities such as project management, design, procurement, and construction, could be viewed as distinct rights that can be enforced separately. However, within the context of the binding arrangement, these rights are all highly interdependent (e.g., the construction of the structure can only be performed after completion of the design, engineering, site clearance foundation, and procurement activities) and highly interrelated (i.e., the individual services together result in the building of a hospital.)

IE28. Because the services in the binding arrangement are all highly interdependent and interrelated, none of the rights in the binding arrangement are distinct. Therefore, as noted in paragraph AG33 of IPSAS 48, the Department aggregates these related rights into a single transfer right.

Case B – Goods or Services are Distinct

IE29. A regional government office (Regional Government) enters into a binding arrangement with an IT services agency (the Agency) for the Agency to provide the following to a public sector university in the region (the University, the third-party beneficiary) over a two-year period:

(a) Productivity software for faculty and staff (e.g., word processing and spreadsheet programs);

(b) Website-related services;

(c) Unspecified software updates for security purposes; and

(d) Technical support (online and telephone) to the University’s faculty and staff.

IE30. The Agency provides the above goods or services separately. The software is comparable to purchasing an off-the-shelf productivity software that is expected to provide enough user accounts for existing and new faculty and staff throughout the two-year period, and the Agency is not expected to change the functionality of the software throughout the two-year period. The website-related services include hosting and maintaining the websites for the University, its departments, and its faculty and staff members. The security updates are routinely performed to address potential vulnerabilities to cyberattacks and do not significantly modify the function of the software or websites. Lastly, technical support services are provided upon request by faculty and staff throughout the two-year period.

IE31. The Regional Government assesses its rights to have the goods or services provided by the Agency to determine which rights are distinct in accordance with paragraph 21 of IPSAS 48. In making this assessment, the Regional Government applies the guidance in paragraphs AG31-AG34 of IPSAS 48.

IE32. The Regional Governments observes that:

(a) As noted in paragraph IE30, the Agency can deliver each of the goods or services separately from the other goods or services in the binding arrangement. This is an indicator that the right to have each of the goods delivered or services performed can be separately enforced;

(b) The software and the various services in the binding arrangement can each be used separately by the University's faculty and staff (e.g., a staff member could be provided with the productivity software but not have a website). This fact further supports that the rights to the license and services can be separately enforced; and

(c) The goods or services are neither highly interdependent nor highly interrelated. The Regional Government noted that the productivity software and websites clearly do not relate to each other. Furthermore, while the security updates modify both the productivity software and websites, these updates do not change their functionality, and the purpose of the updates is to protect against cybersecurity risks. Finally, technical support relates to assisting the faculty and staff with the use of the software or websites and does not modify their functionality.

IE33. The Regional Government also noted that it could have purchased the above goods or services from separate entities but decided to enter one binding arrangement with the Agency to centralize the University's purchasing process and potentially negotiate a discount by bundling the license with services.

IE34. On the basis of the above assessment, the Regional Government identifies four transfer rights in the binding arrangement for the following goods or services:

(a) The productivity software;

(b) Website-related services;

(c) Security updates; and

(d) Technical support.

Recognition of Transfer Expenses

IE35. Examples 6-8 illustrate the requirements in paragraphs 22-25 on the overall accounting model for transfer expenses from transactions with binding arrangements:

(a) Example 6 illustrates a scenario where the transfer provider has transferred resources prior to the transfer recipient satisfying its obligations from the binding arrangement;

(b) Example 7 illustrates a scenario where a transfer recipient satisfies its obligations prior to the full transfer of resources; and

(c) Example 8 illustrates the derecognition and impairment of a transfer right asset due to the non-performance by the transfer recipient as discussed in paragraphs 26 and 43 of IPSAS 48.

Example 6: Recognition of a Transfer Right Asset and its Subsequent Derecognition

IE36. The following example expands on the fact pattern presented in Case B of Example 5 and Case A of Example 10 where a regional government office (the Regional Government) entered into a binding arrangement with an IT services agency (the Agency) to provide certain goods and services to a university in the region (the University). In Examples 5 and 10, the Regional Government determined that its transfer rights in the binding arrangement and its allocation of the transfer consideration are as follows:

(a) The productivity software for CU6 million;

(b) Website-related services for CU2 million;

(c) Security updates for CU3 million; and

(d) Technical support for CU1 million.

IE37. The binding arrangement specifies that the transfer of the software occurs and the service period begins upon payment of the entire CU12 million by the Regional Government (i.e., the Regional Government pays upfront). Upon payment of the CU12 million, the Agency transferred the software to the University and began the two-year service period for the website services, security updates and technical support.

IE38. The Regional Government recognizes the amount as a transfer right asset upon payment then determines how the transfer right asset should be derecognized based on the nature of each transfer right:

(a) Productivity software – The Regional Government observes that the Agency is only obligated to transfer the productivity software to the University upon payment and is not expected to perform further services such as updating the functionality of the software over the two-year period. Therefore, the transfer right for the software license was extinguished once the software was provided to the University, and CU6 million of the transfer right asset should be expensed at that time;

(b) Website-related services – The Regional Government observes that the website hosting and maintenance services are to be performed for the University continuously throughout the two-year period. Therefore, a reasonable approach to reflect the extinguishment of this transfer right is to evenly derecognize CU2 million of the transfer right asset while recognizing a transfer expense over time during the two-year period (e.g., amortizing CU83,333 into expenses each month over the two-year period);

(c) Security updates, and technical support services – The Regional Government's remaining transfer rights relate to services that are performed on an as-needed basis throughout the two-year period. As it would be overly onerous, if not impossible, to estimate when these services are required, a reasonable approach to reflect the extinguishment of these transfer rights would be to evenly derecognize the CU4 million while recognizing a transfer expense over time during the two-year period. (e.g., amortizing CU166,667 into expenses each month over the two-year period).

Example 7: Recognition of a Transfer Obligation Liability

IE39. A municipal government (the Government) enters into a binding arrangement with a publisher (the Publisher) for the Publisher to provide copies of an accounting textbook to the public secondary schools in the city (the Schools, the third-party beneficiaries). Because the number of textbooks required by each school is based on the number of students enrolled in the accounting course, the binding arrangement only specifies that the Government will pay the Publisher CU30 per textbook, and the number of textbooks to be provided will be based on enrollment numbers which will be finalized a month before the beginning of the school year.

IE40. Under the terms of the binding arrangement, the Government will provide the enrollment numbers along with an upfront deposit for 10% of the expected transfer consideration to the Publisher. The Publisher will then provide the textbooks to the Schools at least two weeks before the start of the school year, and the Government will pay the remaining consideration for the textbooks provided within 30 days after the Schools have received the shipments.

IE41. Upon finalization of student enrollment, the enrollment numbers were provided to the Publisher, and 19,800 textbooks were shipped to the Schools. To account for this binding arrangement, the Government applies paragraphs 22-25 of IPSAS 48:

(a) Upon entering the binding arrangement, no accounting occurs as neither party has started to satisfy its obligations in the arrangement.

(b) A month before the school year begins, the Government provides the enrollment numbers and the 10% deposit to the Publisher. Upon payment of the deposit, the Government recognizes a transfer right asset of CU59,400 (CU30 × 19,800 books × 10%):

Transfer right asset	CU59,400	
Cash		CU59,400

(c) Two weeks before the beginning of the school year, the Publisher has fully satisfied its obligations by transferring the textbooks to the Schools, and the Government's right to have the textbooks delivered has been extinguished. The Government derecognizes the transfer right asset of CU59,400 and records the amount as a transfer expense. In addition, the Government also recognizes a transfer obligation liability and a transfer expense for the unpaid consideration of CU534,600 (CU30 × 19,800 books – CU59,400 deposit) based on the terms of the binding arrangement:[9]

Transfer expense	CU594,000	
Transfer right asset		CU59,400
Transfer obligation liability		CU534,600

Example 8: Derecognition of a Transfer Right Asset Due to Non-Performance

IE42. The Ministry of Health (the Ministry) enters into a binding arrangement with a corporation that operates a number of private clinics in a region (the Corporation). Under the terms of the binding arrangement, the Ministry will provide an upfront payment of CU1 million to the Corporation for the Corporation to operate a vaccination program and administer 10,000 doses of a vaccine to the citizens in the region over the next 12 months. The Corporation is required to provide monthly reports on the number of doses administered and patient information to the Ministry.

IE43. The binding arrangement specifies that if the Corporation stops administrating the vaccine or if the 10,000 doses are not administered at the end of the 12-month period, the Corporation is required to pay CU100 per unadministered dose to the Ministry. This requirement to return funds is applicable regardless of whether the Corporation has spent the funds on acquiring the vaccinations. (e.g., if the Corporation purchases 10,000 doses immediately upon receipt of the CU1 million, then only administers 5,000 doses and stops the vaccination program, it will be required to return CU500,000 to the Ministry even though the entire CU1 million has been spent.) However, the binding arrangement also specifies that the Corporation is not responsible for the repayment of funds related to vaccines that cannot be administered due to a force majeure event such as war, terrorist attacks, or natural disasters.

Case A – The Corporation Decides to Stop the Vaccination Program

IE44. Upon paying the CU1 million, the Ministry recognizes a transfer right asset for the right to have the Corporation's clinics administer the 10,000 doses of the vaccine. Upon receipt of the CU1 million, the Corporation purchases and distributes 1,000 doses of the vaccine to its clinics. After administering only 500 vaccines, the Corporation observes that the administration of each dose of the vaccine is resulting in a loss. As a result, the Corporation makes a business decision and informs the Ministry that it will stop administering the vaccines.

[9] It should be noted that IPSAS 48 does not prohibit the Government from using alternative descriptions in its financial statements for the terms 'transfer right asset', 'transfer obligation liability', or 'transfer expense'.

IE45. For the vaccines that have been administered, the Ministry derecognizes CU50,000 of the transfer right asset and recognizes a transfer expense for the same amount. For the remaining 9,500 doses, based on the terms of the binding arrangement, the Ministry applies paragraph 26 of IPSAS 48 and:

(a) Derecognize the transfer right asset of CU950,000; and

(b) Recognize a receivable for CU950,000 (CU100 × 9,500 doses). The fact that the Corporation has already spent CU100,000 to purchase vaccines has no relevance to the amount to be repaid to the Ministry based on the terms of the binding arrangement. This receivable is a financial asset within the scope of IPSAS 41, *Financial Instruments*—that is, the amount is subject to the recognition and measurement requirements, including impairment considerations, in IPSAS 41 and is no longer within the scope of IPSAS 48.

Case B – A Force Majeure Event Prevents the Administration of 10,000 Doses

IE46. Similar to Case A, upon paying the CU1 million, the Ministry recognizes the amount as a transfer right asset. In this scenario, the Corporation also purchases 1,000 doses of the vaccine upon the receipt of funds. However, after administering 500 doses, an earthquake occurred in the region and the remaining 500 doses of the vaccine held in storage were destroyed. The Corporation informed the Ministry of the destruction of the 500 doses but noted that it intends to continue with the vaccination program and administer the remaining 9,000 within 12 months.

IE47. Like Case A, the Ministry derecognizes CU50,000 of the transfer right asset and recognizes a transfer expense of CU50,000 for the 500 administered vaccines. However, the terms of the binding arrangement do not confer the right to recover any funds for the 500 vaccines which were destroyed in the earthquake. In addition, the Corporation has not provided any indication that they will not be able to administer the remaining 9,000 doses within the 12-month period.

IE48. Based on the fact pattern in this scenario, the Ministry applies paragraph 43 of IPSAS 48 and considers if the remaining transfer right asset of CU950,000 has been impaired. Because the Ministry does not have any recourse for the 500 doses lost in the earthquake, it now only has a transfer right to have the Corporation's clinics provide 9,000 doses to the citizens in the region. As a result, the Ministry records an impairment of CU50,000 in accordance with IPSAS 21 and reduces its transfer right asset to CU900,000.

Modifications to a Binding Arrangement

IE49. Example 9 illustrates the requirements in paragraphs 27-29 of IPSAS 48 on binding arrangement modifications. In addition, Case C of this example illustrates the requirements to estimate variable consideration in paragraphs 35-37 of IPSAS 48, as well as the requirements on changes in transfer consideration in paragraphs 40-42. Cases A, B, and C all build on the fact pattern outlined in paragraphs IE50-IE51 but are each independent from each other.

Example 9: Modifications to a Construction Arrangement

IE50. The Department of Housing (Housing, the transfer provider) enters into a binding arrangement with the Department of Public Works (Public Works, the transfer recipient) for Public Works to construct a residential building for a Housing Association (the Association, the third-party beneficiary) on land owned by the Association for promised consideration of CU1 million. In accordance with paragraph 25 of IPSAS 48 and based on the terms of the binding arrangement, Housing accounts for the transfer as a single transfer right extinguished over time as construction of the residential building is being completed.

IE51. Housing determines that an output measure, the stage of completion assessed by a qualified quantity surveyor, provides an appropriate measure of progress towards completion of the residential building. By the end of the first year, Housing assesses that Public Works has completed 60% of the building's construction

based on the surveyor's report. Consequently, the expenses recognized by Housing for the first year are CU600,000 (transfer consideration of CU1 million x 60%).

Case A – Modification Resulting in a Cumulative Catch-Up Adjustment to Expenses

IE52. In the first quarter of the second year, the parties to the binding arrangement agree to modify the binding arrangement by changing the floor plan of the building. As a result, the transfer consideration increases by CU150,000 and the total transfer consideration after the modification is CU1,150,000. In assessing the modification to the binding arrangement, Housing evaluates paragraph (a) of IPSAS 48 and concludes that the upcoming construction based on the revised floor plan remains a single transfer right rather than any additional transfer rights, because the modification does not result in the acceptance of additional distinct compliance obligations by Public Works or an increase in Public Works' existing compliance obligations.

IE53. Consequently, Housing accounts for the modification to a binding arrangement as if it were part of the original binding arrangement in accordance with paragraph 29 of IPSAS 48. Based on an updated quantity surveyor's report, Housing updates its measure of progress and estimates that construction of the modified building is 53% complete at the date of modification. As a result, Housing recognizes additional expenses of CU9,500 [(53% complete × CU1,150,000 modified transaction consideration) – CU600,000 expenses recognized to date] at the date of the modification as a cumulative catch-up adjustment in the statement of financial performance.

Case B – Modification Resulting in a New Binding Arrangement

IE54. Continuing with the facts presented in paragraphs IE50-IE51, in the first quarter of the second year, the parties to the arrangement agree to modify the binding arrangement by including additional funding of CU100,000 for the construction of a parking lot to be located next to the residential building.

IE55. Housing determines that this modification results in a separate binding arrangement because:

(a) The construction of the parking lot is a new transfer right, as Housing can enforce its construction separately from the construction of the building. That is, the enforceable right for the construction of the parking lot is a distinct right as noted in paragraph AG32 of IPSAS 48; and

(b) The additional consideration of CU100,000 is intended to reflect the value of the additional transfer right by compensating Public Works for the construction of the parking lot.

IE56. As a result, Housing continues to account for the transfer relating to the construction of the residential building in the manner described in paragraphs IE50-IE51. The CU100,000 transfer relating to the construction of the parking lot is accounted for as a separate binding arrangement.

Case C – Change in Transfer Consideration Due to the Resolution of Uncertain Events

IE57. Modifying the facts presented in paragraphs IE50-IE51, at the inception of the binding arrangement, Housing also agreed to pay a bonus of CU200,000 after construction of the building if it is completed within 24 months. For clarity, this bonus is part of the original terms of the binding arrangement and not a subsequent modification.

IE58. Completion of the building is highly susceptible to factors outside Public Works' influence, including weather conditions and regulatory approvals. In addition, Public Works has limited experience with similar types of binding arrangements. Based on these factors, Housing excluded the CU200,000 bonus from the transfer consideration at the inception of the binding arrangement.

IE59. At the end of the first year, the required regulatory approvals have been obtained and the remaining construction work related primarily to interior work which was not subject to weather conditions. Furthermore, the progress of work completed to date indicated that completion of the building within 24 months is likely.

As a result, Housing concludes that payment of the bonus is now probable and adjusts the transfer consideration to CU1,200,000.

IE60. The reassessment of variable consideration is not, in and of itself, a modification of the binding arrangement. Housing accounts for the probable payment of the bonus by applying paragraph 41 of IPSAS 48 and allocates the CU200,000 bonus to the transfer right relating to construction of the building. As 60% of the construction has been completed to date, Housing expenses an additional CU120,000 for the probable bonus payment as a cumulative catch-up adjustment ((CU1.2 million x 60%) – CU600,000 expense recognized to date).

Measurement

IE61. Example 10 expands upon the fact pattern from Case B of Example 5 to illustrate the allocation of transfer consideration to individual transfer rights.

Example 10: Allocation of Transfer Consideration

IE62. Continuing the fact pattern from Case B of Example 5, the regional government office (Regional Government) has concluded that it has four distinct transfer rights in its binding arrangement with the IT services agency (the Agency). As noted in paragraph IE34, these transfer rights relate to providing the University with productivity software, website-related services, security updates, and technical support services over a two-year period.

IE63. When the Regional Government began negotiations with the Agency, it observed that the Agency's published prices would have been as follows, had the software and services been purchased separately for the two-year period: CU6 million for the software, CU4 million for the website-related services, CU3 million for the security updates, and CU2 million for technical support. During negotiations, the Regional Government and the Agency used these published prices as a starting point then agreed to reduce the total consideration for all four deliverables from CU15 million to CU12 million.

Case A – Binding Arrangement Specifies Each Transfer Right's Stand-Alone Consideration

IE64. In this scenario, the binding arrangement specifies that the CU3 million reduction in transfer consideration resulted from a CU2 million discount for website-related services and a CU1 million discount for technical support.

IE65. Applying paragraph AG50, the Regional Government uses the amount of stand-alone consideration and the negotiated discount specified in the binding arrangement for each transfer right and allocates the transfer consideration as follows:

(a) Productivity software: CU6 million;

(b) Website-related services: CU2 million;

(c) Security updates: CU3 million; and

(d) Technical support: CU1 million.

Case B – Binding Arrangement Only Specifies the Total Transfer Consideration

IE66. In this scenario, the Regional Government and the Agency only agreed to the overall CU3 million discount for the entire bundle of the software and the various services, and the binding arrangement does not specify how the CU3 million is to be allocated.

IE67. Applying paragraph AG51, the Regional Government estimates the consideration allocated to each transfer right based on the amounts that were intended to compensate the Agency for the software and the services. As the Agency's published prices were used as the starting point for negotiations, the Regional Government

noted that these prices are appropriate proxies for the stand-alone consideration of the software and services. Therefore, one reasonable allocation approach is to proportionately allocate the CU12 million based on each deliverable's published prices.

IE68. Using this approach, the Regional Government allocates the transfer consideration as follows:

(a) Productivity software: CU4.8 million (CU6 million ÷ CU15 million × CU12 million);

(b) Website-related services: CU3.2 million (CU4 million ÷ CU15 million × CU12 million);

(c) Security updates: CU2.4 million (CU3 million ÷ CU15 million × CU12 million); and

(d) Technical support: CU1.6 million (CU2 million ÷ CU15 million × CU12 million).

Application of Principles to Specific Transactions

IE69. Example 11 illustrates the application of paragraphs AG53-AG55 of IPSAS 48 to capital transfers.

Example 11: Capital Transfers

Case A – Transfer Only Relates to the Construction of an Asset

IE70. Entity P enters into a binding arrangement with Entity R. The terms of the binding arrangement are as follows:

(a) Entity P is to provide funding in the form of CU22 million in cash to Entity R, to be used by Entity R to construct a building. There are no terms specifying how the building is to be used after construction;

(b) The amount of CU22 million is based on the budgeted construction and related costs. The funding is to be fully provided to Entity R at the beginning of the construction period;

(c) To facilitate Entity P's enforcement of the binding arrangement, the terms require Entity R to:

(i) Have a detailed construction plan outlining the activities to be completed in each significant phase of construction (e.g., clearing the site, foundations, framing, etc.), along with the budgeted costs of these activities;

(ii) Provide detailed progress reports at each significant stage of construction; and

(d) Upon completion of construction, Entity R obtains control of the building. If construction of the building is not completed within five years, Entity R retains control of any construction in progress but any funds that have not been spent on construction are to be returned to Entity P.

IE71. Entity P has determined that the binding arrangement consists of one transfer right (for Entity R to construct the building) and that completion of the construction activities noted in the construction plan, as measured by the costs spent on these activities, is an appropriate measure of progress towards complete extinguishment of this right.

IE72. In this example, the substance of the binding arrangement is to provide funding for the construction of the building, and there is no transfer relating to the subsequent use of the building by Entity R. Therefore, upon payment of the CU22 million, Entity P recognizes a transfer right asset for the full amount of CU22 million as Entity R has not yet started construction of the building.

IE73. As Entity R completes the construction activities in the construction plan, the costs incurred in completing these activities is used to determine the percentage of construction completed. Entity P applies this percentage to the CU22 million to determine the portion of the transfer right asset that should be derecognized and expensed throughout the construction period.

Case B – Transfer Relates to the Construction and Operation of an Asset

IE74. In this example, the binding arrangement states that:

(a) The funding amount has been increased to CU32 million. This amount is based on the budgeted construction costs of CU20 million, construction-related overhead costs of CU2 million, and a subsidy of CU10 million to cover some of the costs of operating the building as a public library for the first 10 years after completion of the building;

(b) Throughout the 10-year operating period, Entity R is required to provide evidence to Entity P that the building has been operated as a public library. The evidence can include documentation such as audited financial statements which provide details on the operating costs incurred by Entity R;

(c) If Entity R stops operating the building as a public library at any time during the 10-year period, it is required to repay a portion of the CU10 million operating transfer to Entity P based on the amount of time remaining in the 10-year period. For example, if Entity R stops operating the building as a library at two years into the 10-year period, it is required to return CU8 million to Entity P; and

(d) Similar to Case A, Entity P transfers the entire CU32 million to Entity R at the beginning of the construction period. Entity R is also required to provide information regarding construction progress to Entity P.

IE75. In this scenario, Entity P concludes that the binding arrangement consists of two transfer rights: the construction of the building and the operation of the building as a library for a 10-year period. Applying the requirements from IPSAS 48, Entity P has allocated CU22 million to the right for Entity R to construct the building and CU10 million to the right for Entity R to operate the building as a public library for 10 years.

IE76. For the transfer right relating to the construction of the building, as in Case A, Entity P recognizes a transfer right asset of CU22 million upon the transfer of funds. Entity P then derecognizes the CU22 million (and recognizes the amounts as transfer expenses) over the construction period, based on the construction progress as determined by information reported by Entity R.

IE77. For the transfer right relating to the operation of the building as a library, Entity P has determined that this transfer right is extinguished as the building is being operated by Entity R as a library during the 10-year period. Therefore, Entity P recognizes the entire CU10 million as a transfer right asset upon payment. After construction has been completed, as Entity R operates the building as a public library, Entity P derecognizes CU1 million of the transfer right asset per year over the 10-year period and recognizes the amount as a transfer expense.

Case C – Transfer Relates to the Construction and Operation of an Asset, and an Additional Penalty is Payable if the Entity Ceases Operation of the Asset

IE78. In this scenario, the binding arrangement includes all the terms from Case B, with the addition of the following:

(a) The binding arrangement now imposes a penalty of CU5 million under specific conditions. If Entity R stops operating the building as a library within the 10-year period, it is required to pay a penalty to Entity P;

(b) The CU5 million penalty is payable in addition to the return of funds for not complying with the terms of the binding arrangement related to the operation of the asset. For clarity, if Entity R has completed construction of the building and operated the building as a library for nine years but stops operating the library at the beginning of the 10th year, it is required to pay CU6 million (repayment of CU1 million of the operating subsidy plus the CU5 million penalty) to Entity P.

IE79. In this scenario, the accounting for the CU22 million and CU10 million portions of the transfer for construction and operation of the building as a library will be the same as Cases A and B. That is, Entity P will recognize the CU32 million as a transfer right asset upon the transfer of funds. Subsequently, the CU22 million will be

expensed as the building is constructed and the CU10 million will be expensed over the 10-year operating period.

IE80. The additional CU5 million penalty is not recognized by Entity P because its receipt is contingent on Entity R ceasing to operate the building as a public library. Such a contingent asset is not recognized in accordance with IPSAS 19.

Case D – Transfer Only Relates to the Operation of an Asset

IE81. The following scenario is independent from Cases A-C and illustrates the accounting for a transfer without a capital transfer component.

IE82. In this scenario:

(a) Entity R already owns the building;

(b) Under the terms of the binding arrangement, Entity P is required to transfer CU10 million to Entity R to subsidize the operation of the building as a public library for the next 10 years. The transfer of funds is required to occur upon finalization of the binding arrangement;

(c) Throughout the 10-year period, Entity R is required to provide evidence to Entity R that the building has been operated as a public library; and

(d) If Entity R stops operating the building as a public library at any time during the 10-year period, it is required to repay a portion of the CU10 million operating transfer to Entity P based on the amount of time remaining in the 10-year period.

IE83. In this scenario, the CU10 million transfer only relates to the right to have Entity R operate the existing building as a public library over a 10-year period. Upon initial payment, Entity P recognizes the CU10 million as a transfer right asset.

IE84. Entity P has determined that the transfer right extinguishes as the building is being operated as a library by Entity R throughout the 10-year period. As the operation of the library consists of many different activities which are performed consistently from period to period, Entity P derecognizes the transfer right asset evenly over the 10-year period and recognizes a transfer expense of CU1 million per year.

COMPARISON WITH GFS

In developing IPSAS 48, *Transfer Expenses*, the IPSASB considered Government Finance Statistics (GFS) reporting guidelines.

Key similarities and differences with GFS are as follows:

- The similarities and differences between the accounting under IPSAS 48 and GFS will depend on the facts and circumstances of the transfer expense transactions.
- The definition of 'transfer expenses' in IPSAS 48 is drawn from the definition of 'transfers' in GFS but focuses on the perspective of the transfer provider.
- The accounting in IPSAS 48 is driven by the existence of a binding arrangement. In principle, the accounting in GFS is based on, among other considerations, the assessment of whether the transfer is compulsory or voluntary. Both IPSAS 48 and GFS may lead to the same accounting outcome in certain situations.
- IPSAS 48 distinguishes between transfer expenses arising from transactions with binding arrangements (including capital transfers) and transfer expenses from transactions without binding arrangements. GFS distinguishes grants as either current or capital grants, regardless of whether the grant arises from a binding arrangement, so different accounting outcomes could arise in certain situations.
- Under IPSAS 48, an entity recognizes a transfer expense when (or as) its enforceable right to have the transfer recipient satisfy its obligations is extinguished. Under GFS, the timing of expense recognition is based on the type of grant.

International Public Sector Accounting Standard 49, *Retirement Benefit Plans*, is set out in paragraphs 1–27. All the paragraphs have equal authority. IPSAS 49 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*. IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provides a basis for selecting and applying accounting policies in the absence of explicit guidance.

Objective

1. The objective of this Standard is to prescribe the accounting and reporting requirements for public sector retirement benefit plans, which provide retirement benefits to public sector employees and other eligible participants.

Scope

2. **A retirement benefit plan that prepares and presents financial statements under the accrual basis of accounting shall apply this Standard.**

3. Retirement benefit plans are sometimes referred to by various other names, such as ‘pension schemes’, ‘superannuation schemes’ or ‘retirement benefit schemes’. This Standard regards a retirement benefit plan as a reporting entity separate from the employers of the participants in the plan. All other Standards only apply to the financial statements to the extent that they are not superseded by the requirements in this Standard.

4. This Standard deals with accounting and reporting requirements for the plan for all participants as a group. It does not deal with reports to individual participants about their retirement benefit rights.

5. This Standard deals with retirement benefits for public sector employees and other participants who are eligible to join the plan. It does not deal with other forms of employment benefits, such as employment termination payments, deferred compensation arrangements, long-service leave benefits, special early retirement or redundancy plans, health and welfare plans or bonus plans. Government social security arrangements are also excluded from the scope of this Standard.

6. Retirement benefit plans are normally described as either defined benefit plans or defined contribution plans, each having their own distinctive characteristics. Occasionally plans exist that contain characteristics of both. For the purposes of this Standard, defined benefit plans include hybrid plans, which are retirement benefit plans that contain characteristics of both defined benefit plans and defined contribution plans. References in this Standard to defined benefit plans shall be read as encompassing hybrid plans.

7. Many retirement benefit plans require the creation of separate funds, which may or may not have separate legal identity and may or may not have trustees, to which contributions are made and from which retirement benefits are paid. This Standard applies regardless of whether such a fund is created and regardless of whether there are trustees.

8. Retirement benefit plans with assets invested with insurance companies are subject to the same accounting and funding requirements as privately invested arrangements. Accordingly, they are within the scope of this Standard unless the contract with the insurance company is in the name of a specified participant or a group of participants and the retirement benefit obligation is solely the responsibility of the insurance company.

Definitions

9. **The following terms are used in this Standard with the meanings specified:**

   Actuarial present value of promised retirement benefits is the present value of the expected payments by a retirement benefit plan to participants attributable to service, as employees, already rendered.

   Defined benefit plans are, for the purposes of this Standard, retirement benefit plans other than defined contribution plans.

   Defined contribution obligations are the amounts owed to participants under the terms of a defined contribution plan.

Defined contribution plans are, for the purposes of this Standard, retirement benefit plans under which amounts to be paid as retirement benefits are determined by contributions to a fund together with investment earnings thereon.

Funding is the transfer of assets to an entity (the retirement benefit plan) separate from the employer/sponsor to meet future obligations for the payment of retirement benefits.

Net assets available for benefits are:

(a) **For defined benefit plans – the assets of a plan less liabilities other than the actuarial present value of promised retirement benefits and, in a hybrid plan, the defined contribution obligation to participants; and**

(b) **For defined contribution plans – the assets of a plan less liabilities other than the defined contribution obligations to participants.**

Participants are the members of a retirement benefit plan and others who are entitled to benefits under the plan.

Retirement benefit obligations are:

(a) **For defined benefit plans – the actuarial present value of promised retirement benefits; and**

(b) **For defined contribution plans – the defined contribution obligations.**

Retirement benefit plans are arrangements whereby an employer/sponsor provides benefits for participants on or after termination of service as employee (either in the form of an annual income and/or as a lump sum) when such benefits, or the contributions towards them, can be determined or estimated in advance of retirement from the provisions of a document or from the employer's/sponsor's practices.

Vested benefits are benefits, the rights to which, under the conditions of a retirement benefit plan, are not conditional on continued employment.

Any other terms defined in other IPSAS are used in this Standard with the same meaning as in those Standards and are reproduced in the Glossary of Defined Terms published separately.

Recognition

10. **For defined benefit plans, retirement benefit obligations owed to participants shall be recognized in the statement of financial position as a provision for the actuarial present value of the promised retirement benefits.**

11. **For defined contribution plans, retirement benefit obligations owed to participants shall be recognized in the statement of financial position as defined contribution obligations.**

Measurement

Valuation of Plan Investments

12. **Retirement benefit plan investments shall be measured at fair value.**

Actuarial Present Value of Promised Retirement Benefits

13. The actuarial present value of promised retirement benefits for defined benefit plans shall be based on the benefits promised under the terms of the plan on service rendered to date using projected salary levels.

14. If an actuarial valuation has not been prepared at the date of the financial statements, the most recent actuarial valuation, updated for any material transactions and material changes in circumstances shall be used.

Presentation and Disclosure

Presentation of Financial Statements

15. **A retirement benefit plan, whether defined benefit or defined contribution, shall present the following:**

    (a) **A statement of financial position;**

    (b) **A statement of changes in net assets available for benefits;**

    (c) **A cash flow statement; and**

    (d) **Notes to the financial statements.**

16. **A retirement benefit plan shall also explain the changes in retirement benefit obligations to participants either by:**

    (a) **Presenting a statement of changes in retirement benefit obligations; or**

    (b) **Disclosing in the notes to the financial statements a reconciliation between the opening and closing retirement benefit obligation balances.**

Financial Statement Content

Statement of Financial Position

17. **The face of the statement of financial position shall include line items that present the following amounts (if applicable and as appropriate, but not limited to):**

    (a) **Plan investments (suitably classified);**

    (b) **Contributions receivable;**

    (c) **Other assets;**

    (d) **Benefits due and payable;**

    (e) **Any other liabilities excluding retirement benefit obligations to participants;**

    (f) **Net assets available for benefits;**

    (g) **Provision for actuarial present value of promised retirement benefits in a defined benefit plan;**

    (h) **Defined contribution obligation to participants; and**

    (i) **Excess or deficit.**

Statement of Changes in Net Assets Available for Benefits

18. **The statement of changes in net assets available for benefits shall present opening and closing balances and include line items that present the following amounts, (if applicable and as appropriate, but not limited to):**

    (a) **Employer/sponsor contributions;**

    (b) **Participant contributions;**

    (c) **Investment income;**

    (d) **Other income;**

(e) **Benefits paid or payable (analyzed, for example, as retirement, death and disability benefits, or lump sum payments);**

(f) **Transfers from and to other plans;**

(g) **Administrative expenses;**

(h) **Other expenses; and**

(i) **Taxes on income.**

Cash Flow Statement

19. **A retirement benefit plan shall prepare a cash flow statement, using the direct method, in accordance with IPSAS 2, *Cash Flow Statements.***

Changes in Retirement Benefit Obligations

20. **Paragraph 16 requires a retirement benefit plan to present information that explains the changes in retirement benefit obligations to participants either as a financial statement or as a reconciliation in the notes to the financial statements.**

21. **This statement or note shall present opening and closing balances and the following information (if applicable and as appropriate, but not limited to):**

(a) **Amendments to the plan (e.g., changes in participant benefits);**

(b) **Changes in the nature of the plan (e.g., a merger with another plan);**

(c) **Participant benefits allocated to defined contribution participant accounts;**

(d) **Net changes to defined benefit participant accrued benefits (e.g., actuarial movements);**

(e) **Employer/sponsor contributions;**

(f) **Participant contributions;**

(g) **Taxes on contributions;**

(h) **Benefits paid; and**

(i) **Administration expenses.**

Disclosure

22. The notes to the financial statements of a retirement benefit plan, whether defined benefit or defined contribution, shall disclose the following:

(a) A summary of significant accounting policies;

(b) A description of the plan (see paragraph 24) and the effect of any changes in the plan during the period;

(c) The basis for the valuation of all plan assets, including fair value measurement disclosure per class of plan assets as required by the applicable IPSAS;

(d) Details of any single investment exceeding either 5 percent of the net assets available for benefits or 5 percent of any class or type of security;

(e) Details of any investment in the employer/sponsor;

(f) Liabilities other than the provision for actuarial present value of promised retirement benefits or the defined contribution obligation to participants; and

(g) A description of the funding policy, including any obligations by the employer/sponsor to meet any actuarial determined shortfall in assets in a funded retirement benefit plan.

23. For defined benefit plans the following shall also be disclosed in the notes to the financial statements:

(a) The actuarial present value of promised retirement benefits, distinguishing between vested benefits and non-vested benefits;

(b) A description of the:

(i) Significant actuarial assumptions made; and

(ii) Method used to calculate the actuarial present value of promised retirement benefits;

(c) The effect of any changes in actuarial assumptions that have had a significant effect on the actuarial present value of promised retirement benefits; and

(d) The date of the actuarial valuation and when the next valuation will be undertaken.

24. A retirement benefit plan's financial statements shall contain a description of the plan. It shall contain the following:

(a) The name(s) of the employer(s)/sponsor(s) and the participant groups covered;

(b) The number of participants receiving benefits and the number of other participants, classified as appropriate;

(c) The type of plan – defined contribution or defined benefit;

(d) A note as to whether participants contribute to the plan;

(e) A description of the retirement benefits promised to participants;

(f) A description of any plan termination terms; and

(g) Changes in items (a) to (f) during the period covered by the financial statements.

Effective Date and Transition

Effective Date

25. **A retirement benefit plan shall apply this Standard for annual financial statements beginning on or after January 1, 2026. Earlier application is permitted. If a retirement benefit plan applies this Standard for a period beginning before January 1, 2026, it shall disclose that fact.**

26. When a retirement benefit plan adopts accrual basis IPSAS Standards as defined in IPSAS 33, *First*-time *Adoption of Accrual Basis International Public Sector Accounting Standards* for financial reporting purposes subsequent to this effective date, this Standard applies to the retirement benefit plan's financial statements covering periods beginning on or after the date of adoption of IPSAS Standards.

Transition

27. This Standard shall be applied prospectively as of the beginning of the annual period in which it is initially applied.

Appendix A

Application Guidance

This appendix is an integral part of IPSAS 49.

Objective (see paragraph 1)

AG1. The objective of this Standard is to prescribe the accounting and reporting requirements for public sector retirement benefit plans which provide retirement benefits primarily to public sector employees. Some public sector retirement benefit plans may also be open to participants working in the same field in the private sector (e.g., teachers in private sector schools) and are in the scope of this Standard. The aim is to improve the transparency and accountability of public sector retirement benefit plans, by providing information that is useful to users about a public sector retirement benefit plan's obligation in respect of participants' promised retirement benefits.

AG2. This Standard applies to retirement benefit plans established by public sector employers/sponsors to provide retirement benefits (either in the form of an annual income and/or lump sum) primarily to former employees. It does not apply to old-age pensions provided through welfare or social security programs, nor to social security schemes that provide pensions to all citizens.

AG3. The objective of reporting by a defined benefit plan is to provide information about the financial resources and activities of the plan that is useful in assessing the relationship between the accumulation of resources (where the defined benefit plan is funded) and plan benefits over time and, in particular, the extent of any deficits. This objective is usually achieved by providing financial statements that include the following:

(a) The recognition of the actuarial present value of promised retirement benefits (and for hybrid plans, the defined contribution obligation);

(b) Actuarial information about the retirement benefit obligations, including the measurement basis;

(c) A description of significant activities for the period and the effect of any changes relating to the plan, and its membership and terms and conditions;

(d) Statements reporting on the transactions and investment performance for the period and the financial position of the plan at the end of the period;

(e) A description of the investment policies; and

(f) How a pay-as-you-go[1] retirement benefit plan obligation is funded.

AG4. The objective of reporting by a defined contribution plan is to provide information about the plan and the performance of its investments. That objective is usually achieved by providing financial statements that include the following:

(a) The recognition of the defined contribution obligation;

(b) A description of significant activities for the period and the effect of any changes relating to the plan, and its membership and terms and conditions;

(c) Statements reporting on the transactions and investment performance for the period and the financial position of the plan at the end of the period; and

[1] Many public pension systems operate on a pay-as-you-go basis. This means that pensions paid to current pensioners are typically financed from general taxation and from contributions paid by current participants or sponsors during the same period in which pensions are paid.

(d) A description of the investment policies.

AG5. Given the prevalence and significance of retirement benefit scheme obligations primarily to current and former employees, to achieve the objective of improved transparency and accountability, this Standard requires retirement benefit plans to present, on the face of the statement of financial position as obligations, the estimated present value of promised retirement benefits based on the type of plan, with defined benefit plan obligations and defined contribution plan obligations presented differently.

Scope (see paragraphs 2–8)

AG6. A retirement benefit plan is a reporting entity. That is, it reports separately from the employer of the participants in the plan and separately from the entity that administers the plan (which may be the employer or an outsourced service provider). For example, where an entity administers more than one separate retirement benefit plan, this Standard applies to each of those plans and requires financial statements to be prepared for each retirement benefit plan.

AG7. Retirement benefit plans can also be classified as single employer, multi-employer[2], or state plans[3]. That classification may have an impact on the application of IPSAS 39, *Employee Benefits*, but does not alter the application of this Standard.

AG8. Many public sector entities provide retirement benefits for their employees by way of a multi-employer plan or state plan. Multi-employer plans and state plans are defined in IPSAS 39. Multi-employer plans and state plans can be either defined benefit plans or defined contribution plans. However, for entities providing defined benefit pensions for employees using either a multi-employer or state plan, IPSAS 39 allows entities to use defined contribution accounting if there is insufficient information to use defined benefit accounting. This has the potential to underestimate the obligation owed to employees when that entity applies IPSAS 39. Therefore, the full obligation may not be reported in the employer's financial statements.

AG9. Some retirement benefit plans have sponsors other than employers; this Standard also applies to the financial statements of such plans.

AG10. Most retirement benefit plans are based on formal agreements. Some plans are informal but have acquired obligations as a result of employers' established practices. While some plans permit employers to limit their obligations under the plans, it is usually difficult for an employer to cancel a plan if employees are to be retained. The same basis of accounting and reporting applies to an informal plan as to a formal plan.

AG11. Some retirement benefit plans provide for the establishment of separate funds into which contributions are made and out of which benefits are paid. Such funds may be administered by parties who act independently in managing fund assets. Those parties are called trustees in some countries. The term trustee is used in this Standard to describe such parties regardless of whether a trust has been formed. Many public sector retirement benefit plans are unfunded, operating on a pay-as-you-go basis whereby benefits are payable from general taxation.

---

[2] Multi-employer plans are defined in IPSAS 39 as defined contribution plans (other than state plans) or defined benefit plans (other than state plans) that:

(a) Pool the assets contributed by various entities that are not under common control; and

(b) Use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees.

[3] State plans are defined in IPSAS 39 as plans established by legislation that operate as if they are multi-employer plans for all entities in economic categories laid down in legislation.

Definitions (see paragraph 9)

AG12. For the purposes of this Standard, defined benefit plans are those plans which do not meet the definition of a defined contribution plan. This includes hybrid plans, which are retirement benefit plans that contain characteristics of both defined benefit plans and defined contribution plans. A defined benefit plan is a retirement benefit plan under which amounts to be paid as retirement benefits are typically determined by reference to a formula usually based on participants' earnings and/or years of service. The extent of the obligation for future retirement benefits is determined by the measurement of the promised retirement benefits and not by the level of contributions. Defined benefit plans might be funded, through plan investments, and where a shortfall arises, the employer/sponsor has a legal or constructive obligation to provide for the additional promised benefits. For unfunded plans, such as those established on a pay-as-you-go basis, all benefits payable will be financed from, for example, general taxation.

AG13. A defined benefit plan usually needs the periodic advice of an actuary to assess the financial condition of the plan, review the assumptions and recommend future contribution levels by employers/sponsors. Because the employer/sponsor is obligated to provide for any shortfall of retirement benefits over plan investments based on these assumptions, any investment risk typically falls on the employer/sponsor.

AG14. The retirement benefit plan accounts for its defined benefit obligation at the present value of the payments expected to settle promised retirement benefits, which it bases on the calculations performed periodically by an actuary. The retirement benefit plan accounts for the plan assets (if any) separately.

AG15. Defined contribution plans differ from defined benefit plans in that the amounts to be paid as retirement benefits are determined by the amount of contributions to a participant's plan together with investment earnings. The extent of the obligation for future retirement benefits is, therefore, capped by the size of the fund at the reporting date.

AG16. Under a defined contribution plan, the amount of a participant's future benefits is determined by the contributions paid by the employer/sponsor, the participant, or both, and the operating efficiency and investment earnings of the fund. An employer's/sponsor's obligation is usually discharged by contributions to the fund. Therefore, any investment risk typically falls on the participant. An actuary's advice is not normally required although such advice is sometimes used to estimate future benefits that may be achievable based on present contributions and varying levels of future contributions and investment earnings.

Recognition (see paragraphs 10 and 11)

AG17. This Standard requires the obligations to participants to be recognized and presented on the face of the statement of financial position. In a defined benefit plan, the obligation is a provision (a liability of uncertain timing or amount) called "the actuarial present value of promised retirement benefits"; it will generally be calculated by an actuary in accordance with the rules of the plan (e.g., qualifying service and salary) using actuarial assumptions. A hybrid plan will also have defined contribution obligations (see paragraphs 11 and AG18). The responsibility for making good any deficit between the value of any plan assets and the promised retirement benefit obligations may lie with the employer/sponsor of the plan, or with the appropriate level of government, or, in a shared funding arrangement, one or more of the employers/sponsors, depending on the rules of the retirement benefit plan and/or legislation.

AG18. In a defined contribution plan, the amount to be recognized for obligations to participants equate to the net assets less, if required by the rules of the plan or other regulations, any retention for specified purposes (e.g., investment risks).

Measurement (see paragraphs 12–14)

Valuation of Plan Investments

AG19. The term ‘plan assets’ is an overarching term for all assets of the retirement benefit plan. Plan investments are a subset of plan assets and are those assets that are required specifically for their investment potential to fund payment of retirement benefit obligations.

AG20. This Standard requires all plan investments to be measured at fair value. Any plan investments that are financial instruments shall be measured at fair value in accordance with IPSAS 41, *Financial Instruments.* Other plan investments shall be measured at fair value in accordance with the applicable IPSAS (e.g., IPSAS 16, *Investment Property*). Other plan assets shall be measured in accordance with the applicable IPSAS.

Actuarial Present Value of Promised Retirement Benefits

AG21. The actuarial present value of promised retirement benefits based on projected salaries is disclosed to indicate the magnitude of the potential obligation on a going concern basis which is generally the basis for funding. This obligation reflects the expectation of future benefits determined using actuarial methods, and projected salaries are used because benefits are measured in the future against salaries applicable at the point the benefits become due.

AG22. Actuarial valuations are not always obtained annually; some retirement benefit plan regulations might require actuarial valuations every three or five years, for example. If an actuarial valuation has not been prepared at the date of the financial statements, the most recent valuation is likely to be suitable as a starting point for the current year’s valuation. This requires the most recent actuarial valuation to be updated for any material transactions and other material changes in circumstances (including changes in market prices, interest rates, and expected inflation rate of projected salaries) up to the end of the reporting period.

AG23. Because a retirement benefit plan may have different risks and assumptions when compared to the employer/sponsor, an actuarial valuation may result in different valuations of the same defined benefit obligations for the retirement benefit plan and for the employer/sponsor. For example, the discount rate applied by the employer/sponsor may differ from that of the retirement benefit plan as a result of different risks related to the employer/sponsor compared to the plan. When the actuarial valuation performed for the employer/sponsor is used as a base, any necessary adjustments shall be made for determining the obligation of the retirement benefit plan.

Applicability of Other IPSAS

AG24. Unless specifically overwritten by this Standard, all other IPSAS apply to the financial statements of retirement benefit plans when applicable. For example, if a retirement benefit plan is required or elects to make their approved budget(s) publicly available, IPSAS 24, *Presentation of Budget Information in Financial Statements* shall also apply.

Presentation and Disclosure (see paragraphs 15–24)

Presentation of Financial Statements

AG25. This Standard overrides the requirements of IPSAS 1, *Presentation of Financial Statements* by setting out in paragraphs 15 and 16 which financial statements a retirement benefit plan shall present.

Statement of Financial Position

AG26. Plan investments are to be shown on the face of the statement of financial position and suitably classified. This requires grouping assets of a similar nature – for example, as equities, fixed income securities, and investment funds.

AG27. The statement of financial position is required to present the actuarial present value of promised retirement benefits and defined contribution obligation to plan participants below net assets available for benefits. Inclusion of this obligation(s) addresses the principal objective of this Standard to increase the transparency and accountability about retirement benefit plan obligations of public sector entities to participants.

AG28. This line item differs from the presentation of liabilities for benefits due and payable to participants (if applicable). Liabilities for benefits due and payable to participants are shown above the net assets available for benefits and only include those amounts that are immediately payable. For example, it may represent a monthly defined benefit pension payment yet to be paid or a withdrawal from a defined contribution plan requested by the participant that is yet to be paid.

Statement of Changes in Net Assets Available for Benefits

AG29. The line items shown in the statement of changes in net assets available for benefits are only those that are directly attributable to the plan. The nature of those items will largely depend on the terms of a plan. For example, some retirement benefit plans may specify that some administrative costs (such as the salaries of plan's investment managers) are paid out of investment income.

Statement of Changes in Retirement Benefit Obligations or Disclosure of Reconciliation Between the Opening and Closing Retirement Benefit Obligation Balances

AG30. The structure of a retirement benefit plan – such as whether it is a defined benefit plan or defined contribution plan and whether it is funded or pay-as-you-go – may determine how contributions and benefits are accounted for.

AG31. Some retirement benefit plans account for contributions and benefits as revenue and expenses respectively, while others account for contributions and benefits as changes in liabilities to participants. In some cases, the structure of retirement benefit plans might mean that a mixed approach is taken to accounting for contributions and benefits. Depending on the circumstances, the line items for contributions and benefits paid may need to be shown differently on the face of the statement of changes in retirement benefit obligations (see the Illustrative Examples) or in the disclosure of the reconciliation between the opening and closing retirement benefit obligation balances.

Cash Flow Statement

AG32. When preparing the cash flow statement, a retirement benefit plan shall consider the requirements and guidance in IPSAS 2, *Cash Flow Statements.* This Standard requires cash flows to be reported using the direct method, because the structure of the other financial statements makes it unlikely that an annual surplus or deficit will be reported, making the indirect method impracticable.

AG33. Individual retirement benefit plans may treat certain transactions differently. For example, contributions may be revenue or a liability to the participant, depending on the terms of the retirement benefit plan. Therefore, the classification of transactions as operating, investing, or financing cash flows may differ between retirement benefit plans. However, the classification adopted shall be applied consistently by a retirement benefit plan.

Disclosure

AG34. This Standard requires retirement benefit plans to provide a description of the funding policy. This description shall include information about how a retirement benefit plan intends to fund the payment of promised benefits, including the management of any funding deficit which may exist at the reporting date.

AG35. Information about how a plan intends to fund benefit payments may provide useful information to some users about the maturity of the retirement benefit plan. Participants are interested in the activities of the plan since they directly affect the level of their future benefits. Participants are interested in knowing whether

contributions have been received and proper control has been exercised to protect their rights. An employer/sponsor is interested in the efficient and fair operation of the plan.

AG36. Information provided in disclosures shall also reveal whether a retirement benefit plan is sufficiently funded. If the retirement benefit plan is unfunded or in deficit, the description of the funding policy shall provide information about how amounts due for promised retirement benefits will be satisfied – for example, by participant contributions or by funds from a central government.

Effective Date and Transition (see paragraphs 25–27)

AG37. This Standard shall be applied prospectively. However, when a retirement benefit plan that has used another international or national accounting standard dealing with retirement benefit plans first applies this Standard, it shall provide restated comparative financial statements in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.

Appendix B

Amendments to Other IPSAS

[Deleted]

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 49.

Objective (see paragraph 1)

BC1. This Basis for Conclusions summarizes the IPSASB's considerations in reaching the conclusions in IPSAS 49, *Retirement Benefit Plans*. This Standard is adapted from IAS 26, *Accounting and Reporting by Retirement Benefit Plans* issued by the International Accounting Standards Board (IASB). This Basis for Conclusions outlines those areas where the IPSASB decided to propose requirements for retirement benefit plans in the public sector that differ from those set out in IAS 26.

Background

BC2. The IPSASB's *Strategy and Work Plan 2019-2023* identified a project to develop an IPSAS aligned with IAS 26 as part of Theme B – 'Maintaining alignment with IFRS' which then led to the development of this Standard. The IPSASB approved the Project Brief for this Standard at its March 2021 meeting.

BC3. Multi-employer plans and state plans are common in the public sector. Because IPSAS 39, *Employee Benefits* allows employers contributing to these types of plans to report on a defined contribution basis, even if they are a defined benefit plan, the IPSASB was of the view that there may be a lack of transparent reporting of these plans' obligations for retirement benefits. The IPSASB noted that, while IPSAS 39 was aligned with IAS 19, *Employee Benefits*, there was no IPSAS equivalent to IAS 26.

BC4. IAS 26 was issued in January 1987 and its objective is to provide the accounting and reporting requirements for arrangements through which an entity provides retirement benefits (for example, an annual income) to employees after they terminate from service. Prior to the issuance of this Standard there were no corresponding requirements in IPSAS for the accounting by retirement benefit plans.

BC5. Therefore, the IPSASB considered it was important to develop a Standard which would require retirement benefit plans to provide a more complete view of the public sector retirement benefit obligation for accountability purposes. Further, because governments are often responsible for funding the deficits of defined benefit plans, this information also supports governments in making fiscal decisions about whether continuing to provide defined benefit pensions (in particular) is sustainable; making such decisions is challenging without easy access to the expected cost of providing retirement benefits in the form of an obligation on the plan's statement of financial position. The IPSASB noted that this Standard complements the requirements in IPSAS 39, and therefore provides the desired information on public sector retirement benefit obligations for each retirement benefit plan that reports under this Standard.

BC6. The IPSASB discussed whether relevant entities should consolidate a retirement benefit plan into a greater economic entity, based on the concepts in IPSAS 35, *Consolidated Financial Statements.* The IPSASB concluded that where the greater economic entity does not control the retirement benefit plan, consolidation under IPSAS 35 is not appropriate. When consolidation is not appropriate, the IPSASB confirmed the principles in IPSAS 39 provide the appropriate information about the totality of public sector retirement benefit obligations in the greater economic entity.

BC7. When discussing the Project Brief, the IPSASB noted that the age of IAS 26 means it is out of step with some of the developments in financial reporting since 1987. The IPSASB concluded that it was likely that some of the options available in IAS 26 would be inappropriate for public sector financial reporting and decided to proceed on the basis that the project would be an adaptation project rather than an alignment project.

BC8. The IPSASB also considered whether the title of this Standard should differ from IAS 26 and decided that the title should be shortened to *Retirement Benefit Plans*.

Scope (see paragraphs 2–8)

BC9. Respondents to Exposure Draft 82, *Retirement Benefit Plans* proposed better aligning the requirements of IPSAS 49 with the requirements in other IPSAS. For example, some respondents suggested aligning the definitions and requirements of IPSAS 49 with those in IPSAS 39, arguing that aligning definitions and requirements would better ensure that key measurements such as the actuarial present value of promised retirement benefits would be consistent and enable balances presented under IPSAS 49 to be consolidated into the employer/sponsor's financial statements when applying IPSAS 35.

BC10. The IPSASB concluded alignment between IPSAS 49 and IPSAS 39 was not necessary for the following reasons:

- Financial information presented using IPSAS 49 provides different information and satisfies different user needs than financial information presented using IPSAS 39. The primary users of financial information provided by IPSAS 49 are participants of the plan. They require information that supports their ability to understand if the retirement benefit plan can fund their retirement. The primary users of the financial information provided by IPSAS 39 are users of the financial information of the employer/sponsor. The financial information provided by IPSAS 39 makes up only a portion in the broader set of the employer's/sponsor's financial statements. These users are concerned with the employer's/sponsor's liability to fund the plan and require the ability to compare that retirement benefit liability with similar entities. The IPSASB concluded different user needs warrant the need for different measurements.
- The requirements of what an employer/sponsor shall include in its financial statements related to a retirement benefit plan are stated in IPSAS 39. IPSAS 49 provides guidance on how to present and measure this balance in a set of financial statements for the retirement benefit plan. Since the retirement benefit liability is already presented in the financial statements of the employer/sponsor, the IPSASB concluded an employer/sponsor is not expected to apply the requirements of this Standard as any pension obligations are captured in its financial statements when applying the requirements of IPSAS 39.

BC11. The IPSASB also discussed whether the scope of this Standard should be expanded to include benefit plans that have similar characteristics to retirement benefit plans but provide benefits more generally to meet societal needs other than solely retirement benefits to public sector employees and other participants who are eligible to join the plan (see paragraph 5 of this Standard). The IPSASB decided to retain the scope of IAS 26 because the primary purpose of the Standard is to provide guidance for accounting and reporting by retirement benefit plans in the public sector. The IPSASB noted that, for plans that have characteristics similar to retirement benefit plans, application of relevant parts of this Standard by analogy could be appropriate under paragraphs 12-15 of IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*. Other schemes may have characteristics that make application of relevant parts of IPSAS 39 or IPSAS 42, *Social Benefits* appropriate.

BC12. The IPSASB also agreed that the retirement benefit plan is the reporting entity; this is consistent with IAS 26. Therefore, entities that administer multiple retirement benefit plans must prepare financial statements for each individual plan.

Definitions (see paragraph 9)

BC13. The IPSASB noted that 'defined benefit plans' and 'defined contribution plans' are already defined in IPSAS 39, *Employee Benefits* but with different definitions to those in IAS 26 and discussed whether the IPSAS 39 definitions should be used in this Standard. The IPSASB decided that the IPSAS 39 definitions were not appropriate because they were written from the perspective of an employer contributing to a

retirement benefit plan, whereas the IAS 26 definitions are written from a retirement benefit plan's perspective.

BC14. The IPSASB decided to retain the IAS 26 definition for 'defined contribution plans', with additional guidance noting that for a defined contribution plan it is the participants in the plan who bear the principal investment risk.

BC15. The IPSASB did, however, decide to amend the IAS 26 definition for 'defined benefit plans' from:

"Defined benefit plans are retirement benefit plans under which amounts to be paid as retirement benefits are determined by reference to a formula usually based on participants' earnings and/or years of service"; to

"Defined benefit plans are retirement benefit plans other than defined contribution plans".

BC16. The IPSASB made this change to ensure that all retirement benefit plans that did not meet the definition of a defined contribution plan would be accounted for as a defined benefit plan. It was also decided to include Application Guidance to help distinguish between a defined benefit plan and a defined contribution plan. For example, the guidance indicates that for a defined benefit plan it is the employer/sponsor that bears the principal investment risk.

BC17. The IPSASB considered whether the IAS 26 definition for the 'actuarial present value of promised retirement benefits' should be replaced with the IPSAS 39 definition for the 'present value of defined benefit obligations'. The IPSASB noted that the definitions were written from different perspectives and that the plan perspective is appropriate in this Standard, even if the different perspectives may result in different valuations for fundamentally the same obligation (refer to BC18 below). Therefore, it was decided to retain the IAS 26 definition.

Recognition (see paragraphs 10–11)

BC18. The IPSASB noted that IAS 26 provides three options for defined benefit plans to present information on the actuarial present value of promised retirement benefits: recognition on the face of the financial statements, presentation in the notes to the financial statements, or by reference to an accompanying actuarial report. The IPSASB considers that the actuarial present value of promised retirement benefits is key information and decided that this information shall be recognized on the face of the statement of financial position as a separate provision. The IAS 26 options permitting only disclosure of this information in notes to the financial statements, or in a separate actuarial report, are therefore not included in this IPSAS.

BC19. The IPSASB also noted that IAS 26 is silent on whether or where retirement benefit obligations for defined contribution plans should be recognized and presented in the financial statements of a retirement benefit plan. To improve the accountability and transparency of such plans, the IPSASB decided that defined contribution obligations owed to participants under the terms of the plan shall also be recognized and presented on the face of the statement of financial position. In contrast, the employer's/sponsor's financial statements should not present an obligation related to contributions when there is no liability for unpaid contributions. There are differing views on the precise nature of defined contribution obligations; are they liabilities of uncertain timing and/or amount (and thus be accounted for as provisions); potential distribution to owners; or are they akin to stakeholder' equity? The IPSASB is of the view that the nature of defined contribution obligations may be linked to the design of the defined contribution plans and decided, therefore, not to describe them as any particular element of financial statements.

Measurement (see paragraphs 12–14)

Valuation of Plan Investments

BC20. IAS 26 requires plan investments to be measured at fair value. However, the IPSASB noted that IAS 26 seems to allow plan investments to be measured at another value if an estimate of fair value is not possible.

The IPSASB agreed that fair value measurement guidance in other IPSAS is sufficient and decided that plan investments shall be measured at fair value using the guidance in other IPSAS as relevant to the type of plan investments.

Actuarial Present Value of Promised Retirement Benefits

BC21. The IPSASB noted that IAS 26 allows the actuarial present value of promised retirement benefits to be measured using either current salaries or projected salaries. The IPSASB discussed whether it was appropriate to keep both options in this Standard. The IPSASB decided that the option to use current salaries should be removed from this Standard because it has the potential to understate the actuarial present value of promised retirement benefits. Plan participants are interested in the sustainability of the retirement benefit plan and therefore require a best estimate of the present value of future obligations using projected salaries. It was also noted that using projected salaries is consistent with IPSAS 39, under which the present value of a defined benefit obligation is required to be measured using projected salaries. Further, using projected salaries is consistent with the objective of this Standard to increase the transparency and accountability of retirement benefit plans for retirement benefit obligations owing to participants. The IPSASB noted that the benefit of providing an estimate based on projected salaries would outweigh any cost implication to the retirement benefit plan.

BC22. The IPSASB considered including a practical expedient whereby, under certain circumstances, the trustees of a retirement benefit plan could use the employer's/sponsor's actuarial valuation to measure the actuarial valuation of promised retirement benefits for the purposes of this Standard. The IPSASB noted the use of such a practical expedient in some jurisdictions, but also noted that in other jurisdictions regulatory requirements may result in a different measurement for the same obligation, due to, amongst others, the different discount rates applied by actuaries and the impact of collective versus individual participant valuation, especially prevalent in multi-employer plans. The IPSASB is also of the view that if the trustees of a retirement benefit plan considered the IPSAS 39 measurement was appropriate for retirement benefit plan purposes, e.g., there are no material differences in approach, assumptions, or discount rates applied by actuaries, they may use it without needing a practical expedient in this Standard. Therefore, it was decided not to include such a practical expedient.

Classification of Contributions and Benefits

BC23. The IPSASB discussed whether contributions and benefits should be classified as any particular element as defined in the Conceptual Framework. The IPSASB noted that in some jurisdictions contributions are considered to be revenue whereas other jurisdictions are of the view that contributions give rise to an obligation. Similarly, benefits may be considered expenses or a reduction in that obligation depending on the jurisdiction.

BC24. The IPSASB decided that classifying contributions and benefits is dependent on the structure and regulations of a particular retirement benefit plan. The IPSASB acknowledged that there are many different types of retirement benefit plans, and each will have its own nuances regarding structure and regulations. Therefore, because this Standard applies to all types of plans, the IPSASB decided not to classify contributions and benefits as particular elements but instead to leave the classification in financial statements to the judgement of preparers with knowledge of the plan structure and regulations.

Presentation of Financial Statements (see paragraphs 15–21)

BC25. The IPSASB noted that IAS 26 is not definitive about which financial statements a retirement benefit plan should present and decided that this Standard would specify which financial statements are required.

BC26. The IPSASB noted that users of a retirement benefit plan's financial statements are mostly interested in a statement which shows a reconciliation of the opening and closing balances of the net assets available for

benefits, which shows the inflows and outflows of the retirement benefit plan and decided that a statement of financial performance would not be required. A reconciliation of the annual performance of the retirement benefit plan is presented in the statement of changes in net assets available for benefits, which does bear some resemblance to a statement of financial performance but should not be considered as such.

BC27. The IPSASB noted that it was unclear whether IAS 26 required a retirement benefit plan to present a cash flow statement. The IPSASB was of the view that retirement benefit plans should include a cash flow statement because it provides important information for users. Therefore, the IPSASB decided that this Standard would specify that a retirement benefit plan shall present a cash flow statement. The cash flow statement shall be prepared using the direct method according to IPSAS 2, *Cash flow Statements*, because this Standard does not require a statement of financial performance. Therefore, it is not suitable to prepare a cash flow statement using the indirect method, because there is no surplus or deficit to adjust for non-cash items to derive net cash flows from operating activities.

Disclosure (see paragraphs 22–24)

BC28. The IPSASB reviewed the IAS 26 disclosure on the valuation of plan assets in, and the funding of, a retirement benefit plan, and agreed with respondents that more information would be useful to the decision-making needs of users of the financial statements, Therefore, the IPSASB agreed to expand the disclosure requirements in the notes to the financial statements of a retirement benefit plan, whether defined benefit or defined contribution, reflected in paragraph 22, as follows:

> "(c) The basis for the valuation of all plan assets, including fair value measurement disclosure per class of plan assets as required by the applicable IPSAS"; and
>
> "(g) A description of the funding policy, including any obligations by the employer/sponsor to meet any actuarial determined shortfall in assets in a funded retirement benefit plan".

BC29. The IPSASB further agreed to enhance the application guidance in AG36 regarding the inclusion of disclosure on the funding policy of the retirement benefit plan by referring, for example, to the contributions expected from participants, central government, or another entity.

Effective Date and Transition (see paragraphs 25–27)

BC30. The IPSASB considered that the key information in the General Purpose Financial Statements of a retirement benefit plan comprises the obligation of future benefits, the extent of any deficit, and the change in those figures over the reporting period. The IPSASB concluded that requiring the application of the guidance on the prospective basis would best serve the needs of users of retirement benefit plan information because it enables the retirement benefit plan to provide the information sooner than if retrospective application were required. Prospective application will require a retirement benefit plan to prepare an opening and closing Statement of Financial Position, and other Statements only for the year of adoption. This more quickly achieves one of the project objectives, which was to provide users with a more accurate view of the retirement benefit obligations of public sector entities. Retrospective application would require additional historical information and the key information would not be available as quickly as under prospective application.

Implementation Guidance

This guidance accompanies, but is not part of, IPSAS 49.

Factors to consider in determining whether contributions and benefits are revenue and expenses or liabilities and a reduction in liabilities.

Q: How do preparers determine the accounting treatment of contribution and benefits?

A: There may be many different retirement benefit plan structures and frameworks even within the same jurisdiction, as well as across jurisdictions. In order to determine the economic substance of the arrangements in each plan, and therefore the most appropriate accounting treatment, the preparers of the retirement benefit plan financial statements should exercise professional judgment in making this determination and consider the following factors:

(a) Characteristics of the plan;

(b) Structure of the plan;

(c) Regulatory environment;

(d) Legislative environment;

(e) Purpose of the contributions;

(f) Types of benefits provided; and

(g) The type of other expenses borne by the plan.

Illustrative Examples

These examples accompany, but are not part of, IPSAS 49.

The following illustrative examples (IE) provide examples of styles and formats for retirement benefit plans to present financial statements that are consistent with IPSAS 49. These IEs are not comprehensive nor mandatory. Other styles and formats are acceptable if they meet the requirements of this IPSAS.

These IEs show three potential ways in which the required financial statements can be presented, depending on the judgment made about how to present contributions and benefits. The different line items in the IEs are illustrative.

IE 1 relates to a *defined benefit plan* where the contributions and benefits are treated as revenue and expenses and all cash flows are treated as operating cash flows.

IE 2 relates to a *defined benefit plan* where the contributions are treated as a liability and the benefits as a reduction in that liability. Regarding cash flows, returns on investments, administrative payments, investment payments, and taxes paid on investment income are operating cash flows. Purchases and sales of plan investments are investing activities. Contributions and benefits, transfers to and from other plans, and income tax on contributions are financing activities.

IE 3 relates to a *defined contribution plan* where the contributions and benefits are treated as revenue and expenses. Regarding cash flows, return on investments, administrative payments, contributions received, benefits paid (and associated receipts and payments), and income taxes are operating activities. Purchases and sales of plan investments are investing activities.

Net cash inflows (outflows) from investing activities	**N/A**	**X**	**X**

[7] This funding is generally related to unfunded plans and may be made by, for example, a central government. It is separate from contributions from the employer.

Cash flow statement **For the year ended December 31, 20XY** (in thousands of currency units)	**IE1** **(DB)**	**IE2** **(DB)**	**IE3** **(DC)**
Cash flows from financing activities			
Employer contributions received	N/A	X	N/A
Participant contributions received	N/A	X	N/A
Funding received from sponsor[8]	N/A	X	N/A
Participant benefits paid	N/A	X	N/A
Transfers to and from other plans	N/A	X	N/A
Tax paid on contributions	N/A	(X)	N/A
Net cash inflows (outflows) from financing activities	**N/A**	**X**	**N/A**
Net increase (decrease) in cash and cash equivalents	**X**	**X**	**X**
Cash and cash equivalents at the beginning of the year	X	X	X
Cash and cash equivalents at the end of the year	**X**	**X**	**X**

[8] This funding is generally related to unfunded plans and may be made by, for example, a central government. It is separate from contributions from the employer.

COMPARISON WITH IAS 26

IPSAS 49, *Retirement Benefit Plans* is drawn from IAS 26, *Accounting and Reporting by Retirement Benefit Plans*, including amendments up to February 2021.

The main differences between IPSAS 49 and IAS 26 are as follows:

- IPSAS 49 has different definitions, such as defined benefit plans and net assets available for benefits;
- IPSAS 49 requires the use of projected salaries only when measuring the actuarial present value of promised retirement benefits, while IAS 26 permits a choice of using current salary levels or projected salary levels; and
- IPSAS 49 requires the presentation of a cash flow statement for retirement benefit plans, while IAS 26 does not.

COMPARISON WITH GFS

In developing IPSAS 49, *Retirement Benefit Plans*, the IPSASB considered Government Finance Statistics (GFS) reporting guidelines.

Key similarities with GFS are as follows:

- IPSAS 49 permits contributions to the retirement benefit plans to be accounted for as either revenue or a liability to the participant, depending on the terms of the plan, and GFS also permits this depending on the type of scheme.
- IPSAS 49 requires retirement benefit obligations to be recognized in the statement of financial position. Similarly, GFS also requires pension entitlements to be presented on the balance sheet.

IPSAS 50, *EXPLORATION FOR AND EVALUATION OF MINERAL RESOURCES*

Acknowledgment

IPSAS 50, *EXPLORATION FOR AND EVALUATION OF MINERAL RESOURCES*

History of IPSAS Accounting Standard

This version includes amendments resulting from IPSAS Accounting Standards issued up to January 31, 2026.

IPSAS 50, *Exploration for and Evaluation of Mineral Resources* was issued in November 2024.

Since then, IPSAS 50 has been amended by the following IPSAS *Accounting* Standards:

- IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards* (issued November 2025)

Table of Amended Paragraphs in IPSAS 50

Paragraph Affected	How Affected	Affected By
28	Amended	IPSAS 33 November 2025

IPSAS 50, *EXPLORATION FOR AND EVALUATION OF MINERAL RESOURCES*

Basis for Conclusions	
Comparison with IFRS 6	
Comparison with GFS	

International Public Sector Accounting Standard 50, *Exploration for and Evaluation of Mineral Resources*, is set out in paragraphs 1–29. All the paragraphs have equal authority. IPSAS 50 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*. IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provides a basis for selecting and applying accounting policies in the absence of explicit guidance.

Objective

1. The objective of this Standard is to specify the financial reporting for the exploration for and evaluation of mineral resources.

2. In particular, the Standard requires:

   (a) Limited improvements to existing accounting practices for exploration and evaluation expenditures.

   (b) Entities that recognize exploration and evaluation assets to assess such assets for impairment in accordance with this Standard and measure any impairment in accordance with IPSAS 26, *Impairment of Cash-Generating Assets*.

   (c) Disclosures that identify and explain the amounts in the entity's financial statements arising from the exploration for and evaluation of mineral resources and help users of those financial statements understand the amount, timing and certainty of future cash flows from any exploration and evaluation assets recognized.

Scope

3. An entity that prepares and presents financial statements under the accrual basis of accounting shall apply this Standard to exploration and evaluation expenditures that it incurs.

4. This Standard does not address other aspects of accounting by entities engaged in the exploration for and evaluation of mineral resources.

5. An entity shall not apply this Standard to expenditures incurred:

   (a) Before the exploration for and evaluation of mineral resources, such as expenditures incurred before the entity has obtained the legal rights to explore a specific area.

   (b) After the technical feasibility and commercial viability of extracting a mineral resource are demonstrable.

Definitions

6. **The following terms are used in this Standard with the meanings specified:**

   Exploration and evaluation assets means exploration and evaluation expenditures recognized as assets in accordance with the entity's accounting policy.

   Exploration and evaluation expenditures means expenditures incurred by an entity in connection with the exploration for and evaluation of mineral resources before the technical feasibility and commercial viability of extracting a mineral resource are demonstrable.

   Exploration for and evaluation of mineral resources means the search for mineral resources, including minerals, oil, natural gas, and similar non-regenerative resources after the entity has obtained legal rights to explore in a specific area, as well as the determination of the technical feasibility and commercial viability of extracting the mineral resource.

   Any other terms defined in other IPSAS are used in this Standard with the same meaning as in those Standards and are reproduced in the *Glossary of Defined Terms* published separately.

Recognition of Exploration and Evaluation Assets

7. **When developing its accounting policies, an entity recognizing exploration and evaluation assets shall apply paragraph 12 of IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors.***

Exemption from IPSAS 3 Paragraphs 14 and 15

8. Paragraphs 14 and 15 of IPSAS 3 specify sources of authoritative requirements and guidance that management is required to consider in developing an accounting policy for an item if no IPSAS applies specifically to that item. Subject to paragraphs 10 and 11 below, this Standard exempts an entity from applying those paragraphs to its accounting policies for the recognition and measurement of exploration and evaluation assets.

Measurement of Exploration and Evaluation Assets

Initial Measurement

9. Exploration and evaluation assets shall be measured at cost.

Elements of Cost of Exploration and Evaluation Assets

10. An entity shall determine an accounting policy specifying which expenditures are recognized as exploration and evaluation assets and apply the policy consistently. In making this determination, an entity considers the degree to which the expenditure can be associated with finding specific mineral resources. The following are examples of expenditures that might be included in the initial measurement of exploration and evaluation assets (the list is not exhaustive):

    (a) Acquisition of rights to explore;

    (b) Topographical, geological, geochemical and geophysical studies;

    (c) Exploratory drilling;

    (d) Trenching;

    (e) Sampling; and

    (f) Activities in relation to evaluating the technical feasibility and commercial viability of extracting a mineral resource.

11. Expenditures related to the development of mineral resources shall not be recognized as exploration and evaluation assets. *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* and IPSAS 31, *Intangible Assets* provide guidance on the recognition of assets arising from development.

12. In accordance with IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets* an entity recognizes any obligations for removal and restoration that are incurred during a particular period as a consequence of having undertaken the exploration for and evaluation of mineral resources.

Subsequent Measurement

13. An entity shall measure the exploration and evaluation assets at either historical cost or fair value. If fair value is used (either according to the model in IPSAS 45*, Property, Plant, and Equipment*, or according to the model in IPSAS 31) it shall be consistent with the classification of the assets (see paragraph 16).

Changes in Accounting Policies

14. **An entity may change its accounting policies for exploration and evaluation expenditures if the change makes the financial statements more relevant to the economic decision-making needs of users and no less reliable, or more reliable and no less relevant to those needs. An entity shall judge relevance and reliability using the criteria in IPSAS 3.**

15. To justify changing its accounting policies for exploration and evaluation expenditures, an entity shall demonstrate that the change brings its financial statements closer to meeting the criteria in IPSAS 3, but the change need not achieve full compliance with those criteria.

Presentation

Classification of Exploration and Evaluation Assets

16. An entity shall classify exploration and evaluation assets as tangible or intangible according to the nature of the assets acquired and apply the classification consistently.

17. Some exploration and evaluation assets are treated as intangible (e.g., drilling rights), whereas others are tangible (e.g., vehicles and drilling rigs). To the extent that a tangible asset is consumed in developing an intangible asset, the amount reflecting that consumption is part of the cost of the intangible asset. However, using a tangible asset to develop an intangible asset does not change a tangible asset into an intangible asset.

Reclassification of Exploration and Evaluation Assets

18. An exploration and evaluation asset shall no longer be classified as such when the technical feasibility and commercial viability of extracting a mineral resource are demonstrable. Exploration and evaluation assets shall be assessed for impairment, and any impairment loss recognized, before reclassification.

Impairment

Recognition and Measurement

19. **Exploration and evaluation assets shall be assessed for impairment when facts and circumstances suggest that the carrying amount of an exploration and evaluation asset may exceed its recoverable amount. When facts and circumstances suggest that the carrying amount exceeds the recoverable amount, an entity shall measure, present and disclose any resulting impairment loss in accordance with IPSAS 26, except as provided by paragraph 22 below.**

20. For the purposes of exploration and evaluation assets only, paragraph 21 of this Standard shall be applied rather than paragraphs 25–29 of IPSAS 26 when identifying an exploration and evaluation asset that may be impaired. Paragraph 21 uses the term ‘assets’ but applies equally to separate exploration and evaluation assets or a cash-generating unit, in the case of cash-generating assets per IPSAS 26.

21. One or more of the following facts and circumstances indicate that an entity should test exploration and evaluation assets for impairment (the list is not exhaustive):

    (a) The period for which the entity has the right to explore in the specific area has expired during the period or will expire in the near future, and is not expected to be renewed.

    (b) Substantive expenditure on further exploration for and evaluation of mineral resources in the specific area is neither budgeted nor planned.

(c) Exploration for and evaluation of mineral resources in the specific area have not led to the discovery of commercially viable quantities of mineral resources and the entity has decided to discontinue such activities in the specific area.

(d) Sufficient data exist to indicate that, although a development in the specific area is likely to proceed, the carrying amount of the exploration and evaluation asset is unlikely to be recovered in full from successful development or by sale.

In any such case, or similar cases, the entity shall perform an impairment test in accordance with IPSAS 26. Any impairment loss is recognized as an expense in accordance with IPSAS 26.

Specifying the Level at which Exploration and Evaluation Assets are Assessed for Impairment

22. An entity shall determine an accounting policy for allocating exploration and evaluation assets to cash-generating units or groups of cash-generating units for the purpose of assessing such assets for impairment. Each cash-generating unit or group of units to which an exploration and evaluation asset is allocated shall not be larger than a segment determined in accordance with IPSAS 18, *Segment Reporting.*

23. The level identified by the entity for the purposes of testing exploration and evaluation assets for impairment may comprise one or more cash-generating units.

Disclosure

24. An entity shall disclose information that identifies and explains the amounts recognized in its financial statements arising from the exploration for and evaluation of mineral resources.

25. To comply with paragraph 24, an entity shall disclose:

(a) Its accounting policies for exploration and evaluation expenditures including the recognition of exploration and evaluation assets.

(b) The amounts of assets, liabilities, revenue and expense, and operating and investing cash flows arising from the exploration for and evaluation of mineral resources.

26. An entity shall treat exploration and evaluation assets as a separate class of assets and make the disclosures required by either IPSAS 45 or IPSAS 31 consistent with how the assets are classified.

Effective Date and Transition

Effective Date

27. **An entity shall apply this Standard for annual financial statements covering periods beginning on or after January 1, 2027. Earlier application is permitted. If an entity applies this Standard for a period beginning before January 1, 2027, it shall disclose that fact.**

28. When an entity adopts accrual basis IPSAS Standards, as defined in IPSAS 33*, First-time Adoption of Accrual Basis International Public Sector Accounting Standards*, for financial reporting purposes subsequent to this effective date, this Standard applies to the entity's annual financial statements covering periods beginning on or after the date of adoption of IPSAS Standards.

Transition

29. If it is impracticable to apply a particular requirement of paragraph 19 to comparative information that relates to annual periods beginning before January 1, 2027, an entity shall disclose that fact. IPSAS 3 explains the term 'impracticable'.

Appendix A

Amendments to Other IPSAS

Amendments to IPSAS 31, *Intangible Assets*

Paragraph 3 is amended, and paragraph 132L is added. New text is underlined, and deleted text is struck through.

3. This Standard does not apply to:

…

(c) The recognition and measurement of exploration and evaluation assets (see IPSAS 50, *Exploration for and Evaluation of Mineral Resources* ~~the relevant international or national accounting standard dealing with exploration for, and evaluation of, mineral resources~~).

…

Effective Date

…

132P. **Paragraph 3 was amended by IPSAS 50, *Exploration for and Evaluation of Mineral Resources*, issued in November 2024. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2027. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2027, it shall disclose that fact.**

…

Amendments to IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards (IPSAS)*

Paragraphs 62D, 62E, and 154P are added. New text is underlined, and deleted text is struck through.

…

Exemptions that Affect Fair Presentation and Compliance with Accrual Basis IPSAS during the Period of Transition

…

IPSAS 50, *Exploration for and Evaluation of Mineral Resources*

62D. **Where a first-time adopter takes advantage of the exemption in paragraph 36 which allows a three-year transitional relief period to not recognize assets, it is not required to apply the requirements related to exploration and evaluation assets until the exemption that provided the relief has expired, and/or when the relevant assets are recognized in accordance with the applicable IPSAS (whichever is earlier).**

62E. This IPSAS allows a first-time adopter a period of up to three years from the date of adoption of IPSAS to recognize assets in accordance with IPSAS 45. During this period, a first-time adopter may need to consider the recognition requirements of this IPSAS at the same time as considering the recognition of exploration and evaluation assets in this IPSAS. Where a first-time adopter takes advantage of the exemption in accordance with IPSAS 45, it is not required to recognize exploration and evaluation assets until the exemptions that provided relief have expired, and/or when the relevant assets are recognized in accordance with the applicable IPSAS (whichever is earlier).

…

Effective Date

…

154P. **Paragraphs 62F and 62G were added by IPSAS 50, *Exploration for and Evaluation of Mineral Resources*, issued in November 2024. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2027. Earlier application is encouraged. If an entity applies the amendment for a period beginning before January 1, 2027, it shall disclose that fact.**

…

Amendments to IPSAS 45, *Property, Plant, and Equipment*

Paragraph 3 is amended, and paragraph 85B is added. New text is underlined, and deleted text is struck through.

3. This Standard does not apply to:

…

(d) The recognition and measurement of exploration and evaluation assets (see IPSAS 50, *Exploration for and Evaluation of Mineral Resources* ~~the relevant international or national accounting standard dealing with measurement of exploration and evaluation assets~~).

…

Effective Date

…

85B. **Paragraph 3 was amended by IPSAS 50, *Exploration for and Evaluation of Mineral Resources*, issued in November 2024. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2027. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2027, it shall disclose that fact.**

…

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 50.

Objective (see paragraphs 1 and 2)

BC1. This Basis of Conclusions summarizes the IPSASB's considerations in reaching the conclusions on IPSAS 50, *Exploration for and Evaluation of Mineral Resources.* This Standard is based on IFRS 6 *Exploration for and Evaluation of Mineral Resources* published by the IASB on December 31, 2004, including amendments up to March 2018. This Basis for Conclusions outlines only those areas where IPSAS 50 departs from the requirements of IFRS 6.

Background

BC2. IFRS 6 was issued by the IASB in December 2004. It allows a policy choice when accounting for expenditure during the exploration phase of a mine. IFRS 6 also prescribes the financial reporting if the entity chooses an accounting policy that recognizes and measures the exploration and evaluation expenditure as an asset. Prior to the issuance of this Standard there were no equivalent requirements in IPSAS for the financial reporting for the exploration for and evaluation of mineral resources.

BC3. The IPSASB published the Consultation Paper, Natural Resources, in May 2022, which proposed the development of guidance aligned with IFRS 6. Respondents to the Consultation Paper agreed with the IPSASB's proposal and the IPSASB decided that a separate Standard aligned with IFRS 6 should be developed.

Exploration for and Evaluation of Mineral Resources in the Public Sector

BC4. An entity will typically need to conduct exploration and evaluation activities to determine if a site should be developed. Before this Standard, there was no specific guidance on exploration and evaluation activities in IPSAS.

BC5. The IPSASB determined that guidance on exploration and evaluation costs should be aligned with IFRS 6, applicable to exploration and evaluation activities of a commercial nature, and not of a service delivery nature. In reaching this conclusion, the IPSASB determined that a number of resource-rich jurisdictions had entered into production sharing or co-production agreements with private companies, rather than the traditional mining licensing or royalty agreements. The IPSASB found that from the public sector entity's perspective, such agreements may fall within the scope of IPSAS 37, *Joint Arrangements,* and it is possible for the resulting joint operation or joint venture to incur exploration and evaluation costs.

BC6. The IPSASB noted that an entity may explore for mineral resources due to other rights, e.g., sovereign rights, without needing a license (a legal right). The IPSASB determined that, in such instances, the exploration and evaluation expenditures are within the scope of this Standard.

BC7. Respondents to the IPSASB's Consultation Paper, *Natural Resources* generally agreed with the IPSASB's approach to develop the Standard aligned with IFRS 6.

BC8. The IPSASB did not identify any public sector specific reasons to depart from principles in IFRS 6 in the development of this Standard, except for terminology and other IPSASB-specific formatting and consistency amendments. The IPSASB decided to retain the terminology of "commercial viability" and "impairment of cash-generating assets" used in IFRS 6, because the Standard is only applicable to exploration and evaluation activities of a commercial nature, and it is considered that this would be a relevant to public sector entities who use the Standard.

BC9. The IPSASB noted the view of some respondents to Exposure Draft 86 that the Standard should provide guidance to recognize, as intangible assets, the State's power to issue exploration rights to entities. The

IPSASB noted that accounting by the issuer of the exploration rights is not in the scope of this Standard and noted, furthermore, that powers and rights conferred by legislation, a constitution, or by equivalent means, such as mining rights managed by the state itself, are also excluded from the scope of IPSAS 31, *Intangible Assets.*

Comparison with the Conceptual Framework

BC10. The IPSASB noted that where an entity chooses an accounting policy that recognizes and measures the exploration and evaluation expenditure as assets, that policy may not be consistent with the definition of an asset in the Conceptual Framework. Recent outreach by the IASB noted that private sector constituents generally agreed that IFRS 6 resulted in information that was useful to both preparers and users of IFRS financial statements. The IPSASB noted that guidance which is aligned with IFRS 6 should also result in useful information for preparers and users in the public sector and concluded that the exemption from applying paragraphs 14 and 15 of IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provided for in paragraph 8 of the Standard is acceptable.

BC11. The IPSASB also noted that the IASB concluded its project on Extractive Activities in September 2023. No further changes to the accounting and disclosure requirements in IFRS 6 will be made, and the temporary nature of the exemption from paragraphs 11 and 12 of IAS 8 Accounting Policies, Changes in Accounting Estimates, and Errors will be removed as part of the IASB's next annual improvements cycle. The IPSASB agreed to align to the IASB's decision to remove the temporary nature of the exemption, which supports the conclusion on the usefulness of information per BC8.

Subsequent Measurement

BC12. The IPSASB agreed to align with IFRS 6 and the application of the Standard to operations of a commercial nature. Therefore, exploration and evaluation assets are held for their financial capacity (i.e., commercial purpose), to which the fair value measurement basis applies.

Reversal of impairment losses

BC13. The IPSASB noted that for the reversal of impairment losses, entities should apply the specified requirements set out in paragraphs 99–105 of IPSAS 26, *Impairment of Cash-Generating Assets*, because these requirements apply to all entities for all assets (excluding goodwill and equity investments classified as available for sale).

COMPARISON WITH IFRS 6

IPSAS 50, *Exploration for and Evaluation of Mineral Resources* is drawn from IFRS 6 *Exploration for and Evaluation of Mineral Resources*, including amendments up to March 2018.

The main differences between IPSAS 50 and IFRS 6 are as follows:

- IPSAS 50 uses different terminology from IFRS 6. For example, IPSAS 50 uses the terms “historical cost”, and “impairment of cash-generating assets”, while IFRS 6 uses the terms “cost model”, “revaluation model”, and “impairment of assets”.

COMPARISON WITH GFS

In developing IPSAS 50, *Exploration for and Evaluation of Mineral Resources,* the IPSASB considered Government Finance Statistics (GFS) reporting guidelines.

Key similarities and differences with GFS are as follows:

- When an entity elects to capitalize exploration and evaluation expenditure, both IPSAS 50 and GFS require an entity to account for the expenditure as exploration and evaluation assets.
- IPSAS 50 requires the classification of exploration and evaluation assets as either tangible or intangible assets. GFS requires their classification as a type of intellectual property products.
- On initial recognition, the elements of cost in IPSAS 50 do not include a return to fixed capital used in the exploration and evaluation activity, while GFS does include a return to fixed capital.
- On subsequent measurement, IPSAS 50 allows the historical cost or current value model. In GFS, assets should be measured at market values, so the same valuation can result if the market approach is used as the measurement technique.
- On subsequent measurement, IPSAS 50 requires exploration and evaluation assets to be assessed for impairment and impaired when the carrying amount exceeds the recoverable amount. In GFS, consumption of the asset is the decline in the current value of the asset.
- IPSAS 50 includes disclosure requirements that are not present in GFS.

IPSAS 51, *TANGIBLE NATURAL RESOURCES HELD FOR CONSERVATION*

History of IPSAS Accounting Standard

This version includes amendments resulting from IPSAS Accounting Standards issued up to January 31, 2026.

IPSAS 51, *Tangible Natural Resources Held for Conservation* was issued in January 2026.

Comparison with GFSM 2014	

International Public Sector Accounting Standard 51, *Tangible Natural Resources Held for Conservation*, is set out in paragraphs 1–78. All the paragraphs have equal authority. IPSAS 51 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*. IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*, provides a basis for selecting and applying accounting policies in the absence of explicit guidance.

Objective

1. **The objective of this Standard is to establish the principles that an entity shall apply to report relevant information to users of financial statements about the nature, amounts, timing, and uncertainties arising from tangible natural resources held for conservation.**

2. To meet the objective in paragraph 1, this Standard:

   (a) Sets out the recognition, measurement, and presentation requirements for tangible natural resources held for conservation; and

   (b) Requires an entity to provide disclosures in their financial statements that enable users to evaluate:

      (i) The nature of, and risks associated with, tangible natural resources held for conservation; and

      (ii) The effects of tangible natural resources held for conservation on the entity's financial position, financial performance, and cash flows.

Scope

3. **An entity that prepares and presents financial statements under the accrual basis of accounting shall apply this Standard in accounting for tangible natural resources held for conservation as defined in this Standard.**

4. **This Standard does not apply to:**

   (a) **Assets consisting of materials or supplies to be consumed in the production process or in the rendering of services, held for distribution in the ordinary course of operations or in the process of production for sale or distribution, which are within the scope of IPSAS 12, *Inventories*;**

   (b) **Assets held to earn rentals or capital appreciation, or both, which are within the scope of IPSAS 16, *Investment Property*;**

   (c) **Assets that are biological assets whose biological transformation is managed for sale, distribution, or conversion into agricultural produce, which are within the scope of IPSAS 27, *Agriculture*;**

   (d) **Service concession assets within the scope of IPSAS 32, *Service Concession Arrangements: Grantor*;**

   (e) **Leases as defined in IPSAS 43, *Leases*;**

   (f) **Assets classified as held for sale in accordance with IPSAS 44, *Non-current Assets Held for Sale and Discontinued Operations*;**

   (g) **Assets used in the production or supply of goods or services, for rental to others, or for administrative purposes, and are expected to be used for more than one reporting period, which are within the scope of IPSAS 45, *Property, Plant, and Equipment*; and**

   (h) **Exploration and evaluation assets within the scope of IPSAS 50, *Exploration for and Evaluation of Mineral Resources*.**

5. **This Standard also does not apply to obligations relating to tangible natural resources held for conservation within the scope of IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*.**

Classification as Tangible Natural Resources Held for Conservation

6. The assessment of the unit of account for a resource may impact whether an item is within the scope of this Standard, as some resources could consist of multiple units of account. Each unit of account potentially could

be accounted for separately, and its classification is considered individually based on an entity's primary intended reason for holding that individual unit of account. Only units of account which meet the definition of a tangible natural resource held for conservation in paragraph 8 are classified as such and are within the scope of this IPSAS Standard. Other units of account that are held primarily for other purposes, such as those listed in paragraph 4, are accounted for based on the guidance in other IPSAS Standards.

7. Paragraphs AG2 and AG14–AG18 provide additional guidance on the unit of account, and paragraphs AG3–AG4 provide additional guidance on the scope of this Standard.

Definitions

8. **The following terms are used in this Standard with the meanings specified:**

For the purposes of this Standard, a tangible natural resource held for conservation is a naturally occurring tangible asset that is managed to prevent its degradation.

A class of tangible natural resources held for conservation means a grouping of tangible natural resources held for conservation that are of a similar nature and are shown as a single item for the purpose of disclosure in the financial statements.

Terms defined in other IPSAS Standards are used in this Standard with the same meaning as in those Standards and are reproduced in the *Glossary of Defined Terms* published separately.

9. Paragraphs AG5–AG13 provide additional guidance on the definitions in this Standard.

Recognition

10. **A tangible natural resource held for conservation shall be recognized if, and only if:**

(a) **It is probable that service potential associated with the resource will flow to the entity;**

(b) **The entity controls the tangible natural resource held for conservation as a result of past events; and**

(c) **The tangible natural resource held for conservation can be measured reliably.**

11. An asset can be reliably measured if the variability in the range of reasonable cost or deemed cost measurements is not significant for that asset, or the probabilities of the various estimates within the range can be reasonably assessed.

12. If an entity controls a tangible natural resource held for conservation which meets the definition of an asset, but does not meet the recognition criterion in paragraph 10(c), the information required by paragraph 68 shall be disclosed in the notes to the financial statements. If subsequently, the tangible natural resource held for conservation becomes reliably measurable, the entity shall, from that date, recognize the tangible natural resource held for conservation in accordance with paragraph 10 and apply the measurement principles in this Standard. Paragraphs AG19–AG24 provide additional guidance on the recognition of tangible natural resources held for conservation.

13. The unit of account (see paragraph 6) for a tangible natural resource held for conservation should also be considered when applying the recognition criteria and principles for initial and subsequent measurement. Depending on the characteristics and risks associated with the item(s), and considering the objectives of financial reporting, it may be appropriate to (a) disaggregate significant items into separate units of account, then apply the recognition criteria and measurement principles to each individual unit, or (b) aggregate individual items into one unit of account, then apply the recognition criteria and measurement principles to the aggregate value. Paragraphs AG2 and AG14–AG18 provide additional guidance on determination of the unit of account.

Subsequent Expenditures

14. An entity recognizes subsequent expenditures on tangible natural resources held for conservation in accordance with the recognition principle in paragraph 10. Under this principle, the costs of day-to-day maintenance which do not result in incremental service potential and other activities such as research (as defined in IPSAS 31, *Intangible Assets*) regarding conservation are recognized in surplus or deficit as incurred. The costs of day-to-day maintenance may primarily consist of the costs of labor and consumables and could include, for example, when rangers are employed to protect a tangible natural resource held for conservation or when some form of chemical treatment is applied.

15. In contrast, an entity may, for example, acquire additional parcels of land to expand an existing conservation area. Under the recognition principle in paragraph 10, the entity would recognize the acquisition cost of the additional land as part of the existing conservation area, as these costs result in incremental service potential that would likely flow to the entity.

Subsequent Expenditures on Unrecognized Tangible Natural Resources Held for Conservation

16. The recognition of a subsequent expenditure as an asset is unaffected by whether or not the underlying tangible natural resource held for conservation was initially recognized. If the subsequent expenditure relates to a tangible natural resource held for conservation that was not initially recognized because its cost or deemed cost could not be measured reliably, it should nonetheless be reviewed in light of paragraph 10 to determine whether or not it should be recognized as an asset.

Measurement

Initial Measurement

17. **Where a tangible natural resource held for conservation is recognized as an asset as the result of an event that is not a transaction in an orderly market, including non-exchange transactions, the asset shall be measured initially at its deemed cost (current value). The current value of a tangible natural resource held for conservation is measured at current operational value because these assets are held for their operational capacity. An entity shall apply IPSAS 46, *Measurement*, when determining current operational value.**

18. For the purpose of this Standard, the initial measurement of a tangible natural resource held for conservation at its current operational value in accordance with the requirement of paragraph 17, does not constitute a revaluation. Accordingly, the revaluation requirements in paragraphs 26–30 and the supporting Application Guidance only apply where an entity elects to revalue a tangible natural resource held for conservation in subsequent reporting periods.

19. **A tangible natural resource held for conservation acquired through an exchange transaction shall be measured at its cost.**

Elements of Cost

20. The cost of a tangible natural resource held for conservation acquired in an exchange transaction comprises:

    (a) Its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates; and

    (b) Any costs directly attributable to bringing the asset to the location and condition to be conserved as intended by management.

21. Examples of directly attributable costs are:

    (a) Costs of employee benefits (as defined in IPSAS 39, *Employee Benefits*) arising directly from the acquisition, development (including rehabilitation) of the tangible natural resource held for conservation;

    (b) Costs of site preparation;

    (c) Initial delivery and handling costs; and

    (d) Professional fees.

22. Recognition of costs in the carrying amount of a tangible natural resource held for conservation ceases when the item is in the location and condition necessary for it to be capable of being conserved in the manner intended by management.

23. Paragraphs AG30–AG33 provide additional guidance on the measurement of deferred consideration and on the acquisition of a tangible natural resource held for conservation in exchange for non-monetary assets.

Subsequent Measurement

24. **After initial recognition, an entity shall apply the measurement requirements from IPSAS 46 by choosing either the historical cost model or the current value model as its accounting policy. An entity shall apply the chosen policy to an entire class of tangible natural resources held for conservation. If, after initial measurement, the current value of a tangible natural resource held for conservation cannot be reliably measured on a continuing basis, an entity shall apply the historical cost model to that resource. If the current value subsequently becomes reliably measurable and the entity chooses to apply the current value model, the change in accounting policy shall be dealt with as a revaluation in accordance with this Standard.**

Historical Cost Model

25. **Where an entity subsequently chooses to measure a tangible natural resource held for conservation, which was initially measured at its cost or deemed cost, at its historical cost, the resource shall be carried at that cost or deemed cost less any accumulated depreciation (if applicable) and any accumulated impairment losses.**

Current Value Model

26. **Where an entity chooses to measure a tangible natural resource held for conservation after initial recognition using the current value model, and its current value can be measured reliably, it shall be carried at a revalued amount, being its current operational value at the date of revaluation, less any subsequent accumulated depreciation (if applicable) and subsequent accumulated impairment losses.**

27. **Revaluations shall be made with sufficient regularity to ensure that the carrying amount does not differ materially from that which would be determined using current operational value at the reporting date. The accounting treatment for revaluations is set out in paragraphs 28–30.**

28. **If the carrying amount of a class of tangible natural resources held for conservation is increased as a result of revaluation, the increase shall be credited directly to revaluation surplus. However, the increase shall be recognized in surplus or deficit to the extent that it reverses a revaluation decrease of the same class of tangible natural resources held for conservation previously recognized in surplus or deficit.**

29. **If the carrying amount of a class of tangible natural resources held for conservation is decreased as a result of a revaluation, the decrease shall be recognized in surplus or deficit. However, the decrease shall be debited directly to revaluation surplus to the extent of any credit balance existing in the revaluation surplus in respect of that class of tangible natural resources held for conservation.**

30. **Revaluation increases and decreases relating to individual assets within a class of tangible natural resources held for conservation must be offset against one another within that class but must not be offset in respect of assets in different classes of tangible natural resources held for conservation.**

Depreciation

31. **An entity shall assess whether the useful life of a tangible natural resource held for conservation is finite or indefinite, and if finite, the length of that useful life. There is a rebuttable presumption that tangible natural resources held for conservation have indefinite useful lives, as these resources are typically not used or consumed like tangible assets within the scope of other IPSAS Standards.**

32. A tangible natural resource held for conservation with a finite useful life is depreciated, while a tangible natural resource held for conservation with an indefinite useful life is not depreciated. Paragraphs AG36–AG39 provide additional guidance on the assessment of whether a tangible natural resource held for conservation has an indefinite or finite useful life.

Assets with Indefinite Useful Lives

33. The term “indefinite” does not mean “infinite.” The useful life of tangible natural resources held for conservation should reflect evidence on factors that could affect the useful life at the time of estimating the asset’s useful life. Projections of those factors and the estimated useful life should be realistic rather than optimistic or pessimistic, which means they should be supported by objective evidence and generate relevant and faithfully representative measures of asset value and depreciation, rather than optimistic or pessimistic projections of those factors. For example, the conclusion that the useful life of a tangible natural resource held for conservation is indefinite should not depend on planned future expenditure in excess of that required to maintain the asset at its current condition.

Assets with Finite Useful Lives

34. **A tangible natural resource held for conservation shall be regarded as having a finite useful life when, based on an analysis of all the relevant factors, there is clearly a foreseeable limit to the period over which the asset is expected to provide service potential to the entity.**

35. The useful life of a tangible natural resource held for conservation may be very long or even indefinite. Uncertainty about an asset’s useful life when it is very long does not justify choosing a life that is unrealistically short.

36. **The depreciation charge for each period shall be recognized in surplus or deficit.**

37. **The depreciable amount of a tangible natural resource held for conservation shall be allocated on a systematic basis over its useful life.**

38. **The residual value, if appropriate, and the useful life of an asset shall be reviewed at least at each annual reporting date and, if expectations differ from previous estimates, the change(s) shall be accounted for as a change in accounting estimate in accordance with IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*.**

39. **The depreciation method shall reflect the pattern in which the asset is expected to provide service potential to the entity.**

40. **The depreciation method applied to an asset shall be reviewed at least at each annual reporting date, and if there has been a significant change in the pattern in which the asset is expected to provide service potential to the entity, the method shall be changed to reflect the changed pattern. Such a change shall be accounted for as a change in accounting estimate in accordance with IPSAS 3.**

Impairment

41. **To determine whether a tangible natural resource held for conservation is impaired, an entity applies IPSAS 21, *Impairment of Non-Cash-Generating Assets*. IPSAS 21 explains how an entity reviews the carrying amount of its assets, how it determines the recoverable service amount of an asset, and when it recognizes, or reverses the recognition of, an impairment loss.**

42. An entity is required to review tangible natural resources held for conservation with an indefinite useful life annually for indications of impairment in accordance with IPSAS 21.

Derecognition

43. **The carrying amount of a tangible natural resource held for conservation, or a part thereof, shall be derecognized:**

    (a) **On disposal;**

    (b) **When the entity ceases to control the resource; or**

    (c) **When no service potential is expected from the resource.**

44. **The gain or loss arising from the derecognition of a tangible natural resource held for conservation shall be included in surplus or deficit when the item is derecognized.**

45. **The gain or loss arising from the derecognition of a tangible natural resource held for conservation shall be determined as the difference between the net disposal proceeds, if any, and the carrying amount of the item.**

46. The consideration receivable on disposal of tangible natural resources held for conservation is recognized initially at its fair value. If payment for the item is deferred, the consideration received is recognized initially at the cash price equivalent. The difference between the nominal amount of the consideration and the cash price equivalent is recognized as interest revenue in accordance with IPSAS 47, *Revenue*, reflecting the effective yield on the receivable.

Reclassification

47. If a tangible natural resource, or a specific part of that asset, is no longer primarily held for conservation, that asset or its specific part shall be reclassified based on its new primary intended use. Similarly, if the primary reason for holding a tangible natural resource within the scope of another IPSAS Standard has been changed to conservation, that asset shall be reclassified as a tangible natural resource held for conservation within the scope of this Standard.

48. Up to the date of reclassification, an entity continues to account for the asset using the IPSAS Standard that was applicable before the change in classification and considers whether the change is an indication of impairment in accordance with IPSAS 21, *Impairment of Non-Cash-Generating Assets*, or IPSAS 26, *Impairment of Cash-Generating Assets*.

49. Upon a reclassification of an asset or its specific part (along with its revaluation surplus if applicable and identifiable), the net carrying amount of the asset or its specific part immediately before reclassification shall be its cost for subsequent accounting (including subsequent measurement and if applicable, derecognition) in accordance with the IPSAS Standard applicable to the reclassified asset.

50. An entity shall reclassify a tangible natural resource held for conservation or a part of that resource as an asset (or disposal group) held for sale within the scope of IPSAS 44 if it meets the classification criteria specified in paragraphs 11–19 of IPSAS 44.

Presentation

Display

51. **Consistent with the requirements in paragraph 88 of IPSAS 1, *Presentation of Financial Statements*, an entity shall display tangible natural resources held for conservation as a separate line item in the statement of financial position.**

Disclosure

52. **The objective of the disclosure requirements is for the entity to disclose sufficient information to enable users of the financial statements to evaluate:**

    (a) **The nature of, and risks associated with, tangible natural resources held for conservation within the scope of this Standard; and**

    (b) **The effects of tangible natural resources held for conservation on the entity's financial position, financial performance, and cash flows.**

53. Information regarding tangible natural resources held for conservation which meet the definition of an asset must be disclosed in the financial statements, even when the asset is not recognized. (See paragraphs 68–71)

Disclosures for Recognized Tangible Natural Resources Held for Conservation

54. **For recognized tangible natural resources held for conservation, an entity shall disclose the following:**

    (a) **A narrative description of the recognized tangible natural resource held for conservation, including:**

        (i) **The nature or type of the resource;**

        (ii) **Information regarding the location and quantity of the resource;**

        (iii) **If applicable, the significant judgments applied to determine the various units of account of a tangible natural resource held for conservation;**

        (iv) **The significance of the tangible natural resource held for conservation in relation to achieving the entity's objectives, including how it is expected to provide service potential; and**

        (v) **The significant judgments applied to determine that the tangible natural resource held for conservation meets the asset recognition criteria;**

    (b) **The measurement model and basis used for determining the gross carrying amount;**

    (c) **If applicable, why the asset is depreciable, the depreciation method used, the residual value, if applicable, the useful lives or the depreciation rates used, and the gross carrying amount and the accumulated depreciation at the beginning and end of the period; and**

    (d) **A reconciliation of the carrying amount at the beginning and end of the period, showing:**

        (i) **Any additions;**

(ii) **Assets classified as held for sale or included in a disposal group classified as held for sale in accordance with IPSAS 44 and other disposals;**

(iii) **Increases and decreases resulting from revaluations under paragraphs 27–30 and from impairment losses (if any) recognized or reversed directly in net assets/equity in accordance with IPSAS 21;**

(iv) **If applicable, depreciation;**

(v) **Impairment losses recognized in surplus or deficit in accordance with IPSAS 21;**

(vi) **Impairment losses reversed in surplus or deficit in accordance with IPSAS 21; and**

(vii) **Other relevant changes, such as increases and decreases resulting from reclassifications under paragraph 47.**

55. **The financial statements shall also disclose for each class of recognized tangible natural resources held for conservation in the financial statements:**

(a) **The existence and amounts of restrictions on title, legal, or similar limits on the use of the resources due to environmental or other regulatory requirements;**

(b) **The existence and amounts of tangible natural resources held for conservation pledged as securities for liabilities; and**

(c) **The existence of other stewardship responsibilities.**

56. In accordance with IPSAS 3, an entity discloses the nature and effect of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in subsequent periods. For recognized tangible natural resources held for conservation, such disclosure may arise from changes in estimates with respect to:

(a) Residual values, if applicable;

(b) Useful lives; and

(c) Depreciation methods.

57. **If a class of recognized tangible natural resources held for conservation is stated at revalued amounts, the following shall be disclosed:**

(a) **The effective date of the revaluation;**

(b) **Whether an independent valuer was involved;**

(c) **The revaluation surplus, indicating the change for the period and any restrictions on the distribution of the balance to owners;**

(d) **The sum of all revaluation surpluses for individual tangible natural resources held for conservation within that class; and**

(e) **The sum of all revaluation deficits for individual tangible natural resources held for conservation within that class.**

58. In accordance with IPSAS 21, an entity discloses information on impaired tangible natural resources held for conservation in addition to the information required by paragraphs 54(d)(iii) and 54(d)(v) –54(d)(vi).

59. Where applicable, entities are encouraged, but not required, to disclose the gross carrying amount of any fully depreciated tangible natural resource held for conservation, as users of the financial statements may find such information relevant to their needs.

60. In rare cases, the disclosure of information regarding the location, quantity, and carrying amount of a rare or endangered tangible natural resource held for conservation may lead to further endangerment or degradation. In these cases, an entity need not disclose such information, but shall disclose the general nature of the resource, together with the fact that, and the reason why, the information has not been disclosed. Paragraphs AG42–AG43 provide additional guidance on rare or endangered resources.

Current Value Measurement

61. As noted in paragraph 24, the initial measurement of a recognized tangible natural resource held for conservation at its deemed cost does not require the entity to choose the current value model for its accounting policy for subsequent measurement. Where it does so, the requirements of paragraph 62 are applicable for recognized tangible natural resources held for conservation which are subsequently measured using the current value model.

62. **An entity shall disclose information that helps users of its financial statements assess both of the following:**

    (a) **For tangible natural resources held for conservation that are measured at current operational value in the statement of financial position after initial recognition, the measurement techniques and inputs used to develop those measurements; and**

    (b) **For current operational value measurements estimated using significant unobservable inputs, the effect of the measurements on surplus or deficit or net assets/equity for the period.**

63. To meet the objectives in paragraph 62, an entity shall consider all of the following:

    (a) The level of detail necessary to satisfy the disclosure requirements;

    (b) How much emphasis to place on each of the various requirements;

    (c) How much aggregation or disaggregation to undertake; and

    (d) Whether users of financial statements need additional information to evaluate the quantitative information disclosed.

    If the disclosures provided in accordance with this Standard are insufficient to meet the objectives in paragraph 62, an entity shall disclose additional information necessary to meet those objectives.

64. To meet the objectives in paragraph 62, an entity shall disclose, at a minimum, the following information for each class of tangible natural resources held for conservation measured at current operational value in the statement of financial position after initial recognition:

    (a) The current operational value measurement at the end of the reporting period;

    (b) Whether the current operational value measurements are estimated using observable or unobservable inputs;

    (c) For current operational value estimated using significant unobservable inputs, a description of the measurement technique(s) and the inputs used in the current operational value measurement (e.g., a cost approach or a market approach). If there has been a change in measurement technique (e.g., changing from a cost approach to a market approach), the entity shall disclose that change and the reason(s) for making it. For current operational value measurements estimated using significant unobservable inputs, an entity shall provide quantitative information about the significant unobservable inputs used in the current operational value measurement. An entity is not required to create quantitative information to comply with this disclosure requirement if quantitative unobservable inputs are not developed by the entity when measuring current operational value (e.g., when an entity uses prices from prior transactions or third-party pricing information without adjustment). However, when

providing this disclosure an entity cannot ignore quantitative unobservable inputs that are significant to the current operational value measurement and are reasonably available to the entity;

(d) For current operational value measurements estimated using significant unobservable inputs, a reconciliation from the opening balances to the closing balances, disclosing separately changes during the period attributable to the following:

(i) Total gains or losses for the period recognized in surplus or deficit, and the line item(s) in surplus or deficit in which those gains or losses are recognized;

(ii) Total gains or losses for the period recognized in net assets/equity, and the line item(s) in net assets/equity in which those gains or losses are recognized; and

(iii) Purchases and sales (each of those types of changes disclosed separately).

(e) For current operational value estimated using significant unobservable inputs, the amount of the total gains or losses for the period in paragraph 64(d)(i) included in surplus or deficit that is attributable to the change in unrealized gains or losses relating to those tangible natural resources held for conservation held at the end of the reporting period, and the line item(s) in surplus or deficit in which those unrealized gains or losses are recognized;

(f) For current operational value measurements estimated using significant unobservable inputs, a description of the valuation processes used by the entity (including, for example, how an entity decides its valuation policies and procedures and analyses changes in current operational value measurements from period to period); and

(g) For current operational value measurements estimated using significant unobservable inputs a narrative description of the sensitivity of the current operational value measurement to changes in unobservable inputs if a change in those inputs to a different amount might result in a significantly higher or lower current operational value measurement. If there are interrelationships between those inputs and other unobservable inputs used in the current operational value measurement, an entity shall also provide a description of those interrelationships and of how they might magnify or mitigate the effect of changes in the unobservable inputs on the current operational value measurement. To comply with that disclosure requirement, the narrative description of the sensitivity to changes in unobservable inputs shall include, at a minimum, the unobservable inputs disclosed when complying with paragraph 64(c).

Paragraphs 65–66 provide information on determining the appropriate classes of tangible natural resources held for conservation for current value measurement disclosures.

65. For the purposes of current value measurement disclosures, an entity may decide that a greater disaggregation of the classes of tangible natural resources held for conservation (see paragraph 8) is required on the basis of the extent to which the current operational value uses observable or unobservable inputs. For example, assets whose current operational value can only be measured using significant unobservable inputs are likely to be subject to different risks compared to assets that can be measured using observable inputs. Such differences in risk may warrant disaggregation of these assets into different classes.

66. The number of classes may need to be greater for current operational value measurements estimated using significant unobservable inputs, because those measurements have a greater degree of uncertainty and subjectivity. Determining appropriate classes of tangible natural resources held for conservation for which disclosures about current operational value measurements should be provided requires judgment. For example, a class of tangible natural resources held for conservation may often require greater disaggregation than the line items presented in the statement of financial position. However, an entity shall provide the information sufficient to permit reconciliation to the line items presented in the statement of financial position.

67. An entity shall present the quantitative current operational value measurement disclosures required by this Standard in a tabular format unless another format is more appropriate.

Disclosure of Unrecognized Tangible Natural Resources Held for Conservation

68. **Where a tangible natural resource held for conservation meets the definition of an asset but is not recognized in the financial statements because, at initial measurement, its cost or deemed cost cannot be measured reliably, the entity shall disclose:**

    (a) **Qualitative information regarding the resource such as the nature or type of resource, its location, and if available, its quantity;**

    (b) **The difficulties in obtaining a reliable measurement that prevented recognition; and**

    (c) **The significance of the unrecognized tangible natural resource held for conservation in relation to delivery of the entity's objectives.**

69. Similar to paragraph 60, in rare cases, the disclosure of information regarding the location and quantity of a rare or endangered unrecognized tangible natural resource held for conservation may lead to further endangerment or degradation. In these cases, an entity need not disclose such information but shall disclose the general nature of the resource held, together with the fact that, and the reason why, certain information has not been disclosed. Paragraphs AG42–AG43 provide additional guidance on rare or endangered resources.

70. Where subsequent expenditures on unrecognized tangible natural resources held for conservation are recognized, the disclosure requirements in paragraphs 54–67 will apply.

71. Where an entity acts as a steward of an unrecognized tangible natural resource held for conservation, the entity shall explain in the Notes to the Financial Statements the nature of its stewardship rights and responsibilities, including the legislation or similar means that establishes the stewardship arrangement over the resource.

Effective Date and Transition

Effective Date

72. **An entity shall apply this Standard for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies this Standard for a period beginning before January 1, 2028, it shall disclose that fact.**

73. When an entity adopts accrual basis IPSAS Standards, as defined in IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards*, for financial reporting purposes subsequent to this effective date, this Standard applies to the entity's annual financial statements covering periods beginning on or after the date of adoption of IPSAS Standards.

Transition

74. **An entity shall apply this Standard using one of the following two methods:**

    (a) **Using a modified retrospective approach by recognizing the tangible natural resources held for conservation which meet the asset recognition criteria on the date of initial application of this Standard at their deemed costs (current operational values) as at the date of initial application. The entity shall recognize the cumulative effect of initially applying this Standard as an adjustment to the opening balance of accumulated surplus or deficit (or other component of net assets/equity, as appropriate) of the annual reporting period that includes the date of initial application. Under this transition method, an entity need not consider tangible natural**

resources held for conservation which had previously met the recognition criteria but were derecognized prior to the date of initial application; or

(b) **Retrospectively in accordance with IPSAS 3.**

75. For the purposes of the requirements in paragraph 74, the date of initial application is the start of the reporting period in which an entity first applies this Standard.

76. If the current operational value of a tangible natural resource held for conservation cannot be reliably measured upon the initial application of this Standard, the requirements in paragraph 12 are applicable and only disclosures are required upon initial application. If the tangible natural resource held for conservation becomes reliably measurable subsequent to initial application, the entity shall, from that date, recognize the tangible natural resource held for conservation in accordance with paragraph 10 and apply the measurement principles in this Standard.

77. If the application of this Standard results in the reclassification of an asset that was previously within the scope of another IPSAS Standard, the asset shall be reclassified as a tangible natural resource held for conservation at its carrying amount (along with any revaluation surplus, if applicable and identifiable) on the date of initial application of this Standard, and the entity shall apply the subsequent measurement requirements in paragraphs 24–42. An entity shall also consider whether or not the disclosure requirements in paragraphs 55(b) and 60 are applicable.

78. If an entity elects to apply this Standard using the modified retrospective approach in accordance with paragraph 74(a), the entity shall disclose this fact.

Appendix A

Application Guidance

This Appendix is an integral part of IPSAS 51.

Introduction

AG1. This application guidance is organized into the following categories:

(a) Scope (paragraphs AG2–AG4);

(b) Definitions (paragraphs AG5–AG13);

(c) Recognition (paragraphs AG14–AG24);

(d) Measurement (paragraphs AG25–AG39); and

(e) Presentation (paragraphs AG40–AG43).

Scope (paragraphs 3–7)

Unit of Account and Scope

AG2. The assessment of the unit of account may impact whether an item is within the scope of this Standard, as a resource could consist of multiple units of account that are each within the scope of different Standards. Because of the potentially significant difference in accounting outcomes, the determination of the appropriate unit of account is critical when accounting for tangible natural resources, including those held for conservation. In these situations, the scoping requirements in paragraphs 3–7 should be applied to each unit of account, and only the unit(s) of account which meets the definition of a tangible natural resource held for conservation is within the scope of this Standard. Once an entity has determined that a unit of account is within the scope of this Standard, paragraph 13 requires the entity to apply the recognition and measurement guidance to each unit of account.

Other Scope Considerations

AG3. This Standard applies to all tangible natural resources held for conservation, and paragraph 4 provides additional clarification on assets that are not within the scope of this Standard. An entity may hold a tangible natural resource for multiple benefits, such as providing ecological and societal value, for public enjoyment, or for cultural reasons, and the conservation of these resources maintains these benefits for current and future generations. In situations where an entity holds a tangible natural resource for multiple objectives, the entity considers all relevant facts and circumstances to determine if the tangible natural resource is held primarily for conservation or for another purpose such as the production or supply of goods or services.

AG4. To be within the scope of this Standard, a tangible asset must have both of the following two key characteristics:

(a) The tangible asset must be naturally occurring; and

(b) It must be held primarily for conservation (see paragraphs AG6–AG13).

Some tangible assets may have certain aspects which overlap with these characteristics. For example, some heritage assets within the scope of IPSAS 45 could be preserved for the benefit of present or future generations because of their rarity and/or significance in relation, but not limited, to their archeological, cultural, or historical features. Such heritage assets are not within the scope of this Standard, as they are not naturally occurring and therefore do not have all of the necessary characteristics to meet the definition of a

tangible natural resource held for conservation. Similarly, other tangible assets such as land are naturally occurring, but if the land is not held primarily for conservation, it is also not within the scope of this Standard.

Definitions (paragraphs 8–9)

AG5. Naturally occurring items are the living and non-living components of the Earth, together constituting the biophysical and geophysical environment, which came into existence in nature.

AG6. Conservation is the act of managing and protecting a tangible natural resource from degradation and is sometimes referred to as preservation. Generally, both conservation and preservation refer to the same concept, but for the purposes of this Standard, the term conservation is used.

AG7. In practice, the activities which constitute conservation vary significantly depending on the resource that is being conserved and the objective of the conservation effort. In some situations, conservation could be limited to restricting access to a resource. In other situations where a resource requires rehabilitation, conservation could involve actively managing the growth or restoration of the resource.

AG8. Tangible natural resources held for conservation, rather than for their use or for disposal, may be recognized as assets because of the service potential provided in achieving the objectives of a public sector entity. For example, a government or public sector entity could have an objective to conserve a tangible natural resource, as the resource is perceived to provide cultural or ecological value to its citizens in current and future generations. The cultural or ecological value resulting from achieving the public sector entity's objective represents service potential which could give rise to an asset.

AG9. An entity may demonstrate that a tangible natural resource held for conservation embodies service potential when there is a plan detailing how the conservation of the item is expected to achieve the entity's objectives, the entity's ability and intent to carry out the plan, and if necessary, how the entity will obtain the resources necessary to carry out this plan. Tangible natural resources held for conservation which embody service potential, are controlled by the entity as a result of past events and can be measured reliably shall be recognized as an asset within the scope of this Standard.

AG10. In the context of conservation, degradation generally refers to the reduction in the overall service potential embodied in a tangible natural resource held for conservation. Degradation can result from events leading to a decline in the quantity and/or quality of a tangible natural resource held for conservation, and could include:

(a) Depletion due to the active use or consumption of an asset, even if the use or consumption is carried out by a third party;

(b) Destruction of the asset, such as forest fires resulting from deliberate or accidental human action; and

(c) Other events that could result in the decline in the quantity and/or quality of the asset, such as pollution.

AG11. Some events may appear to lead to a decline in the quantity and/or quality of a resource when viewed in isolation but generally do not constitute degradation when considered in the context of the natural processes that are applicable to the tangible natural resource held for conservation. For example, the natural death of individual living resources due to age or disease within an increasing population is generally not considered degradation.

AG12. In some situations, preventing the degradation of a resource could result in an increase in its service potential due to the resource's natural growth. While an increase in service potential is a possible result of conservation, such an increase is not a necessary requirement for conservation within the context of this Standard.

AG13. Some tangible natural resources held for conservation may be prone to uncontrollable events, such as frequent earthquakes or floods, which could lead to their degradation. For these resources, conservation

activities may be limited to the mitigation of the potential degradation to these resources, as it is unlikely that the entity will be able to completely prevent the degradation of the resource from these events.

Recognition (paragraphs 10–13)

Unit of Account

AG14. This Standard does not prescribe a unit of account for a tangible natural resource held for conservation. However, the identification of a unit of account should be based on what the entity judges to be the most useful and relevant to users of the financial statements and achieves the qualitative characteristics of financial reporting while taking into account the constraints, such as materiality and cost-benefit considerations.

AG15. The following factors can indicate that separate tangible natural resources held for conservation may be aggregated into one single unit of account:

(a) The items are subject to similar risks, despite having some different physical characteristics;

(b) The items are managed together in aggregate and likely subject of the same transactions;

(c) The items are unlikely or unable to separately provide service potential to the entity; and

(d) The items can be measured together as a group and the entity is unable to measure the items individually.

AG16. For example, there may be different natural resources held for conservation, such as a rare natural forest and multiple wild animal species in a large reserve area which is being conserved on an integrated basis. Activities such as controlling access into the reserve and monitoring the biodiversity within the area could be performed on a reserve-wide basis with the different species of plants and animals within the reserve not being managed individually. Although the land, forest and animal species have different physical characteristics, the variety of conservation activities on different items in the reserve are designed to ensure that all biodiversity will flourish as a single unit. In this case, it may be appropriate to account for the various tangible natural resources within the reserve, including the land, as a single unit of account.

AG17. In contrast, the following factors can indicate that significant parts of a tangible natural resource held for conservation may constitute separate units of account:

(a) The parts are separately identifiable and measurable; and

(b) The parts are material in relation to the overall asset.

For example, if a specific part of a tangible natural resource held for conservation has a finite useful life while the rest of the resource has an indefinite useful life, the specific part could constitute a separate unit of account. See paragraph AG39.

AG18. The determination of the unit of account may also impact the subsequent measurement of a tangible natural resource held for conservation. When a tangible natural resource held for conservation consists of multiple units of account, and the cost or current value of each unit is significant in relation to the total cost or current value of the resource, each unit of account shall be measured separately. Therefore, subsequent measurement considerations need to be carefully considered by the entity when making the initial judgment about the appropriate unit of account for financial reporting purposes.

Application of the Recognition Criteria

AG19. The recognition of a tangible natural resource held for conservation as an asset involves an assessment of any uncertainties related to the existence and measurement of the item. For some naturally occurring items, until the item is extracted, there will be uncertainty over the existence, quantity and quality of the item in a given location. This impacts the assessment of whether the item is a recognizable asset because an item

that is subjected to existence uncertainty may not be considered a resource until this uncertainty has been resolved.

AG20. An entity evaluates all costs related to a tangible natural resource held for conservation at the time they are incurred using the recognition principle in paragraph 10. These costs include costs incurred initially to acquire the resource.

Control as a Result of Past Events

AG21. An entity can obtain control of a resource through an event that is not a transaction in an orderly market, which could include non-exchange transactions or the exercise of sovereign powers, or through exchange transactions, such as a purchase from a third party. The exercise of sovereign power creates an asset only when the entity has a right to receive resources, and it can control those resources. For example, a government entity may be required to pass legislation and establish a legal framework to implement programs to conserve a tangible natural resource before being able to conclude that these resources can be controlled.

AG22. In assessing whether it presently controls a tangible natural resource held for conservation, an entity assesses whether one or more of the following indicators of control exist:

(a) Legal ownership;

(b) Access to the resource, or the ability to deny or restrict others to access the resource;

(c) The means to ensure that the entity can achieve its objectives with the resource; or

(d) The existence of an enforceable right to service potential arising from the resource.

Assessments of control involve judgment, and control may exist when only some of these indicators are satisfied. Conversely, control may not exist even when most of these indicators are met.

AG23. No one indicator is more important than another indicator. Legal ownership is only one indicator demonstrating control of a tangible natural resource held for conservation. An entity may demonstrate that it controls the resource even when there is no legal ownership because it can direct the conservation of the resource and obtain its service potential. Conversely, an entity may have legal ownership but no rights to the service potential. In such circumstances, an entity considers substance over form in determining whether or not it controls the asset.

Changes in the Ability to Reliably Measure a Resource due to Changes in Facts and Circumstances

AG24. When a tangible natural resource held for conservation becomes reliably measurable due to changes in facts and circumstances, an entity applies the guidance on changes in accounting estimates in IPSAS 3.

Measurement (paragraphs 17–42)

Application of the Current Value Model

AG25. The frequency of revaluations depends upon the changes in current values of the tangible natural resources held for conservation being revalued. When the current value of a revalued asset differs materially from its carrying amount, a further revaluation is necessary. Some tangible natural resources held for conservation may experience significant and volatile changes in current value, thus necessitating annual revaluation. Such frequent revaluations are unnecessary for other tangible natural resources held for conservation. For example, a mature tangible natural resource held for conservation with only insignificant annual changes in current value may only require a revaluation every three or five years.

AG26. When a tangible natural resource held for conservation is revalued, the carrying amount of that asset is adjusted to the revalued amount. At the date of revaluation, the asset is treated in one of the following ways:

(a) The gross carrying amount is adjusted in a manner that is consistent with the revaluation of the carrying amount of the asset. For example, the gross carrying amount may be restated proportionately to the change in carrying amount. The accumulated depreciation (if applicable) at the date of the revaluation is adjusted to equal the difference between the gross carrying amount and the carrying amount of the asset after taking into account accumulated impairment losses; or

(b) The accumulated depreciation is eliminated against the gross carrying amount of the asset.

The amount of the adjustment of accumulated depreciation (if applicable) and accumulated impairment losses forms part of the increase or decrease in carrying amount that is accounted for in accordance with paragraphs 28 and 29.

AG27. A class of tangible natural resources held for conservation is a group of assets of a similar nature or subject to similar conservation activities. The following are examples of separate classes:

(a) Conservation areas consisting of land, wildlife, habitat areas, and bodies of water which are all subjected to the same management activities;

(b) Certain species of animals subject to a specific conservation program; and

(c) Forests in designated areas.

AG28. The items within a class of tangible natural resources held for conservation are revalued simultaneously in order to avoid selective revaluation of assets and the reporting of amounts in the financial statements that are a mixture of costs and values at different dates. However, a class of assets may be revalued on a rolling basis provided revaluation of the class of assets is completed within a short period and provided the revaluations are kept up to date.

AG29. Some or all of the revaluation surplus included in net assets/equity in respect of tangible natural resources held for conservation may be transferred directly to accumulated surpluses or deficits when the assets are derecognized. This may involve transferring some or the whole of the surplus when the assets within the class of tangible natural resources held for conservation to which the surplus relates are derecognized. However, if depreciation is applicable, some of the surplus may be transferred as the assets are depreciated. In such a case, the amount of surplus transferred would be the difference between depreciation, based on the revalued carrying amount of the assets, and depreciation based on the assets' original cost. Transfers from revaluation surplus to accumulated surpluses or deficits are not made through surplus or deficit.

Deferred Consideration

AG30. The cost of a tangible natural resource held for conservation for an item referred to in paragraph 19 is the cash price equivalent at initial recognition. If payment is deferred and the time value of money is material, the difference between the cash price equivalent and the total payment is recognized as interest over the period of credit, unless such interest is recognized in the carrying amount of the item in accordance with the allowed alternative treatment in IPSAS 5, *Borrowing Costs*.

Exchange of Assets

AG31. One or more tangible natural resources held for conservation may be acquired in exchange for a non-monetary asset or assets, or a combination of monetary and non-monetary assets. The following discussion refers simply to an exchange of one non-monetary asset for another, but it also applies to all exchanges described in the preceding sentence. The cost of such a tangible natural resource held for conservation is measured at its current value (see paragraph AG33) unless: 1) the exchange lacks commercial substance;

or 2) the current value of neither the asset received nor the asset given up is reliably measurable. (See paragraph 11.) The acquired item is measured in this way even if an entity cannot immediately derecognize the asset given up. If the acquired item is not measured at current value, its cost is measured at the carrying amount of the asset given up.

AG32. An entity determines whether an exchange transaction has commercial substance by considering the extent to which the net future cash flows and/or service potential from the exchanged assets are expected to change as a result of the transaction. An exchange transaction has commercial substance if:

(a) The configuration (risk, timing, and amount) of the service potential of the asset received differs from the configuration of the cash flows or service potential of the asset transferred; or

(b) The portion of the entity's operations affected by the transaction changes as a result of the exchange; and

(c) The difference in (a) or (b) is significant relative to the current value of the assets exchanged.

For the purpose of determining the portion of the entity's operations affected by the transaction, as in paragraph AG32(b), the entity calculates the present value of the expected cash flows (or post-tax cash flows when tax applies) to arise from the continuing use of an asset and from its expected disposal. The result of these analyses may be clear without an entity having to perform detailed calculations.

AG33. For a tangible natural resource held for conservation acquired through a non-monetary exchange transaction, if an entity is able to measure reliably the current operational value of either the asset received or the current value of the asset given up, then the current value of the asset given up is used to measure the cost of the asset received unless the current operational value of the asset received is more clearly evident.

Depreciation

AG34. Although there is a rebuttable presumption that the tangible natural resources held for conservation within the scope of this Standard have indefinite useful lives, a tangible natural resource held for conservation may still have a finite useful life based on an analysis of all relevant factors. In such cases, a significant part of the tangible natural resource held for conservation may have a useful life and a depreciation method that are the same as the useful life and the depreciation method of another significant part of that same resource. Such parts may be grouped in determining the depreciation charge.

AG35. To the extent that an entity depreciates separately some parts of a tangible natural resource held for conservation, it also separately considers depreciation for the remainder of the resource unless the remainder consists of the parts that are individually not significant. If an entity has varying expectations for these parts, approximation techniques may be necessary to depreciate the remainder in a manner that faithfully represents the useful lives of its parts. In some situations, an entity may conclude that the remainder of the resource has an indefinite useful life and is, therefore, not depreciated.

Finite and Indefinite Useful Lives

AG36. Many tangible natural resources held for conservation have indefinite useful lives. For example, although a conserved geological feature is subject to erosion over time, the applicable geological time scale is so long that there is no foreseeable limit to the period over which the asset is expected to provide service potential.

AG37. With some exceptions, land that is held for conservation has an indefinite useful life and therefore is not depreciated. One example of land with a finite useful life is when land is being encroached by rising sea levels and the entity expects that, within a finite period of time, the land will no longer be available due to either a severe and continual risk of flooding or actual submersion beneath the water.

AG38. Depending on the factors associated with the loss or displacement of land held for conservation, an entity may need to consider the appropriateness of depreciating land in future reporting periods and should continue to assess for impairment in accordance with the requirements of this Standard and IPSAS 21. Where land held for conservation is being lost or displaced as a result of, for example, unexpected coastline erosion, and such a loss was not contemplated in the assessment of useful life, the entity will need to apply:

(a) The derecognition requirements in paragraphs 43–46 of this Standard; or

(b) The impairment requirements in IPSAS 21.

AG39. When a tangible natural resource held for conservation consists of living resources, an entity will need to consider factors such as the characteristics and risks associated with the resource and its unit of account when determining whether the resource has an indefinite or finite useful life. Although individual organisms generally have a finite life, living resources are typically conserved at a population-wide level, so a stable or increasing population would generally support an indefinite useful life. Conversely, if a species is endangered and its overall population is declining over time, a finite life may be appropriate.

Presentation (paragraphs 51–71)

Disclosure of Unrecognized Tangible Natural Resources when Cost or Current Value Cannot be Measured Reliably

AG40. The disclosures required by paragraph 68 for unrecognized tangible natural resources held for conservation should ensure that, when read in the context of information about recognized tangible natural resources, the financial statements provide useful and relevant information about the entity's overall holding of tangible natural resources held for conservation, and thereby support users' evaluation of the entity's finances, including its net financial position, and understanding of its ability to deliver services.

AG41. These disclosures may be presented in aggregate for groups or classes of tangible natural resources held for conservation, provided this aggregation does not obscure significant information.

Additional Guidance on Rare or Endangered Tangible Natural Resources Held for Conservation

AG42. Endangered tangible natural resources held for conservation are resources which are seriously at risk of extinction, while rare tangible natural resources held for conservation refer to resources which are uncommon, scarce or infrequently encountered. While not automatically endangered, rare species of living resources are typically more vulnerable to extinction due to their limited numbers.

AG43. An entity assesses whether a resource is considered rare or endangered based on all relevant facts and circumstances, such as the known quantities of the resource or a population's vulnerabilities to risk factors such as disease or habitat loss. In practice, the assessment could also be based on designations determined by third parties such as international organizations or government organizations.

Appendix B

Amendments to Other IPSAS Standards

Amendments to IPSAS 1, *Presentation of Financial Statements*

Paragraphs 88(ba), 107(ca), and 153T are added, and paragraphs 92 and 134 are amended. New text is underlined, and deleted text is struck through.

Information to be Presented on the Face of the Statement of Financial Position

…

88. **As a minimum, the face of the statement of financial position shall include line items that present the following amounts:**

…

(ba) **Tangible natural resources held for conservation;**

…

92. The use of different measurement models for different classes of assets suggests that their nature or function differs and, therefore, ~~that~~ they should be presented as separate line items. For example, different classes of property, plant, and equipment can be carried at cost or revalued amounts in accordance with IPSAS 45. Similarly, different classes of tangible natural resources held for conservation can be carried at historical cost or current value in accordance with IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

Information to be Presented either on the Face of the Statement of Financial Performance or in the Notes

…

107. Circumstances that would give rise to the separate disclosure of items of revenue and expense include:

…

(ca) Disposals of tangible natural resources held for conservation;

…

Disclosure of Accounting Policies

…

134. In deciding whether a particular accounting policy should be disclosed, management considers whether disclosure would assist users in understanding how transactions, other events, and conditions are reflected in the reported financial performance and financial position. Disclosure of particular accounting policies is especially useful to users when those policies are selected from alternatives allowed in IPSASs. An example is disclosure of whether an entity applies the ~~fair~~ current value or historical cost model to its investment property (see IPSAS 16, *Investment Property*.) Some IPSASs specifically require disclosure of particular accounting policies, including choices made by management between different policies allowed in those Standards. For example, IPSAS 45 and IPSAS 51 require disclosure of the measurement bases used for classes of property, plant, and equipment or classes of tangible natural resources held for conservation. IPSAS 5, *Borrowing Costs*, requires disclosure of whether borrowing costs are recognized immediately as an expense, or capitalized as part of the cost of qualifying assets.

Effective Date

…

153T. **Paragraphs 88(ba) and 107(ca) were added, and paragraphs 92 and 134 were amended by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors*

Paragraph 59J is added and paragraph 22 is amended. New text is underlined, and deleted text is struck through.

…

22. **The initial application of a policy to revalue assets in accordance with IPSAS 31, *Intangible Assets*, ~~or~~ IPSAS 45, *Property, Plant, and Equipment*, or IPSAS 51, *Tangible Natural Resources Held for Conservation*, is a change in accounting policy to be dealt with as a revaluation in accordance with IPSAS 31, ~~or~~ IPSAS 45, or IPSAS 51, rather than in accordance with this Standard.**

…

Effective Date

…

59J. **Paragraph 22 was amended by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 12, *Inventories*

Paragraph 51K is added and paragraph 4 is amended. New text is underlined, and deleted text is struck through.

…

4. ~~[Deleted]~~This Standard does not apply to tangible natural resources held for conservation within the scope of IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

Effective Date

…

51K. **Paragraph 4 was added by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 16, *Investment Property*

Paragraphs 6(c) and 101M are added. New text is underlined.

…

6. This Standard does not apply to:

…

(c) Tangible natural resources held for conservation within the scope of IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

Effective Date

…

101M. **Paragraph 6(c) was added by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 27, *Agriculture*

Paragraphs 3(e) and 56L are added. New text is underlined.

…

3. This Standard does not apply to:

…

(e) Tangible natural resources held for conservation within the scope of IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

Effective Date

…

56L. **Paragraph 3(e) was added by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards (IPSAS)*

Paragraphs 62D, 62E, and 154R are added. New text is underlined.

…

Exemptions that Affect Fair Presentation and Compliance with Accrual Basis IPSAS during the Period of Transition

…

IPSAS 51, *Tangible Natural Resources Held for Conservation*

62D. **Where a first-time adopter takes advantage of the exemption in paragraph 36 which allows a three-year transitional relief period to not recognize assets, it is not required to apply the requirements related to tangible natural resources held for conservation until the exemption that provided the relief has expired, and/or when the relevant assets are recognized in accordance with the applicable IPSAS Standard (whichever is earlier).**

62E. This Standard allows a first-time adopter a period of up to three years from the date of adoption of IPSAS Standards to recognize assets in accordance with IPSAS 12, 16, 27, and 45. During this period, a first-time adopter may need to consider the recognition requirements of those IPSAS Standards at the same time as considering the recognition of tangible natural resources held for conservation in IPSAS 51. Where a first-time adopter takes advantage of the exemption in this Standard, it is not required to recognize tangible natural resources until the exemptions that provided relief have expired, and/or when the relevant assets are recognized in accordance with the applicable IPSAS Standard (whichever is earlier).

…

Effective Date

…

154R. **Paragraphs 62D and 62E were added by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is encouraged. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

Amendments to IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards* — Issued in November 2025

Paragraphs 36A, AG54(m), AG56(j), and AG61 are added. New text is underlined.

…

Effective Date

…

36A. **Paragraphs AG54(m), AG56(j) and AG61 were added by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply this amendment for annual financial statements covering periods beginning on or after January 1, 2028. Earlier application is encouraged. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.**

…

IPSAS 51, *Tangible Natural Resources Held for Conservation*

…

AG54. The following Standards are relevant:

…

(k) IPSAS 45, *Property, Plant, and Equipment*; ~~and~~

(l) IPSAS 50, *Exploration for and Evaluation of Mineral Resources*~~.~~; and

(m) IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

AG56. Where a first time adopter has not recognized the following non-financial assets under its previous basis of accounting, it may take advantage of the transition period and may recognize and/or measure them in accordance with the requirements of IPSAS Standards for reporting periods from any date within the transition period:

(i) Exploration and evaluation assets (see IPSAS 50, *Exploration for and Evaluation of Mineral Resources*)~~.~~; and

(j) Tangible natural resources held for conservation (see IPSAS 51, *Tangible Natural Resources Held for Conservation*.)

AG61. **This IPSAS Standard allows a first-time adopter a period of up to three years from the date of adoption of IPSAS Standards to recognize non-financial assets in accordance with IPSAS 12, 16, 27, and 45. During this period, a first-time adopter may need to consider the recognition requirements of those IPSAS Standards at the same time as considering the recognition of tangible natural resources in IPSAS 51. Where a first-time adopter takes advantage of the exemption in this Standard, it is not required to recognize tangible natural resources held for conservation until the exemptions that provided relief have expired, and/or when the relevant assets are recognized in accordance with the applicable IPSAS Standard (whichever is earlier).**

…

Amendments to IPSAS 45, *Property, Plant, and Equipment*

Paragraphs 3(e) and AG2 are amended, and paragraph 85E is added. New text is underlined, and deleted text is struck through.

3. This Standard does not apply to:

…

(c) Property, plant, and equipment classified as held for sale in accordance with IPSAS 44, *Non-current Assets Held for Sale and Discontinued Operations*; ~~and~~

(d) The recognition and measurement of exploration and evaluation assets (see IPSAS 50, *Exploration for and Evaluation of Mineral Resources*)~~.~~; and

(e) Tangible natural resources held for conservation within the scope of IPSAS 51, *Tangible Natural Resources Held for Conservation*.

…

Effective Date

…

85E. **Paragraphs 3(e) and AG2 were amended by IPSAS 51, *Tangible Natural Resources Held for Conservation*, issued in January 2026. An entity shall apply these amendments for annual financial**

statements covering periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies the amendments for a period beginning before January 1, 2028, it shall disclose that fact and apply IPSAS 51 at the same time.

…

Heritage Assets

…

AG2. Some property, plant, and equipment are described as heritage assets because of their rarity and/or significance in relation, but not limited to, their archeological, architectural, agricultural, artistic, cultural, ~~environmental,~~ historical, ~~natural,~~ scientific, or technological features. Entities usually intend to hold heritage assets for long periods and preserve them for the benefit of present and future generations. Examples of heritage assets include historic buildings, monuments, museum collections, and works of art.

…

Basis for Conclusions

…

Definition of Property, Plant, and Equipment

…

Characteristics of Heritage and Infrastructure Assets

…

BC20A. During the development of IPSAS 51, *Tangible Natural Resources Held for Conservation*, the IPSASB decided to amend the description of heritage assets to better distinguish between heritage assets which are not naturally occurring and naturally occurring heritage assets held for conservation. As a result, the description of heritage assets in paragraph AG2 was amended to remove the references to environmental and natural features.

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSAS 51.

Introduction

BC1. In March 2020, the IPSASB approved the project brief for the Natural Resources project due to the significance of natural resources in many jurisdictions, the growing public concerns for sustainable management of the natural environment, and the lack of explicit accounting guidance on natural resources. The aim of the project was to develop IPSAS Standards guidance relating to the recognition, measurement, display, and disclosure of tangible natural resources by public sector entities in their general purpose financial statements (GPFS). As the project was a financial reporting project, the project brief stated that any resulting IPSAS Standards guidance would be developed in accordance with the Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework).

BC2. In May 2022, the IPSASB issued the Consultation Paper (CP), *Natural Resources*. The CP discussed the application of the principles in the Conceptual Framework to the accounting for natural resources and set out a number of the IPSASB's overarching preliminary views, as well as preliminary views specific to subsoil resources, water, and living resources. The CP also highlighted the challenges with the recognition of unextracted subsoil resources as assets within the Conceptual Framework and clarified that recognition is not achievable due to their inherent existence uncertainty.

Development of Exposure Draft 92, *Tangible Natural Resources*

BC3. Respondents to the CP generally agreed with the IPSASB's preliminary views. The IPSASB received comments from indigenous groups indicating that based on indigenous traditions and practices, it may be difficult for any entity to demonstrate control over natural resources. Many respondents also acknowledged that natural resources are likely to only meet the asset recognition criteria in very limited circumstances, while others suggested that it may be more appropriate to report information on natural resources in the broader general purpose financial reports (GPFRs) due to the expected difficulties in recognition.

BC4. In response to this feedback, the IPSASB noted that from a financial reporting perspective, control over natural resources, and the broader issue of whether natural resources can be recognized, should be considered on a case-by-case basis using the recognition and measurement principles in the Conceptual Framework. Based on this reasoning and considering the original aim of the project, the IPSASB decided in March 2023 to proceed with developing Exposure Draft (ED) 92 to provide financial reporting guidance on natural resources in the context of the principles in the Conceptual Framework. The IPSASB also noted that the development of such financial reporting guidance in an IPSAS Standard does not preclude the Board from developing non-financial reporting guidance on natural resources in the future.

Focus on Tangible Items

BC5. When the IPSASB developed the project brief and the CP, the IPSASB decided to limit the scope of the project to tangible items for the following reasons:

(a) The feedback from constituents indicated that the development of guidance for tangible natural resources, such as subsoil resources, water, and living resources, was a greater priority than the development of guidance for natural resources without physical substance, i.e., intangible natural resources, such as the electromagnetic spectrum;

(b) The IPSASB decided that focusing on tangible natural resources alone in this project would be a more efficient use of its staff resources; and

(c) The development of guidance for intangible natural resources would be better accomplished if it was part of a more comprehensive update of the accounting guidance for intangible assets.

BC6. The IPSASB noted that the above reasons continued to be valid when it developed ED 92. As a result, the IPSASB decided to limit the focus of the ED to tangible natural resources and named the ED, "[draft] IPSAS [X], (ED 92), *Tangible Natural Resources*".

Location of Guidance and Objective of IPSAS 51

BC7. Due to the similarities between the proposed guidance on the recognition and measurement of natural resources and the potential relevance of guidance regarding assets within the scope of existing IPSAS, the IPSASB considered whether the guidance proposed in ED 92 should be located in a standalone IPSAS Standard or as amendments to existing IPSAS Standards. Having considered the topics that might need to be covered such as assets held for conservation purposes, the IPSASB decided that the proposed guidance on natural resources should be located in a standalone IPSAS Standard in order to address the challenges around recognition of such assets explicitly, for public interest reasons, as well as highlighting the importance of the topic in the public sector and providing guidance in a single place in order to facilitate implementation by preparers.

BC8. Respondents to ED 92 generally agreed with locating the guidance on tangible natural resources within a standalone IPSAS Standard or did not raise any concerns which were not previously considered by the IPSASB. As a result, the IPSASB decided to proceed with the development of guidance in a standalone IPSAS Standard.

Scope (paragraphs 3–7)

Scope of ED 92, Tangible Natural Resources

BC9. When ED 92 was developed, the IPSASB noted that some items which could be considered tangible natural resources may have a primary intended use within the scope of another existing IPSAS Standard. The IPSASB therefore decided to exclude such items from the scope of this Standard to avoid duplication of guidance. Based on this scoping approach, ED 92 was developed as a residual standard that applies to any items meeting the definition of tangible natural resources which are not within the scope of existing IPSAS Standards.

BC10. The IPSASB also discussed whether ED 92 should include guidance on the accounting and disclosure of natural resource-related obligations and decided that these obligations would be within the scope of IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*. As a result, the IPSASB decided that no additional guidance on such obligations would be provided in ED 92.

Scope of IPSAS 51, Tangible Natural Resources Held for Conservation

BC11. Respondents to ED 92 generally disagreed with the proposed residual scoping approach and noted that, consistent with an alternative view included in ED 92, they could not identify any tangible natural resources which were not already within the scope of existing IPSAS Standards other than those held for conservation. As a result, the IPSASB decided to clarify the scope to focus on conservation and named the final IPSAS Standard, "IPSAS 51, *Tangible Natural Resources Held for Conservation*." Based on this clarified scope, the flow chart in ED 92 regarding the proposed residual scoping approach and applicability of guidance was removed, as it was no longer necessary.

Definitions (paragraphs 8–9)

Development of the Definitions in the Consultation Paper and ED 92

BC12. When the IPSASB developed the CP, it had proposed to describe a 'natural resource' as an item which is: (a) a resource as described in the IPSASB's Conceptual Framework; (b) naturally occurring; and (c) in its natural state. While the IPSASB noted that the requirement to be in its natural state was necessary to delineate between natural and other resources, respondents to the CP noted that the general description would be difficult to implement due to a lack of clarity on what is in its natural state and what is considered naturally occurring.

BC13. In response to constituents' concerns, the IPSASB decided to develop a definition of 'tangible natural resource' in ED 92 using a top-down approach, starting with the broader concept of 'nature' as defined in other internationally relevant reporting frameworks such as the Taskforce on Nature-related Financial Disclosures (TNFD) Framework and the United Nations System of Environmental-Economic Accounting (2012) (UN SEEA) Central Framework.

BC14. These frameworks envisioned nature as a collection of 'environmental assets,' which, at the time ED 92 was developed, were defined as the naturally occurring living and non-living components of the Earth, together constituting the biophysical environment, which may provide benefits to humanity.

BC15. The IPSASB noted that the term 'environmental assets' embodies the same key characteristics of 'natural resources' as described in the CP. However, this term could not be incorporated as it was into the IPSAS Standards, as the term 'asset' already has a specific definition in the IPSASB's Conceptual Framework that is not consistent with how it is defined and used in the TNFD or UN SEEA frameworks.

BC16. Furthermore, the concept of providing benefits to humanity is similar to the concept of providing service potential or the capability to generate economic benefits in the IPSASB's Conceptual Framework. However, because the objective of financial reporting using IPSAS Standards is to provide information about an individual entity for accountability and decision-making purposes, the IPSASB decided it would be more appropriate for a tangible natural resource to refer to service potential or the capability to generate economic benefits rather than broadly referring to benefits to humanity.

BC17. Finally, because ED 92 focuses on tangible items only, using the term 'tangible natural resources' rather than 'environmental assets' is another way to highlight the differences from the concepts in the TNFD Framework and the UN SEEA Central Framework. This differentiation will avoid unintended interactions between tangible natural resources in financial reporting under IPSAS Standards and the reporting of naturally occurring items in the sustainability and statistical reporting context. The guidance from the other internationally relevant reporting frameworks could however still be relevant in considering the financial reporting treatment of items that these frameworks classify under the land, freshwater and ocean realms.

BC18. As a result, the IPSASB developed the definition of 'tangible natural resources' in paragraph 6 of ED 92 based on the term 'environmental assets' from the TNFD Framework and UN SEEA Central Framework but modified the definition to reflect the conventional nomenclature and objectives of financial reporting under IPSAS Standards.

Revisions to Definitions in IPSAS 51

BC19. Due to the clarification of scope as explained in paragraph BC11, the IPSASB decided to further revise the definitions in IPSAS 51 to be consistent with the clarified scope. The IPSASB noted that the definition of a tangible natural resource held for conservation would need to capture the following characteristics:

(a) The item is naturally occurring;

(b) The item is a resource which embodies service potential;

(c) The item has physical substance; and

(d) The item is held for conservation, which means it is managed to prevent its degradation.

BC20. Based on these characteristics, and to be consistent with the definitions in other IPSAS Standards, the IPSASB developed the definition in paragraph 8 of IPSAS 51 by referring to naturally occurring tangible assets which are managed to prevent their degradation. As a result of the new definition, the standalone definitions of ‘natural resource’ and ‘tangible natural resource’ were no longer needed and therefore were removed.

Recognition (paragraphs 10–13)

BC21. When the IPSASB developed the CP, it included preliminary views indicating that the recognition of tangible natural resources, especially subsoil resources, as assets in GPFS would be challenging due to the definition of an asset, and the asset recognition criteria in the Conceptual Framework, as well as limitations in the technologies currently used to identify, quantify, and establish the existence of certain tangible natural resources.

BC22. To operationalize the application of the asset recognition criteria from the Conceptual Framework to tangible natural resources held for conservation, the IPSASB looked to the recognition criteria in the IPSAS Standards for other tangible assets, such as IPSAS 12, *Inventories*, IPSAS 16, *Investment Property*, IPSAS 27, *Agriculture*, and IPSAS 45, *Property, Plant, and Equipment*. The IPSASB noted that most of these standards shared similar recognition criteria regarding the probable flow of future economic benefits or service potential to the entity and the ability to reliably measure the asset. These two criteria were used as a starting point to develop the recognition criteria in paragraph 10 of this Standard.

BC23. The IPSASB initially considered whether the first recognition criterion should include both economic benefits and service potential to be consistent with the recognition of tangible assets in other IPSAS Standards. However, after the clarification of scope as explained in paragraph BC11, the IPSASB decided that tangible natural resources held for conservation are only held for their operational capacity, as their conservation would only provide service potential to an entity. Other tangible natural resources which are held for their capacity to generate economic benefits, or both economic benefits and service potential, would likely be within the scope of other IPSAS Standards.

BC24. The IPSASB also noted that unlike property, plant, and equipment, investment property, or inventories where the determination of control is relatively straightforward when an entity incurs cost to acquire, develop, or construct the asset, the assessment of control for tangible natural resources held for conservation is more complex and will require the application of judgment to facts and circumstances specific to each resource. As a result, the IPSASB also included the demonstration of control from past events as an explicit recognition criterion for tangible natural resources held for conservation.

BC25. The IPSASB considered using the term “natural assets” to refer to tangible natural resources which have met the asset recognition criteria. However, this term was already used in the GPFRs of various public sector entities to broadly refer to items which include tangible natural resources held for conservation, infrastructure developed from tangible natural resources, or ecosystems. The IPSASB also considered using the term “tangible natural resource assets” but noted that some tangible natural resources held for conservation may meet the definition of an asset and remain unrecognized as they cannot be measured reliably. As a result, where guidance distinguishes between tangible natural resources held for conservation that are recognized from those that are not, such as in the disclosure requirements, this Standard refers to the items which meet the asset recognition criteria as ’recognized tangible natural resources held for conservation’.

Subsequent Expenditures on Unrecognized Tangible Natural Resources

BC26. The IPSASB noted that, in IPSAS 45, the accounting for subsequent expenditures on heritage property, plant, and equipment is driven by whether the subsequent expenditure meets the recognition principles in IPSAS 45, and that this assessment is unaffected by whether or not the underlying heritage property, plant, and equipment was initially recognized. The IPSASB applied the same principle to subsequent expenditures relating to unrecognized tangible natural resources held for conservation in general and developed the guidance in paragraph 16.

Measurement (paragraphs 17–42)

BC27. To operationalize the principles from IPSAS 46, *Measurement*, and to be consistent with the standards on other tangible assets such as IPSAS 45, the IPSASB proposed that the measurement of a tangible natural resource held for conservation at initial recognition should be determined based on whether or not control of the asset was obtained as the result of an event that is a transaction in an orderly market. Tangible natural resources held for conservation which were recognized as the result of an event that is not a transaction in an orderly market, which could include a non-exchange transaction, would be recognized at their deemed cost (current value). In contrast, resources recognized as the result of an exchange transaction in an orderly market would be recognized at cost.

BC28. The IPSASB noted that it is more likely for a tangible natural resource held for conservation to be recognized from an event that is not a transaction in an orderly market, such as non-exchange transactions or the exercise of sovereign powers. In such cases, as there will be no direct cost information available, such assets will need to be initially measured at deemed cost. While the acquisition of tangible natural resources held for conservation in an exchange transaction is possible, such transactions are expected to be rare in the public sector. Based on these observations, the measurement guidance was drafted in a different order to focus on the initial measurement of events which are not a transaction in an orderly market.

BC29. For subsequent measurement of tangible natural resources held for conservation, the IPSASB decided to leverage the subsequent measurement guidance from IPSAS 45 and allow an entity to subsequently measure the asset using either the historical cost model or a current value model, independently of whether it was initially measured at cost or deemed cost.

BC30. The IPSASB noted that a tangible natural resource held for conservation will be held for its operational capacity. While the conservation of a tangible natural resource may indirectly result in economic benefits to a jurisdiction in the form of increased tourism or donations, the intent of the conservation effort is not to directly generate future economic benefits, such as a financial return. As a result, IPSAS 51 requires the current value of a tangible natural resource held for conservation to be measured at its current operational value.

Depreciation

BC31. The IPSASB noted that the tangible natural resources held for conservation are not typically used or consumed in a manner similar to tangible assets within the scope of other IPSAS Standards. As a result, the IPSASB decided to include a rebuttable presumption that tangible natural resources held for conservation generally have an indefinite useful life and are typically not depreciated. The IPSASB developed guidance on the assessment of whether a tangible natural resource held for conservation has an indefinite or finite life, as well as guidance on the depreciation of a resource that clearly has a finite useful life, based on guidance from IPSAS 45, tailored for conservation.

Derecognition (paragraphs 43–46)

BC32. The IPSASB decided to leverage the guidance from IPSAS 45 when developing the guidance on the derecognition of tangible natural resources held for conservation. The IPSASB also considered whether specific guidance on the sale and leaseback of tangible natural resources held for conservation should be developed but noted that such scenarios are expected to be exceptionally rare in practice. Furthermore, entities can leverage the general guidance on sale and leaseback transactions from IPSAS 43, *Leases*, if such situations do occur, so no specific guidance was needed.

Reclassification (paragraphs 47–50)

BC33. A public sector entity's primary reason for holding a tangible natural resource held for conservation may change due to, for example, management decisions or changes in facts and circumstances. The IPSASB developed guidance on the reclassification of an asset into and out of the scope of IPSAS 51 based on the principles on reclassifications in IPSAS 16—i.e., account for the asset using the previous IPSAS Standard up until the reclassification, then upon reclassification, account for the asset using the IPSAS Standard applicable to the reclassified asset at its then carrying amount.

BC34. Revaluation surpluses may arise when an entity applies the current value model in IPSAS 45 or IPSAS 51. The guidance on reclassification noted that revaluation surpluses are only reclassified if they are applicable and identifiable. When the current value model is applied to assets within the scope of IPSAS 45 and IPSAS 51, revaluation increases and decreases relating to individual assets within a class of assets must be offset against one another within that class, and an entity is required to disclose the sum of all revaluation surpluses or revaluation deficits for individual assets within the class. If a specific part of an asset is reclassified, the revaluation surplus or deficit associated with that specific part may not be identifiable.

Presentation (paragraphs 51–71)

BC35. The IPSASB decided to incorporate the disclosure proposals for recognized tangible natural resources from the CP, which are broadly consistent with the disclosure requirements from IPSAS 45.

BC36. In addition, when the IPSASB developed the CP, it had also proposed the following financial statement disclosures for unrecognized natural resources to address both the accountability and decision making objectives for financial reporting in the public sector:

(a) Qualitative disclosures for a natural resource which meets the definition of an asset but could not be recognized due to the inability to measure the resource reliably. These disclosures focused on explaining the difficulties in obtaining a reliable measurement and the significance of the natural resource to the delivery of the entity's objectives;

(b) Qualitative disclosures regarding its responsibilities relating to a natural resource, regardless of whether the resource is recognized; and

(c) Qualitative disclosures on unrecognized natural resources that do not meet the definition of an asset but are important to an understanding of the entity's finances or delivery of services.

BC37. The IPSASB decided to retain the proposed disclosures noted in paragraph BC36(a), as the required information is expected to be readily available to an entity. The proposed disclosure in paragraph BC36(b) was also retained, as it relates to potential obligations which are similar in nature to contingent liabilities or potential obligations from pledges, rather than the underlying unrecognized tangible natural resource held for conservation.

BC38. Respondents to the CP were particularly concerned by the requirements in paragraph BC36(c) and noted that such disclosures in the financial statements would likely not be auditable. As a result, the IPSASB decided to clarify that only information regarding tangible natural resources held for conservation that meet

the definition of an asset is to be disclosed in the financial statements. Items which do not meet the definition of an asset are not covered by any requirements within this Standard.

BC39. The IPSASB also noted that for tangible natural resources held for conservation which are subject to depreciation, due to uncertainties in the estimation of their useful lives and residual values, there could be situations where such resources continue to meet the asset recognition criteria but are fully depreciated. Similar to fully depreciated property, plant, and equipment, paragraph 59 was added to encourage entities to disclose the gross carrying amount of any fully depreciated tangible natural resources held for conservation.

Disclosure of Information Regarding Rare or Endangered Tangible Natural Resources

BC40. In some situations, the disclosure of information regarding rare or endangered tangible natural resources held for conservation, regardless of whether they are recognized, may lead to their further endangerment or degradation. For example, disclosing information on the quantity and location of endangered species may lead to their illegal poaching. To address this concern, the IPSASB decided to allow an entity to limit the disclosure of such information. This approach is similar to IPSAS 19, which has an exemption from disclosing information which may prejudice an entity's position in a dispute with other parties.

BC41. The IPSASB noted that it may be difficult for an entity to determine whether a resource is rare or endangered. As a result, the IPSASB provided guidance on what is considered rare or endangered and noted that in practice, the determination of whether a resource is rare or endangered could be based on designations made by third parties such as international organizations or government entities.

Effective Date and Transition (paragraphs 72–78)

BC42. The IPSASB noted that full retrospective application of this Standard might lead to some scenarios where an entity would need to account for tangible natural resources held for conservation which have been derecognized prior to the date of initial application. To provide transitional relief, the IPSASB decided that an entity could elect to apply this Standard using a modified retrospective approach and only recognize tangible natural resources held for conservation which meet the asset recognition criteria on the date of initial application. The IPSASB also considered allowing a prospective transition approach but noted that as many tangible natural resources held for conservation would have been controlled by an entity in historical periods, a large percentage of these resources would not be recognized if a prospective approach was used. As a result, only the full retrospective or modified retrospective approaches were included in this Standard.

BC43. In response to feedback on ED 92, the IPSASB also clarified that if a tangible natural resource held for conservation cannot be recognized because its current value cannot be reliably measured upon the initial application of this Standard, the guidance in paragraphs 12 and 68 is applicable and only disclosures are required until the resource becomes reliably measurable.

BC44. The IPSASB initially considered whether this Standard should be applied together with IPSAS 50, *Exploration for and Evaluation of Mineral Resources*, and *Stripping Costs in the Production Phase of a Surface Mine (Amendments to IPSAS 12)*. However, as the guidance in these pronouncements is not related from a technical perspective and their application would not impact the implementation of this Standard, the IPSASB decided it was unnecessary to require the application of this Standard at the same time as the application of IPSAS 50 and the amendments to IPSAS 12.

Application Guidance (Appendix A)

Tangible Natural Resources Held for Conservation

BC45. Based on the clarified scope as explained in paragraph BC11, the IPSASB decided to provide additional application guidance to explain the concept of conservation and that whether a tangible natural resource is within the scope of this Standard will depend on an entity's primary intended purpose of holding the resource.

The IPSASB also decided to clarify in the application guidance that the terms conservation and preservation generally refer to the same concept but for the purposes of this Standard, the term conservation is used.

BC46. The IPSASB also observed that some heritage assets as described in IPSAS 45 could have similar characteristics as tangible natural resources held for conservation. While the accounting for heritage assets within the scope of IPSAS 45 and tangible natural resources held for conservation is similar, to help distinguish between these assets, the description of heritage assets in IPSAS 45 was amended to remove references to environmental and natural features. Paragraph AG4 was also developed to clarify that although certain heritage assets may have some of the characteristics of a tangible natural resource held for conservation, they are not within the scope of this Standard as they do not fully embody all of the characteristics required to meet the definition of a tangible natural resource held for conservation (i.e., they are not both naturally occurring and held primarily for conservation).

Identification of Potential Tangible Natural Resources

BC47. In response to the CP, some constituents raised concerns regarding whether it was necessary to perform a detailed exercise to create an inventory of all naturally occurring items in a jurisdiction in order to identify all potential tangible natural resources held for conservation. These respondents noted that such an exercise would be extremely costly, even if the resulting recognition, measurement, display, and disclosure impact in the GPFS will be minimal. When this Standard was developed, the IPSASB noted that the definition of tangible natural resources held for conservation in paragraph 8, along with the related application guidance in paragraph AG11 of the Standard, would limit the potential tangible natural resources held for conservation to naturally occurring items that are subject to a detailed management plan demonstrating how such items would provide service potential for the entity. In addition, Section B.1 of the Implementation Guidance was developed to explain how an entity can effectively identify all potential tangible natural resources held for conservation without individually considering each naturally occurring item in the jurisdiction.

Recognition upon Changes in Facts and Circumstances

BC48. The IPSASB noted that a tangible natural resource held for conservation which was initially not recognized as it could not be reliably measured could subsequently become measurable due to changes in facts and circumstances. The IPSASB considered developing guidance specific to such changes but noted that no additional guidance was required, as such scenarios are already addressed by IPSAS 3, *Accounting Policies, Changes in Accounting Estimates, and Errors*. As a result, the IPSASB decided to only include application guidance signposting to IPSAS 3 when such changes in facts and circumstances occur.

Amendments to Other IPSAS Standards (Appendix B)

BC49. Based on the guidance in this Standard, the IPSASB decided to amend certain presentation requirements in IPSAS 1, *Presentation of Financial Statements*, the scope of IPSAS 12, IPSAS 16, IPSAS 27, and IPSAS 45, as well as certain exemptions in IPSAS 33, *First-time Adoption of Accrual Basis International Public Sector Accounting Standards*. These amendments relate to the presentation of tangible natural resources held for conservation as a separate line item in the statement of financial position, excluding tangible natural resources held for conservation within the scope of this Standard from the scope of IPSAS 12, IPSAS 16, IPSAS 27, and IPSAS 45, and exemptions regarding the recognition and measurement of tangible natural resources held for conservation in an entity's transitional IPSAS financial statements. The guidance in IPSAS 3 regarding the initial application of a policy to revalue assets in accordance with IPSAS 31, *Intangible Assets*, or IPSAS 45 was also amended to apply to revaluation of assets within the scope of IPSAS 51.

Implementation Guidance and Illustrative Examples

BC50. The IPSASB decided to add implementation guidance and illustrative examples to IPSAS 51 for topics that are complex and potentially difficult to apply in practice, are an area of concern for constituents, or would benefit from additional non-authoritative guidance.

Implementation Guidance

This guidance accompanies, but is not part of, IPSAS 51.

Section A: Scope

A.1 Determination of Whether an Item Falls Within the Scope of IPSAS 51 (Paragraphs 3–7 and AG3–AG4)

When is a tangible natural resource within the scope of IPSAS 51 and how is conservation different from the uses of tangible assets within the scope of other IPSAS?

IG1. IPSAS 51 defines a tangible natural resource held for conservation as a naturally occurring tangible asset that is managed to prevent its degradation, and an item which meets this definition is accounted for within the scope of the Standard. The determination of which IPSAS Standard is applicable is based on the entity's primary intended purpose for holding the item, which is consistent with the scoping assessment in all other IPSAS Standards on tangible assets.

IG2. Conservation is distinct from the uses of tangible assets within the scope of other IPSAS, as these other Standards typically address the immediate or near-term use of an asset to provide service potential or economic benefits to the entity. In addition, these other uses often lead to the consumption of an asset, whereas conservation usually involves avoiding or limiting the use of a resource in a way which leads to its consumption.

How would an entity determine if a tangible natural resource is held for conservation?

IG3. There may be situations where clear legislation is in place requiring the conservation of a tangible natural resource by restricting its use. In other situations, it may not be clear whether a tangible natural resource is held primarily for conservation purposes, requiring an entity to exercise judgment to determine its primary intended purpose for holding the resource. For example, an entity may have the intention to conserve a tangible natural resource without any legislation in place to restrict access to the resource or its use. In these situations, the tangible natural resources may be primarily held for conservation purposes but could also be used to provide ancillary services.

IG4. Without clear legislation, it may be necessary to analyze the details of the relevant conservation program to determine whether a tangible natural resource is held primarily for conservation. Some factors to consider include:

(a) The intended purpose of the conservation program: The specification to protect a particular resource, such as a particular species or group of species, is a strong indicator that the tangible natural resource is held for conservation. In contrast, programs which are more concerned with enhancing or promoting the use of a resource, such as the maintenance of green spaces to attract more visitors, may indicate that conservation is not the primary objective;

(b) The nature and intent of program activities: Conservation activities will vary depending on the facts and circumstances for each resource. For some mature tangible natural resources, a conservation program may simply focus on limiting the impact of human activities on the resource. In other situations, an entity may need to perform activities such as providing feed or treatment for diseases to actively prevent the degradation of a resource. Regardless of the specific activities, those which are performed to maintain the state of a tangible natural resource are indicative of conservation; and

(c) The existence of a significant profit element: Some tangible natural resources held for conservation may be used to earn ancillary revenues to partially recover the costs of maintaining the resource. However, in some situations, a tangible natural resource may be managed to earn a profit. A program

which primarily focuses on the generation of revenues or profits may indicate that the tangible natural resources are part of plant, property, and equipment or inventory rather than held for conservation.

How would an entity assess if a resource that is held for multiple reasons is within scope of IPSAS 51?

IG5. In practice, some resources are held for multiple reasons or uses, and the determination of whether an asset is primarily held for conservation requires judgment, considering the relevant facts and circumstances specific to the use or reason for holding each asset.

IG6. In some situations, specific parts of a resource may be held for different purposes. These specific parts are different units of account, which are assessed individually to determine if they are within the scope of IPSAS 51. Such a situation could occur if, for example, a part of a forest is managed and harvested for agricultural purposes while another part of the same forest is held for conservation.

IG7. In other situations, the entire asset could be held for different uses or purposes, and the entity will need to apply judgment to develop a systematic or logical way to assess which use or reason for holding the asset is more significant. For example, an entity may hold land that is subject to a conservation program, to conserve the land's natural features for ecological reasons. The land is accessible to the public via a large network of hiking tracks to allow the public to experience the natural features of the conserved land. If the entity determines that the land is a single unit of account, the entity would need to apply judgment to determine whether the primary purpose for holding the land is conservation, and therefore within the scope of IPSAS 51. There may be different methods to support the determination of the land's primary purpose.

A.2 Unextracted Subsoil Resources (Paragraphs 3–7, and AG19)

Can unextracted subsoil resources be within the scope of IPSAS 51 and be recognized as assets in the financial statements?

IG8. Generally, no. Unextracted subsoil resources, such as minerals or petroleum deposits, are typically extracted for the future economic benefits from their use or sale, rather than held for the service potential from their conservation. As a result, these resources are not within the scope of IPSAS 51.

IG9. Furthermore, as noted in paragraph AG19, for some naturally occurring items, there will be uncertainty over the existence, quantity, and quality of the item until it is extracted, and this uncertainty impacts whether the item can be considered a resource. Because unextracted subsoil items are usually located deep underground, an entity is unlikely to be able to establish, using currently available scientific know-how and technological means, the existence, quantities, and quality of these items with the degree of certainty needed for asset recognition prior to their extraction.

Section B: Definitions

B.1 Identification of Tangible Natural Resources Held for Conservation (Paragraphs 8 and AG9)

Does an entity applying IPSAS 51 need to consider whether all tangible naturally occurring items within its jurisdiction are tangible natural resources held for conservation?

IG10. No. To meet the definition of a tangible natural resource held for conservation in paragraph 8 of IPSAS 51, a naturally occurring item must be a tangible asset and be subjected to conservation activities. It is unlikely that all tangible naturally occurring items within a jurisdiction would meet the definition of an asset, as they are unlikely to be resources if they are not actively managed or conserved. As explained in paragraph AG9 of IPSAS 51, this criterion is typically satisfied when an entity has a plan demonstrating how the naturally occurring item can provide service potential or generate economic benefits, the entity's ability and intent to carry out the plan, and whether the entity will obtain the resources necessary to carry out this plan. Therefore, one acceptable approach to ensure that the analysis of potential tangible natural resources held for

conservation is complete is to consider programs relating to the conservation of naturally occurring items. By focusing on such programs, an entity is not required to individually analyze each naturally occurring item within its jurisdiction. Some tangible natural resources may be subject to other programs which do not relate to conservation. Such programs could indicate that these resources are within the scope of other IPSAS Standards.

Section C: Recognition

C.1 Determination of Control (Paragraphs AG21–AG23)

What key considerations should an entity evaluate when assessing whether they control certain types of tangible natural resources held for conservation such as water and living resources?

IG11. In general, the control of a tangible natural resource held for conservation can be assessed based on the indicators listed in paragraph AG22 of IPSAS 51. Sometimes, a tangible natural resource held for conservation may consist of multiple units of account due to the different characteristics and risks associated with the specific parts of the resource. In such cases, the assessment of control is performed separately for each unit of account.

IG12. For a tangible natural resource held for conservation, the indicators of control are often directly impacted by the nature of the resource, as well as laws and regulations that are specific to the resource. The following discussion highlights some of the more prevalent factors that should be considered when assessing control over water and living resources held for conservation:

Water

IG13. Generally, the physical movement of free-flowing water such as oceans, seas, lakes, and rivers cannot feasibly be controlled. Therefore, it is unlikely that an entity is able to demonstrate control over these bodies of water.

IG14. Water that is physically housed in a managed environment could potentially be controlled. For example, some underground aquifers located in a jurisdiction can act as naturally occurring reservoirs holding ground water. An entity could demonstrate control over the water in such aquifers when:

(a) The entity has legal ownership of the aquifer and its contents in accordance with the applicable laws and regulations, and such legal ownership confers enforceable rights to the service potential embodied in the water;

(b) The entity has the means to manage the volume of water actively to ensure that it is available for meeting the entity’s conservation objectives. This is typically achieved by having an appropriate structure to house the water and control its flow; and

(c) The entity can restrict others from accessing the water. Such restrictions can consist of physical barriers such as fences, legislative mechanisms which legally prohibit other parties from access, the use of security personnel to prevent unauthorized access to the water, or a combination of the above.

Living Resources

IG15. Depending on the applicable laws and regulations, a public sector entity may have legal ownership of the living resources located within its jurisdiction, and such legal ownership could lead to an enforceable right to the service potential embodied in the resources. However, this assessment is not always straightforward. An entity may have difficulties demonstrating control over living resources that can move about, such as fish and animals, without some means to limit their movement to an area that is controlled by the entity. For example, even with physical barriers in place, it may not be feasible to effectively control the movements of certain animals. Since these animals can freely roam out of the areas controlled by an entity into neighboring

jurisdictions, it would be difficult for any entity to assert control. In contrast, it is generally easier to demonstrate control over plants, as these resources cannot relocate on their own.

IG16. Control over living resources also requires the ability to prevent others from accessing the resource. Like water, restricting access to living resources can be implemented through physical means such as barriers and fences, legislation prohibiting the use of the living resource, using security personnel to guard the living resources, or a combination of the above.

IG17. An entity's ability to direct the conservation of a living resource in a manner it sees fit is a strong indicator of control. In the most extreme case, the unfettered ability to sell a living resource held for conservation for cash or other resources would be a strong indicator of control over the resource. Similarly, the ability to freely change the primary intended use of a living resource held for conservation (e.g., from conservation to one's own use or for sale) is another strong indicator of control. However, in these scenarios, an entity should carefully consider whether these living resources are within the scope of IPSAS 51, as items that are used in production or held for sale are likely considered inventory within the scope of IPSAS 12 or biological assets within the scope of IPSAS 27.

C.2 Subsequent Expenditures Incurred to Conserve a Tangible Natural Resource (Paragraphs 10 and 14–16)

How should an entity account for subsequent expenditures incurred to conserve a tangible natural resource?

IG18. The recognition principle in paragraph 10 of IPSAS 51 is applicable to the expenditures incurred for the conservation of tangible natural resources. The resulting accounting is consistent with the accounting for subsequent expenditures relating to property, plant, and equipment in IPSAS 45:

(a) Expenditures which are incurred to maintain the current state of a tangible natural resource held for conservation are similar to maintenance expenses for property, plant, and equipment. These expenditures are recognized as expenses in surplus or deficit as incurred; and

(b) Expenditures that result in incremental service potential are recognized as an asset based on the recognition principle in paragraph 10. Depending on the nature of the expenditure and the appropriate unit of account, these expenditures could result in an increase in the carrying amount of an existing tangible natural resource held for conservation, similar to additions in IPSAS 45, or the recognition of a separate asset. For example, an entity that has impaired the carrying amount of a habitat asset because of physical damage may subsequently restore it by reintroducing native flora and fauna, then managing their growth until the habitat is comparable to a condition had the damage not occurred. As these restoration activities would result in an increase in the service potential of the habitat back to the levels before the impairment, the cost of introducing the flora and fauna and managing their growth would be capitalized.

C.3 Change in the Primary Reason for Holding an Asset (Paragraphs 47–50)

How would an entity account for land that is subject to "rewilding"?

IG19. "Rewilding" is the act of limiting human influence in an area with the aim of restoring the naturally occurring processes and biodiversity in that environment. In general, a change in an entity's primary intended reason for holding a tangible natural resource may lead to a change in which IPSAS Standard is applicable to the resource. See paragraphs 47–50 on Reclassification for details. In the context of rewilding land for the purpose of conservation, such a change may occur when there is evidence that an entity has ceased to use the land as an investment property or property, plant, and equipment. A change in use may be evidenced by events such as ending the occupation or use of the land, termination of a lease of the property to another party, or the removal of structures on the land.

IG20. Consistent with the guidance in paragraph 49, the net carrying amount of the land then becomes the carrying amount of the tangible natural resource held for conservation within the scope of IPSAS 51 upon the change in use.

IG21. As noted in paragraph 48 of IPSAS 51, the entity should also consider if the change in use meets one of the indicators of impairment in IPSAS 21, *Impairment of Non-Cash-Generating Assets*, or IPSAS 26, *Impairment of Cash-Generating Assets*.

C.4 Reassessment of the Unit of Account Due to Changes in Facts and Circumstances (Paragraphs AG2–AG4)

Could a change in the primary reason for holding an asset or changes in other facts and circumstances result in a reassessment of the unit of account?

IG22. Yes. As noted in Implementation Guidance C.3, a change in primary reason for holding an asset could result in a reclassification and, depending on whether the reclassification applies to the entire resource or a specific part of the resource, such a change could result in the need to reassess the unit of account for both the part of the resource with the change and the remaining portion of the resource.

IG23. For example, an entity obtains control of a conservation area in a non-exchange transaction. This conservation area consists of land and a native forest within the location, which are accounted for as two units of account—one for the land and another for the native forest. As the entity holds the area primarily for conservation, the two assets were initially measured at their current operational values. The entity has also decided to subsequently measure these assets at their current operational values, as using the current value model would result in more useful information for users of the financial statements.

IG24. Sometime later, approximately a quarter of the conservation area was destroyed in a forest fire. As a result of the significant physical damage to the forest, the entity applied IPSAS 21 and impaired the unit of account consisting of the native forest to its recoverable service amount.

IG25. The entity also determined that it is not feasible to restore the areas that have been damaged and made a formal decision to use this situation to clear the burned area and use the vacant land for the construction of administrative buildings. The entity determined that this significant change in the use of the vacant land did not result in an impairment loss, as the change in use would not have an adverse effect on the entity's land assets.

IG26. Due to the vacant land's new primary intended use as property, plant and equipment, that portion of the land is no longer part of the same unit of account as the land held for conservation. As a result, the entity applies the guidance on reclassification in paragraphs 47–50 of IPSAS 51 to reclassify the vacant land to an asset within the scope of IPSAS 45.

Section D: Measurement

D.1 Determination of Current Operational Value (Paragraphs 17, 26–30, and AG25–AG29)

How would an entity determine the current operational value for a tangible natural resource held for conservation?

IG27. In general, current operational value (COV) can be measured using a market approach or a cost approach. The use of a market approach does not necessarily result in a fair value measurement, as market prices can be used to estimate an asset's entry price.

IG28. For tangible natural resources held for conservation, which are held for their operational capacity, an active market with transactions involving an identical asset may not be available. However, an entity could still apply the market approach by using the price from an orderly transaction involving a similar asset. For example, an entity holding a forest for conservation may estimate its COV using an appraisal value of a similar land

and adjusting the value for specific differences in characteristics that may impact its service potential, such as differences in the size of the forested area or restrictions in how the forested area can be used.

IG29. If an active market for similar assets does not exist, an entity could also estimate COV using a cost approach by estimating the cost of developing a similar asset. Continuing with the forest example, the entity could estimate the forest's COV by accumulating the estimated costs of acquiring, planting, and growing saplings into mature trees, as well as the value of the land if it is not a separate unit of account.

D.2 Inability to Reliably Measure Current Value (Paragraph 11)

When may an entity conclude that the current value of a tangible natural resource held for conservation cannot be reliably measured?

IG30. The use of estimates is an essential part of the accrual basis of accounting, and there will often be uncertainty associated with the measurement of a tangible natural resource held for conservation. In some situations, the level of uncertainty in an estimate is so large that the relevance and faithful representativeness of a measure is questionable, even if disclosures are provided to explain the estimation techniques applied by the entity. Under these circumstances, the current value of the tangible natural resource held for conservation cannot be reliably measured.

IG31. The following factors may indicate that a tangible natural resource held for conservation cannot be reliably measured:

(a) There is a significantly wide range of values that could be reasonable;

(b) There is no reasonable way to assess the probabilities of various estimates; or

(c) There is no reasonable methodology or observable input available to measure the resource.

D.3 Exchange of Assets

How should an entity measure a tangible natural resource held for conservation acquired through a non-monetary transaction such as an exchange of assets?

IG32. As required by paragraphs AG31–AG33 of IPSAS 51, a tangible natural resource held for conservation that is acquired in a non-monetary transaction is typically measured at the current value of the asset(s) given up at the time of acquisition if it can be reliably measured. If the current operational value of the acquired tangible natural resource held for conservation is more evident, the acquired resource is measured at this current operational value. Such a situation could occur if, for example, an entity gives up a specialized asset that does not have an active market in exchange for a tangible natural resource held for conservation that is commonly purchased for conservation purposes.

IG33. There are two exceptions to the requirement to measure a tangible natural resource held for conservation acquired through a non-monetary transaction at current value:

(a) If both the current operational value of the tangible natural resource held for conservation acquired and the current value of the asset(s) given up cannot be reliably measured, the acquired resource is measured at the carrying amount of the asset(s) given up; and

(b) If the exchange transaction lacks commercial substance, the acquired resource is also measured at the carrying amount of the asset(s) given up.

IG34. Paragraph AG32 provides guidance on how to determine if an exchange transaction has commercial substance. Generally, an exchange transaction has commercial substance if:

(a) The configuration (risk, timing, and amount) of the service potential of the acquired tangible natural resource held for conservation is different from the configuration of the cash flows or service potential

of the asset(s) given up, and this difference is significant relative to the current value of the asset(s) given up; or

(b) The net change in the entity's operations resulting from the exchange is significant relative to the current value of the asset(s) given up.

IG35. Due to the specialized nature of tangible natural resources held for conservation, it may be evident that the acquisition of such an asset in a non-monetary exchange of assets has commercial substance without the need to perform a detailed numerical analysis. For example, if an entity gives up inventory to acquire a tangible natural resource held for conservation, the fact that items which were mainly held for their future economic benefits through sale were exchanged for a resource which is not expected to generate future cash flows could be sufficient to indicate that the transaction has commercial substance.

Section E: Display and Disclosure

E.1 Grouping of Disclosures (Paragraphs 52–71 and AG40–AG43)

Do IPSAS Standards require an entity to provide the disclosures that relate tangible natural resources held for conservation and other tangible natural resources within the scope of other IPSAS Standards in one note?

IG36. IPSAS Standards generally neither require nor prohibit an entity from grouping the disclosures of tangible natural resources within the scope of this and other IPSAS Standards into a single note. If an entity decides to group the disclosures, it needs to ensure that this grouping does not obscure the information presented. This is typically accomplished by reconciling the information disclosed in the note with the amounts that are included in the various financial statement captions which contain tangible natural resources.

IG37. The decision to group the disclosures of tangible natural resources together will depend on the entity's judgment on whether this results in more useful information for users of the financial statements compared to the potential costs of reorganizing the notes. When making this decision, the entity should consider the aggregation and disaggregation principles in IPSAS 1, *Presentation of Financial Statements*, as well as the requirements in IPSAS 18, *Segment Reporting*.

E.2 Disclosure of Stewardship Arrangements (Paragraphs 55 and 71)

What information regarding stewardship arrangements is required to be disclosed?

IG38. A public sector entity may enter into stewardship arrangements which confer certain rights and obligations related to a tangible natural resource held for conservation. Regardless of whether the related tangible natural resource held for conservation is recognized as an asset, the entity will need to consider the potential accounting and disclosure implications from the rights and obligations in its stewardship arrangements.

IG39. For example, certain treaties or legislation may grant rights to indigenous peoples to maintain and strengthen their relationship with resources that they have traditionally owned, or delegate conservation activities to a third party. Other arrangements may impose obligations or responsibilities, such as restrictions on the use of certain tangible natural resources held for conservation without the free, prior, and informed consent from indigenous peoples. These rights and obligations are required to be disclosed if their impact is material to the financial statements.

IG40. Some stewardship arrangements may also result in the recognition of an asset or liability that is outside the scope of IPSAS 51. For example, some arrangements may confer the right to a public sector entity to harvest or use a resource that is controlled by a third party, and such an arrangement may result in the recognition of an asset within the scope of IPSAS 31, *Intangible Assets*. Other arrangements may require a public sector entity to potentially provide funding or other support to a third party. For example, a public sector entity may

be required to fund the restoration of certain resources in the event of a natural disaster. Such an arrangement may result in the recognition or disclosure of an obligation as required by IPSAS 19, *Provisions, Contingent Liabilities and Contingent Assets*.

Illustrative Examples

These examples accompany, but are not part of, IPSAS 51.

Introduction

IE1. These examples portray hypothetical situations illustrating how an entity might apply the requirements in IPSAS 51, *Tangible Natural Resources Held for Conservation*, to particular natural resources on the basis of the limited facts presented. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific sector illustrated. Although some aspects of the examples may be presented in actual fact patterns, all relevant facts and circumstances of a particular fact pattern would need to be evaluated when applying IPSAS 51.

Scope

IE2. Examples 1–2 illustrate the application of paragraphs 3–7 of IPSAS 51 on the scope of the Standard.

Example 1: Accounting for Physically Similar Assets that are Held for Different Reasons

IE3. A public sector entity controls two regions of forested land in its jurisdiction, Area A and Area B. Both regions have similar physical characteristics and were initially uncultivated forests containing the same species of flora and fauna. There is no legislation that explicitly dictates how Regions A and B are to be used, but the regions are managed in accordance with different programs that have been created by the entity.

IE4. In accordance with the entity's program, Area A is opened to visitors. The entirety of Area A has been landscaped or cleared to create hiking paths and campgrounds within the area, and the majority of the vegetation in the area has also been replaced with species that are deemed to have higher aesthetic value or are safer for visitors. Visitors can pay a nominal fee to reserve a specific campground, or they can enter and use the campgrounds that are available for free without a reservation. In addition, the entity has hired a team of security personnel to manage the campground operations.

IE5. In contrast, the entity has announced to the public that Area B is a reserve and constructed fencing to limit human access to the area. Unlike Area A, the flora and fauna in Area B have been left in their natural state. While the entity has also hired a team of security personnel to patrol Area B, this security team has been instructed to deter individuals from trespassing into the region.

IE6. The entity applies judgment to the facts presented in paragraphs IE3–IE5 and concludes that Area A and Area B appear to be held for different primary intended purposes despite the fact that both regions initially had similar physical characteristics. The entity notes that Area A is primarily managed for use by the public for camping and hiking, and the introduction of new plants to facilitate this use rather than the conservation of native species indicates that the region is not primarily held for conservation.

IE7. The entity also observes that, regardless of whether the restrictions on the access and use of Area B are self-imposed, the facts and circumstances support the conclusion that the primary reason for holding the asset is for conservation. As a result, the entity concludes that Area B is within the scope of IPSAS 51.

Example 2: Use of Natural Spaces as Infrastructure

IE8. A government entity has a "Rain Garden Program" in place to develop natural spaces in urban areas. These "rain gardens" are naturally occurring green spaces which have been augmented with planted trees and other vegetation to help reduce the risk of flooding in the area and are considered more desirable than traditional constructed infrastructure such as dikes and reservoirs.

IE9. Because these rain gardens accomplish the same objectives as constructed infrastructure, the government entity concludes that they are considered property, plant, and equipment within the scope of IPSAS 45. This

assessment is separate from the consideration of whether the land on which the rain garden is located is an asset.

IE10. In some jurisdictions, the developed natural spaces such as the rain gardens in this example may be referred to as “modified natural assets”, “enhanced natural assets”, or “green infrastructure”. Regardless, the assessment of which IPSAS Standard to apply is based on the entity’s primary intended use of the item.

Measurement

IE11. Example 3 illustrates the determination of the current operational value of a tangible natural resource held for conservation when its current operational value is required by paragraphs 17 and 26 of IPSAS 51.

Example 3: Determination of Current Operational Value

IE12. A government entity obtains control of a 5,000-hectare plot of woodlands in its jurisdiction through a non-exchange transaction and has designated the forest and the land on which it is located as a ‘Conservation Area’ that is held primarily for conservation. As the conservation of the woodlands results in meeting the entity’s social and environmental objectives, the entity has concluded that the Conservation Area meets the definition of an asset. Since the asset was obtained in a non-exchange transaction, it is initially measured at deemed cost (which is current operational value (COV) in the context of tangible natural resources held for conservation), as required by paragraph 17 of IPSAS 51.

Case A – Valuation Performed by an External Valuation Specialist Using the Market Approach

IE13. To measure the COV of the Conservation Area, the entity engaged a valuation specialist who conducted a valuation in accordance with an internationally recognized valuation framework that is commonly used for property valuation.

IE14. The valuation specialist used data from historical purchases of forests held specifically for conservation, adjusted for the following factors:

(a) Differences in the location and size of the comparable forests;

(b) Differences in the species within the conservation area and the comparable forests; and

(c) Average age of plantation.

The valuation specialist also compared the resulting estimate with the value of physically similar forests that are held for the production of timber as a high-level check for the reasonability of the estimate, taking into account the different purposes for holding the asset. Based on the above valuation approach, the specialist estimated a COV of CU28 million on the date when the entity obtained control of the Conservation Area.

IE15. The entity considers the disclosure requirements for current value measurement in paragraphs 61–67 of IPSAS 51. In addition, depending on the materiality of the Conservation Area, the valuation could be a key source of estimation uncertainty due to issues such as limited or inconsistent historical data or the subjectivity inherent in the adjustments noted in paragraph IE14. As a result, the entity also considers the disclosure requirements in paragraphs 140–148 of IPSAS 1, *Presentation of Financial Statements*.

Case B – Estimation of COV Based on the Cost to Develop a Similar Asset

IE16. Alternatively, the entity can estimate the Conservation Area’s COV based on the cost to develop a similar forest. While it may be counterintuitive to estimate the cost to develop a tangible natural resource held for conservation, IPSAS 46, *Measurement*, allows the use of the cost to develop a *similar* asset. Therefore, an estimate of COV based on the cost to develop a forest physically similar to the Conservation Area is acceptable.

IE17. Based on this approach, the entity noted that it will take approximately 20 years to grow a forest comparable to the one in the Conservation Area. In addition, the entity estimated forestation costs of CU4,000 per hectare based on the costs for site preparation, the acquisition cost of seedlings of flora to be planted, and the present value of the labor and material costs to plant and maintain the trees during their 20-year growth period. In addition, the entity estimated that the cost of a plot of land with similar physical characteristics is approximately CU1,500 per hectare. Based on these estimates of the costs per hectare, the entity estimated a COV of approximately CU27.5 million.

IE18. As noted in paragraph IE15, as the above estimation of the COV could be a key source of estimation uncertainty, the entity will need to consider the disclosure requirements in paragraphs 140–148 of IPSAS 1 in addition to the disclosure requirements for current value measurement in paragraphs 61–67 of IPSAS 51.

Disclosure of Unrecognized Tangible Natural Resources Held for Conservation

IE19. Example 4 illustrates the application of paragraphs 12 and 68 of IPSAS 51 on the disclosure of a tangible natural resource held for conservation which meets the definition of an asset but is not recognized as it cannot be reliably measured.

Example 4: Unused Publicly Owned Land

IE20. A public sector entity obtains control of a plot of land in an uninhabited area through the exercise of its sovereign powers. Due to the remote location of the land and the characteristics of its flora and fauna, the entity plans to conserve the habitats in the area and concludes that the land and its habitats (collectively, the reserve) meet the definition of a tangible natural resource held for conservation. Based on these facts, the entity concludes that the reserve is within the scope of IPSAS 51 and should be initially measured at its deemed cost (current operational value) in accordance with paragraph 17.

IE21. To determine the current operational value of the reserve, the entity retained a number of valuation specialists to assist in the estimation process. Due to the remote location of the land and the difficulties in valuing its flora and fauna, the entity and the valuation specialists agreed that there is no reasonable basis on which to measure the reserve's current operational value.

IE22. As a result, the entity concludes that the reserve is an asset that cannot be reliably measured. Therefore, the entity applies the disclosure requirements in paragraph 68 of IPSAS 51 and discloses:

(a) The location and physical characteristics of the reserve;

(b) An explanation of the difficulties in obtaining a reliable measurement of the reserve's current value; and

(c) The significance of the reserve in relation to the delivery of the entity's objectives.

Transition

IE23. Example 5 illustrates the potential similarities and differences resulting from the application of IPSAS 51 using the modified retrospective transition approach and the full retrospective approach.

Example 5: Differences Between the Modified Retrospective and Full Retrospective Transition Methods

(Note: To isolate the impact of the transitional provisions, this example assumes that other than the events or transactions specified below, there are no other transactions within the entity.)

IE24. A central government entity with a December 31 year-end applies IPSAS 51 in year 20X4. The entity has elected to use the historical cost model and concluded that the tangible natural resource held for conservation in question has an indefinite useful life, i.e., it should not be depreciated.

IE25. When the country's constitution was established many years ago, the entity obtained control over a significant tangible natural resource held for conservation in its jurisdiction (Resource A). At the time, Resource A's current value was CU50 million. However, the entity did not consider recognition of an asset, as its accounting framework at the time did not have explicit guidance on the recognition of tangible natural resources held for conservation.

Case A – The Central Government Continues to Control the Resource on the Date of Initial Application

IE26. Since 20X2, the current value of Resource A has increased to CU70 million. The entity has continued to control Resource A throughout 20X2 to 20X4.

IE27. The entity considered the transitional requirements in paragraph 74 of IPSAS 51 and noted the following:

Modified Retrospective Approach (Paragraph 74(a))

IE28. Applying the guidance in paragraph 75, the date of initial application for the modified retrospective approach is January 1, 20X4. The modified retrospective approach requires the recognition of any tangible natural resources held for conservation that are controlled by an entity on the date of initial application at their current value. The cumulative effect of initially applying IPSAS 51 is recognized as an adjustment to opening accumulated surpluses or deficits.

IE29. As a result, the entity recognizes Resource A as an asset at CU70 million on January 1, 20X4 and adjusts its opening accumulated surpluses or deficits by CU70 million.

Retrospective Application in Accordance with IPSAS 3, Accounting Policies, Changes in Accounting Estimates and Errors *(Paragraph 74(b))*

IE30. If the entity applies IPSAS 51 in accordance with IPSAS 3, it would be required to consider the initial recognition of Resource A at the time control was obtained. This approach would result in the following:

(a) Resource A would be recognized as an asset of CU50 million upon the establishment of the country's constitution; and

(b) Because the entity elected to subsequently measure tangible natural resources using the historical cost model, on the date of initial application, Resource A would not be adjusted to CU70 million. The recognized asset and the opening accumulated surpluses or deficits would remain at CU50 million.

Case B - Resource was Sold Prior to the Date of Initial Application

IE31. In this case, the example facts outlined in paragraphs IE24–IE25 continue to be applicable. However, during 20X2, the entity classified Resource A as an asset held for sale and sold it for cash consideration of CU70 million. As the resource was previously unrecognized, there was no carrying amount to offset the consideration received, and the sale resulted in a gain of CU70 million.

IE32. Prior to the application of IPSAS 51, the entity's statement of financial position as at December 31, 20X2 would have consisted of cash and accumulated surpluses or deficits of CU70 million.

IE33. The entity considered the transitional requirements in paragraph 74 of IPSAS 51.

Modified Retrospective Approach (Paragraph 74(a))

IE34. The modified retrospective approach does not require the reconsideration of any tangible natural resources held for conservation that were no longer controlled on the date of initial application (January 1, 20X4). As a result, the entity does not need to make any adjustments to its opening statement of financial position.

Retrospective Application in Accordance with IPSAS 3, Accounting Policies, Changes in Accounting Estimates and Errors *(Paragraph 74(b))*

IE35. If the entity applies IPSAS 51 in accordance with IPSAS 3, it would be required to consider the initial recognition of Resource A at the time control was obtained and its subsequent sale in year 20X2. This approach would result in the following:

(a) Resource A would have been recognized as an asset valued at CU50 million when the country's constitution was established. Since the 20X4 financial statements only include comparative information for the 20X3 year, this CU50 million adjustment will only be reflected in the 20X3 opening accumulated surpluses or deficits;

(b) In year 20X2, the sale of Resource A would have resulted in a gain of only CU20 million (CU70 million cash consideration less Resource A's carrying amount of CU50 million). Since the entity is only presenting comparative information for the 20X3 year, this CU20 million gain will only be reflected in the opening accumulated surpluses or deficits in the 20X3 financial statements; and

(c) Although the gain in year 20X2 is different from the gain recognized before the application of IPSAS 51, it should be noted that the accumulated surpluses or deficits on January 1, 20X3 continue to be CU70 million (consisting of CU50 million from the initial recognition of Resource A and the gain of CU20 million from the sale of the resource).

COMPARISON WITH GFSM 2014

The following data recognition and measurement requirements in IPSAS 51 are aligned with those in Government Finance Statistics Manual 2014 (GFSM 2014):

- Both IPSAS 51 and GFSM 2014 require the recognition and measurement of tangible natural resources held for conservation, although GFSM 2014 does not report on these separately but includes them in the appropriate category of assets.
- IPSAS 51 requires initial measurement at deemed cost or cost depending on whether recognition resulted from a transaction in an orderly market and includes an accounting policy option that allows current operational value for subsequent measurement.

The following presentation requirements in IPSAS 51 are not aligned with those in GFSM 2014 even though recognition and measurement requirements are aligned:

- IPSAS 51 provides guidance on tangible natural resources held for conservation, while GFSM 2014 provides guidance on broader types of natural resources.
- IPSAS 51 requires the presentation of increases in the carrying amount in either net assets/equity or surplus or deficit, as appropriate. GFSM 2014 requires the presentation of changes in market value as other economic flows.
- IPSAS 51 requires the presentation of tangible natural resources held for conservation as a separate line item in the statement of financial position. GFSM 2014 includes tangible natural resources held for conservation within the appropriate category of nonfinancial assets in the balance sheet.

The following recognition and measurement requirements in IPSAS 51 need additional data to be collected for GFSM 2014 reporting:

- Where entities apply cost, deemed cost, or current operational value, there will be a need to collect additional data or separately identify data in the accounting system to be used for GFSM 2014 reporting.
- Where IPSAS 51 groups natural resources for presentation purposes, further breakdown by resource type (e.g., land, mineral and energy resources, and other naturally occurring assets) may be required for GFSM 2014 reporting.
- In GFSM 2014, assets are initially and subsequently measured at market value. Where current operational value is applied, IPSAS-based values may closely approximate the market value required by GFSM 2014. However, preparers should assess whether adjustments are needed, for example, to remove ownership transfer costs or reflect exit-price assumptions where these are material.

GLOSSARY OF DEFINED TERMS IN IPSAS ACCOUNTING STANDARDS

This Glossary contains all terms defined in the 51-accrual basis IPSAS Accounting Standards approved up to January 31, 2026. A list of these IPSAS Accounting Standards is located after this Glossary. This Glossary does not include terms defined in the Cash Basis IPSAS Standard, *Financial Reporting under the Cash Basis of Accounting*. Users should refer to that Cash Basis IPSAS Standard for these terms.

Definitions

References to accrual basis IPSAS Standards are by Standard number and paragraph number. For example, 1.7 refers users to IPSAS 1, *Presentation of Financial Statements*, paragraph 7. References set out in brackets indicate a minor variation in wording.

Term	Definition	Location
12-month expected credit loss	The portion of lifetime expected credit losses that represent the expected credit losses that result from default events on a financial instrument that are possible within the 12 months after the reporting date.	41.9
accounting estimates Applicable for periods beginning on or after January 1, 2028.	Monetary amounts in financial statements that are subject to measurement uncertainty.	3.7
accounting policies	The specific principles, bases, conventions, rules, and practices applied by an entity in preparing and presenting financial statements.	3.7
accrual basis	A basis of accounting under which transactions and other events are recognized when they occur (and not only when cash or its equivalent is received or paid). Therefore, the transactions and events are recorded in the accounting records and recognized in the financial statements of the periods to which they relate. The elements recognized under accrual accounting are assets, liabilities, net assets/equity, revenue, and expenses.	1.7
acquired operation	The operation that the acquirer gains control of in an acquisition.	40.5
acquirer	The entity that gains control of one or more operations in an acquisition.	40.5
acquisition	A public sector combination in which one party to the combination gains control of one or more operations, and there is evidence that the combination is not an amalgamation.	40.5
acquisition date	The date on which the acquirer gains control of the acquired operation.	40.5
active market	A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.	46.6

Term	Definition	Location
actuarial gains and losses	Changes in the present value of the defined benefit obligation resulting from: (a) Experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred); and (b) The effects of changes in actuarial assumptions.	39.8
actuarial present value of promised retirement benefits	The present value of the expected payments by a retirement benefit plan to participants attributable to service, as employees, already rendered.	49.9
agricultural activity	The management by an entity of the biological transformation and harvest of biological assets for: • Sale; • Distribution at no charge or for a nominal charge; or • Conversion into agricultural produce or into additional biological assets for sale or for distribution at no charge or for a nominal charge.	27.9
agricultural produce	The harvested produce of the entity's biological assets.	27.9
amalgamation	Gives rise to a resulting entity and is either: (a) A public sector combination in which no party to the combination gains control of one or more operations; or (b) A public sector combination in which one party to the combination gains control of one or more operations, and in which there is evidence that the combination has the economic substance of an amalgamation.	40.5
amalgamation date	The date on which the resulting entity obtains control of the combining operations.	40.5
amortization	The systematic allocation of the depreciable amount of an intangible asset over its useful life.	31.16
amortized cost of a financial asset or financial liability	The amount at which the financial asset or financial liability is measured at initial recognition minus the principal repayments, plus or minus the cumulative amortization using the effective interest method of any difference between that initial amount and the maturity amount and, for financial assets, adjusted for any loss allowance.	41.9
annual budget	An approved budget for one year. It does not include published forward estimates or projections for periods beyond the budget period.	24.7

Term	Definition	Location
appropriation	An authorization granted by a legislative body to allocate funds for purposes specified by the legislature or similar authority.	24.7
approved budget	The expenditure authority derived from laws, appropriation bills, government ordinances, and other decisions related to the anticipated revenue or receipts for the budgetary period.	24.7
assets	Resources controlled by an entity as a result of past events and from which future economic benefits or service potential are expected to flow to the entity.	1.7
asset ceiling	The present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan.	39.8
assets held by a long-term employee benefit fund	Assets (other than non-transferable financial instruments issued by the reporting entity) that: (a) Are held by an entity (a fund) that is legally separate from the reporting entity and exists solely to pay or fund employee benefits; and (b) Are available to be used only to pay or fund employee benefits, are not available to the reporting entity's own creditors (even in bankruptcy), and cannot be returned to the reporting entity, unless either: (i) The remaining assets of the fund are sufficient to meet all the related employee benefit obligations of the plan or the reporting entity; or (ii) The assets are returned to the reporting entity to reimburse it for employee benefits already paid.	39.8
bearer plant	A living plant that: (a) Is used in the production or supply of agricultural produce: (b) Is expected to bear produce for more than one period: and (c) Has a remote likelihood of being sold as agricultural produce, except for incidental scrap sales.	27.9
benefits	The advantages an entity obtains from its involvement with other entities. Benefits may be financial or non-financial. The actual impact of an entity's involvement with another entity can have positive or negative aspects.	35.14
binding arrangement (for a service concession arrangement)	Describes contracts and other arrangements that confer similar rights and obligations on the parties to it as if they were in the form of a contract.	32.8

Term	Definition	Location
binding arrangement (for a joint arrangement)	An arrangement that confers enforceable rights and obligations on the parties to it as if it were in the form of a contract. It includes rights from contracts or other legal rights.	35.14; 36.8
binding arrangement (for revenue transactions)	For the purposes of this Standard, an arrangement that confers both rights and obligations, enforceable through legal or equivalent means, on the parties to the arrangement.	47.4
binding arrangement asset	An entity's right to consideration for satisfying its compliance obligations in compliance with the terms of the binding arrangement when that right is conditioned on something other than the passage of time (for example, the entity's future performance).	47.4
binding arrangement liability	an entity's obligation to satisfy its compliance obligation in compliance with the terms of the binding arrangement for which the entity has received consideration (or the amount is due) from the resource provider.	47.4
biological asset	A living animal or plant.	27.9
biological transformation	Comprises the processes of growth, degeneration, production, and procreation that cause qualitative or quantitative changes in a biological asset.	27.9
borrowing costs	Interest and other expenses incurred by an entity in connection with the borrowing of funds.	5.5
budgetary basis	The accrual, cash, or other basis of accounting adopted in the budget that has been approved by the legislative body.	24.7
capital transfer (for a resource recipient)	From the perspective of a resource recipient, an inflow of cash or another asset that arises from a binding arrangement with a specification that the entity acquires or constructs a non-financial asset that will be controlled by the entity. (Paragraph AG140 provides additional guidance.)	47.4
capital transfer (for a resource provider)	From the perspective of a transfer provider, an outflow of cash or another asset that arises from a binding arrangement with a specification that the transfer recipient acquires or constructs a non-financial asset that will be controlled by the transfer recipient.	48.6
carrying amount (of an intangible asset)	The amount at which an asset is recognized after deducting any accumulated amortization and accumulated impairment losses.	31.16
carrying amount (of investment property)	The amount at which an asset is recognized in the statement of financial position.	16.7

Term	Definition	Location
carrying amount (of property, plant, and equipment)	The amount at which an asset is recognized after deducting any accumulated depreciation and accumulated impairment losses.	45.5
carrying amount of a liability	The amount at which a liability is recognized in the statement of financial position.	10.7
carrying amount of an asset	The amount at which an asset is recognized in the statement of financial position, after deducting any accumulated depreciation and accumulated impairment losses thereon.	10.7
cash	Comprises cash on hand and demand deposits.	2.8
cash equivalents	Short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.	2.8
cash flows	Inflows and outflows of cash and cash equivalents.	2.8
cash-generating assets	Assets held with the primary objective of generating a commercial return.	21.14
cash-generating unit	The smallest identifiable group of assets held with the primary objective of generating a commercial return that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets.	26.13, 44.9
change in accounting estimate Applicable up to periods beginning on or before December 31, 2027.	Is an adjustment of the carrying amount of an asset or a liability, or the amount of the periodic consumption of an asset, that results from the assessment of the present status of, and expected future benefits and obligations associated with, assets and liabilities. Changes in accounting estimates result from new information or new developments and, accordingly, are not correction of errors.	3.7
class of property, plant, and equipment	A grouping of assets of a similar nature or function in an entity's operations that is shown as a single item for the purpose of disclosure in the financial statements.	45.5
class of tangible natural resources held for conservation Applicable for periods beginning on or after January 1, 2028.	A grouping of tangible natural resources held for conservation that are of a similar nature and are shown as a single item for the purpose of disclosure in the financial statements.	51.8

Term	Definition	Location
close members of the family of an individual	Close relatives of the individual or members of the individual's immediate family who can be expected to influence, or be influenced by, that individual in their dealings with the entity.	20.4
closing rate	The spot exchange rate at the reporting date.	4.10
collective services	Services provided by a public sector entity simultaneously to all members of the community that are intended to address the needs of society as a whole.	19.18
combining operation	An operation that combines with one or more other operations to form the resulting entity in an amalgamation.	40.5
commencement date of the lease	The date on which a lessor makes an underlying asset available for use by a lessee.	43.5
comparable basis	The actual amounts presented on the same accounting basis, same classification basis, for the same entities, and for the same period as the approved budget.	24.7
compliance obligation	An entity's promise in a binding arrangement to either use resources internally for distinct goods or services or transfer distinct goods or services to a purchaser or third-party beneficiary.	47.4
component of an entity	Comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.	44.9
conditions on transferred assets	Stipulations that specify that the future economic benefits or service potential embodied in the asset is required to be consumed by the recipient as specified or future economic benefits or service potential must be returned to the transferor.	23.7
consolidated financial statements	The financial statements of an economic entity in which the assets, liabilities, net assets/equity, revenue, expenses and cash flows of the controlling entity and its controlled entities are presented as those of a single economic entity.	34.6
construction contract	A contract, or a similar binding arrangement, specifically negotiated for the construction of an asset or a combination of assets that are closely interrelated or interdependent in terms of their design, technology, and function or their ultimate purpose or use.	11.4

Term	Definition	Location
constructive obligation	An obligation that derives from an entity's actions where: (a) By an established pattern of past practice, published policies, or a sufficiently specific current statement, the entity has indicated to other parties that it will accept certain responsibilities; and (b) As a result, the entity has created a valid expectation on the part of those other parties that it will discharge those responsibilities.	19.18
contingent asset	A possible asset that arises from past events, and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.	19.18
contingent consideration	Usually an obligation of the acquirer to transfer additional assets or equity interests to the former owners of an acquired operation as part of the exchange for control of the acquired operation if specified future events occur or conditions are met. However, contingent consideration also may give the acquirer the right to the return of previously transferred consideration if specified conditions are met.	40.5
contingent liability	(a) A possible obligation that arises from past events, and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity; or (b) A present obligation that arises from past events, but is not recognized because: (i) It is not probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation; or (ii) The amount of the obligation cannot be measured with sufficient reliability.	19.18
contract	For the purpose of this Standard, is an agreement between two or more parties that creates enforceable rights and obligations.	43.5
contractor	An entity that performs construction work pursuant to a construction contract.	11.4
contributions from owners	Future economic benefits or service potential that has been contributed to the entity by parties external to the entity, other than those that result in liabilities of the entity, that establish a financial interest in the net assets/equity of the entity, which: (a) Conveys entitlement both to (i) distributions of future economic benefits or service potential by the entity during its life, such distributions	1.7

Term	Definition	Location
	being at the discretion of the owners or their representatives, and to (ii) distributions of any excess of assets over liabilities in the event of the entity being wound up; and/or (b) Can be sold, exchanged, transferred, or redeemed.	
control	An entity controls another entity when the entity is exposed, or has rights, to variable benefits from its involvement with the other entity and has the ability to affect the nature or amount of those benefits through its power over the other entity.	2.8
control of an asset	Arises when the entity can use or otherwise benefit from the asset in pursuit of its objectives, and can exclude or otherwise regulate the access of others to that benefit.	23.7
controlled entity	An entity that is controlled by another entity.	35.14
controlling entity	An entity that controls one or more entities.	35.14
cost	The amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire an asset at the time of its acquisition or construction.	16.7
cost approach	A measurement technique that reflects the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost).	46.6
cost plus or cost- based contract	A construction contract in which the contractor is reimbursed for allowable or otherwise defined costs and, in the case of a commercially based contract, an additional percentage of these costs or a fixed fee, if any.	11.4
costs of disposal	Incremental costs directly attributable to the disposal of an asset, excluding finance costs and income tax expense.	21.14
cost of fulfillment	The costs that the entity will incur in fulfilling the obligations represented by the liability, assuming that it does so in the least costly manner.	46.6
costs to sell	The incremental costs directly attributable to the disposal of an asset, excluding finance costs and income taxes. Disposal may occur through sale or through distribution at no charge or for a nominal charge.	27.9
costs to sell	The incremental costs directly attributable to the disposal of an asset (or disposal group), excluding finance costs and income tax expense.	44.9

Term	Definition	Location
credit-adjusted effective interest rate	The rate that exactly discounts the estimated future cash payments or receipts through the expected life of the financial asset to the amortized cost of a financial asset that is a purchased or originated credit-impaired financial asset. When calculating the credit-adjusted effective interest rate, an entity shall estimate the expected cash flows by considering all contractual terms of the financial asset (for example, prepayment, extension, call and similar options) and expected credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate (see [IPSAS 41] paragraphs AG156–AG158), transaction costs, and all other premiums or discounts. There is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the cash flows or the remaining life of a financial instrument (or group of financial instruments), the entity shall use the contractual cash flows over the full contractual term of the financial instrument (or group of financial instruments).	41.9
credit-impaired financial asset	A financial asset that is credit-impaired when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired include observable data about the following events: (a) Significant financial difficulty of the issuer or the borrower; (b) A breach of contract, such as a default or past due event; (c) The lender(s) of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider; (d) It is becoming probable that the borrower will enter bankruptcy or other financial reorganization; (e) The disappearance of an active market for that financial asset because of financial difficulties; or (f) The purchase or origination of a financial asset at a deep discount that reflects the incurred credit losses. It may not be possible to identify a single discrete event—instead, the combined effect of several events may have caused financial assets to become credit-impaired.	41.9
credit loss	The difference between all contractual cash flows that are due to an entity in accordance with the contract and all the cash flows that the entity expects to receive (i.e., all cash shortfalls), discounted at the original effective interest rate (or credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets). An entity shall estimate cash flows	41.9

Term	Definition	Location
	by considering all contractual terms of the financial instrument (for example, prepayment, extension, call and similar options) through the expected life of that financial instrument. The cash flows that are considered shall include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms. There is a presumption that the expected life of a financial instrument can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the expected life of a financial instrument, the entity shall use the remaining contractual term of the financial instrument.	
credit risk	The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.	30.8
credit risk rating grades	A rating of credit risk based on the risk of a default occurring on the financial instrument	30.8
currency risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.	30.8
current asset	An entity shall classify an asset as a current asset when: (a) It expects to realize the asset, or intends to sell or consume it, in its normal operating cycle; (b) It holds the asset primarily for the purpose of trading; (c) It expects to realize the asset within twelve months after the reporting period; or (d) The asset is cash or a cash equivalent (as defined in IPSAS 2, *Cash Flow Statements*) unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.	44.9
current replacement cost Applicable up to periods beginning on or before December 31, 2027.	Is the cost the entity would incur to acquire the asset on the reporting date	12.9
current operational value	The amount the entity would pay for the remaining service potential of an asset at the measurement date.	46.6
customer	A party that has contracted with an entity to obtain goods or services that are an output of the entity's activities in exchange for consideration.	47.4
date of adoption of IPSAS	The date an entity adopts accrual basis IPSAS for the first time, and is the start of the reporting period in which the first-time adopter adopts accrual basis IPSAS and for which the entity presents its first transitional IPSAS	33.9

Term	Definition	Location
Applicable up to periods beginning on or before December 31, 2027.	financial statements or its first IPSAS financial statements.	
date of adoption of IPSAS Standards Applicable for periods beginning on or after January 1, 2028.		33.8 (issued in 2025)
decision maker	An entity with decision-making rights that is either a principal or an agent for other parties.	35.14
deemed cost	An amount used as a surrogate for transaction price at the measurement date.	46.6
deficit or surplus	Is: (a) The present value of the defined benefit obligation less (b) The fair value (as defined in IPSAS 46, *Measurement*) of plan assets (if any).	39.8
defined benefit plans	Post-employment benefit plans other than defined contribution plans.	39.8
defined benefit plans	For the purposes of this Standard, retirement benefit plans other than defined contribution plans.	49.9
defined contribution obligations	The amounts owed to participants under the terms of a defined contribution plan.	49.9
defined contribution plans	Post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a fund) and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods.	39.8
defined contribution plans	For the purposes of this Standard, retirement benefit plans under which amounts to be paid as retirement benefits are determined by contributions to a fund together with investment earnings thereon.	49.9
depreciable amount	The cost of an asset, or other amount substituted for cost, less its residual value.	45.5
depreciation	The systematic allocation of the depreciable amount of an asset over its useful life.	45.5

Term	Definition	Location
derecognition	The removal of a previously recognized financial asset or financial liability from an entity's statement of financial position.	41.9
derivative	A financial instrument or other contract within the scope of this Standard with all three of the following characteristics. (a) Its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract (sometimes called the 'underlying'). (b) It requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors. (c) It is settled at a future date.	41.9
development	The application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, devices, products, processes, systems or services before the start of commercial production or use.	31.16
distributions to owners	Future economic benefits or service potential distributed by the entity to all or some of its owners, either as a return on investment or as a return of investment.	1.7
disposal group	A group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. The group includes goodwill acquired in a public sector combination if the group is a cash-generating unit to which goodwill has been allocated in accordance with the requirements of paragraphs 90A–90H of IPSAS 26, Impairment of Cash-Generating Assets or if it is an operation within such a cash-generating unit.	44.9
discontinued operation	A component of an entity that either has been disposed of or is classified as held for sale and: (a) Represents a separate major operation or geographical area of operations; (b) Is part of a single coordinated plan to dispose of a separate operation or geographical area of operations; or (c) Is a controlled entity acquired exclusively with a view to resale.	44.9

Term	Definition	Location
dividends or similar distributions	Distributions to holders of equity instruments in proportion to their holdings of a particular class of capital	41.9
economic entity	A controlling entity and its controlled entities.	1.7, 35.14
economic life	Either: (a) The period over which an asset is expected to be economically usable by one or more users; or (b) The number of production or similar units expected to be obtained from an asset by one or more users.	43.5
effective date of the modification	The date when both parties agree to a lease modification	43.5
effective interest method	The method that is used in the calculation of the amortized cost of a financial asset or a financial liability and in the allocation and recognition of the interest revenue or interest expense in surplus or deficit over the relevant period.	41.9
effective interest rate	The rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability to the gross carrying amount of a financial asset or to the amortized cost of a financial liability. When calculating the effective interest rate, an entity shall estimate the expected cash flows by considering all the contractual terms of the financial instrument (for example, prepayment, extension, call and similar options) but shall not consider the expected credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate (see [IPSAS 41] paragraphs AG156–AG158), transaction costs, and all other premiums or discounts. There is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the cash flows or the expected life of a financial instrument (or group of financial instruments), the entity shall use the contractual cash flows over the full contractual term of the financial instrument (or group of financial instruments).	41.9
employee benefits	All forms of consideration given by an entity in exchange for service rendered by employees or for the termination of employment.	39.8
entry price	The price paid to acquire an asset or received to assume a liability in an exchange transaction.	46.6
equity interests	For the purposes of this Standard, is used broadly to mean ownership	40.5

Term	Definition	Location
	interests of investor-owned entities and owner, member or participant interests of mutual entities.	
equity instrument	Any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.	28.9
equity method (relating to interests in other entities)	Method of accounting whereby the investment is initially recognized at cost and adjusted thereafter for the post-acquisition change in the investor's share of the investee's net assets/equity of the associate or joint venture. The investor's surplus or deficit includes its share of the investee's surplus or deficit and the investor's net assets/equity includes its share of changes in the investee's net assets/equity that have not been recognized in the investee's surplus or deficit.	36.8
events after the reporting date	Those events, both favorable and unfavorable, that occur between the reporting date and the date when the financial statements are authorized for issue. Two types of events can be identified: (a) Those that provide evidence of conditions that existed at the reporting date (adjusting events after the reporting date); and (b) Those that are indicative of conditions that arose after the reporting date (non-adjusting events after the reporting date).	14.5
exchange difference	The difference resulting from translating a given number of units of one currency into another currency at different exchange rates.	4.10
exchange rate	The ratio of exchange for two currencies.	4.10
exchange transactions	Transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange	9.11
exchange transactions	Transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange	12.9
exit price	The price received to sell an asset or paid to transfer a liability.	46.6
executory contracts	Contracts under which neither party has performed any of its obligations, or both parties have partially performed their obligations to an equal extent.	19.18

Term	Definition	Location
expected cash flow	The probability-weighted average (i.e., mean of the distribution) of possible future cash flows.	46.6
expected credit loss	The weighted average of credit losses with the respective risks of a default occurring as the weights.	41.9
expenses	Decreases in economic benefits or service potential during the reporting period in the form of outflows or consumption of assets or incurrences of liabilities that result in decreases in net assets/equity, other than those relating to distributions to owners.	1.7
expenses paid through the tax system	Amounts that are available to beneficiaries regardless of whether or not they pay taxes.	23.7, 47.4
exploration and evaluation assets Applicable for periods beginning on or after January 1, 2027.	Exploration and evaluation expenditures recognized as assets in accordance with the entity's accounting policy	50.6
exploration and evaluation expenditures Applicable for periods beginning on or after January 1, 2027.	Expenditures incurred by an entity in connection with the exploration for and evaluation of mineral resources before the technical feasibility and commercial viability of extracting a mineral resource are demonstrable.	50.6
exploration for and evaluation of mineral resources Applicable for periods beginning on or after January 1, 2027.	The search for mineral resources, including minerals, oil, natural gas, and similar non-regenerative resources after the entity has obtained legal rights to explore in a specific area, as well as the determination of the technical feasibility and commercial viability of extracting the mineral resource.	50.6
fair value	For the purpose of applying the lessor accounting requirements in this Standard, is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.	43.5
fair value	The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.	46.6
fair value less costs to sell	The amount obtainable from the sale of an asset in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.	21.14

Term	Definition	Location
Applicable up to periods beginning on or before December 31, 2027.		
fair value less costs to sell Applicable for periods beginning on or after January 1, 2028.	The price that would be received to sell the asset in an orderly transaction between market participants less the costs of disposal.	21.14
final budget	The original budget, adjusted for all reserves, carry-over amounts, transfers, allocations, supplemental appropriations, and other authorized legislative or similar authority changes applicable to the budget period	24.7
finance lease	A lease that transfers substantially all the risks and rewards incidental to ownership of an underlying asset.	43.5
financial asset	Any asset that is: (a) Cash; (b) An equity instrument of another entity; (c) A contractual right: (i) To receive cash or another financial asset from another entity; or (ii) To exchange financial assets or financial liabilities with another entity under conditions that are potentially favorable to the entity; or (d) A contract that will or may be settled in the entity's own equity instruments and is: (i) A non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or (ii) A derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose the entity's own equity instruments do not include puttable financial instruments classified as equity instruments in accordance with paragraphs 15 and 16, instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation and are classified as equity instruments in accordance with paragraphs 17 and 18, or instruments that are contracts for the future receipt or delivery of the entity's own equity instruments.	28.9

Term	Definition	Location
financial guarantee contract	A contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.	41.9
financial instrument	Any contract that gives rise to both a financial asset of one entity and a financial liability or equity instrument of another entity.	28.9
financial liability	Any liability that is: (a) A contractual obligation: (i) To deliver cash or another financial asset to another entity; or (ii) To exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavorable to the entity; or (b) A contract that will or may be settled in the entity's own equity instruments and is: (i) A non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or (ii) A derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose, rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. Also, for these purposes the entity's own equity instruments do not include puttable financial instruments classified as equity instruments in accordance with [IPSAS 28] paragraphs 15 and 16, instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation and are classified as equity instruments in accordance with paragraphs 17 and 18, or instruments that are contracts for the future receipt or delivery of the entity's own equity instruments. As an exception, an instrument that meets the definition of a financial liability is classified as an equity instrument if it has all the features and meets the conditions in paragraphs 15 and 16 or paragraphs 17 and 18.	28.9

Term	Definition	Location
financial liability at fair value through surplus or deficit	A financial liability that meets one of the following conditions: (a) It meets the definition of held for trading. (b) Upon initial recognition it is designated by the entity as at fair value through surplus or deficit in accordance with [IPSAS 41] paragraph 46 or 51. (c) It is designated either upon initial recognition or subsequently as at fair value through surplus or deficit in accordance with [IPSAS 41] paragraph 152.	41.9
financing activities	Activities that result in changes in the size and composition of the contributed capital and borrowings of the entity.	2.8
fines Applicable up to periods beginning on or before December 31, 2025.	Economic benefits or service potential received or receivable by public sector entities, as determined by a court or other law enforcement body, as a consequence of the breach of laws or regulations.	23.7
fines	Economic benefits or service potential received or receivable by the entity, as determined by a court or other law enforcement body, as a consequence of the breach of laws and/or regulations.	47.4
firm commitment	A binding agreement for the exchange of a specified quantity of resources at a specified price on a specified future date or dates.	41.9
firm purchase commitment	An agreement with an unrelated party, binding on both parties and usually legally enforceable, that (a) specifies all significant terms, including the price and timing of the transactions, and (b) includes a disincentive for non-performance that is sufficiently large to make performance highly probable.	44.9
first IPSAS financial statements Applicable up to periods beginning on or before December 31, 2027.	The first annual financial statements in which an entity complies with the accrual basis IPSAS and can make an explicit and unreserved statement of compliance with those IPSAS because it adopted one or more of the transitional exemptions in this IPSAS that do not affect the fair presentation of the financial statements and its ability to assert compliance with accrual basis IPSAS.	33.9
first IPSAS financial statements Applicable for periods beginning on or after January 1, 2028.	Are the first financial statements that fairly present transactions and balances for the reporting period in compliance with the accrual basis IPSAS, and for which an entity can make an explicit and unreserved statement of compliance with those IPSAS Standards.	33.9 (issued in 2025)
first-time adopter	An entity that adopts accrual basis IPSAS for the first time and presents its	33.9

Term	Definition	Location
Applicable up to periods beginning on or before December 31, 2027.	first transitional IPSAS financial statements or its first IPSAS financial statements.	
first-time adopter Applicable for periods beginning on or after January 1, 2028.	An entity that adopts accrual basis IPSAS Standards for the first time	33.8 (issued in 2025)
fixed payments	Payments made by a lessee to a lessor for the right to use an underlying asset during the lease term, excluding variable lease payments	43.5
fixed price contract	A construction contract in which the contractor agrees to a fixed contract price, or a fixed rate per unit of output, which in some cases is subject to cost escalation clauses.	11.4
forecast transaction	An uncommitted but anticipated future transaction.	41.9
foreign currency	A currency other than the functional currency of the entity.	4.10
foreign operation	An entity that is a controlled entity, associate, joint venture, or branch of a reporting entity, the activities of which are based or conducted in a country or currency other than those of the reporting entity.	4.10
functional currency	The currency of the primary economic environment in which the entity operates.	4.10
funding	The transfer of assets to an entity (the retirement benefit plan) separate from the employer/sponsor to meet future obligations for the payment of retirement benefits.	49.9
general government sector	Comprises all organizational entities of the general government as defined in statistical bases of financial reporting	22.15
goodwill	An asset representing the future economic benefits arising from other assets acquired in an acquisition that are not individually identified and separately recognized.	40.5
grantor (in a service concession arrangement)	The entity that grants the right to use the service concession asset to the operator.	32.8
gross carrying amount of a financial asset	The amortized cost of a financial asset, before adjusting for any loss allowance.	41.9

Term	Definition	Location
gross investment in the lease	The sum of: (a) The lease payments receivable by the lessor under a finance lease; and (b) Any unguaranteed residual value accruing to the lessor.	43.5
group of biological assets	An aggregation of similar living animals or plants.	27.9
harvest	The detachment of produce from a biological asset or the cessation of a biological asset's life processes.	27.9
hedged item	An asset, liability, firm commitment, highly probable forecast transaction or net investment in a foreign operation that (a) exposes the entity to risk of changes in fair value or future cash flows and (b) is designated as being hedged ([IPSAS 29] paragraphs 87–94 and Appendix A paragraphs AG131–AG141 elaborate on the definition of hedged items).	29.10
hedge effectiveness	The degree to which changes in the fair value or cash flows of the hedged item that are attributable to a hedged risk are offset by changes in the fair value or cash flows of the hedging instrument (see [IPSAS 29] Appendix A paragraphs AG145–AG156).	29.10
hedge ratio	The relationship between the quantity of the hedging instrument and the quantity of the hedged item in terms of their relative weighting.	41.9
hedging instrument	A designated derivative or (for a hedge of the risk of changes in foreign currency exchange rates only) a designated non-derivative financial asset or non-derivative financial liability whose fair value or cash flows are expected to offset changes in the fair value or cash flows of a designated hedged item ([IPSAS 29] paragraphs 81–86 and Appendix A paragraphs AG127–AG130 elaborate on the definition of a hedging instrument).	29.10
held for trading	A financial asset or financial liability that: (a) Is acquired or incurred principally for the purpose of selling or repurchasing it in the near term; (b) On initial recognition is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking; or (c) Is a derivative (except for a derivative that is a financial guarantee contract or a designated and effective hedging instrument).	41.9
highest and best use	The use of a non-financial asset by market participants that would	46.6

Term	Definition	Location
	maximize the value of the asset or the group of assets and liabilities (e.g., an operation) within which the asset would be used.	
highly probable	Means significantly more likely than probable.	44.9
historical cost	The consideration given to acquire, construct, or develop an asset plus transaction costs, or the consideration received to assume a liability minus transaction costs, at the time the asset is acquired, constructed or developed, or the liability is incurred.	46.6
identifiable	An asset is identifiable if it either: (a) Is separable, i.e., is capable of being separated or divided from the entity and sold, transferred, licensed, rented, or exchanged, either individually or together with a related binding arrangement, identifiable asset or liability, regardless of whether the entity intends to do so; or (b) Arises from binding arrangements (including rights from contracts or other legal rights), regardless of whether those rights are transferable or separable from the entity or from other rights and obligations.	40.5
impairment	A loss in the future economic benefits or service potential of an asset, over and above the systematic recognition of the loss of the asset's future economic benefits or service potential through depreciation.	21.14
impairment gain or loss	Recognized in surplus or deficit in accordance with [IPSAS 41] paragraph 80 and that arises from applying the impairment requirements in [IPSAS 41] paragraphs 73–93.	41.9
impracticable (1)	Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so.	1.7
impracticable (2)	Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so. For a particular prior period, it is impracticable to apply a change in an accounting policy retrospectively or to make a retrospective restatement to correct an error if: (a) The effects of the retrospective application or retrospective restatement are not determinable; (b) The retrospective application or retrospective restatement requires assumptions about what management's intent would have been in that period; or	3.7

Term	Definition	Location
	(c) The retrospective application or retrospective restatement requires significant estimates of amounts and it is impossible to distinguish objectively information about those estimates that: (i) Provides evidence of circumstances that existed on the date(s) as at which those amounts are to be recognized, measured, or disclosed; and (ii) Would have been available when the financial statements for that prior period were authorized for issue; from other information.	
income approach	A measurement technique that converts future amounts (e.g., cash flows or revenue and expenses) to a single current (i.e., discounted) amount.	46.6
inception date of the lease	The earlier of the date of a lease agreement and the date of commitment by the parties to the principal terms and conditions of the lease.	43.5
individual services	Goods and services provided to individuals and/or households by a public sector entity that are intended to address the needs of society as a whole.	19.18
initial direct costs	Incremental costs of obtaining a lease that would not have been incurred if the lease had not been obtained.	43.5
Inputs	The assumptions used when pricing the asset or liability, including assumptions about risk, such as the following: (a) The risk inherent in a particular measurement technique used to estimate a measurement in accordance with a measurement basis (such as a pricing model); and (b) The risk inherent in the inputs to the measurement technique. Inputs may be observable or unobservable.	46.6
intangible asset	An identifiable non-monetary asset without physical substance.	31.16
interest in another entity	Refers to involvement by way of binding arrangements or otherwise that exposes an entity to variability of benefits from the performance of the other entity. An interest in another entity can be evidenced by, but is not limited to, the holding of equity or debt instruments as well as other forms of involvement such as the provision of funding, liquidity support, credit enhancement and guarantees. It includes the means by which an entity has control or joint control of, or significant influence over, another entity. An entity does not necessarily have an interest in another entity solely because of a typical funder/recipient or customer/supplier relationship.	37.7

Term	Definition	Location
interest rate implicit in the lease	The rate of interest that causes the present value of (a) the lease payments and (b) the unguaranteed residual value to equal the sum of (i) the fair value of the underlying asset and (ii) any initial direct costs of the lessor.	43.5
interest rate risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.	30.8
inventories	Assets: (a) In the form of materials or supplies to be consumed in the production process; (b) In the form of materials or supplies to be consumed or distributed in the rendering of services; (c) Held for sale or distribution in the ordinary course of operations; or (d) In the process of production for sale or distribution.	12.9
investing activities	The acquisition and disposal of long-term assets and other investments not included in cash equivalents.	2.8
investment entity	An entity that: (a) Obtains funds from one or more investors for the purpose of providing those investor(s) with investment management services; (b) Has the purpose of investing funds solely for returns from capital appreciation, investment revenue, or both; and (c) Measures and evaluates the performance of substantially all of its investments on a fair value basis.	35.14
investment property	Property (land or a building – or part of a building – or both) held to earn rentals or for capital appreciation, or both, rather than for: (a) Use in the production or supply of goods or services, or for administrative purposes; or (b) Sale in the ordinary course of operations.	16.7
joint arrangement	An arrangement of which two or more parties have joint control.	36.8
joint control	The agreed sharing of control of an arrangement by way of a binding arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.	36.8
joint operation	A joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement.	37.7

Term	Definition	Location
joint operator	A party to a joint operation that has joint control of that joint operation.	37.7
joint venture	A joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.	36.8
joint venturer	A party to a joint venture that has joint control of that joint venture.	36.8
key management personnel	(a) All directors or members of the governing body of the entity; and (b) Other persons having the authority and responsibility for planning, directing and controlling the activities of the reporting entity. Where they meet this requirement, key management personnel include: (i) Where there is a member of the governing body of a whole-of-government entity who has the authority and responsibility for planning, directing, and controlling the activities of the reporting entity, that member; (ii) Any key advisors of that member; and (iii) Unless already included in (a), the senior management group of the reporting entity, including the chief executive or permanent head of the reporting entity.	20.4
lease	A contract, or part of a contract, that conveys the right to use an asset (the underlying asset) for a period of time in exchange for consideration.	43.5
lease incentives	Payments made by a lessor to a lessee associated with a lease, or the reimbursement or assumption by a lessor of costs of a lessee.	43.5
lease modification	A change in the scope of a lease, or the consideration for a lease, that was not part of the original terms and conditions of the lease (for example, adding or terminating the right to use one or more underlying assets, or extending or shortening the contractual lease term).	43.5
lease payments	Payments made by a lessee to a lessor relating to the right to use an underlying asset during the lease term, comprising the following: (a) Fixed payments (including in-substance fixed payments), less any lease incentives; (b) Variable lease payments that depend on an index or a rate; (c) The exercise price of a purchase option if the lessee is reasonably certain to exercise that option; and (d) Payments of penalties for terminating the lease, if the lease term reflects the lessee exercising an option to terminate the lease.	43.5

Term	Definition	Location
lease term	The non-cancellable period for which a lessee has the right to use an underlying asset, together with both: (a) Periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option; and (b) Periods covered by an option to terminate the lease if the lessee is reasonably certain not to exercise that option.	43.5
legal obligation	An obligation that derives from: (a) A contract (through its explicit or implicit terms); (b) Legislation; or (c) Other operation of law.	19.18
lessee	An entity that obtains the right to use an underlying asset for a period of time in exchange for consideration.	43.5
lessee's incremental borrowing rate	The rate of interest that a lessee would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right-of-use asset in a similar economic environment.	43.5
lessor	An entity that provides the right to use an underlying asset for a period of time in exchange for consideration.	43.5
level 1 inputs	Quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.	46.6
level 2 inputs	Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly.	46.6
level 3 inputs	Unobservable inputs for the asset or liability.	46.6
liabilities	Present obligations of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits or service potential.	1.7
lifetime expected credit losses	The expected credit losses that result from all possible default events over the expected life of a financial instrument.	41.9
liquidity risk	The risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset.	30.8

Term	Definition	Location
loans payable	Financial liabilities, other than short-term trade payables on normal credit terms.	30.8
loss allowance	The allowance for expected credit losses on financial assets measured in accordance with paragraph 40, lease receivables, the accumulated impairment amount for financial assets measured in accordance with [IPSAS 41] paragraph 41 and the provision for expected credit losses on loan commitments and financial guarantee contracts.	41.9
market approach	A measurement technique that uses prices and other relevant information generated by market transactions involving identical or comparable (i.e., similar) assets, liabilities or a group of assets and liabilities.	46.6
market participants	Are buyers and sellers in the principal (or most advantageous) market for the asset or liability that have all of the following characteristics: (a) They are independent of each other, i.e., they are not related parties as defined in IPSAS 20, *Related Party Disclosures*, although the price in a related party transaction may be used as an input to a fair value measurement if the entity has evidence that the transaction was entered into at market terms. (b) They are knowledgeable, having a reasonable understanding about the asset or liability and the transaction using all available information, including information that might be obtained through due diligence efforts that are usual and customary. (c) They are able to enter into a transaction for the asset or liability. (d) They are willing to enter into a transaction for the asset or liability, i.e., they are motivated but not forced or otherwise compelled to do so.	46.6
market-corroborated inputs	Inputs that are derived principally from or corroborated by observable market data by correlation or other means.	46.6
market risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk, and other price risk.	30.8
material Applicable up to periods beginning on or before December 31, 2026.	Omissions or misstatements of items are material if they could, individually or collectively, influence the decisions or assessments of users made on the basis of the financial statements. Materiality depends on the nature and size of the omission or misstatement judged in the surrounding circumstances. The nature or size of the item, or a combination of both, could be the determining factor.	1.7

Term	Definition	Location
material Applicable for periods beginning on or after January 1, 2027.	Information is material if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial statements prepared for that reporting period.	1.7
modification gain or loss	The amount arising from adjusting the gross carrying amount of a financial asset to reflect the renegotiated or modified contractual cash flows. The entity recalculates the gross carrying amount of a financial asset as the present value of the estimated future cash payments or receipts through the expected life of the renegotiated or modified financial asset that are discounted at the financial asset's original effective interest rate (or the original credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets) or, when applicable, the revised effective interest rate calculated in accordance with [IPSAS 41] paragraph 139. When estimating the expected cash flows of a financial asset, an entity shall consider all contractual terms of the financial asset (for example, prepayment, call and similar options) but shall not consider the expected credit losses, unless the financial asset is a purchased or originated credit-impaired financial asset, in which case an entity shall also consider the initial expected credit losses that were considered when calculating the original credit-adjusted effective interest rate.	41.9
monetary items	Units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency.	4.10
most advantageous market	The market that maximizes the amount that would be received to sell the asset or minimizes the amount that would be paid to transfer the liability, after taking into account transaction costs and transport costs.	46.6
multi-employer plans	Defined contribution plans (other than state plans) or defined benefit plans (other than state plans) that: (a) Pool the assets contributed by various entities that are not under common control; and (b) Use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees.	39.8
multi-year budget	An approved budget for more than one year. It does not include published forward estimates or projections for periods beyond the budget period.	24.7
mutual entity	An entity, other than an investor-owned entity, that provides dividends, lower costs or other economic benefits directly to its owners, members or participants. For example, a mutual insurance company, a credit union and	40.5

Term	Definition	Location
	a co-operative entity are all mutual entities.	
net assets/equity	The residual interest in the assets of the entity after deducting all its liabilities. The components of net assets/equity are contributed capital, accumulated surpluses or deficits, reserves, and non-controlling interests. Types of reserves include: (a) Changes in revaluation surplus (see IPSAS 17, *Property, Plant, and Equipment* and IPSAS 31, *Intangible Assets*); (b) Remeasurements of defined benefit plans (see IPSAS 39, *Employee Benefits*); (c) Gains and losses arising from translating the financial statements of a foreign operation (see IPSAS 4, *The Effects of Changes in Foreign Exchange Rates*); (d) Gains and losses from investments in equity instruments designated at fair value through net assets/equity in accordance with paragraph 106 of IPSAS 41, *Financial Instruments*; (e) Gains and losses on financial assets measured at fair value through net assets/equity in accordance with paragraph 41 of IPSAS 41; (f) The effective portion of gains and losses on hedging instruments in a cash flow hedge and the gains and losses on hedging instruments that hedge investments in equity instruments measured at fair value through net assets/equity in accordance with paragraph 106 of IPSAS 41 (see paragraphs 113–155 of IPSAS 41); (g) For particular liabilities designated as at fair value through surplus or deficit, the amount of the change in fair value that is attributable to changes in the liability's credit risk (see paragraph 108 of IPSAS 41); (h) Changes in the value of the time value of options when separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the changes in the intrinsic value (see paragraphs 113–155 of IPSAS 41); and (i) Changes in the value of the forward elements of forward contracts when separating the forward element and spot element of a forward contract and designating as the hedging instrument only the changes in the spot element, and changes in the value of the foreign currency basis spread of a financial instrument when excluding it from the designation of that financial instrument as the hedging instrument (see paragraphs 113–155 of IPSAS 41).	1.7
net assets available for benefits	Are:	49.9

Term	Definition	Location
	(a) For defined benefit plans – the assets of a plan less liabilities other than the actuarial present value of promised retirement benefits and, in a hybrid plan, the defined contribution obligation to participants; and (b) For defined contribution plans – the assets of a plan less liabilities other than the defined contribution obligations to participants.	
net defined benefit liability (asset)	The deficit or surplus, adjusted for any effect of limiting a net defined benefit asset to the asset ceiling.	39.8
net interest on the net defined benefit liability (asset)	The change during the period in the net defined benefit liability (asset) that arises from the passage of time.	39.8
net investment in a foreign operation	The amount of the reporting entity's interest in the net assets/equity of that operation.	4.10
net investment in the lease	The gross investment in the lease discounted at the interest rate implicit in the lease.	43.5
net realizable value	The estimated selling price in the ordinary course of operations, less the estimated costs of completion and the estimated costs necessary to make the sale, exchange or distribution.	12.9
non-cash-generating assets	Assets other than cash-generating assets.	21.14
non-controlling interest	The net assets/equity in a controlled entity not attributable, directly or indirectly, to a controlling entity.	35.14
non-current asset	An asset that does not meet the definition of a current asset.	44.9
non-exchange transactions	Transactions that are not exchange transactions. In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.	9.11
non-exchange transactions	Transactions that are not exchange transactions, where an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange.	12.9

Term	Definition	Location
non-monetary items	Items that are not monetary items.	10.7
non-performance risk	The risk that an entity will not fulfill an obligation. Non-performance risk includes, but may not be limited to, the entity's own credit risk.	46.6
notes	Contain information in addition to that presented in the statement of financial position, statement of financial performance, statement of changes in net assets/equity and cash flow statement. Notes provide narrative descriptions or disaggregations of items disclosed in those statements and information about items that do not qualify for recognition in those statements.	1.7
obligating event	An event that creates a legal or constructive obligation that results in an entity having no realistic alternative to settling that obligation.	19.18
observable inputs	Inputs that are developed using market data, such as publicly available information about actual events or transactions, and that reflect the assumptions that market participants would use when pricing the asset or liability.	46.6
onerous contract	A contract for the exchange of assets or services in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits or service potential expected to be received under it.	19.18
opening statement of financial position Applicable for periods beginning on or after January 1, 2028.	A first-time adopter's statement of financial position at the date of adoption of IPSAS Standards	33.8 (issued in 2025)
operating activities	The activities of the entity that are not investing or financing activities.	2.8
operating lease	A lease that does not transfer substantially all the risks and rewards incidental to ownership of an underlying asset.	43.5
operation	An integrated set of activities and related assets and/or liabilities that is capable of being conducted and managed for the purpose of achieving an entity's objectives, by providing goods and/or services.	40.5
operator (in a service concession arrangement)	The entity that uses the service concession asset to provide public services subject to the grantor's control of the asset.	32.8
optional lease payments	Payments to be made by a lessee to a lessor for the right to use an underlying asset during periods covered by an option to extend or terminate a lease that are not included in the lease term.	43.5

Term	Definition	Location
orderly transaction	A transaction that assumes exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (e.g., a forced liquidation or distress sale).	46.6
original budget	The initial approved budget for the budget period.	24.7
other compulsory contributions and levies	Cash or another asset, paid or payable to the entity, in accordance with laws and/or regulations, established to provide revenue that is to be used in the provision of specified government programs.	47.4
other long-term employee benefits	All employee benefits other than short-term employee benefits, post-employment benefits and termination benefits.	39.8
other price risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer or by factors affecting all similar financial instruments traded in the market.	30.8
oversight	The supervision of the activities of an entity, with the authority and responsibility to control, or exercise significant influence over, the financial and operating decisions of the entity.	20.4
owner-occupied property	Property held (by the owner or by the lessee under a finance lease) for use in the production or supply of goods or services, or for administrative purposes.	16.7
owners	For the purposes of this Standard, is used broadly to include any party with quantifiable ownership interests in an operation. This includes, but is not limited to, holders of equity interests of investor-owned entities and owners or members of, or participants in, mutual entities.	40.5
participants	The members of a retirement benefit plan and others who are entitled to benefits under the plan.	49.9
party to a joint arrangement	An entity that participates in a joint arrangement, regardless of whether that entity has joint control of the arrangement.	37.7
past due	A financial asset is past due when a counterparty has failed to make a payment when that payment was contractually due.	41.9
period of use	The total period of time that an asset is used to fulfill a contract with a customer (including any non-consecutive periods of time).	43.5

Term	Definition	Location
plan assets	Comprise: (a) Assets held by a long-term employee benefit fund; and (b) Qualifying insurance policies.	39.8
post-employment benefit plans	Formal or informal arrangements under which an entity provides post-employment benefits for one or more employees.	39.8
post-employment benefits	Employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment.	39.8
power	Consists of existing rights that give the current ability to direct the relevant activities of another entity.	35.14
present value of a defined benefit obligation	The present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods.	39.8
presentation currency	The currency in which the financial statements are presented.	4.10
previous basis of accounting Applicable for periods beginning on or after January 1, 2028.	The basis of accounting that a first-time adopter used immediately before adopting accrual basis IPSAS Standards.	33.8 (issued in 2025
principal market	The market with the greatest volume and level of activity for the asset or liability.	46.6
probable	Means more likely than not	44.9
prior period errors	Omissions from, and misstatements in, the entity's financial statements for one or more prior periods arising from a failure to use, or misuse of, faithfully representative information that: (a) Was available when financial statements for those periods were authorized for issue; and (b) Could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements. Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and	3.7

Term	Definition	Location
	fraud.	
property, plant, and equipment	Tangible items that: (a) Are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and (b) Are expected to be used during more than one reporting period.	45.5
prospective application	Prospective application of a change in accounting policy and of recognizing the effect of a change in an accounting estimate, respectively, are: (a) Applying the new accounting policy to transactions, other events and conditions occurring after the date as at which the policy is changed; and (b) Recognizing the effect of the change in the accounting estimate in the current and future periods affected by the change	3.7
protective rights	Rights designed to protect the interest of the party holding those rights without giving that party power over the entity to which those rights relate.	35.14
provision	A liability of uncertain timing or amount.	19.18
public sector combination	The bringing together of separate operations into one public sector entity.	40.5
public sector combination under common control	A public sector combination in which all of the entities or operations involved are ultimately controlled by the same entity both before and after the public sector combination.	40.5
purchased or originated credit-impaired financial asset	Credit-impaired on initial recognition.	41.9
purchaser	A resource provider that provides a resource to the entity in exchange for goods or services that are an output of an entity's activities under a binding arrangement for its own consumption.	47.4
puttable instrument	A financial instrument that gives the holder the right to put the instrument back to the issuer for cash or another financial asset or is automatically put back to the issuer on the occurrence of an uncertain future event or the death or retirement of the instrument holder.	28.9
qualifying asset	An asset that necessarily takes a substantial period of time to get ready for its intended use or sale.	5.5

Term	Definition	Location
qualifying insurance policy	An insurance policy[1] issued by an insurer that is not a related party (as defined in IPSAS 20) of the reporting entity, if the proceeds of the policy: (a) Can be used only to pay or fund employee benefits under a defined benefit plan; and (b) Are not available to the reporting entity's own creditors (even in bankruptcy) and cannot be paid to the reporting entity, unless either: (i) The proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations; or (ii) The proceeds are returned to the reporting entity to reimburse it for employee benefits already paid.	39.8
reclassification date	The first day of the first reporting period following the change in management model that results in an entity reclassifying financial assets.	41.9
recoverable amount	The higher of an asset's fair value less costs of disposal and its value in use.	44.9
recoverable amount (of an asset or a cash-generating unit)	The higher of an asset's or a cash-generating unit's fair value less costs of disposal and its value in use.	26.13
recoverable service amount Applicable up to periods beginning on or before December 31, 2027.	The higher of a non-cash-generating asset's fair value less costs to sell and its value in use.	21.14
recoverable service amount Applicable for periods beginning on or after January 1, 2028.	The higher of a non-cash-generating asset's fair value less costs to sell and its current operational value.	21.14
regular way purchase or sale	A purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame established generally by regulation or convention in the marketplace concerned.	41.9
related party	Parties are considered to be related if one party has the ability to (a) control	20.4

[1] A qualifying insurance policy is not necessarily an insurance contract (see the relevant international standard dealing with insurance contracts).

Term	Definition	Location
	the other party, or (b) exercise significant influence over the other party in making financial and operating decisions, or if the related party entity and another entity are subject to common control. Related parties include: (a) Entities that directly, or indirectly through one or more intermediaries, control, or are controlled by, the reporting entity; (b) Associates (see IPSAS 7, *Investments in Associates*); (c) Individuals owning, directly or indirectly, an interest in the reporting entity that gives them significant influence over the entity, and close members of the family of any such individual; (d) Key management personnel, and close members of the family of key management personnel; and (e) Entities in which a substantial ownership interest is held, directly or indirectly, by any person described in (c) or (d), or over which such a person is able to exercise significant influence.	
related party transaction	A transfer of resources or obligations between related parties, regardless of whether a price is charged. Related party transactions exclude transactions with any other entity that is a related party solely because of its economic dependence on the reporting entity or the government of which it forms part.	20.4
relevant rights	Activities of the potentially controlled entity that significantly affect the nature or amount of the benefits that an entity receives from its involvement with that other entity.	35.14
remeasurements of the net defined benefit liability (asset)	Comprise: (a) Actuarial gains and losses; (b) The return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset); and (c) Any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).	39.8
removal rights	Rights to deprive the decision maker of its decision-making authority.	35.14
remuneration of key management personnel	Any consideration or benefit derived directly or indirectly by key management personnel from the reporting entity for services provided in their capacity as members of the governing body, or otherwise as employees of the reporting entity.	20.4
reporting date	The date of the last day of the reporting period to which the financial statements relate.	2.8

Term	Definition	Location
research	Original and planned investigation undertaken with the prospect of gaining new scientific or technical knowledge and understanding.	31.16
residual value (of property, plant, and equipment or an intangible asset)	The estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.	45.5
residual value guarantee	A guarantee made to a lessor by a party unrelated to the lessor that the value (or part of the value) of an underlying asset at the end of a lease will be at least a specified amount.	43.5
resource provider	The party that provides a resource to the entity.	47.4
restrictions on transferred assets	Stipulations that limit or direct the purposes for which a transferred asset may be used, but do not specify that future economic benefits or service potential is required to be returned to the transferor if not deployed as specified.	23.7
restructuring	A program that is planned and controlled by management, and materially changes either: (a) The scope of an entity's activities; or (b) The manner in which those activities are carried out.	19.18
resulting entity	The entity that is the result of two or more operations combining in an amalgamation	40.5
retirement benefit obligations	Are: (a) For defined benefit plans – the actuarial present value of promised retirement benefits; and (b) For defined contribution plans – the defined contribution obligations.	49.9
retirement benefit plans	Arrangements whereby an employer/sponsor provides benefits for participants on or after termination of service as employee (either in the form of an annual income and/or as a lump sum) when such benefits, or the contributions towards them, can be determined or estimated in advance of retirement from the provisions of a document or from the employer's/sponsor's practices.	49.9
retrospective application	Applying a new accounting policy to transactions, other events, and conditions as if that policy had always been applied.	3.7
retrospective restatement	Correcting the recognition, measurement and disclosure of amounts of	3.7

Term	Definition	Location
	elements of financial statements as if a prior period error had never occurred.	
return on plan assets	The interest, dividends or similar distributions and other revenue derived from the plan assets, together with realized and unrealized gains or losses on the plan assets, less: (a) Any costs of managing the plan assets; and (b) Any tax payable by the plan itself, other than tax included in the actuarial assumptions used to measure the present value of the defined benefit obligation.	39.8
revenue	The gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets/equity, other than increases relating to contributions from owners.	1.7
revenue from a structured entity	Includes, but is not limited to, recurring and non-recurring fees, interest, dividends or similar distributions, gains or losses on the remeasurement or derecognition of interests in structured entities and gains or losses from the transfer of assets and liabilities to the structured entity.	38.7
right-of-use asset	An asset that represents a lessee's right to use an underlying asset for the lease term.	43.5
risk premium	The compensation sought by risk-averse market participants for bearing the uncertainty inherent in the cash flows of an asset or a liability. Also referred to as a 'risk adjustment'.	46.6
segment	A distinguishable activity or group of activities of an entity for which it is appropriate to separately report financial information for the purpose of (a) evaluating the entity's past performance in achieving its objectives and (b) making decisions about the future allocation of resources.	18.9
segment accounting policies	Accounting policies adopted for preparing and presenting the financial statements of the consolidated group or entity as well as those accounting policies that relate specifically to segment reporting.	18.27
segment assets	Are those operating assets that are employed by a segment in its operating activities, and that either are directly attributable to the segment or can be allocated to the segment on a reasonable basis. If a segment's segment revenue includes interest or dividend revenue, its segment assets include the related receivables, loans, investments, or other revenue-producing assets. Segment assets do not include income tax or income tax-equivalent assets	18.27

Term	Definition	Location
	that are recognized in accordance with accounting standards dealing with obligations to pay income tax or income tax equivalents. Segment assets include investments accounted for under the equity method only if the net surplus (deficit) from such investments is included in segment revenue. Segment assets are determined after deducting related allowances that are reported as direct offsets in the entity's statement of financial position.	
segment expense	An expense resulting from the operating activities of a segment that is directly attributable to the segment, and the relevant portion of an expense that can be allocated on a reasonable basis to the segment, including expenses relating to the provision of goods and services to external parties and expenses relating to transactions with other segments of the same entity. Segment expense does not include: (a) Interest, including interest incurred on advances or loans from other segments, unless the segment's operations are primarily of a financial nature; (b) Losses on sales of investments or losses on extinguishment of debt, unless the segment's operations are primarily of a financial nature; (c) An entity's share of net deficit or losses of associates, joint ventures, or other investments accounted for under the equity method; (d) Income tax or income tax-equivalent expense that is recognized in accordance with accounting standards dealing with obligations to pay income tax or income tax equivalents; or (e) General administrative expenses, head office expenses, and other expenses that arise at the entity level and relate to the entity as a whole. However, costs are sometimes incurred at the entity level on behalf of a segment. Such costs are segment expenses if they relate to the segment's operating activities and they can be directly attributed or allocated to the segment on a reasonable basis. For a segment's operations that are primarily of a financial nature, interest revenue and interest expense may be reported as a single net amount for segment reporting purposes only if those items are netted in the consolidated or entity financial statements.	18.27
segment liabilities	Those operating liabilities that result from the operating activities of a segment, and that either are directly attributable to the segment or can be allocated to the segment on a reasonable basis. If a segment's segment expense includes interest expense, its segment liabilities include the related interest-bearing liabilities. Segment liabilities do not include income tax or income tax equivalent	18.27

Term	Definition	Location
	liabilities that are recognized in accordance with accounting standards dealing with obligations to pay income tax or income tax equivalents.	
segment revenue	Revenue reported in the entity's statement of financial performance that is directly attributable to a segment, and the relevant portion of entity revenue that can be allocated on a reasonable basis to a segment, whether from budget appropriations or similar, grants, transfers, fines, fees, or the provision of goods or services to other parties or from transactions with other segments of the same entity. Segment revenue does not include: (a) Interest or dividend revenue, including interest earned on advances or loans to other segments, unless the segment's operations are primarily of a financial nature; or (b) Gains on sales of investments or gains on extinguishment of debt, unless the segment's operations are primarily of a financial nature. Segment revenue includes an entity's share of net surplus (deficit) of associates, joint ventures, or other investments accounted for under the equity method, only if those items are included in consolidated or total entity revenue.	18.27
separate financial statements	Those presented by an entity, in which the entity could elect, subject to the requirements in this Standard, to account for its investments in controlled entities, joint ventures and associates either at cost, in accordance with IPSAS 29, *Financial Instruments: Recognition and Measurement* or using the equity method as described in IPSAS 36, *Investments in Associates and Joint Ventures*.	34.6
separate vehicle	A separately identifiable financial structure, including separate legal entities or entities recognized by statute, regardless of whether those entities have a legal personality.	37.7
service concession arrangement	A binding arrangement between a grantor and an operator in which: (a) The operator uses the service concession asset to provide a public service on behalf of the grantor for a specified period of time; and (b) The operator is compensated for its services over the period of the service concession arrangement.	32.8
service concession asset	An asset used to provide public services in a service concession arrangement that: (a) Is provided by the operator which: (i) The operator constructs, develops, or acquires from a third party; or (ii) Is an existing asset of the operator; or	32.8

Term	Definition	Location
	(b) Is provided by the grantor which: (i) Is an existing asset of the grantor; or (ii) Is an upgrade to an existing asset of the grantor.	
service cost	Comprises: (a) Current service cost, which is the increase in the present value of the defined benefit obligation resulting from employee service in the current period; (b) Past service cost, which is the change in the present value of the defined benefit obligation for employee service in prior periods, resulting from a plan amendment (the introduction or withdrawal of, or changes to, a defined benefit plan) or a curtailment (a significant reduction by the entity in the number of employees covered by a plan); and (c) Any gain or loss on settlement.	39.8
settlement	A transaction that eliminates all further legal or constructive obligations for part or all of the benefits provided under a defined benefit plan, other than a payment of benefits to, or on behalf of, employees that is set out in the terms of the plan and included in the actuarial assumptions.	39.8
short-term employee benefits	Employee benefits (other than termination benefits) that are due to be settled wholly before twelve months after the end of the reporting period in which the employees render the related service.	39.8
short-term lease	A lease that, at the commencement date, has a lease term of 12 months or less. A lease that contains a purchase option is not a short-term lease.	43.5
significant influence (relating to related party transactions)	The power to participate in the financial and operating policy decisions of an entity, but not control those policies. Significant influence may be exercised in several ways, usually by representation on the board of directors or equivalent governing body but also by, for example, participation in (a) the policy making process, (b) material transactions between entities within an economic entity, (c) interchange of managerial personnel, or (d) dependence on technical information. Significant influence may be gained by an ownership interest, statute, or agreement. With regard to an ownership interest, significant influence is presumed in accordance with the definition contained in IPSAS 36.	20.4
significant influence (relating to interests in other entities)	The power to participate in the financial and operating policy decisions of another entity but is not control or joint control of those policies.	36.8

Term	Definition	Location
social benefits	Are cash transfers provided to: (a) Specific individuals and/or households who meet eligibility criteria; (b) Mitigate the effect of social risks; and (c) Address the needs of society as a whole	42.5
social risks	Events or circumstances that: (a) Relate to the characteristics of individuals and/or households – for example, age, health, poverty and employment status; and (b) May adversely affect the welfare of individuals and/or households, either by imposing additional demands on their resources or by reducing their income.	42.5
spot exchange rate	The exchange rate for immediate delivery.	4.10
stand-alone consideration	The amount that an entity intends to compensate the transfer recipient for satisfying each of its obligations in a binding arrangement.	48.6
stand-alone value (of a good or service)	the price of a good or service that is required to be used internally, or provided separately to a purchaser or third-party beneficiary.	47.4
state plans	Plans established by legislation that operate as if they are multi-employer plans for all entities in economic categories laid down in legislation.	39.8
stipulations on transferred assets	Terms in laws or regulation, or a binding arrangement, imposed upon the use of a transferred asset by entities external to the reporting entity.	23.7
structured entity	Is: (a) In the case of entities where administrative arrangements or legislation are normally the dominant factors in deciding who has control of an entity, an entity that has been designed so that administrative arrangements or legislation are not the dominant factors in deciding who controls the entity, such as when binding arrangements are significant to determining control of the entity and relevant activities are directed by means of binding arrangements; or (b) In the case of entities where voting or similar rights are normally the dominant factor in deciding who has control of an entity, an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when	38.7

Term	Definition	Location
	any voting rights relate to administrative tasks only and the relevant activities are directed by means of binding arrangements.	
sublease	A transaction for which an underlying asset is released by a lessee ('intermediate lessor') to a third party, and the lease ('head lease') between the head lessor and lessee remains in effect.	43.5
tangible natural resource held for conservation Applicable for periods beginning on or after January 1, 2028.	For the purposes of this Standard, is a naturally occurring tangible asset that is managed to prevent its degradation.	51.8
tax expenditures	Preferential provisions of the tax law that provide certain taxpayers with concessions that are not available to others.	23.7, 47.4
taxable event	The event that the government, legislature, or other authority has determined will be subject to taxation.	23.7, 47.4
taxes	Economic benefits or service potential compulsorily paid or payable to public sector entities, in accordance with laws and/or regulations, established to provide revenue to the government. Taxes do not include fines or other penalties imposed for breaches of the law.	23.7
taxes	Economic benefits or service potential compulsorily paid or payable to the entity, in accordance with laws and/or regulations, established to provide revenue to the government. Taxes do not include fines or other penalties imposed for breaches of laws and/or regulations.	47.4
termination benefits	Employee benefits provided in exchange for the termination of an employee's employment as a result of either: (a) An entity's decision to terminate an employee's employment before the normal retirement date; or (b) An employee's decision to accept an offer of benefits in exchange for the termination of employment.	39.8
third-party beneficiary	An entity, household or individual who will benefit from a transaction made between other parties by receiving resources.	47.4
transaction consideration	For the purposes of this Standard, the amount of resources to which an entity expects to be entitled	47.4
transaction costs	Incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability (see [IPSAS 41] paragraph AG163). An incremental cost is one that would not have been incurred if	41.9

Term	Definition	Location
	the entity had not acquired, issued or disposed of the financial instrument.	
transaction costs	Incremental costs that are directly attributable to the acquisition, construction, development or disposal of an asset, or incurrence of a liability, and would not have been incurred if the entity had not acquired, constructed, developed or disposed of the asset, or incurred the liability.	46.6
transaction price	The consideration given to acquire, construct or develop an asset or received to assume a liability.	46.6
transfer	A transaction, other than taxes, in which an entity receives a resource from a resource provider (which may be another entity or an individual) without directly providing any good, service, or other asset in return.	47.4
transfer consideration	For the purposes of this Standard, represents the total amount of resources which an entity expects to transfer.	48.6
transfer expense	An expense arising from a transaction, other than taxes, in which an entity provides a good, service, or other asset to another entity (which may be an individual) without directly receiving any good, service, or other asset in return	48.6
transfer obligation	An entity's obligation in a binding arrangement to transfer resources in a specified manner.	48.6
transfer obligation liability	The liability recognized for the existence of one or more transfer obligations arising from a binding arrangement.	48.6
transfer provider	An entity that provides a good, service, or other asset to another entity without directly receiving any good, service or other asset in return.	48.6
transfer recipient	An entity that receives a good, service, or other asset from another entity without directly providing any good, service or other asset to that entity.	48.6
transfer right	An entity's enforceable right to have the transfer recipient satisfy its obligation in a manner as specified in a binding arrangement or face the consequences as specified in the binding arrangement.	48.6
transfer right asset	The asset recognized for the existence of one or more transfer rights arising from a binding arrangement.	48.6
transfers	Inflows of future economic benefits or service potential from non-exchange transactions, other than taxes.	23.7
transition period	The period during which a first-time adopter applies one or more of the	33.8

Term	Definition	Location
Applicable for periods beginning on or after January 1, 2028.	exemptions in this Standard before it complies with the accrual basis IPSAS Standards in full, and before it is able to make an explicit and unreserved statement of such compliance with IPSAS Standards.	(issued in 2025)
transitional IPSAS financial statements Applicable for periods beginning on or after January 1, 2028.	Are the financial statements prepared in accordance with this Standard where a first-time adopter cannot make an explicit and unreserved statement of compliance with accrual basis IPSAS Standards because it adopted one or more of the transitional exemptions in this Standard that affect the fair presentation of the financial statements and its ability to assert compliance with accrual basis IPSAS Standards.	33.8 (issued in 2025)
transport costs	The costs that would be incurred to transport an asset from its current location to its principal (or most advantageous) market.	46.6
underlying asset	An asset that is the subject of a lease, for which the right to use that asset has been provided by a lessor to a lessee.	43.5
unearned finance revenue	The difference between: (a) The gross investment in the lease; and (b) The net investment in the lease.	43.5
unguaranteed residual value	That portion of the residual value of the underlying asset, the realization of which by a lessor is not assured or is guaranteed solely by a party related to the lessor.	43.5
unit of account	The level at which an asset or a liability is aggregated or disaggregated in an IPSAS for recognition purposes.	46.6
unobservable inputs	Inputs for which market data are not available and that are developed using the best information available about the assumptions that market participants would use when pricing the asset or liability.	46.6
useful life (of a non-cash-generating asset) Applicable up to periods beginning on or before December 31, 2027.	Either: (a) The period of time over which an asset is expected to be used by the entity; or (b) The number of production or similar units expected to be obtained from the asset by the entity.	21.14
useful life (of property, plant, and equipment or an intangible asset)	Either: (a) The period over which an asset is expected to be available for use by an entity; or (b) The number of production or similar units expected to be obtained from the asset by an entity.	45.5

Term	Definition	Location
value in use of a cash-generating asset	The present value of the estimated future cash flows expected to be derived from the continuing use of an asset and from its disposal at the end of its useful life	26.13
value in use of a non-cash-generating asset Applicable up to periods beginning on or before December 31, 2027.	The present value of the asset's remaining service potential.	21.14
variable lease payments	The portion of payments made by a lessee to a lessor for the right to use an underlying asset during the lease term that varies because of changes in facts or circumstances occurring after the commencement date, other than the passage of time.	43.5
vested benefits	Benefits, the rights to which, under the conditions of a retirement benefit plan, are not conditional on continued employment.	49.9

IPSASB SRS 1, *Climate-related Disclosures*, is set out in paragraphs 1–43. All the paragraphs have equal authority. IPSASB SRS 1 should be read in the context of its objective, the Basis for Conclusions, the *Preface to IPSAS Accounting Standards and IPSASB SRS Standards*, and *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities*.

Objective

1. **The objective of this Standard is to provide principles for an entity to disclose information about its climate-related risks and opportunities that is useful to primary users of general purpose financial reports for accountability and decision-making purposes.**

2. This Standard requires an entity to disclose material information (see paragraph B8–B10 in Appendix B[1]) about the climate-related risks and opportunities that could reasonably be expected to affect the long-term fiscal sustainability[2] of an entity, including the long-term sustainability of the services and/or programs it delivers (for the purposes of this Standard, these are collectively referred to as "climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability").

Scope

3. An entity shall apply this Standard in reporting on:

   (a) **Climate-related risks to which an entity is exposed, which are:**

      (i) **Climate-related physical risks; and**

      (ii) **Climate-related transition risks; and**

   (b) **Climate-related opportunities available to the entity.**

4. Climate-related risks and opportunities that could not reasonably be expected to affect the long-term fiscal sustainability of an entity are outside the scope of this Standard.

5. An entity may apply this Standard irrespective of whether the entity's related general purpose financial statements (referred to as "financial statements") are prepared in accordance with International Public Sector Accounting Standards (IPSAS Standards) or other generally accepted accounting principles or practices (GAAP)[3].

Definitions

6. **The following terms are used in this Standard with the meanings specified:**

   Carbon credit is an emissions unit that is issued by a carbon crediting program and represents an emission reduction or removal of greenhouse gases. Carbon credits are uniquely serialized, issued, tracked and cancelled by means of an electronic registry.

   Climate resilience is the capacity of an entity to adjust to climate-related changes, developments or uncertainties. Climate resilience involves the capacity to manage climate-related risks and benefit from climate-related opportunities, including the ability to respond and adapt to climate-related transition risks and climate-related physical risks. An entity's climate resilience includes both its strategic resilience and its operational resilience to climate-related changes, developments and uncertainties.

   Climate-related physical risks are risks resulting from climate change that can be event-driven (acute physical risk) or from longer-term shifts in climatic patterns (chronic physical risk). Acute physical risks arise from weather-related events such as storms, floods, drought or heatwaves, which are increasing in severity and frequency. Chronic physical risks arise from longer-term shifts in climatic

---

1 Appendix B: General Requirements for Climate-Related Disclosures sets out key concepts used in this Standard.

2 Long-term fiscal sustainability is defined in Recommended Practice Guidance (RPG) 1, *Reporting on the Long-Term Sustainability of an Entity's Finances* as "The ability of an entity to meet service delivery and financial commitments, both now and in the future".

3 In the context of this Standard, "GAAP" refers to the relevant international or national accounting standards.

patterns including changes in precipitation and temperature which could lead to sea level rise, reduced water availability, biodiversity loss and changes in soil productivity.

Climate-related risks refer to the potential negative effects of climate change on an entity. These risks are categorized into climate-related physical risks and climate-related transition risks.

Climate-related opportunities refer to the potential positive effects of climate change on an entity. Efforts to mitigate and adapt to climate change can produce climate-related opportunities for an entity.

Climate-related transition plan is an aspect of an entity's overall strategy that lays out the entity's targets, actions or resources for its transition towards a lower-carbon economy, including actions such as reducing its greenhouse gas emissions.

Climate-related transition risks are risks that arise from efforts to transition to a lower-carbon economy. Transition risks include policy, legal, technological, market and reputational risks.

CO_2 equivalent is the universal unit of measurement to indicate the global warming potential of each greenhouse gas, expressed in terms of the global warming potential of one unit of carbon dioxide. This unit is used to evaluate releasing (or avoiding releasing) different greenhouse gases against a common basis.

Financed emissions are the portion of gross greenhouse gas emissions of an investee or counterparty attributed to the loans and investments made by an entity to the investee or counterparty. These emissions are part of Scope 3 Category 15 (investments) as defined in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011).

Global warming potential is a factor describing the radiative forcing impact (degree of harm to the atmosphere) of one unit of a given greenhouse gas relative to one unit of CO_2.

Greenhouse gases are the seven greenhouse gases listed in the Kyoto Protocol— carbon dioxide (CO_2); methane (CH_4); nitrous oxide (N_2O); hydrofluorocarbons (HFCs); nitrogen trifluoride (NF_3); perfluorocarbons (PFCs) and sulfur hexafluoride (SF_6).

Indirect greenhouse gas emissions are emissions that are a consequence of the activities of an entity, but occur at sources owned or controlled by another entity.

Internal carbon price is a price used by an entity to assess the financial implications of changes to investment, production and consumption patterns, and of potential technological progress and future emissions abatement costs. An entity can use internal carbon prices for a range of applications. Two types of internal carbon prices that an entity commonly uses are:

(a) **A shadow price, which is a theoretical cost or notional amount that the entity does not charge but that can be used to understand the economic implications or trade-offs for such things as risk impacts, new investments, the net present value of projects, and the cost and benefits of various initiatives; and**

(b) **An internal tax or fee, which is a carbon price charged to an operational activity, or other operating unit based on its greenhouse gas emissions (these internal taxes or fees are similar to intra-group charges).**

Latest international agreement on climate change is the most recent agreement by central governments and states to combat climate change, setting norms and targets for a reduction in greenhouse gases.

Long-term fiscal sustainability is the ability of an entity to meet service delivery and financial commitments, both now and in the future.

An operational model is an entity's system of transforming inputs through its activities into outputs and outcomes that aims to fulfill the entity's objectives.

Scope 1 greenhouse gas emissions are direct greenhouse gas emissions that occur from sources that are owned or controlled by an entity.

Scope 2 greenhouse gas emissions are indirect greenhouse gas emissions from the generation of purchased or acquired electricity, steam, heating or cooling consumed by an entity. Purchased and acquired electricity is electricity that is purchased or otherwise brought into an entity's boundary. Scope 2 greenhouse gas emissions physically occur at the facility where electricity is generated.

Scope 3 greenhouse gas emissions are indirect greenhouse gas emissions (not included in Scope 2 greenhouse gas emissions) that occur in the value chain of an entity, including both upstream and downstream emissions. Scope 3 greenhouse gas emissions include the Scope 3 categories in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011).

Scope 3 categories are 15 categories of Scope 3 greenhouse gas emissions—as described in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011):

(1) **Purchased goods and services;**

(2) **Capital goods;**

(3) **Fuel- and energy-related activities not included in Scope 1 greenhouse gas emissions or Scope 2 greenhouse gas emissions;**

(4) **Upstream transportation and distribution;**

(5) **Waste generated in operations;**

(6) **Business travel;**

(7) **Employee commuting;**

(8) **Upstream leased assets;**

(9) **Downstream transportation and distribution;**

(10) **Processing of sold products;**

(11) **Use of sold products;**

(12) **End-of-life treatment of sold products;**

(13) **Downstream leased assets;**

(14) **Franchises; and**

(15) **Investments.**

A reporting entity's value chain refers to the full range of interactions, resources and relationships related to a reporting entity's operational model and the external environment in which it operates, including other public sector entities. A value chain encompasses the interactions, resources and relationships an entity uses and depends on to create its goods or provide services from conception to delivery, consumption and end-of-life, including interactions, resources and relationships in the

entity's operations, such as human resources; those along its supply and distribution channels, such as materials and service sourcing, and service and/or product delivery; and the financing, geographical, geopolitical and regulatory environments in which the entity operates.

Terms used in this Standard with the meanings specified in IPSAS Standards are set out in Appendix D: Terms in this IPSASB SRS Standard Defined in IPSAS Standards.

Governance

7. **The objective of climate-related disclosures on governance is to enable primary users of general purpose financial reports to understand the governance processes, controls and procedures an entity uses to monitor, manage and oversee climate-related risks and opportunities.**

8. To achieve this objective, an entity shall disclose information about:

   (a) The governing body(s) (which can include a board, committee or equivalent body charged with governance) or individual(s) responsible for oversight of climate-related risks and opportunities. Specifically, the entity shall identify that body(s) or individual(s) and disclose information about:

      (i) How responsibilities for climate-related risks and opportunities are reflected in the terms of reference, mandates, role descriptions and other related policies applicable to that body(s) or individual(s);

      (ii) How the body(s) or individual(s) determines whether appropriate skills and competencies are available or will be developed to oversee strategies designed to respond to climate-related risks and opportunities;

      (iii) How and how often the body(s) or individual(s) is informed about climate-related risks and opportunities;

      (iv) How the body(s) or individual(s) takes into account climate-related risks and opportunities when overseeing the entity's strategy, its decisions on major activities, and its risk management processes and related policies, including whether the body(s) or individual(s) has considered trade-offs associated with those risks and opportunities; and

      (v) How the body(s) or individual(s) oversees the setting of targets related to climate-related risks and opportunities, and monitors progress towards those targets (see paragraphs 32–35).

   (b) Management's role in the governance processes, controls and procedures used to monitor, manage and oversee climate-related risks and opportunities, including information about:

      (i) Whether the role is delegated to a specific management-level position or management-level committee and how oversight is exercised over that position or committee; and

      (ii) Whether management uses controls and procedures to support the oversight of climate-related risks and opportunities and, if so, how these controls and procedures are integrated with other internal functions.

Strategy

9. **The objective of climate-related disclosures on strategy is to enable primary users of general purpose financial reports to understand an entity's strategy for managing climate-related risks and opportunities.**

10. Specifically, an entity shall disclose information about its strategy for managing climate-related risks and opportunities, including:

(a) The climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability (see paragraph 11);

(b) The current and anticipated effects of those climate-related risks and opportunities on the entity's operational model and value chain (see paragraph 13);

(c) The effects of those climate-related risks and opportunities on the entity's strategy and decision making, including information about its climate-related transition plan (see paragraph 14);

(d) The effects of those climate-related risks and opportunities on the entity's financial position, financial performance and cash flows for the reporting period, and their anticipated effects on the entity's financial position, financial performance and cash flows over the short, medium and long term, taking into consideration how those climate-related risks and opportunities have been factored into the entity's financial planning (see paragraphs 15–21); and

(e) The climate resilience of the entity's strategy and its operational model to climate-related changes, developments, and uncertainties, taking into consideration the entity's identified climate-related risks and opportunities (see paragraphs 22–23).

Climate-Related Risks and Opportunities

11. An entity shall disclose information that enables primary users of general purpose financial reports to understand the entity's climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability. Specifically, the entity shall:

(a) Describe climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability;

(b) Explain, for each climate-related risk the entity has identified, whether the entity considers the risk to be a climate-related physical risk or climate-related transition risk;

(c) Specify, for each climate-related risk and opportunity the entity has identified, over which time horizons—short, medium or long term—the effects of each climate-related risk and opportunity could reasonably be expected to occur; and

(d) Explain how the entity defines "short term", "medium term" and "long term" and how these definitions are linked to the planning horizons used by the entity for strategic decision making (see paragraph AG21).

12. In identifying the climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability, the entity shall use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort, including information about past events, current conditions and forecasts of future conditions.

Operational Model and Value Chain

13. An entity shall disclose information that enables primary users of general purpose financial reports to understand the current and anticipated effects of climate-related risks and opportunities on the entity's operational model and value chain. Specifically, the entity shall disclose:

(a) A description of the current and anticipated effects of climate-related risks and opportunities on the entity's operational model and value chain; and

(b) A description of where in the entity's operational model and value chain climate-related risks and opportunities are concentrated (for example, geographical areas, types of assets, types of public sector entities or private sector entities, or groups of individuals).

Strategy and Decision Making

14. An entity shall disclose information that enables primary users of general purpose financial reports to understand the effects of climate-related risks and opportunities on its strategy and decision making. Specifically, the entity shall disclose:

    (a) Information about how the entity has responded to, and plans to respond to, climate-related risks and opportunities in its strategy and decision making, including how the entity plans to achieve any climate-related targets it has set and any targets it is required to meet by law or regulation. Specifically, the entity shall disclose information about:

        (i) Current and anticipated changes to the entity's operational model, including its resource allocation, to address climate-related risks and opportunities (for example, these changes could include plans to manage or decommission carbon-, energy- or water-intensive operations; resource allocations resulting from demand or supply-chain changes; resource allocations arising from operations development through capital expenditure or additional expenditure on research and development; and acquisitions or divestments);

        (ii) Current and anticipated direct mitigation and adaptation efforts (for example, through changes in operational processes or equipment, relocation of activities, workforce adjustments, and changes in services);

        (iii) Current and anticipated indirect mitigation and adaptation efforts (for example, through working with service recipients and supply chains);

        (iv) Any climate-related transition plan the entity has, including information about key assumptions used in developing its transition plan, and dependencies on which the entity's transition plan relies; and

        (v) How the entity plans to achieve any climate-related targets, including any greenhouse gas emissions targets, described in accordance with paragraphs 32–35;

    (b) Information about how the entity is resourcing, and plans to resource, the activities disclosed in accordance with paragraph 14(a); and

    (c) Quantitative and qualitative information about the progress of plans disclosed in previous reporting periods in accordance with paragraph 14(a).

Financial Position, Financial Performance and Cash Flows

15. An entity shall disclose information that enables primary users of general purpose financial reports to understand:

    (a) The effects of climate-related risks and opportunities on the entity's financial position, financial performance and cash flows for the reporting period (current financial effects); and

    (b) The anticipated effects of those climate-related risks and opportunities on the entity's financial position, financial performance and cash flows over the short, medium and long term, taking into consideration how climate-related risks and opportunities are included in the entity's financial planning (anticipated financial effects).

16. Specifically, an entity shall disclose quantitative and qualitative information about:

    (a) How climate-related risks and opportunities have affected its financial position, financial performance and cash flows for the reporting period;

(b) The climate-related risks and opportunities identified in paragraph 16(a) for which there is a significant risk of a material adjustment within the next annual reporting period to the carrying amounts of assets and liabilities reported in the related financial statements;

(c) How the entity expects its financial position to change over the short, medium and long term, given its strategy to manage climate-related risks and opportunities, taking into consideration:

(i) Its investment and disposal plans (for example, plans for capital expenditure, major infrastructure developments, acquisitions and divestments, transformation of operations, innovation, new public-private partnerships, and asset retirements), including plans the entity is not contractually committed to; and

(ii) Its planned sources of funding to implement its strategy (see paragraph 16(d)); and

(d) How the entity expects its financial performance and cash flows to change over the short, medium and long term, given its strategy to manage climate-related risks and opportunities (for example, increased revenue from tax legislation aligned with a lower-carbon economy; or costs arising from physical damage to assets from climate events).

17. In providing quantitative information, an entity may disclose a single amount or a range.

18. In preparing disclosures about the anticipated financial effects of a climate-related risk or opportunity an entity shall:

(a) Use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort; and

(b) Use an approach that is commensurate with the skills, capabilities and resources that are available to the entity for preparing those disclosures.

19. An entity need not provide quantitative information about the current or anticipated financial effects of a climate-related risk or opportunity if the entity determines that:

(a) Those effects are not separately identifiable; or

(b) The level of measurement uncertainty involved in estimating those effects is so high that the resulting quantitative information would not be useful.

20. In addition, an entity need not provide quantitative information about the anticipated financial effects of a climate-related risk or opportunity if the entity does not have the skills, capabilities or resources to provide that quantitative information.

21. If an entity determines that it need not provide quantitative information about the current or anticipated financial effects of a climate-related risk or opportunity applying the criteria set out in paragraphs 19–20, the entity shall:

(a) Explain why it has not provided quantitative information;

(b) Provide qualitative information about those financial effects, including identifying line items, totals and subtotals within the related financial statements that are likely to be affected, or have been affected, by that climate-related risk or opportunity; and

(c) Provide quantitative information about the combined financial effects of that climate-related risk or opportunity with other climate-related risks or opportunities and other factors unless the entity determines that quantitative information about the combined financial effects would not be useful.

Climate Resilience

22. An entity shall disclose information that enables primary users of general purpose financial reports to understand the resilience of the entity's strategy and operational model to climate-related changes, developments and uncertainties, taking into consideration the entity's identified climate-related risks and opportunities. The entity shall use climate-related scenario analysis to assess climate resilience using an approach that is commensurate with the entity's circumstances (see paragraphs AG23–AG44). In providing quantitative information, the entity may disclose a single amount or a range. Specifically, the entity shall disclose:

    (a) The entity's assessment of the climate resilience of its strategy and operational model as at the reporting date, which shall enable primary users of general purpose financial reports to understand:

        (i) The implications, if any, of the entity's assessment for its strategy and operational model, including how the entity would need to respond to the effects identified in the climate-related scenario analysis;

        (ii) The significant areas of uncertainty considered in the entity's assessment of its climate resilience;

        (iii) The entity's capacity to adjust or adapt its strategy and operational model to climate change over the short, medium and long term, including:

            a. The availability of, and flexibility in, the entity's existing financial resources to respond to the effects identified in the climate-related scenario analysis, including to address climate-related risks and to take advantage of climate-related opportunities;

            b. The entity's ability to redeploy, repurpose, upgrade or decommission existing assets; and

            c. The effect of the entity's current and planned investments in climate-related mitigation, adaptation and opportunities for climate resilience; and

    (b) How and when the climate-related scenario analysis was carried out, including:

        (i) Information about the inputs the entity used, including:

            a. Which climate-related scenarios the entity used for the analysis and the sources of those scenarios;

            b. Whether the analysis included a diverse range of climate-related scenarios;

            c. Whether the climate-related scenarios used for the analysis are associated with climate-related transition risks or climate-related physical risks;

            d. Whether the entity used, among its scenarios, a climate-related scenario aligned with the latest international agreement on climate change;

            e. Why the entity decided that its chosen climate-related scenarios are relevant to assessing its resilience to climate-related changes, developments or uncertainties;

            f. The time horizons the entity used in the analysis; and

            g. What scope of operations the entity used in the analysis (for example, the operational locations and services included in the analysis);

        (ii) The key assumptions the entity made in the analysis, including assumptions about:

            a. Climate-related policies in the jurisdictions in which the entity operates;

            b. Macroeconomic trends;

c. National- or regional-level variables (for example, local weather patterns, demographics, land use, infrastructure and availability of natural resources);

d. Energy usage and mix; and

e. Developments in technology; and

(iii) The reporting period in which the climate-related scenario analysis was carried out (see paragraph AG25–AG44).

23. In preparing disclosures to meet the requirements in paragraphs 13–22, an entity may refer to and consider the applicability of peer metrics associated with related disclosure topics.

Risk Management

24. **The objective of climate-related disclosures on risk management is to enable primary users of general purpose financial reports to understand an entity's processes to identify, assess, prioritize and monitor climate-related risks and opportunities, including whether and how those processes are integrated into and inform the entity's overall risk management process.**

25. To achieve this objective, an entity shall disclose information about:

(a) The processes and related risk management policies the entity uses to identify, assess, prioritize and monitor climate-related risks, including information about:

(i) The inputs and parameters the entity uses (for example, information about data sources and the scope of operations covered in the processes);

(ii) Whether and how the entity uses climate-related scenario analysis to inform its identification of climate-related risks;

(iii) How the entity assesses the nature, likelihood, magnitude and timing of the effects of those risks (for example, whether the entity considers qualitative factors, quantitative thresholds or other criteria);

(iv) Whether and how the entity prioritizes climate-related risks relative to other types of risk;

(v) How the entity monitors climate-related risks; and

(vi) Whether and how the entity has changed the processes it uses compared with the previous reporting period.

(b) The processes the entity uses to identify, assess, prioritize and monitor climate-related opportunities, including information about whether and how the entity uses climate-related scenario analysis to inform its identification of climate-related opportunities; and

(c) The extent to which, and how, the processes for identifying, assessing, prioritizing and monitoring climate-related risks and opportunities are integrated into and inform the entity's overall risk management process.

Metrics and Targets

26. **The objective of climate-related disclosures on metrics and targets is to enable primary users of general purpose financial reports to understand an entity's performance in relation to its climate-related risks and opportunities, including progress towards any climate-related targets it has set, and any targets it is required to meet by law or regulation.**

27. To achieve this objective:

(a) An entity shall disclose:

(i) Information relevant to the metric categories in paragraphs 28–30;

(ii) Targets set by the entity, and any targets it is required to meet by law or regulation, to mitigate or adapt to climate-related risks or take advantage of climate-related opportunities, including metrics used by the governing body or management to measure progress towards these targets (see paragraphs 32–36); and

(b) In addition, an entity may disclose peer metrics that are associated with particular operational models, activities or other common features that are similar to other entities such as categories of functions of government (see paragraph 31).

Climate-Related Metrics

28. An entity shall disclose information relevant to the following metric categories of:

(a) Greenhouse gases—the entity shall:

(i) Disclose its absolute gross greenhouse gas emissions generated during the reporting period, expressed as metric tons of CO_2 equivalent (see paragraphs AG46–AG49), classified as:

a. Scope 1 greenhouse gas emissions;

b. Scope 2 greenhouse gas emissions; and

c. Scope 3 greenhouse gas emissions;

(ii) Measure its greenhouse gas emissions in accordance with the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004) unless a different method for measuring its greenhouse gas emissions is determined to better meet primary user information needs or is required by a jurisdictional authority (see paragraphs AG50–AG54);

(iii) Disclose the approach it uses to measure its greenhouse gas emissions (see paragraphs AG55–AG56) including:

a. The methodology, measurement approach, inputs and assumptions the entity uses to measure its greenhouse gas emissions;

b. The reason why the entity has chosen the methodology, measurement approach, inputs and assumptions it uses to measure its greenhouse gas emissions; and

c. Any changes the entity made to the measurement approach, inputs and assumptions during the reporting period and the reasons for those changes;

(iv) For Scope 1 and Scope 2 greenhouse gas emissions disclosed in accordance with paragraphs 28(a)(i)a–b, disaggregate emissions between:

a. The consolidated accounting group (for example, for an entity applying IPSAS Standards, this group would comprise the parent and its controlled entities); and

b. Other investees excluded from paragraph 28(a)(iv)a (for example, for an entity applying IPSAS Standards, these investees would include associates, joint ventures and unconsolidated controlled entities);

(v) For Scope 2 greenhouse gas emissions disclosed in accordance with paragraph b, disclose its location-based Scope 2 greenhouse gas emissions, and provide information about any contractual instruments that is necessary to inform primary users' understanding of the entity's Scope 2 greenhouse gas emissions (see paragraphs AG57–AG58); and

(vi) For Scope 3 greenhouse gas emissions disclosed in accordance with paragraph 28(a)(i)c, and with reference to paragraphs AG59–AG82, disclose:

a. The categories included within the entity's measure of Scope 3 greenhouse gas emissions, in accordance with the Scope 3 categories described in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011); and

b. Additional information about the entity's Category 15 greenhouse gas emissions or those associated with its investments (financed emissions), if the entity's activities include financial services and investing (see paragraphs AG83–AG84);

(b) Climate-related transition risks—the amount and percentage of operating activities or assets vulnerable to climate-related transition risks;

(c) Climate-related physical risks—the amount and percentage of operating activities or assets vulnerable to climate-related physical risks;

(d) Climate-related opportunities—the amount and percentage of operating activities or assets aligned with climate-related opportunities;

(e) Capital deployment—the amount of capital expenditure, financing or investment deployed towards climate-related risks and opportunities;

(f) Internal carbon prices—the entity shall disclose, with reference to paragraphs AG87–AG88:

(i) An explanation of whether and how the entity is applying a carbon price in decision making (for example, in procurement, investment decisions, transfer pricing and scenario analysis);

(ii) A description of how the entity determines the carbon price; and

(iii) The price for each metric ton of greenhouse gas emissions the entity uses to assess the costs of its greenhouse gas emissions; and

(g) Remuneration—if any climate-related considerations are directly factored into remuneration of key management personnel, the entity shall disclose:

(i) A description of how the climate-related considerations are factored into remuneration of key management personnel (see also paragraph 8(a)(v)); and

(ii) The percentage of remuneration to key management personnel recognized in the current period that is linked to climate-related considerations.

29. In preparing disclosures to meet the requirements in paragraphs 28(b)–(d), an entity shall use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort.

30. In preparing disclosures to meet the requirements in paragraphs 28(b)–(g), an entity shall refer to paragraphs AG85–AG88.

31. An entity may disclose peer metrics that are associated with one or more particular operational models, activities or other common features that are similar to other entities such as categories of functions of government. In determining the peer metrics that the entity discloses, the entity may consider the applicability of existing industry-based metrics such as those associated with disclosure topics such as the SASB Standards or the Global Reporting Initiative (GRI) Sector Standards.

Climate-Related Targets

32. An entity shall disclose the quantitative and qualitative climate-related targets it has set to monitor progress towards achieving its strategic goals, and any targets it is required to meet by law or regulation, including any greenhouse gas emissions targets. For each target, the entity shall disclose:

    (a) The metric used to set the target (see paragraphs AG89–AG90);

    (b) The objective of the target (for example, mitigation, adaptation or conformance with science-based initiatives);

    (c) The scope to which the target applies (for example, whether the target applies to the entirety of the entity or only a part of the entity, such as a specific operating unit or specific geographical region);

    (d) The period over which the target applies;

    (e) The base period from which progress is measured;

    (f) Any milestones and interim targets;

    (g) If the target is quantitative, whether it is an absolute target or an intensity target; and

    (h) How the latest international agreement on climate change, including jurisdictional commitments that arise from that agreement, has informed the target.

33. An entity shall disclose information about its approach to setting and reviewing each target, and how it monitors progress against each target, including:

    (a) Whether the target and the methodology for setting the target have been validated by a third party;

    (b) The entity's processes for reviewing the target;

    (c) The metrics used to monitor progress towards reaching the target; and

    (d) Any revisions to the target and an explanation for those revisions.

34. An entity shall disclose information about its performance against each climate-related target and an analysis of trends or changes in the entity's performance.

35. For each greenhouse gas emissions target disclosed in accordance with paragraphs 32–34, an entity shall disclose:

    (a) Which greenhouse gases are covered by the target;

    (b) Whether Scope 1, Scope 2 or Scope 3 greenhouse gas emissions are covered by the target;

    (c) Whether the target is a gross greenhouse gas emissions target or net greenhouse gas emissions target. If the entity discloses a net greenhouse gas emissions target, the entity is also required to separately disclose its associated gross greenhouse gas emissions target (see paragraphs AG91–AG92);

    (d) Whether the target was derived using a sectoral decarbonization approach; and

    (e) The entity's planned use of carbon credits, if any, to offset greenhouse gas emissions to achieve any net greenhouse gas emissions target. In explaining its planned use of carbon credits the entity shall disclose information including, and with reference to paragraphs AG93–AG94:

        (i) The extent to which, and how, achieving any net greenhouse gas emissions target relies on the use of carbon credits;

        (ii) Which third-party scheme(s) will verify or certify the carbon credits, if any;

(iii) The type of carbon credit, including whether the underlying offset will be nature-based or based on technological carbon removals, and whether the underlying offset is achieved through carbon reduction or removal; and

(iv) Any other factors necessary for primary users of general purpose financial reports to understand the credibility and integrity of the carbon credits the entity plans to use (for example, assumptions regarding the permanence of the carbon offset).

36. In identifying and disclosing the metrics used to set and monitor progress towards reaching a target described in paragraphs 32–33, an entity may refer to and consider the applicability of peer metrics (see paragraph 31), or metrics that otherwise satisfy the requirements in this Standard.

Effective Date and Transition

Effective Date

37. **An entity shall apply this Standard for annual reporting periods beginning on or after January 1, 2028. Earlier application is permitted. If an entity applies this Standard earlier, it shall disclose that fact.**

38. **For the purposes of applying paragraphs 39–43, the date of adoption is the beginning of the annual reporting period in which an entity first applies this Standard.**

Transition

39. **An entity is not required to provide the disclosures specified in this Standard for any period before the date of adoption. Accordingly, an entity is not required to disclose comparative information in the first annual reporting period in which it applies this Standard.**

40. **In the first annual reporting period in which an entity applies this Standard, the entity is permitted to report its climate-related disclosures after it publishes its related financial statements, within nine months of the end of the annual reporting period in which the entity first applies this Standard.**

41. The entity is not required to disclose its Scope 3 greenhouse gas emissions within the first three years in which it applies this Standard (see paragraph 28(a)).

42. An entity may elect an earlier date of adoption without a transition period.

43. If an entity uses the relief in paragraph 41, the entity is permitted to continue to use that relief for the purposes of presenting that information as comparative information in subsequent reporting periods.

Appendix A: Application Guidance

This Appendix is an integral part of IPSASB SRS 1.

Scope and Definitions (paragraphs 3–6)

AG1. Public sector entities perform a broad range of activities in the public interest, which could include:

(a) Service design and delivery;

(b) Compliance and enforcement; and

(c) Monitoring and evaluation.

AG2. Many public sector entities have their activities, objectives/mandates and authority prescribed by statute. This limits the entity's own ability to alter its activities, objectives and/or mandate, and may require coordination with other public sector entities and decision makers to achieve the intended change.

AG3. In applying this Standard, an entity shall consider the activities in its operational model.

Climate-Related Risks and Opportunities

AG4. Climate-related risks and opportunities can materialize through any of the activities of a public sector entity. Disclosures about climate-related risks and opportunities should be guided by the information needs of its primary users which would reflect the entity's context, its public interest mandate and responsibilities (see paragraphs B.AG1–B.AG3).

AG5. Identification of climate-related risks and opportunities informs an entity's response to such risks and opportunities in the context of ensuring its long-term fiscal sustainability. Long-term fiscal sustainability includes an entity's continued ability to fulfill its objectives and is dependent on the capacity and vulnerability of its activities, revenue and debts.

AG6. The climate-related risks that an entity may face include climate-related physical risks and transition risks associated with the transition to a lower-carbon economy. Climate-related physical risks can be:

(a) Acute physical risks – driven by events such as storms, precipitation or temperatures; or

(b) Chronic physical risks – resulting from longer-term factors such as an increase in mean temperatures, shifts in precipitation patterns or rising sea levels. Chronic risks could also have longer-term consequences for entities.

AG7. Climate-related transition risks are associated with policy, legal, technology and market changes resulting from efforts to limit global warming and the move to a lower-carbon economy.

AG8. An entity may pursue adaptation responses, such as investing in infrastructure, to address climate-related physical risks; and may pursue mitigation responses, such as adopting new technologies to reduce its greenhouse gas emissions, to address climate-related transition risks.

AG9. An entity may also pursue climate-related opportunities, such as sourcing renewable energy procurement that lowers energy costs and secures a stable, low-carbon supply. Climate-related risks and opportunities are distinct but not always mutually exclusive.

AG10. An entity's climate-related risks and opportunities arise out of the interactions between the entity and its stakeholders, society, the economy, and the natural environment throughout the entity's value chain. These interactions, which can be direct and indirect – result from an entity's operations in pursuit of its objectives and from the external environment in which the entity operates. These interactions take place within an interdependent system in which an entity both depends on resources and relationships throughout its value

chain and affects those resources and relationships through its activities—contributing to the preservation, regeneration and development of those resources and relationships or to their degradation and depletion. These dependencies and impacts may give rise to climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability.

AG11. Resources and relationships that an entity depends on and affects by its activities and outputs can take various forms, such as natural, manufactured, intellectual, human, social or financial. They can be internal—such as the entity's workforce, its know-how or its organizational processes—or they can be external—such as funding and services the entity needs to access or the relationships it has with resource providers, distributors and beneficiaries. Furthermore, resources and relationships include, but are not limited to, the resources and relationships recognized as assets in the entity's financial statements.

AG12. Due to the interconnected nature of resources and relationships in the public sector, an entity often:

(a) Depends on other public sector entities, for example for funding and policy design, implementation and/or monitoring; or

(b) Is affected by the activities of other public sector entities, such as being delegated responsibility for implementing programs and achieving targets set by higher levels of government.

AG13. In applying this Standard and understanding its climate-related risks and opportunities, it is important that an entity consider other entities along its value chain, which may give rise to climate-related risks and opportunities for the entity itself (see paragraphs B.AG4–B.AG14). For example, a public transport authority with a target to reduce greenhouse gas emissions along its value chain should consider the climate-related strategy of its service providers, as failure to meet its target could lead to enhanced regulatory and reputational risk.

Governance (paragraphs 7–8)

AG14. Public sector governance structures vary considerably between and across jurisdictions. However, all are designed to provide oversight of an entity's operations. For some entities, their climate-related strategy may be driven by another public sector entity such as higher levels of governments or ministries. In the public sector, it is generally rare for governance to be the responsibility of a single individual. An entity shall disclose its governance arrangements as required in paragraph 8(a).

AG15. If no group(s) or individual(s) has responsibility for oversight of particular climate-related risks and opportunities, then this fact should be disclosed.

Strategy (paragraph 9–23)

AG16. In the public sector, climate-related strategies may be set, in many cases, by higher levels of government at regional or national levels to contribute to meeting the requirements of the latest international agreement on climate change.

AG17. Such strategies may be implemented by multiple entities. When entities need to comply with policies set by higher levels of government, they will need to incorporate these into their own strategies.

AG18. Entities may also develop their own strategies to manage climate-related risks to service delivery and/or benefits from climate-related opportunities that support the entity's mandate and service objectives. An entity's strategy will vary depending on its role and responsibilities. For example:

(a) A police force may have mitigation plans to reduce greenhouse gas emission by replacing its fleet of vehicles with electric vehicles; and

(b) A local government may build infrastructure to address rising sea levels as part of its climate adaptation efforts.

AG19. Strategy and decision making in the public sector may also be affected by changes in governments and/or other policies. Therefore, medium and long-term risk management will require clearly articulated strategies that can be flexed as circumstances change.

AG20. Public sector entities' resources are predominantly provided by taxpayers, transfers from different levels of government or external lenders such as bond holders. An entity's disclosures in accordance with paragraph 10(d) shall enable primary users of general purpose financial reports to understand the capacity and financial planning of an entity to continue to fund its activities and to meet its operational objectives, climate-related strategy and targets, including its sources of funding and the extent to which it is dependent on each.

Climate-Related Risks and Opportunities

AG21. Short-, medium- and long-term time horizons can vary between entities and depend on many factors, including the planning horizons typically used for strategic decision making and capital allocation plans, and the time horizons over which primary users of general purpose financial reports conduct their assessments.

Financial Position, Financial Performance and Cash Flows

AG22. The current and anticipated effects of climate-related risks and opportunities include those related to:

(a) Climate-related physical risks which could carry financial implications for an entity, such as costs resulting from direct damage to public assets and infrastructure, indirect effects of supply-chain disruption, or rising sea levels for coastal communities. The entity's long-term fiscal sustainability could also be affected by factors such as changes in water availability, sourcing and quality, or extreme temperature changes affecting the entity's premises, operations, supply chains, transportation needs and employee health and safety. Climate-related physical risks can also have economic or social implications, such as the disruption of services as a result of extreme weather events;

(b) Climate-related transition risks which could carry financial implications for an entity, such as increased operating costs or asset impairment due to new or amended climate-related policies. Climate-related transition risks can also have economic or social implications, such as shifting needs of service recipients and the development and deployment of new technology; and

(c) Climate-related opportunities which could carry financial implications for an entity may include increased efficiency in the use of resources, the adoption of clean energy sources or new technologies, and the development of climate adaptation solutions. For example, a transport authority may achieve long-term cost savings by replacing its fleet with electric buses. Climate-related opportunities can also have economic or social implications, such as the creation of new jobs associated with renewable energy infrastructure.

Climate Resilience

AG23. Paragraph 22 requires an entity to use climate-related scenario analysis to assess its climate resilience, using an approach that is commensurate with its circumstances. The entity is required to use an approach to climate-related scenario analysis that enables it to consider all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort. Paragraphs AG24–AG44 provide guidance on how an entity uses scenario analysis to assess the entity's climate resilience. Specifically:

(a) Paragraphs AG24–AG31 set out the factors the entity shall consider when assessing its circumstances;

(b) Paragraphs AG32–AG41 set out the factors the entity shall consider when determining an appropriate approach to climate-related scenario analysis; and

(c) Paragraphs AG42–AG44 set out additional factors for the entity to consider when determining its approach to climate-related scenario analysis over time.

Assessing the Circumstances

AG24. An entity shall use an approach to climate-related scenario analysis that is commensurate with its circumstances as at the time the entity carries out its climate-related scenario analysis (see paragraph AG25). To assess its circumstances the entity shall consider:

(a) The entity's exposure to climate-related risks and opportunities (see paragraphs AG26–AG27); and

(b) The skills, capabilities and resources available to the entity for the climate-related scenario analysis (see paragraphs AG28–AG31).

AG25. An entity shall assess its circumstances each time it carries out its climate-related scenario analysis. For example, an entity that carries out its climate-related scenario analysis every three years to align with its strategic planning cycle (see paragraph AG44) would be required to reconsider for this purpose its exposure to climate-related risks and opportunities and the skills, capabilities and resources available at that time.

Exposure to Climate-Related Risks and Opportunities

AG26. An entity shall consider its exposure to climate-related risks and opportunities in its assessment of its circumstances and when determining the approach to use for its climate-related scenario analysis. This consideration provides essential context for identifying which risks are included in the assessment, designing the scenario analysis, and understanding the potential benefits of using a particular approach to climate-related scenario analysis. For example, if an entity has a high degree of exposure to climate-related risk then a more quantitative or technically sophisticated approach to climate-related scenario analysis would be of greater benefit to the entity and primary users of general purpose financial reports. Primary users of general purpose financial reports would be less likely to benefit from quantitative or technically sophisticated climate-related scenario analysis if the entity were exposed to few or relatively less severe climate-related risks and opportunities. This means that—with all else being equal—the greater the entity's exposure to climate-related risks or opportunities, the more likely it is the entity would determine that a more technically sophisticated form of climate-related scenario analysis is required.

AG27. This Standard requires an entity to identify the climate-related risks and opportunities to which it is exposed (see paragraph 10(a)) and to disclose information about the process the entity uses to identify, assess, prioritize and monitor those risks and opportunities (see paragraph 25). The information the entity discloses in accordance with paragraphs 10(a) and 25 can inform the entity's consideration of its exposure to climate-related risks and opportunities.

Skills, Capabilities and Resources Available

AG28. An entity shall consider the available skills, capabilities and resources when determining an appropriate approach to use for its climate-related scenario analysis. These skills, capabilities and resources might include both internal and external skills, capabilities and resources. The entity's available skills, capabilities and resources provide context to inform its consideration of the potential cost and level of effort required by a particular approach to climate-related scenario analysis. For example, if an entity has only just begun to explore the use of climate-related scenario analysis to assess its climate resilience, it might be unable to use a quantitative or technically sophisticated approach to climate-related scenario analysis without undue cost or effort. For the avoidance of doubt, if resources are available to the entity then it will be able to invest in obtaining or developing the necessary skills and capabilities.

AG29. Climate-related scenario analysis can be resource intensive and might—through an iterative learning process—be developed and refined over multiple planning cycles. As an entity repeats the climate-related

scenario analysis, it is likely to develop skills and capabilities that will enable the entity to strengthen its approach to climate-related scenario analysis over time. For example, if an entity has not yet used climate-related scenario analysis or participates in a function of government where climate-related scenario analysis is not commonly used, the entity might need more time to develop its skills and capabilities. In contrast, where climate-related scenario analysis is an established practice in its role or function of government, it would be expected to have strengthened skills and capabilities through its experience.

AG30. Entities may leverage climate-related scenario analyses performed by other public sector entities, such as higher levels of government, where the entity has a reasonable and supportable basis for using the other entity's analysis. Entities may also consider whether any additional entity-specific analysis is needed. For example, a town that is part of a large county may determine that the scenario analysis performed by the county is relevant for analysis of its own climate resilience given the geography and similar climate-related risks and opportunities faced. However, the town may be significantly above sea level and therefore could exclude considerations about sea level rise.

AG31. An entity might have a different reporting period from some or all of the entities that it leverages for climate-related scenario analysis purposes. In other cases, climate-related scenario analysis may not be performed annually due to the available resources, skills and capabilities. In such circumstances, the entity is permitted to refer to climate-related scenario analysis for reporting periods that are different from its own reporting period if that information is obtained from entities in its value chain with reporting periods that are different from the entity's reporting period, on the condition that:

(a) The entity uses the most recent climate-related scenario analysis available;

(b) The length of the reporting periods is the same; and

(c) The entity discloses the effects of significant events and changes in circumstances (relevant to its climate-related scenario analysis) that occur between the climate-related scenario analysis and the date of the entity's general purpose financial reports.

Determining the Appropriate Approach

AG32. An entity shall determine an approach to climate-related scenario analysis that enables it to consider all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort. The determination of the approach shall be guided by the assessments of the entity's exposure to climate-related risks and opportunities (see paragraphs AG26–AG27) and its available skills, capabilities and resources (see paragraphs AG28–AG31). Making such a determination involves:

(a) Selecting inputs to the climate-related scenario analysis (see paragraphs AG35–AG39); and

(b) Making analytical choices about how to carry out the climate-related scenario analysis (see paragraphs AG40–AG41).

AG33. Reasonable and supportable information includes information about past events, current conditions and forecasts of future conditions. It also includes quantitative or qualitative information, and information that is obtained from an external source or owned or developed internally.

AG34. An entity will need to use judgment to determine the mix of inputs and analytical choices that will enable the entity to consider all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort. The degree of judgment that is required depends on the availability of detailed information. As the time horizon increases and the availability of detailed information decreases, the degree of judgment required increases.

Selecting Inputs

AG35. When an entity selects the inputs to use in its climate-related scenario analysis, the entity shall consider all reasonable and supportable information—including scenarios, variables and other inputs—available to the entity at the reporting date without undue cost or effort. The inputs used in scenario analysis might include information that is qualitative or quantitative, and is obtained from an external source or developed internally. For example, publicly available climate-related scenarios—from authoritative sources—that describe future trends and a range of pathways to plausible outcomes are considered to be available to the entity without undue cost or effort.

AG36. When selecting scenarios, variables and other inputs to use in climate-related scenario analysis, an entity might, for example, use one or more climate-related scenarios—including international and regional scenarios—that are publicly or freely available from authoritative sources or performed by higher levels of government. The entity shall have a reasonable and supportable basis for using a particular scenario or set of scenarios and could draw upon the applicability of climate-related scenarios performed by other public sector entities to the entity's own circumstances.

AG37. In considering whether the selected inputs are reasonable and supportable, an entity shall consider the objective of paragraph 22, which requires the entity to disclose information that enables primary users of general purpose financial reports to understand the resilience of the entity's strategy and operational model to climate-related changes, developments and uncertainties, taking into consideration the entity's identified climate-related risks and opportunities. This means that the inputs to the entity's climate-related scenario analysis shall be relevant to the entity's circumstances, for example, to the particular activities the entity undertakes and the geographical location of those activities.

AG38. For some analyses, such as current and anticipated financial effects and climate-related scenario analyses, an entity may be required to provide or determine inputs based on forward looking information, which may include policy assumptions.

AG39. An entity should base projections on current policy assumptions. However, there may be instances where a departure from current policy may be appropriate, for example:

(a) There is a conflict between current policy and legal obligations; or

(b) Where current legislation or regulation has a termination date, such as "sunset provisions".

Making Analytical Choices

AG40. An entity's resilience assessment will be guided not only by the individual inputs to its climate-related scenario analysis, but also by the information it develops in combining those inputs to carry out the analysis. The entity shall prioritize the analytical choices (for example, whether to use qualitative analysis or quantitative modelling) that will enable it to consider all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort. For example, if an entity is able—without undue cost or effort—to incorporate multiple carbon price pathways associated with a given outcome (for example, a 1.5 degree Celsius outcome), this analysis is likely to strengthen the entity's resilience assessment, assuming such an approach is warranted by the entity's risk exposure.

AG41. Quantitative information will often enable an entity to carry out a more robust assessment of its climate resilience. However, qualitative information (including scenario narratives), either alone or combined with quantitative data, can also provide a reasonable and supportable basis for the entity's resilience assessment.

Additional Considerations

AG42. Climate-related scenario analysis is an evolving practice and, therefore, the approach that an entity uses is likely to change over time. As described in paragraphs AG24–AG31, the entity shall determine its approach

to climate-related scenario analysis based on its particular circumstances, including the entity's exposure to climate-related risks and opportunities and the skills, capabilities and resources available for the scenario analysis. Those circumstances are also likely to change over time. Therefore, the entity's approach to climate-related scenario analysis need not be the same from one reporting period or strategic planning cycle to the next (see paragraph AG44).

AG43. An entity might use a simpler approach to climate-related scenario analysis, such as qualitative scenario narratives, if such an approach is appropriate to the entity's circumstances. For example, if an entity does not currently have the skills, capabilities or resources to carry out quantitative climate-related scenario analysis but has a high degree of exposure to climate-related risk, the entity might initially use a simpler approach to climate-related scenario analysis, but would build its capabilities through experience and, therefore, would apply a more advanced quantitative approach to climate-related scenario analysis over time. An entity with a high degree of exposure to climate-related risks and opportunities, and with access to the necessary skills, capabilities or resources, is required to apply a more advanced quantitative approach to climate-related scenario analysis.

AG44. Although paragraph 22 requires an entity to disclose information about its climate resilience at each reporting date, the entity might carry out its climate-related scenario analysis in line with its strategic planning cycle, including a multi-year strategic planning cycle (for example, every three to five years). Therefore, in some reporting periods the entity's disclosures in accordance with paragraph 22(b) could remain unchanged from the previous reporting period if the entity does not conduct a scenario analysis annually. The entity shall—at a minimum—update its climate-related scenario analysis in line with its strategic planning cycle. However, an assessment of the entity's resilience is required to be carried out annually to reflect updated insight into the implications of climate uncertainty for the entity's operational model and strategy. As such, an entity's disclosure in accordance with paragraph 22(a)—that is, the results of the entity's resilience assessment—shall be updated at each reporting period.

Risk Management (paragraphs 24–25)

AG45. To identify, assess, prioritize, and monitor climate-related risks and opportunities, an entity may use its risk management processes and also leverage processes from other entities. For example, a national risk register developed by a higher level of government may inform risk management by entities at lower levels of governments. Such entities would also consider additional factors that reflect their own circumstances.

Metrics and Targets (paragraphs 26–36)

Greenhouse Gas Emissions

Permission to Use Information From a Reporting Period That is Different From the Entity's Reporting Period, in Specific Circumstances

AG46. An entity might have a different reporting period from some or all of the entities in its value chain. Such a difference would mean that greenhouse gas emissions information from these entities in its value chain for the entity's reporting period might not be readily available for the entity to use for its own disclosure. In such circumstances, the entity is permitted to measure its greenhouse gas emissions in accordance with paragraph 28(a)(i) using information for reporting periods that are different from its own reporting period if that information is obtained from entities in its value chain with reporting periods that are different from the entity's reporting period, on the condition that:

(a) The entity uses the most recent data available from those entities in its value chain without undue cost or effort to measure and disclose their greenhouse gas emissions;

(b) The length of the reporting periods is the same; and

(c) The entity discloses the effects of significant events and changes in circumstances (relevant to its greenhouse gas emissions) that occur between the reporting dates of the entities in its value chain and the date of the entity's general purpose financial reports.

Aggregation of Greenhouse Gases into CO_2 Equivalent Using Global Warming Potential Values

AG47. Paragraph 28 requires an entity to disclose its absolute gross greenhouse gas emissions generated during the reporting period, expressed as metric tons of CO_2 equivalent. To meet this requirement, the entity shall aggregate the seven constituent greenhouse gases into CO_2 equivalent values.

AG48. If an entity uses direct measurement to measure its greenhouse gas emissions, the entity may convert the seven constituent greenhouse gases into a CO_2 equivalent value using global warming potential values based on a 100-year time horizon, from the latest Intergovernmental Panel on Climate Change assessment available at the reporting date.

AG49. If an entity uses emission factors to estimate its greenhouse gas emissions, the entity shall use—as its basis for measuring its greenhouse gas emissions—the emission factors that best represent the entity's activity (see paragraph AG56). If these emission factors have already converted the constituent gases into CO_2 equivalent values, the entity is not required to recalculate the emission factors using global warming potential values based on a 100-year time horizon from the latest Intergovernmental Panel on Climate Change assessment available at the reporting date. However, if an entity uses emission factors that are not converted into CO_2 equivalent values, then the entity may use the global warming potential values based on a 100-year time horizon from the latest Intergovernmental Panel on Climate Change assessment available at the reporting date.

Methodology, Measurement Approach, Inputs and Assumptions

AG50. Paragraph 28(a)(iii) requires an entity to disclose the methodology, measurement approach, inputs and assumptions it uses to measure its greenhouse gas emissions. As part of this requirement, the entity shall include information about:

(a) The applicable method if the entity is not using the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004) (see paragraphs AG51–AG54);

(b) The measurement approach the entity uses (see paragraph AG55); and

(c) The emission factors the entity uses (see paragraph AG56).

Greenhouse Gas Accounting Methodologies

AG51. There is a rebuttable presumption that entities use the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004). In some circumstances, an entity may determine that another established method of measuring its greenhouse gas emissions is more appropriate for its circumstances to meet the needs of its primary users or is required by a jurisdictional authority.

AG52. In such cases, an entity shall disclose:

(a) The applicable methodology used;

(b) The reason, or reasons, for the entity's choice of methodology; and

(c) How that approach relates to the disclosure objective in paragraph 26.

AG53. For the avoidance of doubt, an entity shall apply the requirements in the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004) only to the extent that they do not conflict with the requirements in this Standard. For example, the Greenhouse Gas Protocol : A Corporate Accounting and Reporting Standard (2004) does not require an entity to disclose its Scope 3 greenhouse gas emissions,

however, the entity is required to disclose Scope 3 greenhouse gas emissions in accordance with paragraph 28(a)(i)b.

AG54. Where an entity uses a methodology other than the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004), an entity shall disclose its Scope 1, 2 and 3 aligned with the definitions in paragraph 6, which are based on the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004). To the extent these definitions differ from the applicable methodology, the entity shall provide a reconciliation.

Measurement Approach

AG55. An entity may use different measurement approaches when measuring its greenhouse gas emissions. In disclosing information in accordance with paragraph 28(a)(iii), the entity is required to disclose information about the measurement approach it uses. Specifically, the entity shall disclose the approach it uses to determine its greenhouse gas emissions, including:

(a) The approach to consolidation of greenhouse gas emissions, such as whether the entity uses the operational control, the financial control or the equity share approach; and

(b) The reason, or reasons, for the entity's choice of measurement approach and how that approach relates to the disclosure objective in paragraph 26.

Emission Factors

AG56. As part of an entity's disclosure of the measurement approach, inputs and assumptions, the entity shall disclose information to enable the primary users of its general purpose financial reports to understand which emission factors the entity uses in its measurement of its greenhouse gas emissions. This Standard does not specify emission factors an entity is required to use in its measurement of its greenhouse gas emissions. Instead, this Standard requires an entity to use emission factors that best represent the entity's activity as its basis for measuring its greenhouse gas emissions.

Scope 2 Greenhouse Gas Emissions

AG57. Paragraph 28(a)(v) requires an entity to disclose its location-based Scope 2 greenhouse gas emissions and provide information about any contractual instruments the entity has entered into that could inform primary users' understanding of the entity's Scope 2 greenhouse gas emissions. A location-based approach reflects the average emissions intensity of grids on which energy consumption occurs. For the avoidance of doubt, an entity is required to disclose its Scope 2 greenhouse gas emissions using a location-based approach and is required to provide information about contractual instruments only if such instruments exist and information about them informs primary users' understanding of an entity's Scope 2 greenhouse gas emissions.

AG58. Contractual instruments are any type of contract between an entity and another party for the sale and purchase of energy bundled with attributes about the energy generation or for unbundled energy attribute claims (unbundled energy attribute claims relate to the sale and purchase of energy that is separate and distinct from the greenhouse gas attribute contractual instruments). Various types of contractual instruments are available in different markets and the entity might disclose information about its market-based Scope 2 greenhouse gas emissions as part of its disclosure.

Scope 3 Greenhouse Gas Emissions

AG59. In accordance with paragraph 28(a)(vi), an entity shall disclose information about its Scope 3 greenhouse gas emissions to enable primary users of general purpose financial reports to understand the source of these emissions. The entity shall consider its entire value chain (upstream and downstream) and shall consider all 15 categories of Scope 3 greenhouse gas emissions, as described in the Greenhouse Gas Protocol

Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011). In accordance with paragraph 28(a)(vi), the entity shall disclose which of these categories are included in its Scope 3 greenhouse gas emissions disclosures.

AG60. For the avoidance of doubt, regardless of the methodology an entity uses to measure its greenhouse gas emissions, the entity is required to disclose the categories included within its measure of Scope 3 greenhouse gas emissions as described in paragraph 28(a)(vi)a.

AG61. An entity's determination of which Scope 3 categories to measure and disclose will require management's judgment and may consider trade-offs such as the cost of collecting data, skills and capabilities needed compared against the benefit the information provides for decision making. This determination shall be based on an entity's mandate and the materiality assessment for information needs of primary users for decision making and accountability purposes.

AG62. In accordance with paragraph B.AG22, on the occurrence of a significant event or a significant change in circumstances, an entity shall reassess the scope of all affected climate-related risks and opportunities throughout its value chain, including reassessing which Scope 3 categories and entities throughout its value chain to include in the measurement of its Scope 3 greenhouse gas emissions. A significant event or significant change in circumstances can occur without the entity being involved in that event or change in circumstances or as a result of a change in what the entity assesses to be important to primary users of general purpose financial reports.

AG63. An entity is permitted, but not required, to reassess the scope of any climate-related risk or opportunity throughout its value chain more frequently than required by paragraph B.AG22.

AG64. In accordance with paragraph B.AG2(b), to determine the scope of the value chain, which includes its breadth and composition, an entity shall use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort.

Scope 3 Measurement Framework

AG65. An entity's measurement of Scope 3 greenhouse gas emissions is likely to include the use of estimation rather than solely comprising direct measurement. In measuring Scope 3 greenhouse gas emissions an entity shall use a measurement approach, inputs and assumptions that result in a faithful representation of this measurement. The measurement framework described in paragraphs AG67–AG79 provides guidance for an entity to use in preparing its Scope 3 greenhouse gas emissions disclosures.

AG66. An entity is required to use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort when the entity selects the measurement approach, inputs and assumptions it uses in measuring Scope 3 greenhouse gas emissions.

AG67. An entity's measurement of Scope 3 greenhouse gas emissions relies upon a range of inputs. This Standard does not specify the inputs the entity is required to use to measure its Scope 3 greenhouse gas emissions, but does require the entity to prioritize inputs and assumptions using these identifying characteristics (which are listed in no particular order):

(a) Data based on direct measurement (paragraphs AG69–AG71);

(b) Data from specific activities within the entity's value chain (paragraphs AG72–AG75);

(c) Timely data that faithfully represents the jurisdiction of, and the technology used for, the value chain activity and its greenhouse gas emissions (paragraphs AG76–AG77); and

(d) Data that has been verified (paragraphs AG78–AG79).

AG68. An entity's prioritization of the measurement approach, inputs and assumptions and the entity's considerations of associated trade-offs—based on the characteristics in paragraph AG67—requires management to apply judgment. For example, an entity might need to consider the trade-offs between timely data and data that is more representative of the jurisdiction and technology used for the value chain activity and its emissions. More recent data might provide less detail about the specific activity, including the technology that was used in the value chain and the location of that activity. On the other hand, older data that is published infrequently might be considered more representative of the specific activity and its greenhouse gas emissions.

Data Based on Direct Measurement

AG69. Two methods are used to quantify Scope 3 greenhouse gas emissions: direct measurement and estimation. Of these two methods—and with all else being equal—an entity shall prioritize direct measurement.

AG70. "Direct measurement" refers to the direct monitoring of greenhouse gas emissions and, in theory, provides the most accurate evidence. However, it is expected that Scope 3 greenhouse gas emissions data will include estimation due to the challenges associated with direct measurement of Scope 3 greenhouse gas emissions.

AG71. Estimation of Scope 3 greenhouse gas emissions involves approximate calculations of data based on assumptions and appropriate inputs. An entity that measures its Scope 3 greenhouse gas emissions using estimation is likely to use two types of input:

(a) Data that represents the entity's activity that results in greenhouse gas emissions (activity data). For example, the entity might use distance travelled as activity data to represent the transport of goods within its value chain; and

(b) Emission factors that convert activity data into greenhouse gas emissions. For example, the entity will convert the distance travelled (activity data) into greenhouse gas emissions data using emission factors.

Data From Specific Activities Within the Entity's Value Chain

AG72. An entity's measurement of its Scope 3 greenhouse gas emissions will be based on data obtained directly from specific activities within the entity's value chain (primary data), data not obtained directly from activities within the entity's value chain (secondary data), or a combination of both.

AG73. In measuring an entity's Scope 3 greenhouse gas emissions, primary data is more likely to be representative of the entity's value chain activity and its greenhouse gas emissions than secondary data. Therefore, the entity shall prioritize—with all else being equal—the use of primary data.

AG74. Primary data for Scope 3 greenhouse gas emissions includes data provided by suppliers or other entities in the value chain related to specific activities in an entity's value chain. For example, primary data could be sourced from meter readings, utility bills or other methods that represent specific activities in the entity's value chain. Primary data could be collected internally (for example, through the entity's own records), or externally from suppliers and other value chain partners (for example, supplier-specific emission factors for purchased goods or services). Data from specific activities within an entity's value chain provides a more accurate representation of the entity's specific value chain activities and, therefore, will provide a better basis for measuring the entity's Scope 3 greenhouse gas emissions.

AG75. Secondary data for Scope 3 greenhouse gas emissions is data that is not obtained directly from specific activities within an entity's value chain. Secondary data is often supplied by third-party data providers (for example, from published databases, government statistics, literature studies and industry associations). Secondary data includes data used to approximate the activity or emission factors. Additionally, secondary data includes primary data from a specific activity (proxy data) used to estimate greenhouse gas emissions

for another activity. If an entity uses secondary data to measure its Scope 3 greenhouse gas emissions, it shall consider the extent to which the data faithfully represents the entity's activities.

Timely Data That Faithfully Represents the Value Chain Activity and Its Greenhouse Gas Emissions

AG76. If an entity uses secondary data, it shall prioritize the use of activity or emissions data that is based on, or represents, the technology used in the value chain activity the data is intended to represent. For example, an entity might obtain primary data from its activities (for example, the specific aircraft model, distance traveled, and travel-class used by employees when traveling) and would then use secondary data that represents the greenhouse gas emissions arising from those activities to convert the primary data into an estimate of its greenhouse gas emissions from air travel.

AG77. If an entity uses secondary data, it shall prioritize activity or emissions data that is timely and representative of the entity's value chain activity during the reporting period. In some jurisdictions, and for some technologies, secondary data is collected annually and, therefore, the data is likely to be representative of the entity's current practice. However, some secondary data sources rely on information collected in a reporting period that is different from the entity's own reporting period.

Verified Data

AG78. An entity shall prioritize Scope 3 greenhouse gas emissions data that is verified. Verification can provide primary users of general purpose financial reports with confidence that the information is complete, neutral and accurate.

AG79. Verified data might include data that has been internally or externally verified. Verification can take place in several ways, including on-site checking, reviewing calculations, or cross-checking of data against other sources. However, in some cases an entity might be unable to verify its Scope 3 greenhouse gas emissions without undue cost or effort. For example, the entity might be prevented from obtaining a complete set of verified data due to the volume of data or because the data is obtained from entities in the value chain that are separated by many tiers from the reporting entity, that is, entities that the reporting entity does not interact with directly. In such cases, an entity might need to use unverified data.

Disclosure of Inputs to Scope 3 Greenhouse Gas Emissions

AG80. An entity shall disclose information about the measurement approach, inputs and assumptions it uses to measure its Scope 3 greenhouse gas emissions in accordance with paragraph 28(a)(iii). This disclosure shall include information about the characteristics of the data inputs as described in paragraph AG65. The purpose of this disclosure is to provide primary users of general purpose financial reports with information about how the entity has prioritized the highest quality data available, which faithfully represents the value chain activity and its Scope 3 greenhouse gas emissions. This disclosure also helps primary users of general purpose financial reports to understand why the measurement approach, inputs and assumptions the entity uses to estimate its Scope 3 greenhouse gas emissions are relevant.

AG81. As part of the requirement in paragraph 28(a)(iii), and to reflect how an entity prioritizes Scope 3 data in accordance with the measurement framework set out in paragraphs AG67–AG79, the entity shall disclose information that enables primary users of general purpose financial reports to understand:

(a) The extent to which the entity's Scope 3 greenhouse gas emissions are measured using inputs from specific activities within the entity's value chain; and

(b) The extent to which the entity's Scope 3 greenhouse gas emissions are measured using inputs that are verified.

AG82. This Standard includes the presumption that Scope 3 greenhouse gas emissions can be estimated reliably using secondary data and peer averages. In those rare cases when an entity determines it is impracticable

to estimate its Scope 3 greenhouse gas emissions, the entity shall disclose how it is managing its Scope 3 greenhouse gas emissions. Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so.

Financed Emissions

AG83. Entities participating in financial activities face risks and opportunities related to the greenhouse gas emissions associated with those activities. Counterparties, borrowers or investees with higher greenhouse gas emissions might be susceptible to risks associated with technological changes, shifts in supply and demand and policy change, which in turn can affect the institution that is providing financial services to these entities. These risks and opportunities can arise in the form of credit risk, market risk, reputational risk and other financial and operational risks. For example, credit risk might arise in relation to financing carbon-intensive sectors, increasing the exposure to stranded assets under increasingly stringent regulations, technological shifts, and changing resource landscapes; credit risk might also arise through increased insurance liability and increased cash outflows by public sector entities arising from damages caused by physical climate risks. Reputational risk might arise from financing carbon-intensive projects. Entities participating in financial activities, such as central banks, public investment corporations, housing finance agencies and public pension funds, monitor and manage such risks by measuring their financed emissions. This measurement serves as an indicator of an entity's exposure to climate-related risks and opportunities and how the entity might need to adapt its financial activities over time.

AG84. An entity shall apply the requirements for disclosing greenhouse gas emissions in accordance with paragraph 28 when disclosing information about its financed emissions.

Metric Categories

AG85. In addition to information about an entity's greenhouse gas emissions, the entity is required to disclose information relevant to the metric categories set out in paragraphs 28(b)–(g).

AG86. In preparing disclosures to fulfill the requirements in paragraphs 28(b)–(g), an entity shall:

(a) Consider the time horizons over which the effects of climate-related risks and opportunities could reasonably be expected to occur, described in accordance with paragraph 11;

(b) Consider where in the entity's operational model and value chain climate-related risks and opportunities are concentrated (for example, geographical areas, facilities or types of assets or services) (see paragraph 13);

(c) Consider the information disclosed in accordance with paragraphs 16(a)–(b) in relation to the effects of climate-related risks and opportunities on the entity's long-term fiscal sustainability, including services it delivers, for the reporting period;

(d) Consider whether peer metrics, as described in paragraph 31 may be relevant for satisfying the requirements in whole or in part; and

(e) Consider the connections between the information disclosed to fulfil the requirements in paragraphs 16(b)–(g) with the information disclosed in the related financial statements, in accordance with paragraph B12(b)(ii). These connections include consistency in the data and assumptions used—to the extent possible—and linkages between the amounts disclosed in accordance with paragraphs 28(b)–(g) and the amounts recognized and disclosed in the financial statements. For example, an entity would consider whether the carrying amount of assets used is consistent with amounts included in the financial statements and would explain the connections between information in these disclosures and amounts in the financial statements.

AG87. Paragraph 28(f) requires an entity to disclose whether it applies internal carbon prices in decision making. The internal carbon price may be applicable for public sector entities in various ways, including but not limited to:

(a) Procurement, where a carbon price is incorporated into the cost of goods and services procured; and

(b) Internal taxes or fees, where a carbon price is charged internally, similar to intra-entity transfer pricing.

AG88. In the public sector, internal carbon prices may not always be set internally by individual entities. In some jurisdictions, another public sector entity such as a central department may establish a carbon price applicable for public sector entities for internal decision making such as procurement, across the jurisdiction. In such cases, this may be the entity's internal carbon price even though it is developed by an external source.

Climate-Related Targets (paragraphs 32–36)

Characteristics of a Climate-Related Target

AG89. Paragraph 32 requires an entity to disclose the quantitative or qualitative climate-related targets it has set, and any targets it is required to meet by law or regulation, including any greenhouse gas emissions targets. In disclosing these climate-related targets, the entity is required to disclose information about the characteristics of these targets as described in paragraphs 32(a)–(h). If the climate-related target is quantitative, an entity is required to describe whether the target is an absolute target or an intensity target. An absolute target is defined as a total amount of a measure or a change in the total amount of a measure, whereas an intensity target is defined as a ratio of a measure, or a change in the ratio of a measure, to an operating metric.

AG90. In identifying and disclosing the metric used to set a climate-related target and measure progress, an entity shall consider the metric categories in paragraphs 28(a)–(g) and, where relevant, peer metrics. If the metric has been developed by the entity to measure progress towards a target, the entity shall disclose information about:

(a) How the metric is defined, including whether it is derived by adjusting a metric taken from a source other than this Standard and, if so, which source and how the metric disclosed by the entity differs from the metric specified in that source;

(b) Whether the metric is an absolute measure, a measure expressed in relation to another metric or a qualitative measure (such as a red, amber, green—or RAG—status);

(c) Whether the metric is validated by a third party and, if so, which party; and

(d) The method used to calculate the metric and the inputs to the calculation, including the limitations of the method used and the significant assumptions made.

Greenhouse Gas Emissions Targets – Gross and Net Greenhouse Gas Emissions Targets

AG91. If an entity has a greenhouse gas emissions target, the entity is required to specify whether the target is a gross greenhouse gas emissions target or a net greenhouse gas emissions target. Gross greenhouse gas emissions targets reflect the total changes in greenhouse gas emissions planned within the entity's value chain. Net greenhouse gas emissions targets are the entity's targeted gross greenhouse gas emissions minus any planned offsetting efforts (for example, the entity's planned use of carbon credits to offset its greenhouse gas emissions).

AG92. Paragraph 35(c) specifies that if an entity has a net greenhouse gas emissions target it is required to also disclose a gross greenhouse gas emissions target. For the avoidance of doubt, if the entity discloses a net

greenhouse gas emissions target, this target cannot obscure information about its gross greenhouse gas emissions targets.

Carbon Credits

AG93. Paragraph 35(e) requires an entity to describe its planned use of carbon credits —which are transferable or tradeable instruments—to offset emissions to achieve any net greenhouse gas emissions targets the entity has set, or any targets it is required to meet by law or regulation. Any information about the planned use of carbon credits shall clearly demonstrate the extent to which these carbon credits are relied on to achieve the net greenhouse gas emissions targets.

AG94. In accordance with paragraph 35(e), an entity is required to disclose only its planned use of carbon credits. However, as part of this disclosure, the entity might also include information about carbon credits it has already purchased that the entity is planning to use to meet its net greenhouse gas emissions target, if the information enables primary users of general purpose financial reports to understand the entity's greenhouse gas emissions target.

Appendix B: General Requirements for Climate-Related Disclosures

This Appendix is an integral part of IPSASB SRS 1.

Definitions

B1. **The following terms are used in this Standard with the meanings specified:**

General purpose financial reports are reports that provide financial and non-financial information about a reporting entity that is useful to primary users in making decisions and to enable accountability. General purpose financial reports include—but are not restricted to—an entity's general purpose financial statements and climate-related disclosures.

In the context of climate-related disclosures, material information is information that, if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial reports prepared for that reporting period.

Primary users of general purpose financial reports (primary users) are existing and potential service recipients and their representatives and resource providers and their representatives.

Terms used in this Standard with the meanings specified in IPSAS Standards are set out in Appendix D: Terms in this IPSASB SRS Standard Defined in IPSAS Standards.

Conceptual Foundations

B2. For climate-related information to be useful, it must provide information that is relevant, faithfully represents what it purports to represent, is understandable, timely, comparable and verifiable. These are qualitative characteristics of information included in general purpose financial reports.

Fair Presentation

B3. A reporting entity shall present fairly its climate-related risks and opportunities that could reasonably be expected to affect the long-term fiscal sustainability of the entity.

B4. To identify an entity's climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability, an entity shall apply paragraphs B.AG1–B.AG22.

B5. Fair presentation requires disclosure of relevant information about climate-related risks and opportunities and their faithful representation in accordance with the principles set out in this Standard. To achieve faithful representation, an entity shall provide a depiction of those climate-related risks and opportunities that are complete, neutral and free from material error.

B6. Fair presentation also requires an entity:

(a) To present information in a manner that provides relevant, understandable, timely, comparable, and verifiable information (see Appendix C: Qualitative Characteristics); and

(b) To disclose additional information as needed to enable primary users of general purpose financial reports to sufficiently understand the effects of the entity's climate-related risks and opportunities on the entity's long-term fiscal sustainability.

B7. Applying this Standard, with additional information disclosed when necessary (see paragraph B6(b)), is presumed to result in climate-related disclosures that achieve fair presentation.

Materiality

B8. An entity shall disclose material information about an entity's climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability.

B9. In the context of climate-related disclosures, information is material if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial reports prepared for that reporting period.

B10. To determine and disclose material information, an entity shall apply paragraphs B.AG23–B.AG47.

Reporting Entity

B11. An entity's climate-related disclosures shall be for the same reporting entity as the related financial statements (see paragraph B.AG48).

Connected Information

B12. An entity shall provide information in a manner that enables primary users of general purpose financial reports to understand the following types of connections:

(a) The connections between the items to which the information relates—such as connections between various climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability; and

(b) The connections between disclosures provided by the entity:

(i) Within its climate-related disclosures—such as connections between disclosures on governance, strategy, risk management, and metrics and targets; and

(ii) Across its climate-related disclosures and other general purpose financial reports published by the entity—such as its related financial statements (see paragraphs B.AG49–B.AG54).

B13. An entity shall identify the financial statements to which the climate-related disclosures relate.

B14. Data and assumptions used in preparing the climate-related disclosures shall be consistent—to the extent possible considering the requirements of IPSAS Standards or other applicable GAAP—with the corresponding data and assumptions used in preparing the related financial statements (see paragraph B.AG52).

B15. When currency is specified as the unit of measure in the climate-related disclosures, the entity shall use the presentation currency of its related financial statements.

General Requirements

Sources of Guidance

Identifying Climate-Related Risks and Opportunities

B16. An entity shall apply this Standard in identifying climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability.

B17. In addition to this Standard, an entity may refer to and consider the applicability of:

(a) The most recent pronouncements of other standard-setting bodies whose requirements are designed to meet the information needs of primary users of general purpose financial reports; and

(b) The climate-related risks and opportunities identified by peer entities or entities that operate in the same function of government or geographical region(s). An entity may refer to and consider sector

standards such as the SASB Standards and GRI Sector Standards to consider applicability to the entity's circumstances.

Identifying Applicable Disclosure Requirements

B18. An entity shall apply this Standard in identifying applicable disclosure requirements about climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability.

B19. In the absence of guidance or metrics in this Standard that specifically apply to an entity's specific circumstances and climate-related risks and opportunities, an entity shall apply judgment to identify information that:

(a) Is relevant to the decision making of and enables accountability by primary users of general purpose financial reports; and

(b) Faithfully represents that climate-related risk or opportunity.

B20. In making the judgment described in paragraph B19:

(a) An entity may refer to and consider the applicability of peer metrics and may consider other guidance such as SASB Standards or GRI Sector Standards. An entity may conclude that such peer metrics are not applicable in the entity's circumstances.

(b) An entity may—to the extent that these sources do not conflict with this Standard—refer to and consider the applicability of:

(i) The most recent pronouncements of other standard-setting bodies whose requirements are designed to meet the information needs of primary users of general purpose financial reports; and

(ii) The information, including metrics, disclosed by peer entities or entities that operate in the same function of government or geographical region(s).

Disclosure of Information About Sources of Guidance

B21. An entity shall identify and disclose:

(a) The specific standards, pronouncements, function-specific practice and other sources of guidance that the entity has applied in preparing its climate-related disclosures, including, if applicable, peer metrics; and

(b) Other sources of guidance relating to a particular function(s) that the entity has applied in preparing its climate-related disclosures, including in identifying applicable metrics.

Location of Disclosures

B22. An entity is required to provide disclosures required by this Standard as part of its general purpose financial reports.

B23. Subject to any regulation or other requirements that apply to an entity, there are various possible locations in its general purpose financial reports in which to disclose climate-related information. Climate-related disclosures could be included in an entity's management commentary or a similar report when it forms part of an entity's general purpose financial reports. Management commentary or a similar report is a required report in many jurisdictions. It might be known by or included in reports with various names, such as "management report", "management's discussion and analysis", "operating and financial review", "integrated report" or "strategic report".

B24. An entity may disclose information required by this Standard in the same location as information disclosed to meet other requirements, such as information required by regulators. The entity shall ensure that the climate-related disclosures are clearly identifiable and not obscured by that additional information (see paragraph B.AG44).

B25. Information required by this Standard may be included in climate-related disclosures by cross-reference to another report published by the entity. If an entity includes information by cross-reference, the entity shall apply the requirements in paragraphs B.AG57–B.AG59.

Timing of Reporting

B26. An entity shall report its climate-related disclosures at the same time as its related financial statements. The entity's climate-related disclosures shall cover the same reporting period as the related financial statements.

B27. Normally, an entity prepares climate-related disclosures for a 12-month period. However, for practical reasons, some entities prefer to report, for example, for a 52-week period. This Standard does not preclude that practice.

B28. When an entity changes the end of its reporting period and provides climate-related disclosures for a period longer or shorter than 12 months, it shall disclose:

(a) The period covered by the climate-related disclosures;

(b) The reason for using a longer or shorter period; and

(c) The fact that the amounts disclosed in the climate-related disclosures are not entirely comparable.

B29. If, after the end of the reporting period but before the date on which the climate-related disclosures are authorized for issue, an entity receives information about conditions that existed at the end of the reporting period, it shall update disclosures that relate to those conditions in the light of the new information.

B30. An entity shall disclose information about transactions, other events and conditions that occur after the end of the reporting period, but before the date on which the climate-related disclosures are authorized for issue, if non-disclosure of that information could reasonably be expected to influence decisions that primary users of general purpose financial reports make on the basis of those reports.

B31. This Standard does not mandate which entities would be required to provide interim climate-related disclosures, how frequently, or how soon after the end of an interim period. If an entity is required or elects to publish interim climate-related disclosures in accordance with this Standard, the entity shall apply paragraph B.AG60.

Comparative Information

B32. An entity shall disclose comparative information in respect of the preceding period for all amounts disclosed in the reporting period. If such information would be useful for an understanding of the climate-related disclosures for the reporting period, the entity shall also disclose comparative information for narrative and descriptive climate-related information (see paragraphs B.AG61–B.AG71).

B33. Amounts reported in climate-related disclosures might relate, for example, to metrics and targets or to current and anticipated financial effects of climate-related risks and opportunities.

Statement of Compliance

B34. An entity whose climate-related disclosures comply with all the requirements of this Standard shall make an explicit and unreserved statement of compliance. An entity shall not describe climate-related disclosures as complying with this Standard unless they comply with all the requirements of this Standard.

B35. This Standard relieves an entity from disclosing information otherwise required if law or regulation prohibits the entity from disclosing that information (see paragraph B.AG42). An entity using this exemption is not prevented from asserting compliance with this Standard.

Judgments, Uncertainties and Errors

Judgments

B36. An entity shall disclose information to enable primary users of general purpose financial reports to understand the judgments, apart from those involving estimations of amounts (see paragraph B38), that the entity has made in the process of preparing its climate-related disclosures and that have the most significant effect on the information included in those disclosures.

B37. In the process of preparing climate-related information, an entity makes various judgments, apart from those involving estimations, that can significantly affect the information reported in the entity's climate-related disclosures. For example, an entity makes judgments in:

(a) Identifying climate-related risks and opportunities;

(b) Determining which sources of guidance to apply in accordance with paragraphs B16–B20;

(c) Determining material information to include in the climate-related disclosures; and

(d) Assessing whether an event or change in circumstances is significant and requires reassessment of the scope of all affected climate-related risks and opportunities throughout the entity's value chain (see paragraph B.AG22).

Measurement Uncertainty

B38. An entity shall disclose information to enable primary users of general purpose financial reports to understand the most significant uncertainties affecting the amounts reported in its climate-related disclosures.

B39. An entity shall:

(a) Identify the amounts that it has disclosed that are subject to a high level of measurement uncertainty; and

(b) In relation to each amount identified in paragraph B39(a), disclose information about:

(i) The sources of measurement uncertainty—for example, the dependence of the amount on the outcome of a future event, on a measurement technique or on the availability and quality of data from the entity's value chain; and

(ii) The assumptions, approximations and judgments the entity has made in measuring the amount.

B40. When amounts reported in climate-related disclosures cannot be measured directly and can only be estimated, measurement uncertainty arises. In some cases, an estimate involves assumptions about possible future events with uncertain outcomes. The use of reasonable estimates is an essential part of preparing climate-related disclosures and does not undermine the usefulness of the information if the estimates are accurately described and explained. However, high levels of measurement uncertainty could potentially diminish the reliability of an estimate in providing useful information. In the context of climate-related disclosures, the incorporation of qualitative information can also enhance the overall usefulness of the information.

B41. The requirement in paragraph B38 for an entity to disclose information about the uncertainties affecting the amounts reported in climate-related disclosures relates to the estimates that require the entity's most difficult, subjective or complex judgments. As the number of variables and assumptions increases, those judgments

become more subjective and complex, and the uncertainty affecting the amounts reported in the climate-related disclosures increases accordingly.

B42. The type and extent of the information an entity might need to disclose vary according to the nature of the amount reported in the climate-related disclosures—the sources of and the factors contributing to the uncertainty and other circumstances. Examples of the type of information an entity might need to disclose are:

(a) The nature of the assumption or other source of measurement uncertainty;

(b) The sensitivity of the disclosed amount to the methods, assumptions and estimates underlying its calculation, including the reasons for the sensitivity;

(c) The expected resolution of an uncertainty and the range of reasonably possible outcomes for the disclosed amount; and

(d) An explanation of changes made to past assumptions concerning the disclosed amount, if the uncertainty remains unresolved.

Errors

B43. An entity shall correct material prior period errors by restating the comparative amounts for the prior period(s) disclosed unless it is impracticable to do so.

B44. Prior period errors are omissions from, and misstatements in, the entity's climate-related disclosures for one or more prior periods. Such errors arise from a failure to use, or the misuse of, reliable information that:

(a) Was available when the climate-related disclosures for that period(s) were authorized for issue; and

(b) Could reasonably be expected to have been obtained and considered in the preparation of those disclosures.

B45. Corrections of errors are distinguished from changes in estimates. Estimates are approximations that an entity might need to revise as additional information becomes known.

B46. If an entity identifies a material error in its prior period climate-related disclosures, it shall apply paragraphs B.AG67–B.AG71.

Appendix B.AG: Application Guidance – General Requirements for Climate-Related Disclosures

This Appendix is an integral part of IPSASB SRS 1.

Climate-Related Risks and Opportunities

B.AG1. This Standard provides principles for an entity to disclose information about its climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability (see paragraph 2).

B.AG2. An entity shall use all reasonable and supportable information that is available to the entity at the reporting date without undue cost or effort (see paragraphs B.AG16–B.AG20):

(a) To identify the climate-related risks and opportunities; and

(b) To determine the scope of its value chain, including its breadth and composition, in relation to each of those climate-related risks and opportunities.

B.AG3. In determining material information for disclosure, an entity shall:

(a) Understand its context (paragraphs B.AG4–B.AG14);

(b) Identify climate-related risks and opportunities (paragraphs B.AG15–B.AG22); and

(c) Determine material information for disclosure (paragraphs B.AG23–B.AG47).

Understand the Entity's Context

B.AG4. Understanding an entity's own context is an important first step that provides the entity with critical information for identifying its climate-related risks and opportunities. To understand from an entity's own context, the entity should understand its activities, relationships, stakeholders, and the climate context in which these occur.

B.AG5. An entity's activities include all types of activities that an entity carries out to achieve its objectives. An entity should consider all aspects of its activities including, for example, the types of activities to deliver its services, the geographic location of these activities, the operating environment and economy, the intended beneficiaries, the nature of employees and non-employees (e.g., contractors or volunteers) and the work they perform for the entity.

B.AG6. An entity's relationships include those with upstream suppliers and service providers, and downstream delivery of services or goods to beneficiaries. For example:

(a) A public hospital's relationships may include those with upstream suppliers of medical equipment and emergency vehicles as well as downstream patients receiving services; and

(b) A taxation authority's relationships may include those with legislative bodies and private corporations and individuals that are required to pay taxes.

B.AG7. Public sector value chains are based on public value creation, rather than profit oriented, through providing essential services to improve service recipients' quality of life and fostering trust in the jurisdiction. Public sector entities serve the public interest and have a wide-ranging set of stakeholders, including primary users. Value chains for an entity are often complex, involving relationships and interactions with multiple stakeholders, including citizens, other public sector agencies, private corporations and nonprofit institutions.

B.AG8. Climate-related reporting shall consider all relevant stakeholders whose interests could reasonably be expected to be affected by the entity's activities, including those that may have a direct relationship with the

entity (e.g., employees, local communities, suppliers, other entities or individuals that may be affected by the entity's operations) or those who do not or are unable to articulate views (e.g., future generations).

B.AG9. An understanding of these stakeholders supports identification of climate-related risks and opportunities. This may result in a broad set of climate-related risks and opportunities, as engagement may be with a broader group than primary users of general purpose financial reports. However, this information will support the ultimate determination of material information that meets the needs of primary users for decision-making and accountability purposes.

B.AG10. This is consistent with the guidance in the *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the Conceptual Framework) that acknowledges that, while those other than the primary users may find the information provided by general purpose financial reports useful, general purpose financial reports are not developed to specifically respond to their information needs.

B.AG11. Climate-related reporting should consider the wider context and latest international developments on climate. Climate context includes:

(a) Objective and authoritative developments and measures such as scientific research or consensus on climate issues;

(b) The latest international agreements on climate-related goals and conditions; and

(c) Expectations of responsible conduct set out in authoritative intergovernmental instruments e.g., United Nations (UN) Sustainable Development Goals from the 2030 Agenda for Sustainable Development, UN Framework Convention on Climate Change, Universal Declaration of Human Rights, UN Guiding Principles on Business and Human Rights, UN Declaration on the Rights of Indigenous Peoples and in other recognized sector-specific, local, regional or global instruments.

B.AG12. An entity shall understand its role and objectives and how it contributes to delivering on climate change commitments, including the latest international agreements on climate change and related regional, national or subnational transition and adaptation plans. For example, an energy regulator whose objective is to ensure safe and efficient delivery of energy to its jurisdiction will contribute to climate change commitments by setting policies that support resource development of lower-emitting energy sources. In addition, the energy regulator would also identify climate-related risks and opportunities such as emissions from its operations or climate-related physical risks to facilities located near areas with increasing frequency of severe wildfires.

B.AG13. If certain processes or assessments have been performed by higher levels of government relating to these commitments, such as processes to engage relevant stakeholders, established national risk registers or climate-related scenario analysis, an entity may consider the applicability of these to the entity's own circumstances and may avoid duplication of efforts to the extent applicable.

B.AG14. The entity shall consider the activities, relationships, stakeholders, and climate context of all the entities it controls or has an interest in (e.g., controlled entities, joint arrangements, associates or holdings of other minority interests).

Identify Climate-Related Risks and Opportunities

Peer Disclosures

B.AG15. Entities are encouraged to consider the applicability of climate-related risks and opportunities that are common to other entities with similar operations, function of government, and/or geographic location because such disclosures may be expected by primary users of general purpose financial reports and may inform an entity's materiality judgments.

Reasonable and Supportable Information

B.AG16. To identify climate-related risks and opportunities, including the processes to engage relevant stakeholders (see paragraphs B.AG4–B.AG14), the entity shall use all reasonable and supportable information available to the entity without undue cost or effort.

B.AG17. Reasonable and supportable information used by an entity in preparing its climate-related disclosures shall cover factors that are specific to the entity as well as general conditions in the external environment. In some cases—such as in identifying an entity's climate-related risks and opportunities—reasonable and supportable information includes information about past events, current conditions and forecasts of future conditions.

B.AG18. An entity may use various sources of data that may be both internal and external. Possible data sources include the entity's risk management processes; peer group experience; and external ratings, reports and statistics. Information that is used by the entity in preparing its financial statements, operations, setting its strategy and managing its risks and opportunities is considered to be available to the entity without undue cost or effort.

B.AG19. An entity need not undertake an exhaustive search for information to identify climate-related risks and opportunities. The assessment of what constitutes undue cost or effort depends on the entity's specific circumstances and requires a balanced consideration of the costs and efforts for the entity and the benefits of the resulting information for primary users. That assessment can change over time as circumstances change.

B.AG20. In some cases, an entity may leverage another entity's processes, such as a national risk register or climate-related scenario analysis performed by centralized public sector entities in its jurisdiction. The entity may consider the applicability of the other entity's processes and findings and, where applicable, cross-reference to the other entity's reports and consider whether additional entity-specific information is required for primary users' decision-making and accountability needs (see paragraphs B.AG57–B.AG59).

Reassessment of the Scope of Climate-Related Risks and Opportunities

B.AG21. Climate-related risks and opportunities may change over time as the entity's activities, relationships, stakeholders and climate context evolve. New activities, new relationships, and major changes in operations or the operating context could lead to changes in the entity's climate-related risks and opportunities. For this reason, the entity may, but is not required to, reassess its context and identify climate-related risks and opportunities on an ongoing basis.

B.AG22. At a minimum, an entity shall reassess the scope of all affected climate-related risks and opportunities throughout its value chain on the occurrence of a significant event or significant change in circumstances. A significant event or significant change in circumstances can occur without the entity being involved in that event or change in circumstances, or as a result of a change in what the entity assesses to be important to primary users of general purpose financial reports. For example, such significant events or significant changes in circumstances might include:

(a) A significant change in the entity's value chain (for example, a supplier in the entity's value chain makes a change that significantly alters the supplier's greenhouse gas emissions);

(b) A significant change in the entity's operational model, activities or structure (for example, changes in structure following a change in political leadership); and

(c) A significant change in an entity's exposure to climate-related risks and opportunities (for example, an increase in frequency or severity of extreme weather events in the entity's jurisdiction that increases risks to the entity).

Materiality (paragraphs B8–B10)

B.AG23. Primary users of public sector general purpose financial reports include service recipients and their representatives, such as legislature or members of parliament who act as representatives of citizens, eligible residents and taxpayers, and resource providers and their representatives, such as multilateral or bilateral donor agencies and lenders and corporations that provide resources to, and transact with, government.

B.AG24. Information is material if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial reports prepared for that reporting period. Materiality depends on both the nature and magnitude of the item judged in the particular circumstances of each entity.

B.AG25. Assessing whether information could reasonably be expected to influence decisions made by primary users requires an entity to consider the characteristics of primary users while also considering the entity's own circumstances.

B.AG26. Service recipients and resource providers require climate-related information for accountability purposes that contributes to, and informs, decision making. Climate-related information needs for accountability and decision-making may be different for different users. For example, a service recipient may look for information on the entity's climate resilience and ability to deliver its service objectives in light of climate-related physical risks to inform how they vote or where they choose to live; while a central government may look for the entity's effective contribution to national transition and adaptation plans to inform its policy setting strategies and/or allocation of resources.

B.AG27. Climate-related disclosures are prepared for primary users who have a reasonable knowledge of public sector programs and operations and who review and analyze the information diligently. At times, even well-informed and diligent primary users may need the aid of an adviser to understand climate-related information.

B.AG28. Individual primary users may have different, and sometimes even conflicting, information needs and desires. Information needs of primary users may also evolve over time. Climate-related disclosures are intended to meet common information needs of primary users.

Determining Material Information

B.AG29. Materiality depends on both qualitative and quantitative information judged in the circumstances of each entity during the reporting period and in the future. Consequently, it is not possible to specify a uniform characteristic or set of characteristics at which a particular type of information becomes material.

B.AG30. To determine material information about a climate-related risk or opportunity, an entity shall apply, as the starting point, the requirements of this Standard.

B.AG31. An entity shall assess whether the information identified in applying this Standard, either individually or in combination with other information, is material in the context of the entity's climate-related disclosures taken as a whole. In assessing whether information is material, an entity shall consider both quantitative and qualitative factors. For example, an entity might consider the magnitude and the nature of the effect of a climate-related risk or opportunity.

B.AG32. An entity need not disclose information otherwise required by this Standard if the information is not material. This is the case even if this Standard contains a list of specific requirements.

B.AG33. Though materiality judgments are specific to an entity, entities are encouraged to consider the applicability of disclosures provided by peers. For example, if an entity is not exposed to a risk to which other peer entities are exposed, the lack of exposure to that particular risk could also be material information where an entity may be expected to incur that risk.

Qualitative Judgments in Materiality

B.AG34. An entity generally assesses whether information is quantitatively material by considering the magnitude, such as the amount and size, of the transaction against measures of the entity's financial position, financial performance and cash flows. For example, the anticipated expenses to develop green infrastructure may be of such a size that it could reasonably be expected to influence decisions that primary users make on the basis of that information.

B.AG35. However, an item of information could reasonably be expected to influence primary users' decisions and assessment of accountability regardless of magnitude or size compared against the entity's financial position, financial performance and cash flows. For example:

(a) How difficult it is to remediate greenhouse gas emissions may influence an entity's primary users' decisions regardless of the size of those emissions;

(b) The lack of processes, such as the lack of climate-related reporting processes, could be material information; and

(c) The range of estimates and the number of assumptions required to estimate the financial effects of a climate-related opportunity could influence how useful the information may be to meet primary users' accountability and decision-making needs.

B.AG36. Information about a single climate-related risk or opportunity may not be material on an individual basis. However, similar climate-related risks or opportunities may be material when taken in aggregate. For example, an entity might be exposed to several climate-related risks, each of which could cause the same type of disruption (such as disruptions to the entity's supply chain). Information about an individual source of risk might not be material if disruption from that source is highly unlikely to occur. However, information about the aggregate risk—the risk of supply chain disruption from all sources—might be material.

B.AG37. With regard to potential future climate-related risks and opportunities, an entity may assess whether information is qualitatively material by considering the likelihood of the potential climate-related risk or opportunity. For example:

(a) Information about a possible future event is more likely to be judged as being material if the potential effects are significant and the event is likely to occur;

(b) If a possible future event is expected to affect an entity or society, but only many years in the future, information about that event is usually less likely to be judged material than information about a possible future event with similar effects that are expected to occur sooner; and

(c) Whether a climate-related opportunity is currently being pursued as part of its approved strategy, as opposed to a general opportunity for the entity, may affect how useful the information is to the user for decision-making purposes.

B.AG38. In some circumstances, an item of information could reasonably be expected to influence primary users' decisions regardless of the magnitude of the potential effects of the future event or the timing of that event. For example, this might happen if information about a particular risk or opportunity is highly scrutinized by primary users of an entity's general purpose financial reports.

B.AG39. An entity must consider the context in which it operates when making materiality judgments, and in respect of prospective information, the preparer's knowledge and expectations about the future, including the range of possible outcomes and the likelihood within that range and all pertinent facts and circumstances. An entity shall also consider whether information about low-probability and high-severity outcomes might be material either individually or in combination with information about other low-probability and high-severity outcomes.

Interaction with Law or Regulation

B.AG40. Laws or regulations might specify requirements for an entity to disclose climate-related information in its general purpose financial reports. In such circumstances, the entity is permitted to include in its climate-related disclosures information to meet legal or regulatory requirements, even if that information is not material. However, such information shall not obscure material information.

B.AG41. An entity shall disclose material climate-related information, even if a law or regulation permits the entity not to disclose such information.

B.AG42. An entity need not disclose information otherwise required by this Standard if law or regulation prohibits the entity from disclosing that information. If an entity omits material information for that reason, it shall identify the type of information not disclosed and explain the source of the restriction to the extent allowed by law and regulation.

Reporting Material Information

B.AG43. An entity should report information in a concise way and aggregate information where useful without omitting necessary details. An entity should consider the appropriate level of aggregation or disaggregation, for example, by geographical location, by nature or by function, in light of all relevant facts and circumstances.

B.AG44. An entity should not obscure material information. Information is obscured if it is communicated in a way that would have a similar effect for primary users to omitting or misstating that information. Examples of circumstances that might result in material information being obscured include:

(a) Material information is not clearly distinguished from additional information that is not material;

(b) Material information is disclosed in the climate-related disclosures, but the language used is vague or unclear;

(c) Material information about a climate-related risk or opportunity is unreasonably scattered throughout the climate-related disclosures;

(d) Items of information that are dissimilar are inappropriately aggregated;

(e) Items of information that are similar are inappropriately disaggregated; and

(f) The understandability of the climate-related disclosures is reduced as a result of material information being hidden by immaterial information to the extent that a primary user is unable to determine what information is material.

B.AG45. An entity shall reassess its materiality judgments at each reporting date to take account of changed circumstances and assumptions. Because of changes in the entity's individual circumstances, or in the external environment, some types of information included in an entity's climate-related disclosures for prior periods might no longer be material. Conversely, some types of information not previously disclosed might become material.

Aggregation and Disaggregation

B.AG46. When an entity applies this Standard, it shall consider all facts and circumstances and decide how to aggregate and disaggregate information in its climate-related disclosures. The entity shall not reduce the understandability of its climate-related disclosures by obscuring material information with immaterial information or by aggregating material items of information that are dissimilar to each other.

B.AG47. An entity shall not aggregate information if doing so would obscure information that is material. Information shall be aggregated if items of information have shared characteristics and shall not be aggregated if they

do not have shared characteristics. For example, the entity might need to disaggregate information about climate-related risks and opportunities by geographical location.

Reporting Entity (paragraph B11)

B.AG48. Climate-related disclosures should be reported for the same reporting entity as the related general purpose financial statements. This enables primary users of general purpose financial reports to understand the effects of climate-related risks and opportunities on the reporting entity's finances.

Connected Information (paragraphs B12–B15)

B.AG49. Paragraph B12 requires an entity to provide information in a manner that enables primary users of general purpose financial reports to understand connections both between the items that could reasonably be expected to affect the entity's long-term fiscal sustainability and between disclosures provided by the entity in its general purpose financial reports.

B.AG50. Connected information provides insight into connections between the items to which the information relates. For example:

(a) If an entity passed a particular climate-related policy that resulted in an increase in the entity's tax revenue, connected information will depict that relationship between the entity's strategy and its financial statements;

(b) If an entity identified a trade-off between two climate-related risks it is exposed to and took action on the basis of its assessment of that trade-off, connected information will depict the relationship between those risks or outcomes and the entity's strategy; and

(c) If an entity committed to a particular climate-related target, but that commitment has not yet affected the entity's financial position, financial performance, and cash flows because the applicable recognition criteria have not been met, connected information will depict that relationship.

B.AG51. Connected information includes:

(a) Connections between various types of information about a particular climate-related risk or opportunity, such as:

(i) Between disclosures on governance, strategy and risk management; and

(ii) Between narrative information and quantitative information (including related metrics and targets and information in the related financial statements); and

(b) Connections between disclosures about various climate-related risks and opportunities. For example, if an entity integrates its oversight of climate-related risks and opportunities, the entity shall integrate the disclosures on governance instead of providing separate disclosures on governance for each climate-related risk and opportunity.

B.AG52. Drawing connections between disclosures involves, but is not limited to, providing necessary explanations and cross-references and using consistent data, assumptions, and units of measure. In providing connected information, an entity shall:

(a) Explain connections between disclosures in a clear and concise manner; and

(b) Disclose information about significant differences between the data and assumptions used in preparing the entity's climate-related disclosures and the data and assumptions used in preparing the related financial statements.

B.AG53. For example, in providing connected information an entity might need to explain the effect or likely effect of its strategy on its financial statements and financial planning, or explain how that strategy relates to the metrics the entity uses to measure progress against targets. Another entity might need to explain how its use of natural resources or changes within its value chain could amplify or, in contrast, reduce its climate-related risks and opportunities. The entity might need to link the information about its use of natural resources or changes within its value chain to information about current or anticipated financial effects, its strategic response to mitigate those risks and its related investment in new assets. The entity might need to link narrative information to the related metrics and targets and to information in the related financial statements.

B.AG54. Other examples of connected information include:

(a) An explanation of the combined effects of the entity's climate-related risks and opportunities and its strategy on its long-term fiscal sustainability over the short, medium and long term. For example, an entity might face social pressure and increasing demand for lower-carbon alternatives. The entity might need to explain how its strategic response, such as transitioning to electric buses, affects the useful lives of its assets and on impairment assessments.

(b) A description of the alternatives that an entity evaluated in setting its strategy in response to its climate-related risks and opportunities, including a description of the trade-offs between those climate-related risks and opportunities . For example, an entity might need to explain the potential effects of retrofitting public buildings with low-carbon heating systems on operating budgets, comfort, and maintenance requirements.

General Requirements

Sources of Guidance (paragraphs B16–B21)

B.AG55. An entity may—to the extent that these sources assist the entity in meeting the objective of this Standard (see paragraphs 1–2) and do not conflict with this Standard—refer to and consider the applicability of sources such as:

(a) IFRS Sustainability Disclosure Standards;

(b) The Global Reporting Initiative Standards;

(c) UN System of Environmental Economic Accounting (UN SEEA); and

(d) Country or region-specific sources (e.g., European Sustainability Reporting Standards).

B.AG56. In applying the sources of guidance specified in paragraph B.AG55, an entity shall not obscure material information required by this Standard (see paragraph B.AG44). If an entity applies the sources of guidance specified in paragraph B.AG55 without applying the requirements in this Standard, the entity shall not make an explicit and unreserved statement of compliance with this Standard.

Information Included by Cross-Reference (paragraph B25)

B.AG57. Information required by this Standard might be available in another report published by the entity. For example, the required information could be disclosed in the related financial statements. Material information can be included in an entity's climate-related disclosures by cross-reference, provided that:

(a) The cross-referenced information is available on the same terms and at the same time as the climate-related disclosures; and

(b) The climate-related disclosures are not made less understandable by including information by cross-reference.

B.AG58. Information included by cross-reference becomes part of the climate-related disclosures and shall comply with the requirements of this Standard. For example, it needs to be relevant, representationally faithful, comparable, verifiable, timely and understandable. The bodies or individuals that authorizes the general purpose financial reports takes the same responsibility for the information included by cross-reference as it does for the information included directly.

B.AG59. If information required by this Standard is included by cross-reference:

(a) The climate-related disclosures shall clearly identify the report within which that information is located and explain how to access that report; and

(b) The cross-reference shall be to a precisely specified part of that report.

Interim Reporting (paragraph B31)

B.AG60. In the interest of timeliness and cost considerations, and to avoid repetition of information previously reported, an entity may be required or choose to provide less information at interim dates than it provides in its annual climate-related disclosures. Interim climate-related disclosures are intended to provide an update on the latest climate-related information. These disclosures focus on new information, events and circumstances and do not duplicate information previously reported. Although the information provided in interim climate-related disclosures may be more condensed than in annual climate-related disclosures, an entity is not prohibited or discouraged from publishing a complete climate-related disclosures report as specified in this Standard as part of its interim general purpose financial report.

Comparative Information (paragraph B32)

B.AG61. Paragraph B32 requires an entity to disclose comparative information in respect of the preceding period for all amounts disclosed in the reporting period.

Metrics

B.AG62. In some cases, the amount disclosed for a metric is an estimate. Except as specified in paragraph B.AG63, if an entity identifies new information in relation to the estimated amount disclosed in the preceding period and the new information provides evidence of circumstances that existed in that period, the entity shall:

(a) Disclose a revised comparative amount that reflects that new information;

(b) Disclose the difference between the amount disclosed in the preceding period and the revised comparative amount; and

(c) Explain the reasons for revising the comparative amount.

B.AG63. In applying the requirement in paragraph B.AG62, an entity need not disclose a revised comparative amount:

(a) If it is impracticable to do so (see paragraph B.AG66); or

(b) If the metric is forward-looking. Forward-looking metrics relate to possible future actions, events and other conditions. The entity is permitted to revise a comparative amount for a forward-looking metric if doing so does not involve the use of hindsight.

B.AG64. If an entity redefines or replaces a metric in the reporting period, the entity shall:

(a) Disclose a revised comparative amount, unless it is impracticable to do so;

(b) Explain the changes; and

(c) Explain the reasons for those changes, including why the redefined or replacement metric provides more useful information.

B.AG65. If an entity introduces a new metric in the reporting period, it shall disclose a comparative amount for the preceding period for that metric unless it is impracticable to do so.

B.AG66. Sometimes, it is impracticable to revise a comparative amount to achieve comparability with the reporting period. For example, data might not have been collected in the preceding period in a way that allows retrospective application of a new definition of a metric, and it might be impracticable to recreate the data. If it is impracticable to revise a comparative amount for the preceding period, an entity shall disclose that fact.

Errors

B.AG67. Paragraphs B43–B46 requires an entity to correct material prior period errors.

B.AG68. Such errors include: the effects of mathematical mistakes, mistakes in applying the definitions for metrics or targets, oversights or misinterpretations of facts, and fraud.

B.AG69. Potential reporting period errors discovered in that period are corrected before the climate-related disclosures are authorized for issue. However, material errors are sometimes not discovered until a subsequent period.

B.AG70. If an entity identifies a material error in its prior period(s) climate-related disclosures, it shall disclose:

(a) The nature of the prior period error;

(b) The correction, to the extent practicable, for each prior period disclosed; and

(c) If correction of the error is impracticable, the circumstances that led to the existence of that condition and a description of how and from when the error has been corrected.

B.AG71. When it is impracticable to determine the effect of an error on all prior periods presented, the entity shall restate the comparative information to correct the error from the earliest date practicable.

Appendix C: Qualitative Characteristics

This Appendix is an integral part of IPSASB SRS 1.

Introduction

C1. The Conceptual Framework establishes the objective and concepts that underpin general purpose financial reporting by public sector entities.

C2. Climate-related disclosures are part of general purpose financial reports. The qualitative characteristics in the Conceptual Framework, therefore, apply to climate-related information. However, the nature of some of the information required to meet the objective of this Standard (see paragraphs 1–2) differs in some respects from the information provided in general purpose financial statements.

C3. Climate-related information is useful if it has the qualitative characteristics of relevance, faithful representation, understandability, timeliness, comparability and verifiability.

Qualitative Characteristics of Useful Climate-Related Information

Relevance

C4. Climate-related information is relevant if it is capable of making a difference in achieving the reporting objectives of accountability and decision making. Information may be capable of making a difference, and thus be relevant, even if some primary users choose not to take advantage of it or are already aware of it from other sources. It is capable of making a difference in decisions or evaluation of accountability by primary users if it has confirmatory value, predictive value, or both.

C5. Climate-related information has confirmatory value if it confirms or changes past (or present) expectations.

C6. Climate-related information has predictive value in helping form expectations about the future. Climate-related information need not be a prediction or forecast to have predictive value. Climate-related information with predictive value is employed by primary users in making their own predictions. For example, information about water quality, which can include information about the water being polluted, could inform the expectations of primary users about the ability of an entity to meet local water-quality requirements.

C7. The confirmatory and predictive roles of information are interrelated—for example, information for the current year about greenhouse gas emissions, which primary users can use as the basis for predicting greenhouse gas emissions in future years, can also be compared with predictions about greenhouse gas emissions for the current year that were made in past years. The results of those comparisons can help primary users to correct and improve the processes they previously used to make those predictions.

Faithful Representation

C8. To be useful, climate-related information must faithfully represent the substance of the phenomena that it purports to represent. To be a faithful representation, a depiction would be complete, neutral and free from material error.

C9. In practice, it may not be possible to know or confirm whether information presented in general purpose financial reports is complete, neutral, and free from material error. However, information should be as complete, neutral, and free from error as is possible.

C10. An omission of some information can cause the representation of a phenomenon to be false or misleading, and thus not useful to primary users of general purpose financial reports. A complete depiction of a climate-related risk or opportunity includes all material information necessary for primary users to understand that risk or opportunity.

C11. Neutrality in reporting is the absence of bias. It means that the selection and presentation of climate-related information is not made with the intention of attaining a particular predetermined result—for example, to influence in a particular way primary users' assessment of the discharge of accountability by the entity or a decision or judgment that is to be made, or to induce particular behavior.

C12. Neutral information faithfully represents the phenomena that it purports to represent. However, to require information included in general purpose financial reports to be neutral does not mean that it is not without purpose or that it will not influence behavior. Relevance is a qualitative characteristic and, by definition, relevant information is capable of influencing primary users' assessments and decisions. Some climate-related information—for example, targets or plans—is aspirational. A neutral discussion of such matters covers both aspirations and the factors or challenges that could prevent an entity from achieving these aspirations.

C13. Neutrality is supported by the exercise of prudence. Prudence is the exercise of caution when making judgments under conditions of uncertainty. The exercise of prudence means that opportunities are not overstated and risks are not understated. Equally, the exercise of prudence does not allow for the understatement of opportunities or the overstatement of risks.

C14. The exercise of prudence does not imply a need for asymmetry; for example, a systematic need for more persuasive evidence to support disclosure of climate-related risks than opportunities. Particular standards may contain asymmetric requirements where there is a consequence of decisions intended to select the most relevant information that faithfully represents what it purports to represent.

C15. The phenomena represented in general purpose financial reports generally occur under conditions of uncertainty. Information included in general purpose financial reports will therefore often include estimates that incorporate management's judgment. To faithfully represent a phenomenon, an estimate must be based on appropriate inputs, and each input must reflect the best available information. Caution will need to be exercised when dealing with uncertainty. It may sometimes be necessary to explicitly disclose the degree of uncertainty in climate-related information to faithfully represent the phenomena.

C16. Free from material error does not mean complete accuracy in all respects. Free from material error means there are no errors or omissions that are individually or collectively material in the description of the phenomenon, and the process used to produce the reported information has been applied as described. In some cases, it may be possible to determine the accuracy of some information included in the general purpose financial reports—for example, the governance and risk management practices of the entity. However, in other cases it may not—for example, the accuracy of an estimate of Scope 3 greenhouse gas emissions. In these cases, the estimate will be free from material error if the amount is clearly described as an estimate, the nature and limitations of the estimation process are explained, and no material errors have been identified in selecting and applying an appropriate process for developing the estimate.

Understandability

C17. Climate-related information shall be clear and concise. For climate-related disclosures to be concise, they need:

(a) To avoid generic information, sometimes called "boilerplate", that is not specific to the entity;

(b) To avoid duplication of information in the general purpose financial reports, including unnecessary duplication of information also provided in the related financial statements; and

(c) To use clear language and clearly structured sentences and paragraphs.

C18. The clearest form a disclosure can take will depend on the nature of the information and might include tables, graphs or diagrams in addition to narrative text. If graphs or diagrams are used, additional text or tables might be necessary to avoid obscuring material detail.

C19. Clarity might be enhanced by distinguishing information about developments in the reporting period from 'standing' information that remains unchanged, or changes little, from one period to the next—for example, by separately describing features of an entity's climate-related governance and risk management processes that have changed since the previous reporting period.

C20. Disclosures are concise if they include only material information. Any immaterial information included shall be provided in a way that avoids obscuring material information.

C21. Some climate-related information may be particularly complex and might be difficult to present in a manner that is easy to understand. All efforts should be undertaken to represent the information in a manner that is understandable to a wide range of primary users. However, information should not be excluded from climate-related disclosures solely because it may be too complex or difficult for some primary users to understand without assistance.

C22. Understandability is enhanced when information is classified, characterized, and presented clearly and concisely. Comparability also can enhance understandability. The completeness, clarity and comparability of climate-related information all rely on information being presented as a coherent whole. For climate-related information to be coherent, it shall be presented in a way that explains the context and the connections between the related items of information.

C23. If climate-related information located in one part of an entity's general purpose financial report has implications for information disclosed in other parts, the entity shall include the information necessary for primary users to assess those implications.

C24. Coherence also requires an entity to provide information in a way that allows primary users to relate information about its climate-related risks and opportunities to information in the entity's financial statements.

Timeliness

C25. Timeliness means having information available for primary users before it loses its capacity to be useful for accountability and decision-making purposes. Having relevant information available sooner can enhance its usefulness as input to assessments of accountability and its capacity to inform and influence decisions that need to be made. A lack of timeliness can render information less useful.

Comparability

C26. Comparability is the quality of information that enables primary users to identify similarities in, and differences between, two sets of phenomena. Comparability is not a quality of an individual item of information, but rather a quality of the relationship between two or more items of information.

C27. Comparability differs from consistency. Consistency refers to the use of the same approaches and basis of preparation of climate-related information, either from period to period within an entity or in a single period across more than one entity. Comparability is the goal, and consistency helps in achieving that goal. In some cases, the approaches or methodologies adopted by an entity may be revised to better represent particular climate-related information. In these cases, the inclusion of additional disclosures or explanation may be necessary to satisfy the characteristics of comparability.

C28. Comparability also differs from uniformity. For information to be comparable, like things must look alike and different things must look different. An over-emphasis on uniformity may reduce comparability by making unlike things look alike. Comparability of climate-related information is not enhanced by making unlike things look alike, any more than it is by making like things look different.

Verifiability

C29. Verifiability is the quality of information that helps to give primary users confidence that information in the general purpose financial reports faithfully represents the phenomena that it purports to represent. The characteristic implies that different knowledgeable and independent observers could reach general consensus, although not necessarily complete agreement, that either:

(a) The information represents the phenomena that it purports to represent without material error or bias; or

(b) An appropriate recognition, measurement, or representation method has been applied without material error or bias.

C30. To be verifiable, information need not be a single point estimate. A range of possible amounts and the related probabilities also can be verified.

C31. The quality of verifiability is not an absolute—some information may be more or less capable of verification than other information. However, the more verifiable the information is, the more it will help to give primary users confidence that the information faithfully represents the phenomena that it purports to represent. Climate-related information can be more verifiable by, for example:

(a) Including information that can be corroborated by comparing it with other information available to primary users about an entity's operations, about other entities with similar activities or operations, or about the external environment in which the entity operates;

(b) Providing information about inputs and methods of calculation used to produce estimates or approximations; and

(c) Providing information reviewed and agreed by the entity's governing bodies, committees or equivalent.

C32. Some climate-related information may include financial and other quantitative information and explanations about the anticipated future effects, or prospective financial and non-financial information. It may not be possible to verify the accuracy of all quantitative representations and explanations of such information until a future period, if at all.

C33. To help give primary users confidence that prospective financial and non-financial information and explanations faithfully represent the phenomena that they purport to represent, the assumptions that underlie the information disclosed, the methodologies adopted in compiling that information, and the factors and circumstances that support any opinions expressed or disclosures made should be transparent. This will enable primary users to form judgments about the appropriateness of those assumptions and the method of compilation, measurement, representation and interpretation of the information.

Constraints on Climate-Related Information Included in General Purpose Financial Reports

Materiality

C34. Information is material if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial reports prepared for that reporting period. Materiality depends on both the nature and magnitude of the item judged in the particular circumstances of each entity.

C35. Assessments of materiality will be made in the context of the legislative, institutional and operating environment within which the entity operates and, in respect of prospective financial and non-financial information, the preparer's knowledge and expectations about the future. Disclosure of information about compliance or non-compliance with legislation, regulation or other authority may be material because of its nature—irrespective of the magnitude of any amounts involved. In determining whether an item is material

in these circumstances, consideration will be given to such matters as the nature, legality, sensitivity and consequences of past or anticipated transactions and events, the parties involved in any such transactions and the circumstances giving rise to them.

Cost-Benefit

C36. Reporting climate-related information imposes costs. The benefits of reporting should justify those costs. Assessing whether the benefits of providing information justify the related costs is often a matter of judgment, because it is often not possible to identify and/or quantify all the costs and all the benefits of information included in general purpose financial reports.

C37. The costs of providing information include the costs of collecting and processing the information, the costs of verifying it and/or presenting the assumptions and methodologies that support it, and the costs of disseminating it. Primary users incur the costs of analysis and interpretation. Omission of useful information also imposes costs, including the costs that primary users incur to obtain needed information from other sources and the costs that result from making decisions using incomplete data provided by general purpose financial reports.

C38. Preparers expend the majority of the effort to provide climate-related information. However, service recipients and resource providers ultimately bear the cost of those efforts—because resources are redirected from service delivery activities to preparation of information for inclusion in general purpose financial reports.

C39. Primary users reap the majority of benefits from the climate-related information. However, climate-related information may also be used internally by management and result in better decision making by management. The disclosure of climate-related information consistent with this Standard will enhance and reinforce perceptions of the transparency of climate-related reporting by governments and other public sector entities and may contribute to the more accurate pricing of public sector debt. Therefore, public sector entities may also benefit in a number of ways from climate-related information provided by general purpose financial reports.

C40. Application of the cost-benefit constraint involves assessing whether the benefits of reporting information are likely to justify the costs incurred to provide and use the information. When making this assessment, it is necessary to consider whether one or more qualitative characteristic might be sacrificed to some degree to reduce cost.

Balance Between the Qualitative Characteristics

C41. The qualitative characteristics work together to contribute to the usefulness of information. For example, neither a depiction that faithfully represents an irrelevant phenomenon, nor a depiction that unfaithfully represents a relevant phenomenon, results in useful information. Similarly, to be relevant, information must be timely and understandable.

C42. In some cases, a balancing or trade-off between qualitative characteristics may be necessary to achieve the objectives of climate-related reporting. The relative importance of the qualitative characteristics in each situation is a matter of professional judgment. The aim is to achieve an appropriate balance among the characteristics in order to meet the objectives of climate-related reporting.

Appendix D: Terms in this IPSASB SRS Standard Defined in IPSAS Standards

This Appendix accompanies, but is not part of, IPSASB SRS 1.

The definitions in this Appendix are taken from the IPSAS Standards Glossary of Defined Terms. These definitions are included for reference only, to provide additional context in understanding and applying the principles of IPSASB SRS 1.

Term	Definition
Acquisition	A public sector combination in which one party to the combination gains control of one or more operations, and there is evidence that the combination is not an amalgamation.
Assets	Resources controlled by an entity as a result of past events and from which future economic benefits or service potential are expected to flow to the entity.
Carrying amount of a liability	The amount at which a liability is recognized in the statement of financial position.
Carrying amount of an asset	The amount at which an asset is recognized in the statement of financial position, after deducting any accumulated depreciation and accumulated impairment losses thereon.
Cash	Comprises cash on hand and demand deposits.
Cash flows	Inflows and outflows of cash and cash equivalents.
Contract	An agreement between two or more parties that creates enforceable rights and obligations.
Control	An entity controls another entity when the entity is exposed, or has rights, to variable benefits from its involvement with the other entity and has the ability to affect the nature or amount of those benefits though its power over the other entity.
Controlled entity	An entity that is controlled by another entity.
Credit risk	The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.
Decision maker	An entity with decision-making rights that is either a principle or an agent for other parties.
Impairment	A loss in the future economic benefits or service potential of an asset, over and above the systematic recognition of the loss of the asset's future economic benefits or service potential through depreciation.
Impracticable	Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so.
Joint arrangement	An arrangement of which two or more parties have joint control.
Joint venture	A joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

Key management personnel	(a) All directors or members of the governing body of the entity; and (b) Other persons having the authority and responsibility for planning, directing and controlling the activities of the reporting entity. Where they meet this requirement, key management personnel include: (i) Where there is a member of the governing body of a whole-of-government entity who has the authority and responsibility for planning, directing, and controlling the activities of the reporting entity, that member; (ii) Any key advisors of that member; and (iii) Unless already included in (a), the senior management group of the reporting entity, including the chief executive or permanent head of the reporting entity.
Market risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk, and other price risk.
Presentation currency	The currency in which financial statements are presented.
Reporting date	The date of the last day of the reporting period to which the financial statements relate.
Revenue	The gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets/equity, other than increases relating to contributions from owners.
Taxes	Economic benefits or service potential compulsorily paid or payable to the entity, in accordance with laws and/or regulations, established to provide revenue to the government. Taxes do not include fines or other penalties imposed for breaches of laws and/or regulations.
Transfer	A transaction, other than taxes, in which an entity receives a resource from a resource provider (which may be another entity or an individual) without directly providing any good, service, or other asset in return.
Useful life (of a non-cash-generating asset)	Either: (a) The period over which an asset is expected to be used by the entity; or (b) The number of production or similar units expected to be obtained from the asset by an entity.
Useful life (of property, plant, and equipment or an intangible asset)	Either: (a) The period over which an asset is expected to be available for use by an entity; or (b) The number of production or similar units expected to be obtained from the asset by an entity.

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, IPSASB SRS 1.

Introduction

BC1. IPSASB SRS 1, *Climate-related Disclosures* is based primarily on IFRS S2 *Climate-related Disclosures* (IFRS S2). Appendix B: General Requirements for Climate-Related Disclosures and Appendix C: Qualitative Characteristics are based primarily on IFRS S1 *General Requirements for Disclosure of Sustainability-related Financial Information* (IFRS S1) and the Conceptual Framework, respectively.

BC2. After considering responses to the Consultation Paper (CP), *Advancing Public Sector Sustainability Reporting,* which was published in May 2022, the IPSASB concluded that there was strong support for the proposals in the CP, including:

(a) The need for public sector specific sustainability reporting standards;

(b) That climate-related disclosures should be prioritized as the most urgent topic; and

(c) That it was appropriate to leverage private sector guidance, where relevant, starting with the IFRS Sustainability Disclosure Standards, while also considering the multistakeholder approach from the GRI Standards.

BC3. These conclusions resulted in the development of IPSASB SRS ED 1, *Climate-related Disclosures*.

BC4. Consistent with IPSAS, this Standard is designed to apply to public sector entities that meet all the following three criteria:

(a) Are responsible for the delivery of services to benefit the public and/or to redistribute income and wealth;

(i) Services encompass goods, services and policy advice, including to other public sector entities;

(b) Mainly finance their activities, directly or indirectly, by means of taxes and/or transfers from other levels of government, social contributions, debt or fees; and

(c) Do not have the primary objective to make profits.

BC5. Adoption of this Standard does not require adoption of IPSAS Standards; entities may choose to adopt either set of standards without the requirement to adopt the other.

BC6. Consistent with the Conceptual Framework, this Standard applies to a wide range of public sector entities, including:

(a) National, regional, state/provincial and local governments;

(b) Government ministries, departments, programs, boards, commissions, agencies;

(c) Public sector social security funds, trusts and statutory authorities; and

(d) International governmental organizations.

BC7. Consistent with IFRS S1 and IFRS S2, this Standard provides proportionality mechanisms for entities, which include:

(a) Using reasonable and supportable information that is available at the reporting date without undue cost or effort, which is applied to:

(i) Identifying the climate-related risks and opportunities that could reasonably be expected to affect an entity's long-term fiscal sustainability (see paragraphs 12, B.AG2(a) and B.AG16–B.AG20)

(ii) Determining the scope of its value chain (see paragraph B.AG2(b));

(iii) Disclosures about the anticipated financial effects of a climate-related risk or opportunity (see paragraph 18(a));

(iv) The entity's approach to climate-related scenario analysis (see paragraphs AG23–AG44);

(v) Providing Scope 3 greenhouse gas emissions data that is verified (see paragraph AG79);

(vi) Disclosures on climate-related metrics (see paragraph 29); and

(b) Considering an entity's skills, capabilities and resources, which is applied to:

(i) Disclosures about the anticipated financial effects of a climate-related risk or opportunity (see paragraphs 18(b) and 20); and

(ii) The entity's approach to climate-related scenario analysis (see paragraphs AG23–AG44).

BC8. In aligning with the proportionality mechanisms provided in IFRS S1 and IFRS S2, the IPSASB acknowledged that, although such mechanisms could be perceived as creating opportunities for inconsistent application, they are essential to ensure that the requirements can be applied effectively across public sector entities. The IPSASB noted that these proportionality mechanisms support a capacity-building approach to achieving the objective of this Standard, encouraging entities to strengthen their skills, capabilities, systems, and resources progressively over time.

IPSAS Standards or other GAAP

BC9. The IPSASB considered whether this Standard should refer to IPSAS Standards and other GAAP (see paragraph 5), acknowledging that not all public sector entities apply accrual basis accounting.

BC10. The IPSASB decided that, though this Standard is agnostic on the entity's financial reporting methodology and can be applied by all public sector entities including those on a cash basis of accounting, the use of accrual accounting, together with climate-related reporting, supports better public financial management and sustainable development.

Background

Phased Approach of the IPSASB's Climate-Related Disclosures Project

BC11. As a result of the feedback received from constituents on the IPSASB SRS ED 1, the climate-related disclosures project has been developed across two phases. Phase 1 aligns with IFRS S2 and corresponds to the "Own Operations" perspective described in IPSASB SRS ED 1, while Phase 2 reflects the unique policy and regulatory role of public sector entities, referred to as "Climate-related Public Policy Programs" in IPSASB SRS ED 1. The IPSASB's discussions and deliberations in developing these two phases include:

(a) Drawing on IFRS S1 and IFRS S2, together with public sector-specific adaptations (see paragraphs BC12–BC21);

(b) Recognizing the policy and regulatory role of public sector entities as a distinguishing characteristic that requires public sector-specific disclosures (see paragraphs BC22–BC26); and

(c) Deciding to use two separate standards to address these distinct reporting perspectives, rather than an integrated single standard (see paragraphs BC27–BC29).

Development of IPSASB SRS ED 1, Climate-Related Disclosures

BC12. General purpose financial reports of public sector entities are developed primarily to respond to the information needs of service recipients and resource providers who do not possess the authority to require a public sector entity to disclose the information they need for accountability and decision-making purposes.

BC13. When developing IPSASB SRS ED 1, the IPSASB drew on the Conceptual Framework and agreed that service recipients and resource providers are the primary users of climate-related disclosures. These include citizens, taxpayers, multilateral or bilateral donor agencies, and lenders that provide resources, such as investors. In addition, representatives of these groups such as the legislature (or a similar body), and members of parliament (or a similar representative body) are also the primary users of climate-related disclosures.

BC14. When developing IPSASB SRS ED 1, the IPSASB decided that the primary users for public sector reports are broader than for private sector reports, where the primary users are existing and potential investors. Based on experience in setting IPSAS, while the information needs of non-investor public sector primary users may align with those of investors in many cases, information needs generally differ where there are transactions unique to the public sector. In the case of sustainability reports, primary user needs will extend beyond the financial effects of climate-related risks and opportunities.

BC15. Therefore, the IPSASB developed the IPSASB SRS ED 1 reflecting the following primary sources:

(a) The CP and feedback from constituents that drive the principles and needs for public sector sustainability reporting;

(b) IPSASB literature, including the Conceptual Framework which addresses general purpose financial reports and non-financial information, provides key public sector concepts (e.g., defines primary users, clarifies the objective of reporting (which is to facilitate accountability and decision making), defines the reporting entity and the qualitative characteristics of reporting) and IPSASB's non-mandatory Recommended Practice Guidelines (RPG); and

(c) International standards, primarily building on the IFRS Sustainability Disclosure Standards drawing from IPSASB's existing *Process for Reviewing and Adapting IASB Documents*.

BC16. During the development of the IPSASB SRS ED 1, the IPSASB considered the challenges to developing public sector-specific sustainability reporting standards, specifically:

(a) The need for public sector specific guidance, given the diversity of services and reporting contexts across different levels of public sector entities;

(b) The need for alignment with private sector guidance where possible and appropriate, given the importance of interoperability due to:

(i) The interconnectivity of value chains across public sector and private sector reporting;

(ii) The significance of sovereign bonds in the global bond market, where investors—one of the primary users of public sector sustainability reporting—provide resources for public sector entities; and

(iii) The growing use of blended finance in addressing climate challenges; and

(c) The need for a climate-related disclosure standard, given the urgency of addressing long-term shifts in temperature and weather patterns, and the importance of the public sector in driving widespread action.

BC17. Given the urgent need for a climate-related reporting standard, the IPSASB considered the extent to which it could leverage private sector guidance, recognizing the potential similarities between the public and private sectors.

BC18. The IPSASB decided that developing guidance aligned with IFRS S1 and IFRS S2 would meet the core information needs of primary users of public sector climate-related disclosures, and would provide information regarding the entity's long-term fiscal sustainability, including efficient delivery of services, that would enable better decision making and accountability.

BC19. Therefore, the IPSASB prioritized aligning with IFRS S1 and IFRS S2 private sector guidance to ensure consistency and interoperability between public sector and private sector reporting, while considering the additional information needs of primary users of public sector climate-related disclosures. This alignment is reflected both in the core text and Application Guidance – where private sector guidance and definitions have been drawn on as directly as possible to meet the objectives of public sector reporting, applying the process from IPSASB's *Process for Reviewing and Adapting IASB Documents*.

BC20. This alignment with IFRS S1 and IFRS S2 private sector guidance was generally supported by respondents to the IPSASB SRS ED 1, which cited benefits such as increasing interoperability with private sector guidance, promoting consistency and comparability between entities and across public and private sectors, enhancing the credibility of public sector climate-related disclosures by drawing on an internationally recognized global baseline, and improving the quality and completeness of climate-related information across the value chain. Respondents also noted that this alignment enables the IPSASB to build on established private sector guidance, facilitating knowledge transfer and capacity building, and supports the timely development of a public sector-specific climate-related disclosures standard.

BC21. In addition to the IPSASB's decision to align with private sector guidance, some respondents noted space for further alignment between IPSASB SRS ED 1 and IFRS S2. They suggested that the IPSASB should prioritize closer alignment with private sector standards and depart only when there is a clear public sector rationale. As a result, in developing this Standard, the IPSASB further prioritized alignment with IFRS S2 while maintaining necessary public sector-specific adaptations, to ensure that any departures from IFRS S2 appropriately reflect public sector-specific differences. This included areas on objective, scope, proportionality mechanisms, strategy (i.e. scenario analysis), and metrics and targets (i.e. remuneration, internal carbon price and third-party validation).

Addressing the Public Sector Policy and Regulatory Role

BC22. As a result of their sovereign powers, governments and other public sector entities have the ability to regulate the activities of other entities, including other public sector entities, private sector entities and/or individuals, either directly or through specifically created agencies. The underlying rationale for such regulation is to safeguard the public interest in accordance with specified public policy objectives, such as combating climate change. Therefore, the IPSASB decided that in addition to aligning with the IFRS S1 and IFRS S2 private sector guidance, the policy and regulatory role of public sector entities is a key characteristic that requires public sector-specific disclosures. This public policy role differentiates public sector entities from the private sector.

BC23. As part of the IPSASB SRS ED 1, the IPSASB proposed that in addition to disclosures on an entity's climate-related risks and opportunities in its day-to-day operations (referred to as "Own Operations" in the IPSASB SRS ED 1), entities should also provide disclosures on the outcomes that could reasonably be expected as a result of its climate-related public policy programs. In the IPSASB SRS ED 1, climate-related public policy programs referred to any type or set of interventions taken or mandated by a public sector entity exercising its sovereign powers to influence the decisions or behaviors of other entities or individuals, with a primary objective to achieve climate-related outcomes. The IPSASB proposed addressing these dual

reporting perspectives through a single standard with further clarification in two sections of Application Guidance.

BC24. In developing the IPSASB SRS ED 1, the IPSASB noted that the “Own Operations” reporting perspective described in the IPSASB SRS ED 1 is expected to be applicable to most public sector entities. For instance, an entity with a policy or regulatory function is also expected to have activities in its operational model, such as managing staff and facilities, that may give rise to climate-related risks and opportunities.

BC25. Responses to the Exposure Draft raised concerns on the two reporting perspectives of the IPSASB SRS ED 1 being combined into one standard, with some noting that separate standards would enhance clarity and the distinct nature of each reporting perspective. The IPSASB noted that a substantial number of comments were received on the proposed disclosure requirements on an entity’s climate-related public policy programs, and identified a number of key issues raised by respondents that require further deliberation.

BC26. In response to consultation feedback, the IPSASB decided that it was appropriate to address the two reporting perspectives in two phases, and therefore developed two separate standards as part of its climate-related disclosures project: Phase 1, which refers to the “Own Operations” reporting perspective described in IPSASB SRS ED 1, and Phase 2, which refers to the “Public Policy Programs” reporting perspective in IPSASB SRS ED 1. The IPSASB decided that this was a pragmatic approach considering the clearer resulting guidance, ease of navigating the Standard, timeliness of issuing guidance, and the reduced initial reporting burden to support the adoption and implementation of the Standard.

IPSASB SRS 1, Climate-related Disclosures

BC27. As a result of the IPSASB's decision to develop two separate standards, the Board concluded that Phase 1 of its climate-related disclosures project will provide guidance that is aligned with IFRS S2, incorporating the public sector context proposed in the IPSASB SRS ED 1. Therefore, in alignment with private sector guidance, Phase 1 of the project will be named “IPSASB SRS 1, *Climate-related Disclosures*”.

BC28. The IPSASB also decided that it was appropriate to maintain the overall structure of the IPSASB SRS ED 1 in developing this Standard, while removing the relevant climate-related public policy program guidance. As a result, this Standard is aligned with the structure of the IPSASB SRS ED 1, with the exception of the removal of Appendix A2: Climate-related Public Policy Programs.

BC29. Further, a respondent to the IPSASB SRS ED 1 observed that the term “Own Operations”, which is used in the IPSASB SRS ED 1 to refer to all the activities in an entity’s operational model in the IPSASB SRS ED 1, is informally associated with Scopes 1 and 2 emissions in the Greenhouse Gas Protocol. In developing this Standard, the IPSASB decided to remove references to the term “Own Operations”. This was to avoid the unintended association with terminology used outside of IPSASB literature and to increase alignment with private sector guidance. Therefore, this Standard no longer uses the term “Own Operations”.

Objective and Scope

BC30. At the time of developing this Standard, the latest international agreements on climate change were the Paris Agreement and the United Nations Sustainable Development Goals (SDGs).

BC31. Many countries have signed or ratified the latest international agreements on climate change, made national commitments enforceable through legislation, and/or developed national transition and adaptation plans. Consistent with these requirements and the Conceptual Framework, the objective of this Standard is to provide information for primary users that support decision making and accountability for the actions taken to deliver on these international commitments. Reporting and disclosure are not aims in and of themselves,

but should help encourage changes in individual and organizational behaviors and global actions more broadly that are needed to combat climate change.

BC32. The IPSASB acknowledged that not all countries have signed or will sign the latest international agreements on climate change and that each country's national strategies provide more specific commitments. However, the IPSASB decided that it was important for the Standard to be capable of being used to support accountability for the delivery of climate change programs in accordance with the latest international agreements.

Long-Term Fiscal Sustainability

BC33. In developing the IPSASB SRS ED 1 and aligning the core guidance with IFRS S2, the IPSASB decided that the focus on "the entity's cash flows, its access to finance or cost of capital over the short-, medium- or long-term" or "the entity's prospects" needed to be augmented for the public sector. The IPSASB decided that the information needs of primary users of public sector climate-related disclosures should also include the effects on an entity's services and resources.

BC34. The IPSASB decided that for public sector entities this broader concept of "an entity's prospects" was already captured by the concept of "long-term fiscal sustainability" as defined in RPG 1, *Reporting on the Long-term Sustainability of an Entity's Finances,* that is "the ability of an entity to meet service delivery and financial commitments, both now and in the future".

BC35. RPG 1 addresses the complex operational model for public sector entities, including each of the interrelated dimensions of long-term fiscal sustainability, comprising services, revenue and debt, and was amended in May 2023 to provide implementation guidance to explain its applicability to reporting information on the impact of sustainability programs.

Definitions

BC36. In developing IPSASB SRS ED 1 and adapting IFRS S2 for the public sector context, the IPSASB determined that the term "business model" should be adapted for the public sector. Accordingly, the IPSASB drew on the concepts in RPG 3, *Reporting Service Performance Information*, including the relationships among "inputs", "outputs", and "outcomes". The IPSASB decided that the term "operational model" appropriately parallels the notion of a "business model" in IFRS S2 for the public sector, and provides a basis for identifying an entity's climate-related risks and opportunities.

BC37. The IPSASB acknowledged that there are evolving terminologies and methodologies for valuing greenhouse gas externalities, such as "internal carbon pricing". The IPSASB explored the applicability of the terminology internationally, its applicability to public sector entities, and the importance of distinguishing internal carbon prices from the market price of carbon. In reviewing this analysis, the IPSASB decided that it was appropriate to align the terminology and definition of "internal carbon pricing" with IFRS S2, along with additional Application Guidance to provide public sector context.

BC38. Some respondents to the IPSASB SRS ED 1 noted that certain terms were not defined. The IPSASB noted that these terms are already defined in the IPSAS Standards. However, as the IPSASB SRS is designed to be applied irrespective of whether the entity's financial statements are prepared in accordance with IPSAS Standards, the IPSASB decided that it was appropriate to set out terms defined in IPSAS Standards in a non-authoritative Appendix (see Appendix D: Terms in this IPSASB SRS Standard Defined in IPSAS Standards), in line with the approach in RPG 1, to provide additional context in understanding and applying the principles of IPSASB SRS 1.

BC39. Responses to the IPSASB SRS ED 1 also included some suggested modifications to the proposed definitions that are aligned with IFRS S2, including "climate resilience", "global warming potential", "greenhouse gases",

and “value chain”. The IPSASB decided that the proposed definitions provide appropriate guidance for public sector entities, and did not identify any public sector-specific justification to depart from the definitions used in private sector guidance.

Governance

BC40. The IPSASB acknowledged that public sector entities worldwide do not operate within a common legislative framework, nor do they have standard organizational structures, shapes or sizes.

BC41. Despite the variation in governance structures, public sector entities share the same public interest objective of enhancing or maintaining the well-being of citizens. Public sector governance can be described as the arrangements put in place to ensure the intended outcomes for stakeholders are defined and achieved, which include political, economic, social, environmental, legal and administrative structures and processes, and other arrangements. Therefore, the IPSASB decided that the primary user information needs relating to governance processes, controls and procedures are similar to those for primary users of private sector entity reporting, and that private sector guidance should be leveraged, with additional Application Guidance addressing public sector differences.

Strategy

BC42. The IPSASB decided that the primary user information needs relating to an organization’s strategy for managing climate-related risks and opportunities in the public sector are in many cases the same or very similar to those for primary users of private sector entity reporting. However, Application Guidance would be needed to clarify how the principles and disclosure requirements apply in the public sector context.

Strategy and Decision Making

BC43. The IPSASB acknowledged that the strategy for public sector entities may differ across functions, levels of government and jurisdictions. In some cases, entities may have significant operational freedoms to determine their own strategy to address climate-related risks and opportunities and therefore climate-related scenario analysis may support and inform their assessment of climate resilience.

BC44. On the other hand, some entities may have limited operational freedom, regulated by the mandates and responsibilities determined by a higher level of government.

BC45. However, one of the objectives of reporting climate-related information is to hold entities accountable for their activities and contributions to climate commitments. The IPSASB decided it is important that reporting at the entity level enables accountability. Entities are therefore encouraged to consider their activities and contributions to climate commitments within their levels of operational freedom and organizational mandates and provide disclosures that are determined to be material for the primary users of their general purpose financial reports.

BC46. A few respondents to the IPSASB SRS ED 1 expressed concern that the proposed disclosure requirements were overly focused on mitigation efforts, such as greenhouse gas reduction, while giving insufficient emphasis to adaptation and climate resilience. The IPSASB acknowledge the importance of both mitigation and adaptation in climate action, however, decided that this Standard provides adequate disclosure requirements on both aspects. For example, an entity is required to disclose information about its current and anticipated direct and indirect mitigation and adaptation efforts in its strategy and decision making.

Climate Resilience

BC47. One respondent to the IPSASB SRS ED 1 posed that, in addition to scenario analysis, the Standard should require climate stress testing to ensure the long-term fiscal sustainability of the public sector entity. The IPSASB considered that the terms “stress testing” and “scenario analysis” are, in many cases, used

interchangeably in practice, and did not identify a public sector-specific reason to depart from the proposed guidance.

Risk Management

BC48. The IPSASB decided that the primary user information needs relating to risk management for a public sector entity are in many cases the same or very similar to those for primary users of private sector entity reporting. However, Application Guidance would be needed to clarify how the principles and disclosure requirements apply in the public sector context.

BC49. The IPSASB discussed the differences between public sector and private sector risk management practices and noted that although the practices are similar, it is the nature and type of risks faced that are significantly different.

BC50. The IPSASB acknowledged that many countries have established national transition and adaptation plans which may be based on detailed national risk assessments. Therefore, the IPSASB decided that these can be a critical resource for many public sector entities which can be leveraged as part of the entity's risk management processes.

Metrics and Targets

BC51. When developing IPSASB SRS ED 1, the IPSASB decided that a rebuttable presumption, that entities measure its greenhouse gas emissions using the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004) (Greenhouse Gas Protocol), was necessary to steer entities towards the same direction, enhancing consistency and comparability. This approach is intended to promote standardized greenhouse gas methodologies and to facilitate better data interoperability between entities.

BC52. As part of this rebuttable presumption, when developing IPSASB SRS ED 1, the IPSASB decided that to encourage adoption of this Standard, flexibility should be provided for preparers to use methodologies other than the Greenhouse Gas Protocol. This decision acknowledges that jurisdictions may have local approaches for national or subnational reporting and aims to alleviate any additional burden in requiring dual reporting or an immediate move to the Greenhouse Gas Protocol. In determining their approach, the IPSASB encourages entities to consider the primary users of the information and their specific needs. For instance, if primary users are donor agencies, the Greenhouse Gas Protocol might be a more appropriate methodology as donor agencies may need consistent and comparable information about the climate-related risks and opportunities upstream and downstream of entities' value chains.

BC53. As value chains may comprise both public and private sector entities, the IPSASB could not identify a public sector specific reason to depart from the Greenhouse Gas Protocol when developing the IPSASB SRS ED 1. Therefore, the IPSASB decided to align the definitions of Scopes 1, 2, and 3 with the Greenhouse Gas Protocol to ensure consistency and clarity in reporting and interpretation. However, the IPSASB acknowledged that the Greenhouse Gas Protocol was designed for the private sector and does not address Scope 3 greenhouse gas emissions relating to the "outcomes of climate-related public policy programs" as referred to in the IPSASB SRS ED 1. At the same time, Scope 3 greenhouse gas emissions are still expected to arise for an entity with a policy or regulatory role. To illustrate this point, the IPSASB considered it appropriate to provide further clarification through illustrative examples (see paragraph IE25–IE29), demonstrating that Scope 3 greenhouse gas emissions may also arise from an entity with a policy design function.

BC54. Respondents to the IPSASB SRS ED 1 generally supported the proposed rebuttable presumption for the reasons of increased consistency and comparability, streamlining reporting processes, reducing transition costs, allowing for national or sector-specific requirements, as well as the principles-based approach provided by the Greenhouse Gas Protocol.

BC55. However, there were also other views on the rebuttable presumption proposed in IPSASB SRS ED 1. Some suggested the Greenhouse Gas Protocol should be presented as a recommendation rather than a rebuttable presumption, to allow for greater jurisdictional flexibility. Others raised concerns that a rebuttable presumption could compromise consistency and comparability, potentially reducing the usefulness of reported information.

BC56. On balance, the IPSASB decided that due to the reasons articulated, the existing rebuttable presumption that entities use the Greenhouse Gas Protocol provides a pragmatic balance between global alignment and local adaptability, and should therefore be retained in the Standard.

BC57. A few responses to the IPSASB SRS ED 1 suggested that the IPSASB provided more specific guidance on consolidation, including consolidation complications in jurisdictions with heterogenous sustainability reporting standards. The IPSASB noted that consolidation considerations primarily arise in relation to the metrics and targets pillar, particularly in the context of reporting greenhouse gas emissions. The IPSASB considered the widespread use of the Greenhouse Gas Protocol, and decided that there would not be significant divergence from other international sustainability reporting standards. Further, the IPSASB considered that the approach to consolidation in IPSAS Standards is fully aligned with private sector guidance. Therefore, the IPSASB decided that the proposed guidance in the IPSASB SRS ED 1 was appropriate for public sector entities.

BC58. One respondent to IPSASB SRS ED 1 suggested that entities be required to disclose a summary statement of greenhouse gas emissions to provide users with a comprehensive view of the entity's overall climate impact. The IPSASB acknowledged that such a summary may be a useful way for some entities to present climate-related information; however, it concluded that the Standard should remain principles-based, allowing entities flexibility in how disclosures are structured and communicated. Accordingly, while entities may choose to include a summary of greenhouse gas emissions, the IPSASB decided that this should remain at their discretion.

Scope 2 Greenhouse Gas Emissions

BC59. The IPSASB recognized the two approaches towards calculating Scope 2 greenhouse gas emissions, location-based approach and market-based approach, and decided to require the location-based approach only, along with disclosures on any contractual instruments into which the entity has entered, in alignment with private sector guidance, and to enhance comparability between Scope 2 greenhouse gas emissions disclosures without undue burden on entities.

Scope 3 Greenhouse Gas Emissions

BC60. When developing the IPSASB SRS ED 1, the IPSASB recognized the complexities and resource requirements surrounding Scope 3 greenhouse gas emissions. However, the disclosure of Scope 3 greenhouse gas emissions and categories is subject to materiality considerations; hence, entities are not required to measure and disclose all Scope 3 greenhouse gas emissions, because value chain emissions and hotspots vary between entities. Therefore, the IPSASB decided that it is important for entities to monitor and manage emissions along their value chains, both in the global public interest and for accountability reasons.

BC61. When developing the IPSASB SRS ED 1, the IPSASB acknowledged that while Scope 3 Category 15 – Financed Emissions may be relevant for public sector entities that provide financial services, the IPSASB expected that this category will be applicable to only a subset of entities. Those entities where Category 15 is material may consider referring to other sources of guidance such as Greenhouse Gas Protocol or the Partnership for Carbon Accounting Financials (PCAF).

BC62. Responses to the IPSASB SRS ED 1 were mixed, with a group of respondents supporting mandatory disclosures of Scope 3 greenhouse gas emissions. However, some argued that the practical and cost-related challenges justify a voluntary or phased approach. In addition, another group of respondents raised concerns

about the cost, complexity, and limited relevance of Scope 3 information, particularly for public sector entities involved in regulatory or service delivery functions.

BC63. Considering the usefulness of the disclosures based on responses received from users, including investors, as well as jurisdictional examples demonstrating the feasibility of public sector reporting on Scope 3 greenhouse gas emissions, the IPSASB decided that disclosures on Scope 3 greenhouse gas emissions are essential for presenting a comprehensive picture of an entity's climate action, and should be required in the Standard.

BC64. Entities that are using methodologies in line with the Greenhouse Gas Protocol might find it useful to refer to the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011) for additional guidance and examples. In consideration of the practical challenges presented by respondents to the IPSASB SRS ED 1, the IPSASB decided that it was appropriate to develop guidance for the application of Scope 3 greenhouse gas emissions in the public sector context during the implementation phase of the project. In addition, the IPSASB considered the complexity of public sector value chains and decided to extend the transition timeline for disclosing Scope 3 greenhouse gas emissions from one year to three years.

Metric Categories

BC65. The IPSASB considered whether disclosures relating to remuneration tied to climate factors would be applicable for the public sector. While the IPSASB acknowledged that this is expected to be infrequent in the public sector, the IPSASB concluded that it was prudent to incorporate this aspect in this Standard to encourage such disclosures in circumstances where they may be applicable. The IPSASB decided that it was appropriate to require disclosure of remuneration to "key management personnel", aligned with public sector terminology used in IPSAS 20, *Related Party Disclosures*, while adding conditionality to reflect the expected infrequency of such arrangements in the public sector. Accordingly, entities would not be required to make these disclosures if climate-related considerations are not directly factored into the remuneration of key management personnel.

BC66. In drafting the IPSASB SRS ED 1, the IPSASB considered the public sector relevance of the capital deployment disclosure requirement under paragraph 29(e) of IFRS S2. While the requirement was initially not included in the IPSASB SRS ED 1, one respondent emphasized the importance of retaining the disclosure requirement, noting that public sector entities, like private sector entities, also make decisions about funding allocation. The respondent noted that the extent to which these entities allocate funding to climate-related issues in alignment with their strategy, and the ability to compare these decisions across the public sector, provides decision-useful information to users – including budgetary decision makers. In consideration of its relevance to the public sector, disclosure requirements on capital deployment, along with the associated implementation guidance (see paragraph IG1), have been incorporated into this Standard in line with private sector guidance.

BC67. One respondent to the IPSASB SRS ED 1 noted that in addition to law and regulation, the IPSASB should acknowledge that government policy can also drive the climate-related targets public sector entities are expected to work towards. The IPSASB decided that this concern was appropriately addressed in the proposed guidance, which requires disclosure of how the latest international climate agreements and jurisdictional commitments have informed each target, and highlights the need to consider an entity's own activities, relationships, and stakeholders, as well as the broader sustainability context, including national targets and commitments relevant to subnational entities.

BC68. Another respondent to the IPSASB SRS ED 1 suggested that the Standard should require disclosure of carbon credits purchased, rather than solely focusing on the entity's planned use of carbon credits. The IPSASB noted that the purchase of carbon credits is a financial transaction and should be recognized in an entity's financial statements. In addition, AG94 states that entities may also disclose carbon credits already

purchased if they are intended to be used toward meeting net greenhouse gas emissions targets. Overall, the IPSASB decided that the guidance does not preclude entities from disclosing carbon credits purchased, and did not identify a public sector-specific reason to depart from private sector guidance.

Peer Metrics

BC69. The IPSASB acknowledged the importance of industry-based guidance to support preparers and standardized reporting. There is no current public sector equivalent to the industry-based guidance at the time of developing this Standard; however, there may be certain functions of government that can consider private sector industry metrics, such as in healthcare or education.

BC70. The IPSASB decided that the term “peer metrics” is more appropriate for the public sector instead of “industry-based metrics”, as used in the IFRS S2. In particular, it was more appropriate for a public sector entity to consider metrics that are associated with operational models, activities, or other common features that are similar to other entities – such as similar categories of functions of government. Overall, the IPSASB considered that peer metrics may only be relevant for some public sector entities and decided that entities may refer to and consider the applicability of peer metrics where appropriate.

BC71. To support entities in considering peer metrics, the IPSASB considered that the Classification of Functions of Government (COFOG) from statistical reporting could provide a framework for the future development and application of peer metrics across the various generic functions undertaken by public sector organizations across many jurisdictions.

BC72. In the interim, the IPSASB noted that the SASB Standards and GRI Sector Standards could be applicable to certain categories of activity defined in COFOG and may therefore be useful for some public sector entities. Therefore, as part of an entity’s peer metrics, the IPSASB decided that SASB Standards and GRI Sector Standards should not be required for public sector entities, but could be considered to the extent they are relevant.

Climate-Related Targets

BC73. In disclosing an entity’s approach to setting and reviewing each target, and how it monitors progress against each target, the IPSASB noted that such validation processes may be more common in the private sector, in response to investor needs. Therefore, the IPSASB considered it appropriate to provide greater flexibility for public sector entities in providing disclosures regarding the validation process in setting climate-related targets. This approach maintains the expectation for transparency, while recognizing that public sector entities may rely on other oversight mechanisms.

Effective Date

BC74. The IPSASB considered the balance between addressing significant stakeholder demand for timely guidance for climate-related disclosures in the public sector, acknowledging that this Standard introduces a relatively new and complex reporting area for most public sector entities. Therefore, the IPSASB set an effective date of January 1, 2028, with earlier application permitted for entities that may wish to do so.

Transition

BC75. The IPSASB acknowledged the significant challenges to implementing climate-related reporting in the public sector. After consultation with the IPSASB Sustainability Reference Group, the IPSASB decided to propose a transition approach aligned with the private sector, given the urgent need for transparency and accountability for government initiatives to support climate action, and the need for public sector leadership on meeting climate targets.

BC76. Responses to the IPSASB SRS ED 1 generally agreed that the proposed areas for transition relief were appropriate. Despite general agreement on the importance of transition relief for Scope 3 greenhouse gas emissions, most respondents expressed the view that the one-year transition relief for Scope 3 greenhouse gas emissions reporting would be insufficient for building the necessary processes and systems to capture Scope 3 greenhouse gas emissions data across complex public-sector value chains.

BC77. Overall, acknowledging the widespread call for additional time to build capacity and systems for Scope 3 greenhouse gas emissions reporting, the ongoing revisions to the Greenhouse Gas Protocol at the time of developing this Standard, while also considering the urgency of climate action and importance of meeting stakeholder expectations, the IPSASB decided that a three-year transition period is appropriate for public sector entities in reporting their Scope 3 greenhouse gas emissions.

BC78. In addition, a few respondents emphasized the importance of considering trade-offs and just transition, particularly in balancing financial constraints with the need for climate-related disclosures in developing economies and smaller public sector entities. The IPSASB considered these concerns in reaching its decisions on retaining the proposed areas for transition relief and extending the transition period for Scope 3 greenhouse gas emissions. Overall, the IPSASB decided that the transition reliefs provided, together with the proportionality mechanisms built into this Standard (see paragraph BC7), appropriately balance feasibility for preparers with the urgency of climate action.

Conceptual Foundations

BC79. In the absence of a framework for sustainability reporting, this Standard includes guidance on conceptual foundations, including the qualitative characteristics of reporting climate-related information, set out in Appendix B: General Requirements for Climate-Related Disclosures and Appendix C: Qualitative Characteristics. This guidance, adapted from IFRS S1 and the Conceptual Framework, is intended to ensure that information in climate-related disclosures is useful to primary users of general purpose financial reports, and provides information to assist an entity in the preparation of climate-related disclosures.

Determining Material Information for Disclosure

BC80. The IPSASB acknowledges that there are varying approaches and guidance to determining material information across different sustainability standards. The IPSASB decided that the steps to reporting appropriate information for the public sector disclosures include:

(a) Step 1 - Understanding the entity’s context;

(b) Step 2 - Identifying climate-related risks and opportunities; and

(c) Step 3 - Determining material information.

BC81. This approach primarily aligns with IFRS S1 but incorporates GRI guidance on understanding the entity’s context and engaging stakeholders.

BC82. Step 1 is based on the first step in GRI 3 to determining material topics, which provides guidance on considering the entity’s activities, relationships, stakeholders and context. The IPSASB decided that this is an important step to include for the public sector, given the broad reach and responsibilities of the public sector. It is important for entities to understand their own activities, relationships, and stakeholders, as well as the broader sustainability context including, for example, national targets and commitments to which a subnational entity contributes.

BC83. As part of understanding an entity’s context, the IPSASB considered the importance of the perspectives of indigenous peoples in sustainable development and therefore decided to add the UN Declaration of Rights of Indigenous Peoples as another authoritative intergovernmental instrument setting expectations for responsible conduct for understanding the broader climate context (see paragraph B.AG11).

BC84. Step 2 and Step 3 mirror IFRS S1 guidance on identifying risks and opportunities and determining material information related to the identified risks and opportunities. Additional guidance from GRI was leveraged to provide guidance on stakeholder engagement. The IPSASB decided that Step 2 and Step 3, which align with the IFRS S1 approach, are appropriate because:

(a) The purpose of the process is to determine material information for reporting (compared with other approaches that identify material topics rather than determine material information);

(b) The concept of materiality requires judgments about information from a quantitative and qualitative perspective (which is consistent with the approach to materiality for IFRS Sustainability Disclosure Standards on which Step 2 and Step 3 are based); and

(c) Guidance on engaging stakeholders is needed for the public sector, which is based on GRI 3 Material Topics 2021, given the demand for a multistakeholder approach in public sector reporting.

Materiality

BC85. When developing the IPSASB SRS ED 1, the IPSASB discussed the concepts of “single” or “financial” materiality versus “double” or “financial and impact” materiality. The IPSASB decided that the approach to determining materiality should mirror the approaches used in the financial statements and the Conceptual Framework, which are also aligned with IFRS Sustainability Disclosure Standards. Therefore, the IPSASB determined that using the definition of material information from the Conceptual Framework is appropriate for climate-related disclosures given:

(a) **The primary users** of public sector general purpose financial reports are service recipients and their representatives and resource providers and their representatives according to the Conceptual Framework;

(b) **The objectives** of reporting are to support primary users in evaluating information for decision making and accountability purposes. This extends beyond the private sector focus on decision making solely for capital allocation purposes. The principles of decision making and accountability apply equally to climate-related reporting as to financial reporting for the public sector because of the need for accountability from a public interest perspective;

(c) **Connectivity** between financial and climate-related reporting is supported by aligning definitions of materiality across suites of reporting standards.

BC86. Materiality is classified as a constraint on information included in general purpose financial reports in the Conceptual Framework. In developing this Standard, the IPSASB has considered the materiality of the consequences of disclosure requirements of a particular item or type of information. Subject to the requirements of this Standard, entities preparing disclosures of climate-related information will also consider the materiality of the separate disclosure of particular items of information.

BC87. The IPSASB decided that materiality is a pervasive concept throughout this Standard, guiding assessments of whether an omission or misstatement could influence primary users' decisions and therefore be deemed material. This Standard provides guidance that materiality assessments involve understanding that primary users are assumed to have a reasonable knowledge of the public sector and its activities and accounting, and a willingness to study the information with reasonable diligence. Accordingly, this Standard takes into account how primary users, with such attributes, could reasonably be expected to be influenced in making and evaluating decisions.

BC88. Significant judgment is required in determining whether information is material to primary users. This Standard provides additional guidance addressing the nature of risks and opportunities, which are commonly considered when determining the materiality of information.

BC89. When developing the IPSASB SRS ED 1, the IPSASB considered whether information that is sensitive and/or confidential should be excluded from disclosure. The IPSASB decided that such information in the public sector is expected to be rare and should not be excluded in the public interest. An entity should evaluate the needs of the primary user in light of any applicable legal requirements.

BC90. Responses to the IPSASB SRS ED 1 revealed diverse interpretations to the proposed materiality definition, with interpretations often linking to external materiality labels such as “financial”, “double”, and “impact”, which exist outside the IPSASB literature. While some respondents interpreted the proposed materiality definition as “financial materiality”, others observed that the broader stakeholder group and emphasis on accountability to meet primary users’ information needs can be interpreted as “double materiality”.

BC91. Considering the range of interpretations, the IPSASB decided that while the proposed definition of materiality was appropriate, further clarity needs to be provided for preparers in applying the materiality definition. As a result, the IPSASB agreed to prioritize the development of non-authoritative educational material on materiality for sustainability reporting, adapted from existing private sector guidance, to support preparers with applying the materiality definition.

Cost-Benefit

BC92. In developing this Standard, the IPSASB considered information from preparers, primary users, academics, and others about the expected nature and quantity of the benefits and costs of the proposed requirements. Disclosure requirements which result in the presentation of climate-related information useful to primary users for accountability and decision-making purposes and satisfy the qualitative characteristics are prescribed by this Standard when the benefits of compliance with those disclosures requirements are assessed by the IPSASB to justify their costs.

Reporting Entity

BC93. The Conceptual Framework sets out the types of entities that are considered public sector entities. In drawing from the Conceptual Framework, the IPSASB decided that this Standard should remain focused on reporting by the same entity that prepares the financial statements. A focus on the same reporting entity as for the financial statements has the benefit of following lines of control and supporting organization-focused accountability, while also facilitating both collection of climate-related risks and opportunities for the entity and the integration of such information with financial information in the entity’s financial statements.

General Requirements

BC94. When developing the IPSASB SRS ED 1, the IPSASB determined that the general requirements on location of disclosures, timing of reporting, comparative information, judgments, measurement uncertainty and errors from IFRS S1 are appropriate for the public sector.

BC95. The IPSASB further considered the requirement to revise comparative information to reflect updated estimates and decided to align with IFRS S1, which includes an impracticability exemption that applies to the correction of errors and when the entity redefines or replaces a metric. The requirement is scoped such that it does not mandate entities to review and revise all previously reported estimates, while ensuring that the information provided is useful for primary users without imposing undue burden on preparers.

BC96. The IPSASB also decided that the general requirements on sources of guidance from IFRS S1 are applicable, with necessary climate-specific adaptations. Additionally, the IPSASB decided that public sector entities should be provided with flexibility to consider the applicability of sources, including the SASB Standards and GRI Sector Standards.

BC97. The IPSASB acknowledged that there may be significant measurement uncertainty in relation to climate-related metrics. Further, the IPSASB acknowledged that both quantitative and qualitative metrics can

generally provide useful information; however, high levels of measurement uncertainty could potentially diminish the reliability of an estimate in providing useful information.

BC98. Responses generally supported the proposed alignment of the general requirements with IFRS S1, noting that this alignment with IFRS S1 fosters consistency and enhances comparability between the private and public sectors. There was also additional feedback, where some respondents suggested that the IPSASB should provide General Requirements in a separate standard, establishing an overarching framework to guide emerging information needs across a range of sustainability-related topics. The IPSASB acknowledged the importance of developing general sustainability-related disclosures guidance, and in consideration of resources available, decided that this would be an option for the future work program as the IPSASB develops its suite of IPSASB SRS Standards.

BC99. In addition, some respondents highlighted challenges to simultaneously providing sustainability and financial reporting within general purpose financial reports. Respondents pointed to challenges such as the timing and availability of secondary data with the financial reporting cycle, resource constraints in collecting and compiling climate information on an annual basis, and whether assurance requirements on financial statements would be expected to be applied to climate-related disclosures. While the IPSASB acknowledge that there may be implementation challenges to the proposed timing of reporting and location of disclosures, the IPSASB decided that existing guidance should appropriately address the issues raised, including transition reliefs (see paragraphs 39–43), using secondary data sources that rely on information collected in a different reporting period (see paragraphs AG76–AG77), including material information by cross-reference provided that the information is available on the same terms and at the same time (see paragraph B.AG57), and uses the same proportionality mechanisms (see paragraph BC7).

BC100. One respondent suggested that the proposed climate-related disclosures should be better integrated with the financial statements. The IPSASB noted that the proposed climate-related disclosures are intended to be a part of general purpose financial reports, and are consistent with the Conceptual Framework. Accordingly, these disclosures are expected to be situated within the broader financial report, even if they are presented outside the financial statements themselves. Overall, the IPSASB decided that the proposed approach ensures appropriate connectivity with the financial statements.

Statement of Compliance

BC101. A respondent to IPSASB SRS ED 1 suggested that the IPSASB consider allowing partial statements of compliance to support broader adoption, acknowledging that full compliance may take several years to achieve. The IPSASB acknowledged that such an approach could facilitate adoption; however, the IPSASB decided that this Standard already provides appropriate transition relief to address this concern.

Implementation Guidance and Illustrative Examples

BC102. The IPSASB considered the public sector applicability of the Accompanying Guidance on IFRS S1 and the Accompanying Guidance on IFRS S2 and decided to include implementation guidance and illustrative examples that are applicable to the public sector context.

BC103. However, the IPSASB decided not to adopt the industry-based guidance from the Accompanying Guidance on IFRS S2, considering this to be relevant only to a limited subset of public sector entities. The IPSASB concluded that it was more appropriate to refer to the SASB and GRI sector standards as optional resources.

BC104. In addition to implementation guidance and illustrative examples adapted from the Accompanying Guidance on IFRS S1 and the Accompanying Guidance on IFRS S2, the IPSASB decided that additional public sector-specific implementation guidance and illustrative examples should be provided on selected topics. This includes additional illustrative examples on the disaggregation of Scopes 1, 2, and 3 greenhouse gas

emissions between public sector functions, as well as additional illustrative guidance to address the disclosure of climate financing mechanisms within this Standard.

BC105. Following the decision to separate the requirements for own operations and public policy programs into two Standards, the IPSASB reviewed the implementation guidance and illustrative examples to ensure clarity regarding Scope 3 greenhouse gas emissions, particularly as it relates to the “outcomes of climate-related public policy programs” as referred to in the IPSASB SRS ED 1. As a result, the IPSASB decided to add implementation guidance (see paragraph IG2) to clarify an entity’s considerations when disclosing its Scope 3 greenhouse gas emissions.

Implementation Guidance

This guidance accompanies, but is not part of, IPSASB SRS 1.

Climate-Related Metrics

IG1. **Which metrics should an entity disclose in relation to the metric categories in paragraphs 28(b)–(e) of this Standard?**

Paragraph 28 of this Standard requires an entity to disclose information relevant to particular metric categories. These examples provide an illustration of such information for the requirements in paragraphs 28(b)–(e) of this Standard.

Metric category	Unit of measure	Example metrics
Climate-related transition risks	Amount and percentage	• Amount or percentage of assets that could become stranded or impaired • Amount or percentage of carbon-related assets (i.e., assets tied to fuel and energy functions)
Climate-related physical risks	Amount and percentage	• Proportion of property or infrastructure in areas subject to flooding, heat stress or water stress • Proportion of real assets exposed to climate-related hazards • Wastewater treatment capacity located in 100-year flood zones • Revenue associated with water withdrawn and consumed in regions of high or extremely high baseline water stress
Climate-related opportunities	Amount and percentage	• Goods or services that support the transition to a lower carbon economy • Investments and programs related to energy efficiency and lower carbon technology • Number of (1) zero-emissions vehicles, (2) hybrid vehicles and (3) plug-in hybrid vehicles in operating fleet • Proportion of buildings certified to a third-party, multi-attribute, green-building standard
Capital deployment	Presentation currency	• Percentage of annual capital expenditure allocated to climate adaptation measures (for example, soil health, irrigation and technology)

IG2. **What should an entity consider when disclosing its Scope 3 greenhouse gas emissions?**

An entity shall consider all 15 categories of Scope 3 greenhouse gas emissions, as described in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011), in disclosing its emissions. Emissions that do not fall within Scope 1, Scope 2, or the 15 categories of Scope 3 are outside the required disclosures in this Standard. Emissions arising from interventions taken by a public sector entity exercising its sovereign powers are not included in the required disclosures of this Standard.

Transition

IG3. **This Standard provides transition relief for specific areas for up to the first three annual reporting periods in which an entity applies this Standard (see paragraphs 39–43). When is an entity considered to have applied this Standard?**

A first time-adopter may determine the date on which it adopts this Standard, unless it is required by another entity to adopt this Standard by a specific date.

The entity is considered to have applied this Standard from the date on which it adopts this Standard and for which it prepares its first climate-related disclosures in accordance with this Standard in its entirety (except for the specific transitional reliefs provided in paragraphs 39–43).

This may be different from the date on which an entity formally and publicly announces its decision that it will adopt this Standard, which may or may not be the same as the date of adoption of this Standard.

Primary Users

IG4. **How does an entity assess whether its disclosures meet primary users' information needs?**

Assessing whether information could reasonably be expected to influence decisions made by the primary users of a specific reporting entity's general purpose financial report requires that entity to consider the characteristics of those users while also considering the entity's own circumstances. General purpose financial reports include—but are not restricted to—an entity's general purpose financial statements and climate-related disclosures.

Existing and potential service recipients and their representatives, and resource providers and their representatives are the primary users to whom general purpose financial reports are directed. General purpose financial reports are prepared for users with a reasonable knowledge of operational and economic activities, public sector programs and operations, and who review and analyze the information diligently. However, even well-informed and diligent users may need to seek the aid of an advisor to understand climate-related financial information.

General purpose financial reports do not, and cannot, provide all the information that primary users need. Therefore, the entity aims to meet the common information needs of its primary users. It does not aim to address specialized information needs—information needs that are unique to particular users.

To meet the common information needs of its primary users, an entity first separately identifies the information needs of one of the types of primary users—for example, service recipients and their representatives (existing and potential). The entity then repeats the assessment for resource providers and their representatives (existing and potential). The combined information needs identified by these assessments form the set of common information needs that the entity aims to meet.

In other words, the assessment of common information needs does not require an entity to identify the information needs that are shared by all primary users. Some identified information needs will be common to all types of primary users, but others may be specific to only one or two types. If an entity were to focus only on information needs that are common to all types of primary users, it might exclude information that meets the needs of only one type of primary user.

Publicly Available Information

IG5. **Does the entity need to disclose publicly available information as a part of its climate-related disclosures?**

Primary users do not source information exclusively from general purpose financial reports. For example, primary users might also consider information about the function of the entity and the jurisdiction(s) in which the entity operates; information about the state of the economy; and information in the entity's news releases as well as other documents the entity has published. However, the fact that information is publicly available does not relieve an entity of its responsibility to disclose material information about the climate-related risks and opportunities that could reasonably be expected to affect the entity's long-term fiscal sustainability over the short, medium or long term.

Green Financing Instruments

IG6. **What information should an entity disclose in relation to green financing instruments?**

Green financing instruments such as green bonds and sustainability-linked loans should be reflected in an entity's financial statements.

While this Standard is not intended as a climate financing standard and does not explicitly reference green financing mechanisms, if such instruments give rise to climate-related risks and opportunities, these should be disclosed in accordance with this Standard. For example, an entity that has issued a green bond may face increased climate-related transition risks (e.g. credit risk, reputational risk) if it fails to implement planned climate-related actions through allocating proceeds to eligible Green Projects with clear environmental benefits. Relevant disclosures in the Standard could include the following:

(a) Governance: Oversight of climate-related risks and opportunities, including climate-related transition risks arising from the green bond;

(b) Strategy: How the entity plans to respond to these climate-related transition risks through its strategy and decision making;

(c) Risk management – Policies and processes for identifying, assessing, prioritizing and monitoring these climate-related transition risks; and

(d) Metrics and Targets: Any targets that the entity has set on the allocation of proceeds to eligible Green Projects, as a part of achieving the entity's climate-related strategic goals.

In addition, the principles and guidance in RPG 3, *Reporting Service Performance Information* are relevant for an entity in reporting on sustainability programs, including green bonds. An entity may refer to *Reporting Service Performance Information–Amendments to RPGs 1 and 3: Additional Non-authoritative Guidance*, which provides an example of reporting on a program financed by a green bond.

Illustrative Examples

These examples accompany, but are not part of, IPSASB SRS 1.

IE1. These examples set out hypothetical situations illustrating how an entity might apply some of the requirements in this Standard. The analysis in each example is not intended to represent the only manner in which the requirements could be applied, nor are the examples intended to apply only to the specific fact pattern illustrated. For illustrative purposes, the examples use simple fact patterns. When making disclosures in accordance with this Standard, an entity would need to consider all relevant facts and the specific circumstances of a particular fact pattern.

Aggregation and Disaggregation of Greenhouse Gas Emissions

IE2. Examples 1–4 illustrate some considerations when determining whether it is necessary to disaggregate information when disclosing greenhouse gas emissions in accordance with the requirements of this Standard. These examples do not illustrate all the reasons that could make it necessary to disaggregate information when disclosing greenhouse gas emissions. Where relevant, these examples refer to the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004).

Example 1—Disaggregating Scope 1 and Scope 2 Greenhouse Gas Emissions between the Consolidated Accounting Group and Other Investees

IE3. Example 1 illustrates the requirements in paragraphs (i)–(v) to disclose and disaggregate Scope 1 and Scope 2 greenhouse gas emissions between an entity's consolidated accounting group and its investees not included in the consolidated accounting group.

IE4. The entity applies the equity share approach, as outlined in the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004), to set its organizational boundary for the purposes of measuring its greenhouse gas emissions. The entity applies IPSAS Standards and has one investment that it accounts for as an investment in an associate. Applying the equity share approach, the entity determines its Scope 1 greenhouse gas emissions to be 7,350 metric tons CO_2 equivalent (CO_2e), and its Scope 2 greenhouse gas emissions to be 1,320 CO_2e.

IE5. Table 1 illustrates the disaggregation of the total Scope 1 and Scope 2 greenhouse gas emissions disclosed by the entity when it applies paragraph 28(a)(iv).

Table 1: Disaggregation of Scope 1 and Scope 2 Greenhouse Gas Emissions Between the Consolidated Accounting Group and the Other Investees

	Greenhouse gas emissions (metric tons CO_2e)		
	Scope 1	**Scope 2**	**Total**
Consolidated accounting group	4,900	830	5,730
Other investees (investment in associate)	2,450	490	2,940
Total disclosed (equity share method)	7,350	1,320	8,670

Example 2—Disaggregating Scope 3 Greenhouse Gas Emissions by Scope 3 Categories

IE6. Example 2 illustrates the disaggregation of Scope 3 greenhouse gas emissions in accordance with paragraph 28(a)(i)c and paragraph 28(a)(vi), applying the principles of aggregation and disaggregation (paragraphs B.AG46–B.AG47). For simplicity, this example illustrates only an entity's considerations related to how it presents its disclosures of Scope 3 greenhouse gas emissions from upstream transportation and distribution (Category 4) and its Scope 3 greenhouse gas emissions from waste generated in operations (Category 5).

IE7. A public sector entity applies paragraph AG59 of this Standard. It measures its Scope 3 greenhouse gas emissions from the upstream transportation of equipment and waste generated in operations. The entity determines these Scope 3 greenhouse gas emissions to be Category 4—upstream transportation and distribution and Category 5—waste generated in operations in accordance with the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004). The entity considers whether disaggregation of its Category 4 and Category 5 Scope 3 greenhouse gas emissions is required to meet the requirements in this Standard (paragraphs B.AG46–B.AG47).

IE8. In relation to Category 4—upstream transportation and distribution, the entity considers that:

(a) Its greenhouse gas emissions in relation to this category account for 20% of its total disclosed Scope 1, Scope 2 and Scope 3 greenhouse gas emissions;

(b) It has committed to the optimization of transport routes by 20x0;

(c) It has set specific supplier engagement targets for reducing Category 4 greenhouse gas emissions; and

(d) Its supply chain is located in jurisdictions with nationally determined contributions, and, as a result, suppliers are subject to increasingly strict emissions-related regulations and taxation policies.

IE9. In relation to Category 5—waste generated in operations, the entity considers that:

(a) It has a three-year plan to reduce emissions from waste;

(b) Its jurisdiction has raised concerns on health hazards from waste incineration, and has set a national roadmap to reduce emissions from waste for public sector entities; and

(c) Its greenhouse gas emissions in this category account for 30% of its total disclosed Scope 1, Scope 2 and Scope 3 greenhouse gas emissions.

IE10. Although this Standard does not explicitly require disaggregation of Scope 3 greenhouse gas emissions by category, the entity considers the requirement in this Standard that prohibits information from being aggregated if doing so would obscure information that is material.

IE11. For the reasons outlined in paragraphs IE6–IE10, the entity determines that disaggregating information about its Scope 3 Category 4 greenhouse gas emissions and its Scope 3 Category 5 greenhouse gas emissions is necessary to provide material information to primary users of its general purpose financial reports.

IE12. The entity decides to include a table to supplement the disclosure of its Scope 3 greenhouse gas emissions, as illustrated in Table 2.

Table 2: Disclosure Excerpt of Scope 3 Greenhouse Gas Emissions Disaggregated Between Category 4 and Category 5

	Greenhouse gas emissions (metric tonnes CO_2e)	
	20X1	**20X0**
Category 4—Upstream transportation and distribution	34,000	35,000
Category 5—Waste generated in operations	13,000	14,600

Example 3—Disaggregating Greenhouse Gas Emissions by Constituent Greenhouse Gases

IE13. Examples 3A and 3B illustrate the disaggregation of an entity's absolute greenhouse gas emissions by constituent greenhouse gases. Although this Standard does not explicitly require such disaggregation, an entity is required to apply the principles of aggregation and disaggregation set out in this Standard (paragraphs B.AG46–B.AG47).

Example 3A—Disaggregation of Scope 1 Greenhouse Gas Emissions by Constituent Gas

IE14. For simplicity, this example illustrates only an entity's considerations related to methane emissions. Considerations related to other constituent gases are ignored.

IE15. An entity operates in the utilities industry. It measures its Scope 1 greenhouse gas emissions in accordance with the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004). The entity considers how to disclose information about its Scope 1 greenhouse gas emissions. In making its decision, the entity considers that:

(a) A jurisdiction in which it operates has introduced stringent regulations on the utilities industry relating to methane emissions arising from production;

(b) The entity considers the applicability of suitable peer metrics (see paragraph 31), and chooses to refer to the SASB Standards for the Gas Utilities & Distributors industry;

(c) The entity's risk function has determined that Scope 1 methane emissions could pose high climate-related transition risks as a result of a national methane pledge; and

(d) The entity has made process improvements to reduce Scope 1 methane emissions, thus reducing the risk of potential regulatory liabilities.

IE16. Although this Standard does not explicitly require disaggregation by constituent greenhouse gases, the entity considers the requirement in this Standard that prohibits information from being aggregated if doing so would obscure information that is material.

IE17. For the reasons outlined in paragraphs IE15–IE16, the entity determines that disaggregating information about its Scope 1 methane emissions is necessary to provide material information to primary users of general purpose financial reports.

IE18. The entity discloses its greenhouse gas emissions in accordance with paragraph 28, and decides to include a table to supplement the disclosure of its Scope 1 greenhouse gas emissions, as illustrated in Table 3.

Table 3: Disclosure Excerpt of Scope 1 Greenhouse Gas Emissions Disaggregated by Constituent Gas

	Greenhouse gas emissions (metric tonnes CO_2e)	
	20X1	**20X0**
Methane	23,000	24,000

Example 3B—Disaggregation of a Scope 3 Category by Constituent Gases

IE19. For simplicity, this example illustrates only an entity's considerations related to its emissions from purchased goods and services (Scope 3 Category 1 greenhouse gas emissions), and, specifically, its CO_2 and nitrogen oxide (N_2O) emissions. Considerations related to other Scope 3 categories and other constituent gases are ignored.

IE20. A waste management agency in the public sector measures its Scope 3 greenhouse gas emissions in accordance with the Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (2004). The entity considers how to disclose information about its emissions from purchased goods and services (Scope 3 Category 1 greenhouse gas emissions). In making its decision, the entity considers that a substantial proportion of its waste management services is outsourced to private companies to handle waste collection, recycling, and disposal services. The entity learns that these private companies have high Scope 1 greenhouse gas emissions —specifically, CO_2 and N_2O— both of which are subject to stringent regulation in the jurisdiction. Based on this consideration, the entity determines that information about its emissions from purchased goods and services is material.

IE21. The entity then also considers circumstances related to CO_2 and N_2O emissions, including:

(a) Whether and how the private companies providing waste management services measure, manage, and monitor their CO_2 and N_2O emissions; and

(b) Whether and how the entity has set specific targets for CO_2 emissions reduction.

IE22. Although not explicitly required by this Standard to disaggregate Scope 3 Category 1 greenhouse gas emissions by constituent greenhouse gases, the entity considers the requirement in this Standard that prohibits information from being aggregated if doing so would obscure information that is material.

IE23. For the reasons outlined in paragraphs IE19–IE22, the entity determines that disaggregating information about CO_2 and N_2O emissions from purchased goods and services is necessary to provide material information to primary users of general purpose financial reports.

IE24. The entity discloses its greenhouse gas emissions in accordance with paragraph 28 of this Standard and decides to include a table to supplement the disclosure of its Scope 3 greenhouse gas emissions, as illustrated in Table 4.

Table 4: Disclosure Excerpt of Scope 3 Category 1 Greenhouse Gas Emissions Disaggregated by Constituent Gases

	Greenhouse gas emissions (metric tonnes CO_2e)	
	20X1	**20X0**
Carbon dioxide	46,000	48,000
Nitrogen oxide	1,000	1,020

Example 4—Disaggregation of Greenhouse Gas Emissions by Function within a Public Sector Entity

IE25. A public sector entity discloses its greenhouse gas emissions in accordance with paragraph 28. The entity performs a range of public sector functions, including a policy design function and a service delivery function.

IE26. The entity was delegated responsibility for part of a national climate action plan and established a policy design function in 20X1 for the purposes of fulfilling this responsibility. This was a major expansion of the entity's operations, particularly from the increase in number of new employees in this policy design function starting from its establishment.

IE27. Although this Standard does not explicitly require disaggregation by function, the entity considers the requirement in this Standard that prohibits information from being aggregated if doing so would obscure information that is material.

IE28. For the reasons outlined in paragraphs IE25–IE27, the entity determines that disaggregating information about its absolute greenhouse gas emissions by function is necessary to provide material information to primary users of general purpose financial reports.

IE29. The entity discloses its greenhouse gas emissions in accordance with paragraph 28 of this Standard. In particular, the entity refers to paragraph AG59 and determines its Scope 3 categories for disclosure. The entity determines its material Scope 3 categories for the policy design function, such as Category 6 – Business Travel, where the entity measures greenhouse gas emissions from the transportation of employees for policy design activities. Table 5 illustrates the disaggregation of greenhouse gas emissions by function and scope within a public sector entity.

Table 5: Disclosure Excerpt of Greenhouse Gas Emissions Disaggregated by Function

Function	Greenhouse gas emissions (metric tonnes CO_2e)					
	20X1			20X0		
	Scope 1	Scope 2	Scope 3	Scope 1	Scope 2	Scope 3
Policy Design	1,900	2,080	4,820	-	-	-
Service Delivery	12,000	6,300	15,000	11,500	7,000	14,000

COMPARISON WITH IFRS S2

IPSASB SRS 1, *Climate-related Disclosures* is drawn primarily from IFRS S2 *Climate-related Disclosures* (2023). The main differences between IPSASB SRS 1 and IFRS S2 are as follows:

- IPSASB SRS 1 contains additional guidance on understanding an entity's context in determining material information, drawing on GRI 3: Material Topics (2021).
- IPSASB SRS 1 includes a rebuttable presumption that entities use the *Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard* (2004), unless a different method is determined to better meet primary user information needs, whereas IFRS S2 requires entities to measure their greenhouse gas emissions in accordance with the same Greenhouse Gas Protocol, unless required by a jurisdictional authority or an exchange on which the entity is listed.
- IPSASB SRS 1 contains additional guidance on conceptual foundations and general requirements drawn from the IPSASB's Conceptual Framework and IFRS S1 *General Requirements for Disclosure of Sustainability-related Financial Information*.
- IPSASB SRS 1 uses different terminology, in certain instances, from IFRS S2. The most significant examples are the use of the terms "long-term fiscal sustainability", and "operational model". The equivalent terms in IFRS S2 are "an entity's prospects" and "business model", respectively.

GLOSSARY OF DEFINED TERMS IN IPSASB SRS STANDARDS

This Glossary contains all terms defined in the IPSASB SRS Standards approved up to January 31, 2026. A list of these IPSASB SRS Standards is located after this Glossary.

Definitions

References to IPSASB SRS Standards are by Standard number and paragraph number. For example, 1.6 refers users to IPSASB SRS 1, *Climate-related Disclosures*, paragraph 6.

Term	Definition	Location
carbon credit	An emissions unit that is issued by a carbon crediting program and represents an emission reduction or removal of greenhouse gases. Carbon credits are uniquely serialized, issued, tracked and cancelled by means of an electronic registry.	1.6
climate resilience	The capacity of an entity to adjust to climate-related changes, developments or uncertainties. Climate resilience involves the capacity to manage climate-related risks and benefit from climate-related opportunities, including the ability to respond and adapt to climate-related transition risks and climate-related physical risks. An entity's climate resilience includes both its strategic resilience and its operational resilience to climate-related changes, developments and uncertainties.	1.6
climate-related physical risks	Risks resulting from climate change that can be event-driven (acute physical risk) or from longer-term shifts in climatic patterns (chronic physical risk). Acute physical risks arise from weather-related events such as storms, floods, drought or heatwaves, which are increasing in severity and frequency. Chronic physical risks arise from longer-term shifts in climatic patterns including changes in precipitation and temperature which could lead to sea level rise, reduced water availability, biodiversity loss and changes in soil productivity.	1.6
climate-related risks	The potential negative effects of climate change on an entity. These risks are categorized into climate-related physical risks and climate-related transition risks.	1.6
climate-related opportunities	The potential positive effects of climate change on an entity. Efforts to mitigate and adapt to climate change can produce climate-related opportunities for an entity.	1.6
climate-related transition plan	An aspect of an entity's overall strategy that lays out the entity's targets, actions or resources for its transition towards a lower-carbon economy, including actions such as reducing its greenhouse gas emissions.	1.6
climate-related transition risks	Risks that arise from efforts to transition to a lower-carbon economy. Transition risks include policy, legal, technological, market and reputational risks.	1.6
CO_2 equivalent	The universal unit of measurement to indicate the global warming potential of each greenhouse gas, expressed in terms of the global warming potential of one unit of carbon dioxide. This unit is used to evaluate releasing (or	1.6

Term	Definition	Location
	avoiding releasing) different greenhouse gases against a common basis.	
financed emissions	The portion of gross greenhouse gas emissions of an investee or counterparty attributed to the loans and investments made by an entity to the investee or counterparty. These emissions are part of Scope 3 Category 15 (investments) as defined in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011).	1.6
general purpose financial reports	Reports that provide financial and non-financial information about a reporting entity that is useful to primary users in making decisions and to enable accountability. General purpose financial reports include—but are not restricted to—an entity's general purpose financial statements and climate-related disclosures.	1.B1
global warming potential	A factor describing the radiative forcing impact (degree of harm to the atmosphere) of one unit of a given greenhouse gas relative to one unit of CO_2.	1.6
greenhouse gases	The seven greenhouse gases listed in the Kyoto Protocol— carbon dioxide (CO_2); methane (CH_4); nitrous oxide (N_2O); hydrofluorocarbons (HFCs); nitrogen trifluoride (NF_3); perfluorocarbons (PFCs) and sulfur hexafluoride (SF_6).	1.6
indirect greenhouse gas emissions	Emissions that are a consequence of the activities of an entity, but occur at sources owned or controlled by another entity.	1.6
internal carbon price	A price used by an entity to assess the financial implications of changes to investment, production and consumption patterns, and of potential technological progress and future emissions abatement costs. An entity can use internal carbon prices for a range of applications. Two types of internal carbon prices that an entity commonly uses are: (a) A shadow price, which is a theoretical cost or notional amount that the entity does not charge but that can be used to understand the economic implications or trade-offs for such things as risk impacts, new investments, the net present value of projects, and the cost and benefits of various initiatives; and (b) An internal tax or fee, which is a carbon price charged to an operational activity, or other operating unit based on its greenhouse gas emissions (these internal taxes or fees are similar to intra-group charges).	1.6
latest international agreement on climate change	The most recent agreement by central governments and states to combat climate change, setting norms and targets for a reduction in greenhouse gases.	1.6
long-term fiscal sustainability	The ability of an entity to meet service delivery and financial commitments, both now and in the future.	1.6

Term	Definition	Location
material information	Information that, if omitting, misstating or obscuring it could reasonably be expected to influence the discharge of accountability by the entity, or the decisions that primary users make on the basis of the entity's general purpose financial reports prepared for that reporting period.	1.B1
operational model	an entity's system of transforming inputs through its activities into outputs and outcomes that aims to fulfill the entity's objectives.	1.6
primary users of general purpose financial reports (primary users)	Existing and potential service recipients and their representatives and resource providers and their representatives.	1.B1
scope 1 greenhouse gas emissions	Direct greenhouse gas emissions that occur from sources that are owned or controlled by an entity.	1.6
scope 2 greenhouse gas emissions	Indirect greenhouse gas emissions from the generation of purchased or acquired electricity, steam, heating or cooling consumed by an entity. Purchased and acquired electricity is electricity that is purchased or otherwise brought into an entity's boundary. Scope 2 greenhouse gas emissions physically occur at the facility where electricity is generated.	1.6
scope 3 greenhouse gas emissions	Indirect greenhouse gas emissions (not included in Scope 2 greenhouse gas emissions) that occur in the value chain of an entity, including both upstream and downstream emissions. Scope 3 greenhouse gas emissions include the Scope 3 categories in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011).	1.6
scope 3 categories	15 categories of Scope 3 greenhouse gas emissions—as described in the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (2011): (1) Purchased goods and services; (2) Capital goods; (3) Fuel- and energy-related activities not included in Scope 1 greenhouse gas emissions or Scope 2 greenhouse gas emissions; (4) Upstream transportation and distribution; (5) Waste generated in operations; (6) Business travel; (7) Employee commuting; (8) Upstream leased assets; (9) Downstream transportation and distribution; (10) Processing of sold products;	1.6

Term	Definition	Location
	(11) Use of sold products; (12) End-of-life treatment of sold products; (13) Downstream leased assets; (14) Franchises; and (15) Investments.	
value chain	The full range of interactions, resources and relationships related to a reporting entity's operational model and the external environment in which it operates, including other public sector entities. A value chain encompasses the interactions, resources and relationships an entity uses and depends on to create its goods or provide services from conception to delivery, consumption and end-of-life, including interactions, resources and relationships in the entity's operations, such as human resources; those along its supply and distribution channels, such as materials and service sourcing, and service and/or product delivery; and the financing, geographical, geopolitical and regulatory environments in which the entity operates.	1.6

RPG™ GUIDELINES

THIS PAGE INTENTIONALLY LEFT BLANK

INTRODUCTION TO RECOMMENDED PRACTICE GUIDELINES

Recommended Practice Guidelines (RPG) are developed and approved by the International Public Sector Accounting Standards Board (IPSASB).

The objective of the IPSASB is to serve the public interest by setting high-quality public sector accounting standards and by facilitating the adoption and implementation of these, thereby enhancing the quality and consistency of practice throughout the world and strengthening the transparency and accountability of public sector finances.

In meeting this objective, the IPSASB sets International Public Sector Accounting Standards (IPSAS) and RPG Guidelines for use by public sector entities, including national, regional, and local governments, and related governmental agencies.

IPSAS Standards relate to the general purpose financial statements (financial statements) and are authoritative. RPG Guidelines are pronouncements that provide guidance on good practice in preparing general purpose financial reports (GPFRs) that are not financial statements. Unlike IPSAS Standards, RPG Guidelines do not establish requirements. Currently all pronouncements relating to GPFRs that are not financial statements are RPG Guidelines. RPG Guidelines do not provide guidance on the level of assurance (if any) to which information should be subject.

RPG 1, *REPORTING ON THE LONG-TERM SUSTAINABILITY OF AN ENTITY'S FINANCES*

History of RPG Guideline

This version includes amendments resulting from IPSAS Accounting Standards and RPG Guidelines issued up to January 31, 2026.

RPG 1, *Reporting on the Long-Term Sustainability of an Entity's Finances* was issued in July 2013.

Since then, RPG 1 has been amended by the following IPSAS Accounting Standards and RPG Guidelines:

- *Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative Guidance* (issued May 2023)
- *The Applicability of IPSAS* (issued April 2016)

Table of Amended Paragraphs in RPG 1

Paragraph Affected	How Affected	Affected By
5	Deleted	*The Applicability of IPSAS* April 2016
6	Amended	*The Applicability of IPSAS* April 2016
IG1	Added	*Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative Guidance* May 2023
IG2	Added	*Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative Guidance* May 2023
IG3	Added	*Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative Guidance* May 2023

Objective

1. This Recommended Practice Guideline (RPG) provides guidance on reporting on the long-term sustainability of a public sector entity's finances ("reporting long-term fiscal sustainability information"[1]). The RPG provides information on the impact of current policies and decisions made at the reporting date on future inflows and outflows and supplements information in the general purpose financial statements ("financial statements"). The aim of such reporting is to provide an indication of the projected long-term sustainability of an entity's finances over a specified time horizon in accordance with stated assumptions.

Status and Scope

2. The reporting of information in accordance with this RPG represents good practice. An entity reporting long-term fiscal sustainability information is encouraged to follow this RPG. Compliance with this RPG is not required in order for an entity to assert that its financial statements comply with International Public Sector Accounting Standards (IPSAS).

3. The scope of this RPG includes an entity's projected flows. It is not limited to those flows related to programs providing social benefits. Nevertheless, this RPG acknowledges that the flows relating to programs providing social benefits, including entitlement programs that require contributions from participants, can be a highly significant component of reporting long-term fiscal sustainability information for many entities.

4. This RPG does not directly address issues associated with the reporting of environmental sustainability. However, an entity should assess any financial impacts of environmental factors and take them into account when developing its projections.

5. [Deleted]

6. Although this RPG does not apply directly to commercial public sector entities, the future inflows and outflows related to a commercial public sector entity, controlled by the reporting entity, over the specified time horizon of the projections are within the scope of this RPG.

7. Long-term fiscal sustainability information should not be described as complying with this RPG unless it complies with all the requirements of this RPG.

8. This RPG outlines minimum information levels. The RPG does not preclude the presentation of additional information if such information is useful in meeting the objectives of financial reporting and meets the qualitative characteristics (QCs) of financial reporting.

Definitions

9. The following terms are used in this RPG with the meaning specified:

   Current policy assumptions are those assumptions based on legislation or regulation in force at the reporting date with appropriate departures for defined circumstances.

   Inflows are cash and cash equivalents projected to be received or accrued by the entity over the time horizon of the projections.

   Long-term fiscal sustainability is the ability of an entity to meet service delivery and financial commitments both now and in the future.

   Outflows are cash and cash equivalents projected to be paid or accrued by the entity over the time horizon of the projections.

[1] The IPSASB acknowledges that in a number of jurisdictions the term "fiscal" has a narrow interpretation related to taxation. In this RPG the term is used with a broader meaning to include both inflows and outflows.

A projection is forward-looking financial information prepared on the basis of the entity's current policy assumptions, and assumptions about future economic and other conditions.

Terms used in this RPG with the meanings specified in International Public Sector Accounting Standards (IPSAS) are set out in Appendix A.

Determining Whether to Report Long-Term Fiscal Sustainability Information

10. In determining whether to report long-term fiscal sustainability information, an entity needs to assess whether potential users exist for prospective financial information.

11. Long-term fiscal sustainability information is broader than information derived from the financial statements. It includes projected inflows and outflows related to the provision of goods and services and programs providing social benefits using current policy assumptions over a specified time horizon. It therefore takes into account decisions made by the entity on or before the reporting date that will give rise to future outflows that do not meet the definition of and/or recognition criteria for liabilities at the reporting date. Similarly it takes into account future inflows that do not meet the definition of and/or recognition criteria for assets at the reporting date.

12. Assessments of long-term fiscal sustainability use a broad range of data. These data include financial and non-financial information about future economic and demographic conditions, assumptions about country and global trends such as productivity, the relative competitiveness of the national, state or local economy and expected changes in demographic variables such as age, mortality, morbidity, fertility, gender, income, educational attainment and workforce participation.

13. The relevance of reporting long-term fiscal sustainability information should be considered in the context of that entity's funding and capacity to determine service delivery levels. There are likely to be users for long-term fiscal sustainability information for entities with one or more of the following characteristics:

    (a) Significant tax and/or other revenue raising powers;

    (b) Powers to incur significant debt; or

    (c) The power and ability to determine the nature, level and method of service delivery including the introduction of new services.

Reporting Boundary

14. Use of the same reporting boundary as for the financial statements enhances the understandability of projections and increases their usefulness to the users of general purpose financial reports (GPFRs).

15. An entity may report long-term fiscal sustainability information using another reporting boundary, such as the General Government Sector (GGS). This may be to enhance consistency and comparability with other jurisdictions or because there are other indicators that are used to assess long-term fiscal sustainability based on another reporting boundary. Entities providing information on the GGS are encouraged to also present information in accordance with IPSAS 22*, Disclosure of Financial Information about the General Government Sector.*

Reporting Long-Term Fiscal Sustainability Information

16. Long-term fiscal sustainability information prepared in accordance with this RPG should enable users to assess various aspects of the long-term fiscal sustainability of the entity, including the nature and extent of financial risks that the entity faces.

17. The form and content of an entity's long-term fiscal sustainability information will vary depending on the nature of the entity and the regulatory environment in which it operates. A single presentation approach is

unlikely to satisfy the objectives of financial reporting. To meet the objectives[2] and QCs of financial reporting while taking into account the constraints[3], long-term fiscal sustainability information will usually include the following components:

(a) Projections of future inflows and outflows, which can be displayed in tabular statements or graphical formats, and a narrative discussion explaining the projections (see paragraphs 21–26 and 56);

(b) A narrative discussion of the dimensions of long-term fiscal sustainability including any indicators used to portray the dimensions (see paragraphs 27–40 and 57); and

(c) A narrative discussion of the principles, assumptions and methodology underlying the projections (see paragraphs 41–53 and 58).

18. The projections reported in long-term fiscal sustainability information generally reflect conditions of uncertainty. The projections are derived from models that rely on assumptions around which there is some uncertainty. In order for long-term fiscal sustainability information to faithfully represent an entity's projected future flows, assumptions used should be based on the best available information.

19. Long-term fiscal sustainability information may be published as a separate report or as part of another report. It may be published at the same time as the entity's GPFSs or at a different time.

20. A controlled entity should ensure that the information reported is consistent with information reported by its controlling entity.

Presenting Projections of Future Inflows and Outflows

21. An entity should present projections of future inflows and outflows, including capital expenditure. The projections should be prepared on the basis of current policy assumptions, and assumptions about future economic and other conditions.

22. An entity should assess the extent to which it can draw on the assumptions, projections and indicators prepared by other entities, such as Ministries of Finance, or from other sources of information, rather than preparing the information itself, as this can reduce the cost of reporting. Such an assessment considers whether such information meets the QCs. Where an entity has a budget or forecast that meets the definition of a projection, this information can be used for the relevant time period or periods.

23. Projections can be displayed in tabular statements or graphical formats providing details of the programs and activities giving rise to outflows and identifying the sources of inflows. In determining the format of tabular statements entities need to balance considerations of understandability and relevance. Presentation of a large number of time periods between the reporting date and the end of the time horizon provides a more complete information set, but increases the risk of information overload and the impairment of understandability.

24. An entity should ensure that its choice and presentation of projections is not skewed to present a misleadingly favorable or unfavorable picture. The formats and terms used should also be consistent between reporting periods.

---

[2] The objectives of financial reporting by public sector entities are to provide information about the entity that is useful to users of general purpose financial reports for accountability purposes and for decision-making purposes. See Chapter 2 of the *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the *Conceptual Framework*) for further details.

[3] The qualitative characteristics of financial reporting are relevance, faithful representation, understandability, timeliness, comparability and verifiability. The constraints on information are materiality, cost-benefit and the balance between the qualitative characteristics. See Chapter 3 of the *Conceptual Framework* for further details.

Time Horizon

25. In selecting an appropriate time horizon an entity needs to balance the QCs of verifiability, faithful representation and relevance. The further the end of the time horizon is from the reporting date, the more future events are captured. However, as the time horizon increases, the assumptions underpinning the projections become less robust and potentially less verifiable. Conversely, excessively short time horizons may increase the risk that the consequences of events outside the time horizon may be ignored, thereby reducing the relevance of projections.

26. The length of the time horizon will reflect the characteristics of the entity. It is likely to be influenced by the characteristics of the entity, including aspects such as the longevity of key programs, the level of dependence on other entities for funding, the estimated lives of major items of property, plant, and equipment, such as infrastructure networks, and the time horizons adopted by other comparable entities providing prospective information.

Addressing the Dimensions of Long-Term Fiscal Sustainability

27. An entity reporting long-term fiscal sustainability information should include a narrative discussion on each of the dimensions of long-term fiscal sustainability. This RPG discusses three inter-related dimensions of long-term fiscal sustainability, as follows:

- Service;
- Revenue; and
- Debt.

28. The dimensions are inter-related as changes in one dimension affect the other dimensions. For example, future services and entitlements to beneficiaries (the service dimension) are funded by revenue and/or debt. A single dimension can be analyzed by holding the other two dimensions constant. For example, by holding the existing levels of services and revenues constant an entity can illustrate the effect of such assumptions on the level of debt. The relationships between the dimensions of long-term fiscal sustainability are illustrated in Appendix B.

29. There are two aspects to each dimension: capacity and vulnerability. Capacity is the ability of the entity to change or influence the dimension, and vulnerability is the extent of the entity's dependence on factors outside its control or influence.

30. An entity can use indicators to present the dimensions of long-term fiscal sustainability. An entity should choose its indicators based on their relevance to the entity. Examples of indicators are provided in the Glossary of Indicators in Appendix C.

Service Dimension

31. The service dimension considers the volume and quality of services to recipients and entitlements to beneficiaries over the period of the projections, given current policy assumptions on revenue from taxation and other sources, while remaining within debt constraints. This dimension focuses attention on the capacity of an entity to maintain or vary the volume and quality of services it provides or the entitlement programs it delivers. It also focuses attention on whether the entity is vulnerable to factors such the willingness of recipients and beneficiaries to accept reductions in services and entitlements or vulnerable because it does not have the ability to determine or vary service levels, for example where another level of government determines the level of services to be provided.

32. By reflecting the impact of current policy assumptions on revenue from taxation and other sources, and on debt, long-term fiscal sustainability information can present the amounts available for the provision of goods

and services. Users can contrast this information with the entity's service delivery commitments, and thereby evaluate the sustainability of the provision of services.

33. A factor to consider in making such comparisons is the extent to which expenditure on certain programs is likely to increase more steeply than the overall levels of expenditure of the entity. This may be because the number of beneficiaries is projected to increase for a particular program or because costs associated with certain programs, such as healthcare, are projected to increase more quickly than the general inflation rate. For example, due to demographic and technological changes, the cost of healthcare as a proportion of overall government expenditures might be projected to increase over the period of projections.

34. For capital intensive activities the service dimension also involves an assessment of the useful lives and replacement cycles of items of property, plant, and equipment.

Revenue Dimension

35. The revenue dimension considers taxation levels and other revenue sources over the period of the projections, given current policy assumptions on the provision of services to recipients and entitlements for beneficiaries, while remaining within debt constraints. This dimension focuses attention on the capacity of an entity to vary existing taxation levels or other revenue sources or introduce new revenue sources. It also focuses attention on factors such as whether the entity is vulnerable to the unwillingness of taxpayers to accept increases in taxation levels, and the extent of its dependence upon revenue sources outside its control or influence.

36. An example of an indicator of the revenue dimension is the proportion of total revenues that are received from entities at other levels of government or from international organizations. For example, a local government entity may be able to maintain or increase property taxes, but be partially dependent upon a mixture of general grants and specific grants from national and/or state governments. As policies for the provision of services and for managing debt are projected, the level of revenue required to fund such policies can be presented. This information assists users in assessing the entity's ability to maintain or increase its levels of revenue and thereby in evaluating the sustainability of its sources of revenue.

37. Generally, an entity which has a limited ability to vary levels of revenue from taxation and other sources is likely to be highly dependent upon funding decisions by entities at other levels of government. If inter-governmental transfers have constitutional or other legal underpinning, this may make the entity less susceptible to sudden adverse funding decisions by other entities and therefore increase the probability of continuing to receive stable revenues. This information assists users in assessing the entity's vulnerability to decisions outside its control.

Debt Dimension

38. The debt dimension considers debt levels over the period of the projections, given current policy assumptions on the provision of services to recipients and entitlements for beneficiaries, and revenue from taxation and other sources. This dimension focuses attention on the capacity of the entity to meet its financial commitments as they come due or to refinance or increase debt as necessary. It also focuses attention on whether the entity is vulnerable to market and lender confidence and interest rate risk.

39. The level of net debt is important for an assessment of the debt dimension, as, at any reporting date, it represents the amount expended on the past provision of goods and services that has to be financed in the future. Therefore, this indicator is likely to be relevant for many entities. By projecting current policy assumptions for the provision of goods and services, and for revenue from taxation and other sources, projected levels of net debt can be presented. This information assists users in assessing the entity's ability to meet its financial commitments as they come due or to maintain, refinance or increase its levels of debt and thereby evaluate the sustainability of the entity's debt.

40. At national levels a factor to consider in presenting such projections is whether to distinguish between: (a) the primary balance, which is total projected government spending, excluding interest payable on debt, minus tax revenues, and (b) the overall balance, which is the primary balance including outflows related to interest payable on debt. At sub-national levels or for international organizations the focus may be on net debt as a percentage of total revenues. Increases in this indicator show that an increasing proportion of revenues will be required for debt servicing, thereby diverting resources from service delivery, and that the projected level of an entity's debt may be unsustainable.

Principles and Methodologies

Updating Projections and Frequency of Reporting

41. While regular updates are desirable, this RPG acknowledges that annual updating may not be realistic for all entities. However, there is generally an inverse relationship between the robustness of assumptions on which projections are made and the amount of time since they were made. During periods of global financial volatility the risk of projections made some time before the reporting date becoming outdated increases, with a consequent reduction of the ability of such information to meet the objectives of accountability and decision making. In this situation, an entity should consider updating its projections on a more frequent basis. An entity should also consider updating its projections after significant or major unexpected events such as natural disasters or other emergencies.

Impact of Legal Requirements and Policy Frameworks

42. In some jurisdictions reporting long-term fiscal sustainability information is governed by a legal or regulatory framework that applies at the national or state level or through international arrangements. There may also be legal requirements for local government. These might include balanced budget requirements. These requirements are likely to specify or otherwise affect the principles, assumptions and methodologies an entity should use in calculating and disclosing its projections.

Current Policy, Demographic and Economic Assumptions

43. Where flows for particular programs and activities are individually modeled, the policy assumptions should be based on the continuation of current legislation or regulation with departures where appropriate. Those assumptions (referred to as "current policy assumptions") should be applied consistently through-out the entire projection period. The starting point for current policy assumptions should be legislation or regulation currently in force. However, there may be instances where a departure from current legislation or regulation may be appropriate, for example:

    (a) Where changes to current legislation or regulation have been enacted before the reporting date, and where those changes have a specific implementation date within the time horizon of the projections;

    (b) Where the provisions in current legislation or regulation are internally inconsistent; or

    (c) Where current legislation or regulation has a termination date, e.g., "sunset provisions".

44. Current policy assumptions may be affected by legal changes that have been enacted before the reporting date, which have a specific implementation date within the time horizon of the projections. In these circumstances, assuming current legislation or regulation remains in force for the entire projection period will not be appropriate.

45. An example of current legislation or regulation that is internally inconsistent is a social security program which has legal provisions that make it unlawful to make payments once an earmarked fund is exhausted, although entitlements of beneficiaries will continue after the exhaustion of that fund. Assuming that the fund will not meet obligations once it is exhausted might reflect a strict legal position, but an entity may need to assess

whether the presentation of projections on such a basis underestimates projected outflows and therefore the extent of the fiscal challenge facing the social security program. In this situation an entity may calculate its projections based on current policy assumptions despite legal restrictions.

46. Current legislation or regulation may have a termination date, e.g., sunset provisions, whereby it terminates after a specific period. In many cases there may be a strong probability that such programs will be replaced by similar programs. Adopting a strict legal termination principle could underestimate projected outflows, and therefore impair the usefulness of the information.

Approach to Revenue Inflows

47. Significant revenue inflows from taxation and other sources, such as inter-governmental transfers, may be individually modeled based on current policy assumptions. Significant sources of taxation and other revenue inflows that are not modeled individually are projected to grow (or diminish) in relation to a variable such as gross domestic product (GDP) or a specified inflation index.

48. Other revenue inflows, such as royalties from natural resources, may also be projected to grow in line with GDP or an index. They may also be individually modeled to address specific circumstances, such as when the natural resource is expected to be depleted.

Approach to Age-Related and Non-Age-Related Programs

49. Age-related programs are often subject to eligibility criteria such as age and other demographic factors. In making projections, programs and activities that are age-related may be distinguished from non-age- related programs. Age-related programs may be individually modeled while non-age-related programs may be projected to increase in line with other variables, such as GDP, or to be constant in real terms. Such an approach to non-age-related programs provides some flexibility, as it allows above GDP/real terms increases in some programs and activities to be offset by lower increases or spending declines in other areas.

Demographic and Economic Assumptions

50. Demographic assumptions are likely to include fertility, mortality and migration rates, and workforce participation rates. Economic assumptions are likely to include economic growth rates and inflation. Other economic assumptions may include environmental factors, such as the impact of the depletion and degradation of ecosystems and the depletion of water and finite natural resources on economic growth.

Reasonableness of Assumptions

51. Projections of inflows and outflows should be based on current policy assumptions and economic and demographic assumptions, which are reasonable in the context of the factors discussed in paragraph 18.

Inflation and Discount Rates

52. There are two main approaches to incorporating the effect of price inflation in projections. Inflation may be taken into account in making projections or projections may be made at current prices (i.e., prices prevailing at the reporting date). If the projections include inflation, then the discount rate should also include inflation. If the projections are at current prices, the discount rate should exclude inflation.

Sensitivity Analysis

53. Many assumptions on which projections are based are inherently uncertain. In some cases small changes in variables can have significant impacts on the projections. The use of sensitivity analysis will help users to understand the impact of significant changes in demographic and economic assumptions on the projections.

Disclosures

54. The entity should disclose information that enables users of its long-term fiscal sustainability information to assess the projected long-term fiscal sustainability of the entity. An entity should make any additional disclosures necessary to meet the objectives of financial reporting.

55. An entity should disclose the following information:

(a) The name of the entity;

(b) The financial statements to which the long-term fiscal sustainability information relates;

(c) Where different, the names of the entities within the reporting boundary for long-term fiscal sustainability information that are different to those for the financial statements;

(d) Where the entity is a controlled entity, the identity of the controlling entity;

(e) The date at which a full set of projections was made;

(f) The basis and timing of subsequent updating of that full set of projections; and

(g) When an entity uses projections and indicators prepared by other entities or from other sources of information, the names of those entities or other sources, and the information that has been used.

56. The narrative discussion of the projections should include disclosure of the following information:

(a) The sources of significant revenue inflows from taxation and other sources;

(b) An overview of the current policy assumptions for significant revenue inflows from taxation and other sources, such as taxation threshold levels and allowances;

(c) The sources of significant outflows including capital expenditure;

(d) An overview of the current policy assumptions for the significant outflows including capital expenditure;

(e) Whether the projections are modeled individually or in aggregate;

(f) An explanation of the changes in projections between reporting dates and the reasons for those changes;

(g) An explanation that projections are not forecasts and that it is unlikely that projections over the specified time horizon will match the actual outcome and the extent of the difference will depend upon a range of factors, including the future actions of the entity in meeting any identified fiscal challenge;

(h) An explanation of any modifications of formats between reporting periods and the reasons for such changes;

(i) The time horizon used for the projections and the reasons for selecting that time horizon; and

(j) Where an entity changes the time horizon from that used in the previous reporting period, the reason for such a change.

57. The narrative discussion of the dimensions of long-term fiscal sustainability should include disclosure of the following information:

(a) An analysis of significant changes in the indicators compared with those of the previous reporting period;

(b) Changes in the indicators used to report long-term fiscal sustainability information from the previous reporting period, and the reasons for such changes; and

(c) Where an entity uses indicators that are based on amounts derived from non-IPSAS-based information and the indicators affected.

58. An entity should disclose the principles, assumptions and methodology that underpin the projections including the following information:

(a) Key aspects of governing legislation and regulation;

(b) Underlying macro-economic policy and fiscal frameworks, including details of where other publicly available reports on these policies and frameworks can be accessed, including documents outside the GPFRs;

(c) The key current policy assumptions and the key demographic and economic assumptions that underpin the projections;

(d) Its policy for reviewing and updating current policy assumptions and, demographic and economic assumptions;

(e) An explanation of any significant current policy assumptions that depart from current legislation or regulation;

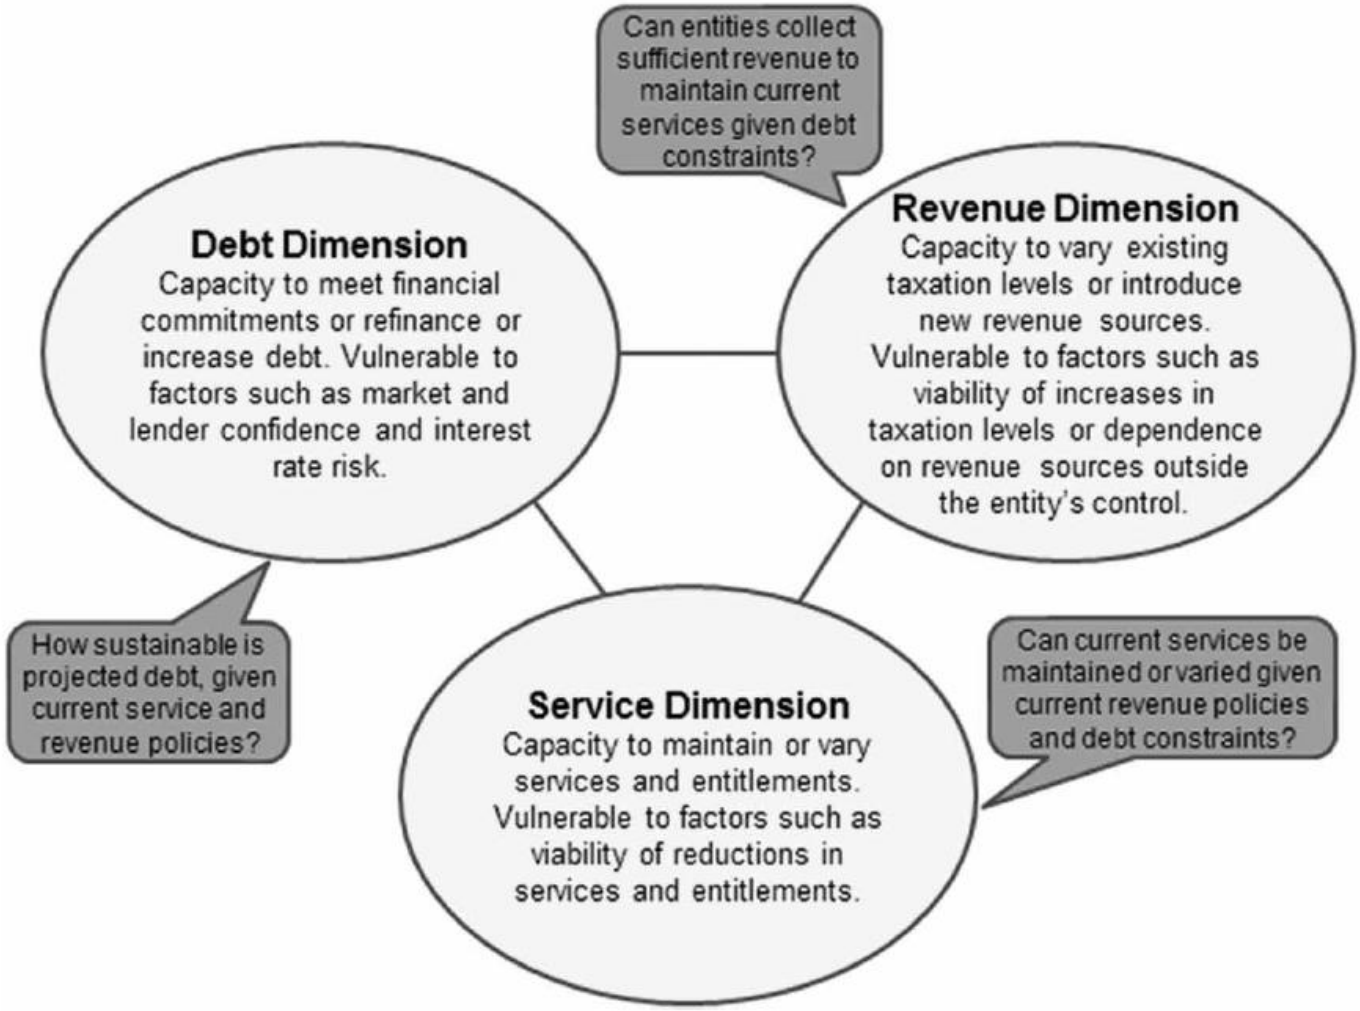
(f) An explanation of significant changes in the principles, assumptions and methodologies from the previous reporting period, the nature and extent of these changes, and the reasons for such changes;

(g) The results of any sensitivity analyses that could have a significant impact on the projections;

(h) The discount rates applied and the basis on which the discount rate has been determined; and

(i) The approach to inflation and the reason for this approach.

Appendix A



Terms in this RPG Defined in IPSAS

Term	Definition
Assets	Resources controlled by an entity as a result of past events and from which future economic benefits or service potential are expected to flow to the entity.
Cash	Comprises cash on hand and demand deposits.
Cash equivalents	Short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.
Controlled entity	An entity, including an unincorporated entity such as a partnership, which is under the control of another entity (known as the controlling entity).
Controlling entity	An entity that has one or more controlled entities.
General government sector	Comprises all organizational entities of the general government as defined in statistical bases of financial reporting.
Liabilities	Present obligations of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits or service potential.
Reporting date	The date of the last day of the reporting period to which the financial statements relate.
Revenue	The gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets/equity, other than increases relating to contributions from owners.

Appendix B

Relationships Between the Dimensions of Long-Term Fiscal Sustainability

This Appendix illustrates the two aspects (capacity and vulnerability) of each of the three dimensions and the relationship between the three dimensions.

Appendix C

Glossary of Indicators

This Appendix lists examples of indicators. It is not intended to be an exhaustive list.

Government Finance Statistics Reporting Guidelines

Where an indicator includes a defined term, that term is shown in italics and its definition is shown after the indicators.

- **Gross debt, total**: Total gross debt—often referred to as "total debt" or "total debt liabilities"—consists of all *liabilities* that are *debt instruments*. A debt instrument is defined as a financial claim that requires payment(s) of interest and/or principal by the debtor to the creditor at a date, or dates, in the future.[4]
- **Net debt:** Net debt is calculated as gross debt minus *financial assets* corresponding to debt instruments.[4]
- **Net financial worth:** Net financial worth of an *institutional unit* (or grouping of units) is the total value of its *financial assets* minus the total value of its outstanding *liabilities*.[4]
- **Net worth:** Net worth of an *institutional unit* (or grouping of units) is the total value of its *assets* minus the total value of its outstanding *liabilities*.[4]
- **Overall balance:** This term corresponds to the GFS 1986 terminology of "Overall Deficit/Surplus," which is defined as revenue plus grants received less expenditure less "lending minus repayments." The balance so defined is equal (with an opposite sign) to the sum of net borrowing by the government, plus the net decrease in government cash, deposits, and securities held for liquidity purposes. The basis of this balance concept is that government policies are held to be deficit- or surplus-creating, and thus the revenue or expenditures associated with these policies are "above the line." Borrowing or a rundown of liquid assets, however, is deficit financing or "below the line." It should be noted that the term "lending minus repayments" included above the line covers government transactions in debt and equity claims on others undertaken for purposes of public policy rather than for management of government liquidity or earning a return.[5]
- **Primary balance:** The overall balance, excluding interest payments. Since interest payments represent the cost of past debt, and the determinants of future debt that are under policy control of government are other spending and revenue measures exclusive of interest payment, the primary balance is of particular importance as an indicator of the fiscal position in countries with high levels of debt.[5]

Underlying Definitions

- **Debt instrument:** A debt instrument is defined as a financial claim that requires payment(s) of interest and/or principal by the debtor to the creditor at a date, or dates, in the future.[4]
- **Economic assets:** Economic assets are entities (i) over which economic ownership rights are enforced by institutional units, individually or collectively, and (ii) from which economic benefits may be derived by their owners by holding them or using them over a period of time.[4]
- **Financial assets:** Financial assets consist of financial claims plus gold bullion held by monetary authorities as a reserve asset. A financial claim is an asset that typically entitles the owner of the asset (the creditor) to receive funds or other resources from another unit, under the terms of a liability.[6]

5 Source: International Monetary Fund: Manual on Fiscal Transparency (2007).

6 Source: International Monetary Fund: Public Sector Debt Statistics—Guide for Compilers and Users 2011.

- **Institutional unit:** An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities, and engaging in economic activities and in transactions with other entities.[6]
- **Liability**: A liability is established when one unit (the debtor) is obliged, under specific circumstances, to provide funds or other resources to another unit (the creditor).[6]

Other Sources

- **Fiscal gap**: The fiscal gap is the change in non-interest spending and/or receipts that would be necessary to maintain public debt at or below a target percentage of gross domestic product (GDP).[7] More specifically, the fiscal gap is the net present value of projected spending[8] minus projected receipts, adjusted by the decrease (or increase) in public debt required to maintain public debt at or below the target percentage of GDP for the stated projection period. (Source: US Federal Accounting Standards Advisory Board: Statement of Federal Financial Accounting Standards 36: *Comprehensive Long-Term Projections for the U.S. Government* 2009).
- **Inter-temporal budget constraint:** The inter-temporal budget constraint is satisfied if the projected outflows of the government (current public debt and the discounted value of all future expenditure, including the projected increase in age-related expenditure) are covered by the discounted value of all future government revenue. (Source European Commission: *Sustainability Report:* 2009).
- **Net Debt/Total Revenues**: Net debt as a proportion of total revenues. (Source Canadian Public Sector Accounting Board (PSAB): Statement of Recommended Practice 4 (SORP 4), *Indicators of Financial Condition: 2009*).

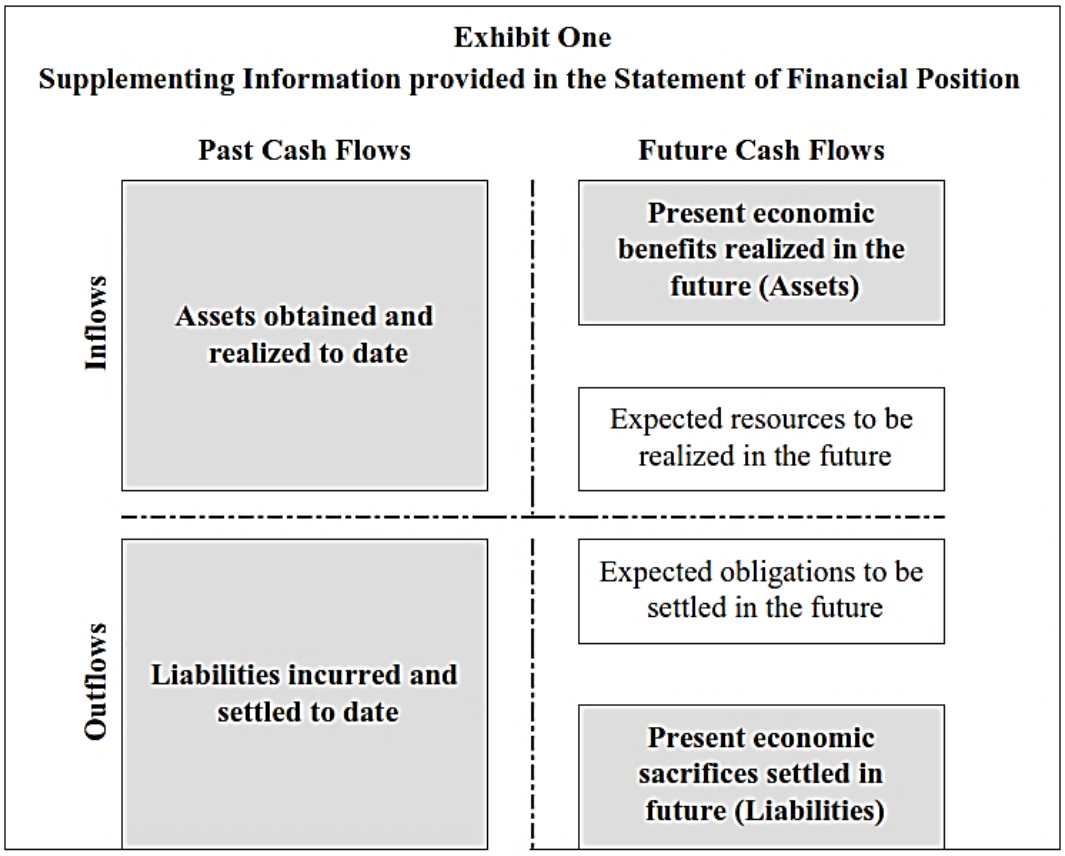
[7] GDP is the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are: private sector consumption and investment, government consumption and investment, and net exports (exports-imports).

[8] Since interest is factored into the present value calculation, the fiscal gap as a share of spending is expressed as a share of spending excluding interest ("non-interest spending").

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, RPG 1.

Background



BC1. The IPSASB initially launched a project on accounting for social policy obligations (subsequently re-termed social benefits) in 2002. This led to the publication of an Invitation to Comment (ITC), *Accounting for Social Policies of Governments*, in January 2004. Following an analysis of responses to that ITC, the IPSASB began to develop proposals for accounting for obligations related to different sub-categories of social benefits. In late 2006, due to failure to agree on recognition points and measurement requirements for liabilities, the IPSASB decided not to develop further proposals on recognition and measurement at that time.

BC2. As an interim step the IPSASB developed proposals for the disclosure of amounts to be transferred to those eligible at the reporting date for cash transfers (benefits settled in cash). It expressly did not propose the disclosure of obligations and liabilities. ED 34, *Social Benefits: Disclosure of Cash Transfers to Individuals or Households*, was issued in March 2008.

BC3. The deliberations on identifying the point at which liabilities for social benefits arise had led the IPSASB to the view that the financial statements cannot provide all the information that users need on social benefits. This is illustrated in Exhibit One below where the shaded boxes indicate information provided in the financial statements. The IPSASB considered that before launching any further project it should consult constituents. Therefore the IPSASB raised this issue in a further Consultation Paper, *Social Benefits: Issues in Recognition and Measurement,* and issued a Project Brief, *Long-Term Fiscal Sustainability* Reporting. Both these documents were issued at the same time as ED 34.

Exhibit One

Supplementing Information provided in the Statement of Financial Position

BC4. In October 2008 the IPSASB reviewed responses to all of the above documents. In the light of these responses, it was decided not to develop ED 34 into an IPSAS. The IPSASB also noted that a large majority of respondents agreed that the financial statements cannot convey sufficient information to users about the long-term financial implications of governmental programs providing social benefits.[9] In light of this view the IPSASB decided to initiate a project on long-term fiscal sustainability (subsequently re-termed *"Reporting on the Long-Term Sustainability of Public Finances*"). This led to the issue of a Consultation Paper, *Reporting on the Long-Term Sustainability of Public Finances*, in November 2009. Drawing on existing practice the Consultation Paper put forward the case for reporting long-term fiscal sustainability information, made suggestions on how such information might be presented and sought the views of constituents. The majority of respondents to the Consultation Paper favored the continuation of the project, although many said that they preferred the IPSASB to develop guidelines rather than requirements.

BC5. In light of the responses to the Consultation Paper, the IPSASB developed ED 46.RPG, *Reporting on the Long-Term Sustainability of a Public Sector Entity's Finances*, which was issued in October 2011. This ED proposed non-authoritative guidance for public sector entities reporting long-term fiscal sustainability information.

BC6. The IPSASB has further developed its thinking on reporting long-term fiscal sustainability information in the course of its project on *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* and, in particular, in Chapter 2 of that Framework. Chapter 2: *Objectives and Users of General Purpose Financial Reporting* reflects the view that, although the financial statements are at the core of financial reporting, a more comprehensive scope is necessary to meet the needs of users. That scope includes prospective financial information. The IPSASB has also noted that projected outflows relating to obligations as a result of past decisions and projected inflows related to sovereign powers and taxation powers may not be recognized or may only be partially recognized in the statement of financial position and the statement of financial performance. Therefore, in order to meet the financial reporting objectives of accountability and decision making, an entity should provide users with information on future inflows and outflows that supplements information on the entity's financial position in the financial statements.

BC7. The IPSASB acknowledges that the rationale for reporting long-term fiscal sustainability information in paragraph BC6 might indicate that for some entities such reporting should be required. However, the IPSASB concluded that it would be premature to issue an authoritative pronouncement, because reporting long-term fiscal sustainability information in GPFRs is an area where practice is developing and the IPSASB wishes to encourage innovative and flexible approaches. This approach is consistent with the views of the majority of respondents to ED 46. The IPSASB notes that paragraph 4 of the RPG notes that it is good practice to follow this RPG.

Completion of the Conceptual Framework and the Social Benefits projects

BC7A. The IPSASB recognized linkages between its work in developing RPG 1, the Conceptual Framework and accounting for social benefits. RPG 1 was published in 2013 when the work on the Conceptual Framework and Social Benefits projects were ongoing. In October 2014 and January 2019, the IPSASB finished these projects by publishing the Conceptual Framework and IPSAS 42, *Social Benefits*, respectively.

[9] Further work on proposals for the recognition and measurement of liabilities arising from obligations to deliver social benefits has progressed indirectly in Phase 2 of the *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* project. This phase deals with elements, and includes the development of the definition of a liability and other relevant issues such as whether the power to tax is an asset. This work is likely to influence the approach to recognizing and measuring liabilities related to social benefits. The IPSASB decided to reactivate its project on social benefits at its June 2013 meeting.

Scope

BC8. The IPSASB considered whether the scope of the RPG should be limited to the consolidated national and whole-of-government levels. The IPSASB acknowledged that reporting long-term fiscal sustainability information is particularly relevant at these levels, but concluded that there might be significant user demand for such information at sub-national levels. The IPSASB therefore concluded that a narrow scope limited to the national and whole-of-government levels is not justified. The factors considered by the Board in determining whether an entity should report long-term fiscal sustainability information are discussed in paragraphs BC14-BC17.

Definitions

Long-Term Fiscal Sustainability

BC9. The Consultation Paper noted that there is no universally accepted definition of long-term fiscal sustainability and included a working definition that long-term fiscal sustainability is "the ability of government to meet its service delivery and financial commitments both now and in the future." The IPSASB acknowledged the view that this definition is insufficiently rigorous and that a definition should be adopted that provides users with a clearer indication whether an entity's current economic position is sustainable. Such an approach might involve (a) linking current service delivery obligations to the maintenance of current taxation levels and (b) focusing on projected debt paths. An entity that can only meet current service delivery obligations and financial obligations by increasing taxation or current debt levels is identified as being in an unsustainable position. Macro-economists tend to adopt this more rigorous approach and focus on "explosive" debt paths, which is a term that connotes that existing service levels and existing benefits from entitlement programs cannot be sustained without major increases in levels of indebtedness.

BC10. When this RPG was issued, the IPSASB decided to retain the definition of long-term fiscal sustainability used in the Consultation Paper for ED 46 and subsequently for this RPG, except for widening the scope to reflect that it can apply to all public sector entities (except [Government Business Enterprises]) (the term in square brackets is no longer used following the issue of *The Applicability of IPSAS* in April 2016) rather than limiting it to governments. In coming to this conclusion the IPSASB noted the need for governments and public sector entities to both (a) provide services and meet obligations relating to entitlement programs and (b) meet financial obligations, principally debt servicing. The IPSASB also noted that many governments have sovereign powers to enact legislation for new taxation sources and to vary the levels of existing taxation, while acknowledging that in a global environment the ability to increase taxation might be practically constrained by a number of considerations. The IPSASB took the view that, provided an entity gives appropriate attention to the dimensions of long-term fiscal sustainability, as explained in paragraphs 27–40, users will be given adequate information about whether an entity can maintain existing service levels, meet obligations to the current and future beneficiaries of entitlement programs and meet financial obligations without increasing revenue from taxation and other sources or increasing borrowing.

Projections, Forecasts and Budgets

BC11. Several respondents to ED 46 suggested that the relationship between projections, forecasts and budgets should be clarified. Given that there are no universally accepted definitions of these terms, the IPSASB decided to develop a definition of a projection to clarify the characteristics of information that should be used in calculating the projections and to ensure that only calculations that meet these characteristics are within the scope of the RPG.

BC12. In developing its definition of a projection the IPSASB considered whether forward-looking financial information should be based on a strict adherence to legislation or regulation in force at the reporting date, or whether specific departures from legislation or regulation in force at the reporting date might be

appropriate. The IPSASB recognized that there may be limited cases where departures from current legislation or regulation may be appropriate in order to provide more relevant information. A projection is therefore defined as "forward-looking financial information prepared on the basis of the entity's current policy assumptions, and assumptions about future economic and other conditions." Current policy assumptions are those "assumptions based on legislation or regulation in force at the reporting date with appropriate departures for defined circumstances." Circumstances where departures from current legislation or regulation are appropriate are detailed in paragraph 43 and discussed in paragraphs BC31-34.

BC13. Budgets and forecasts aim to provide details of intended outcomes. In contrast projections are not intended to provide approximations of actual outcomes. A budget is a plan of an entity's anticipated revenues or receipts and anticipated expenses or expenditure over a specified period. It may be related to service outputs or outcomes in the period. A forecast provides prospective information that includes anticipated actions and interventions by the entity although these may not be reflected in current legislation or regulation or within the limited departures inherent in the definition of a projection. The IPSASB agreed that some of the information in budgets or forecasts might also be used for projections.

Determining Whether to Report Long-Term Fiscal Sustainability Information

BC14. As discussed in paragraph BC8 the IPSASB concluded that the scope of the RPG should not be limited to particular levels of government. However, the IPSASB acknowledged that reporting long-term fiscal sustainability information might not be appropriate for all entities.

BC15. The Consultation Paper questioned whether reporting long-term fiscal sustainability information is appropriate for individual controlled entities. This reservation was based on a tentative view that (a) the cost of producing the information for such entities is likely to be greater than the benefits to users, (b) the production of separate reports and disclosures by individual entities within an economic entity might be confusing to users and (c) it could be misleading if entities with limited tax-raising powers and a dependence on resources from entities at other tiers of government provide projections that are contingent on taxation decisions over which they have little or no control. Some respondents to the Consultation Paper challenged this view and suggested that there are cases where users for long-term fiscal sustainability information of controlled entities can be identified. The example of a local government entity controlled by a state or provincial government was cited. These respondents proposed that the test for whether an entity reports long-term fiscal sustainability information should be to assess whether potential users exist for this type of information. The IPSASB was persuaded by these arguments and the RPG reflects these views in paragraphs 12 and 13.

BC16. The IPSASB acknowledged that direct evidence of the existence of users of long-term fiscal sustainability information might not be readily available. The IPSASB sought to identify characteristics which might indicate the existence of users across the three dimensions of long-term fiscal sustainability. The IPSASB had reservations about whether there would be significant numbers of users to justify the costs of reporting if entities did not have one or more of the following characteristics:

(a) Significant tax and/or other revenue raising powers;

(b) Powers to incur significant debt; or

(c) The power and ability to determine the nature, level and method of service delivery including the introduction of new services.

BC17. The IPSASB believes that reporting long-term fiscal sustainability information is likely to be relevant at the whole of government level, consolidated national level, and for major sub-national entities such as regions, provinces, states and large local government entities (for examples, cities), which have tax raising powers enabling them to generate a significant proportion of their total revenues. The IPSASB remains of the view

that reporting long-term sustainability information is unlikely to be appropriate for individual government departments and entities. This is because often they do not have tax raising powers, their expenditure is controlled through appropriations, and they do not have powers to incur debt.

Presenting Projections of Future Inflows and Outflows

BC18. The Consultation Paper considered three models for reporting long-term fiscal sustainability information and suggested that (a) the provision of additional statements providing details of projections and (b) summarized projections in narrative reporting were appropriate. Some respondents suggested that, although the Consultation Paper acknowledged that these reporting approaches were not mutually exclusive, the IPSASB should highlight that reporting long-term fiscal sustainability information just by displaying projections in statements is insufficient to meet user needs and that other presentation methods need to be deployed. The IPSASB was persuaded by this view and agreed to reflect this in paragraph 17 of the RPG).

BC19. The IPSASB considered whether it should recommend time horizons for projections for entities at particular levels of government. It acknowledged the view that standard time horizons for particular types of public sector entity might enhance comparability. The IPSASB decided that such benchmarks would be over-prescriptive and impractical. The scope of the RPG is such that standard time horizons would have to be determined for a wide range of entities, including individual reporting entities.[10] In addition the fiscal autonomy of entities at the same level of government can differ markedly between jurisdictions. The IPSASB concluded, however, that it is good practice for entities to explain the reason for the time horizons that they select. The IPSASB considers that the extent of an entity's dependence on other entities for funding will have an impact on time horizons; the higher the level of dependence, the higher the likelihood of shorter time horizons.

BC20. The Consultation Paper included illustrative examples of tabular statements showing 75 year projections for key programs and activities. The IPSASB noted the view of some respondents that a focus on the position at the end of the time horizon may obscure events between the reporting date and the end of the time horizon. The IPSASB accepted this view and included guidance on the need to balance the QCs of verifiability, faithful representation and relevance in displaying projections in paragraph 25 of the RPG.

Addressing the Dimensions of Long-Term Fiscal Sustainability

BC21. The IPSASB considered that providing a flexible framework for the disclosure of information might help entities to organize the way in which they communicate information and ensure that information is a faithful representation of an entity's long-term fiscal sustainability information.

BC22. ED 46 included three dimensions of long-term fiscal sustainability, as follows:

- Fiscal capacity;
- Service capacity; and
- Vulnerability.

BC23. The description of vulnerability was derived from the definition of vulnerability in Statement of Recommended Practice 4 (SORP-4), *Indicators of Financial Condition* issued by the Canadian Public Sector Accounting Board (PSAB). The definition in SORP-4 is "the degree to which a government is dependent on sources of funding outside its control or influence or is exposed to risks that could impair its ability to meet its existing financial obligations both in respect of its service commitments to the public and financial commitments to creditors, employees and others." The IPSASB considered that a variant of this notion is particularly important for entities at sub-national levels which have limited taxation powers and are therefore exposed to decisions, over which they have no or very limited control, taken by other entities at other levels of government.

[10] For example, such entities might include school boards or bodies responsible for water and drainage.

BC24. The descriptions of the other two dimensions in ED 46 were derived from the US Governmental Accounting Standards Board's (GASB)[11] definitions of "fiscal capacity" and "service capacity." The GASB defines fiscal capacity as "the government's ability and willingness to meet its financial obligations as they come due on an ongoing basis" and service capacity as "the government's ability and willingness to meet its commitments to provide services on an ongoing basis."

BC25. When developing the RPG based on ED 46, the IPSASB considered whether the notion of vulnerability in the ED was too narrow and whether vulnerability is a more pervasive factor in the analysis of the long-term fiscal sustainability of an entity's finances. The IPSASB concluded that vulnerability is an aspect of all three dimensions. Therefore, the IPSASB decided to (a) explain how the notion of vulnerability affects each dimension of long-term fiscal sustainability and (b) change the name of the vulnerability dimension to the revenue dimension because its description relates to changes in revenues.

BC26. The IPSASB also noted that the dictionary definition of "fiscal" includes revenue[12] while the description of fiscal capacity relates to the ability of the entity to meet financial commitments, in other words, its ability to maintain and service its debt. Therefore the IPSASB decided that the name of this dimension should be changed to the debt dimension to more closely reflect the description. The renaming of these two dimensions required a modification to the service capacity dimension so that the wording of the three dimensions is consistent. The IPSASB acknowledged that the dimensions are inter-related.

BC27. The IPSASB noted that the approach taken by the PSAB and the GASB had similarities to the "dimensions" of sustainability developed by Allen Schick[13] and discussed in the Consultation Paper.

BC28. One of the dimensions that Schick discussed was "economic growth." The IPSASB considered that explicitly introducing a dimension of economic growth was inappropriate because the determinants of economic growth are complex and not under the control of the reporting entity. However, assumptions about economic growth will be critical to the development of projections and are likely to feature heavily in sensitivity analyses.

Principles and Methodologies

BC29. The Consultation Paper discussed the principles that should be adopted for the inclusion of programs and activities in reporting long-term fiscal sustainability information and methodologies central to the outcome of projections. The areas addressed included whether projections should be based on current or future policy, the approach to revenue inflows, the approach to age-related and non-age-related programs and the approach to sensitivity analysis. The IPSASB considered whether, in order to meet the qualitative characteristic of comparability, the IPSASB should make firm recommendations on good practice.

BC30. The IPSASB did not consider it appropriate to make firm recommendations on good practice because (a) the scope of the RPG includes all public sector entities and practice that is appropriate at one level of government may not be suitable elsewhere in the public sector, (b) while reporting long-term fiscal sustainability information has become a feature of financial management in an increasing number of jurisdictions it is at an early stage of development and (c) it is not the intention of the IPSASB to usurp the role of other professional groups with expertise in this area. In some cases the IPSASB has considered it appropriate to express a view on a preferred high level approach. For example, the IPSASB has taken the view that projections are likely to be most useful when they are based on current policy assumptions and encompass both inflows as well as outflows. The IPSASB also noted that, at the national level, the Organisation for Economic Cooperation and Development has recommended that projections should be updated on an annual basis.

---

11 Preliminary Views of the Governmental Accounting Standards Board on Major Issues related to Economic Condition Reporting: Financial Projections. (Governmental Accounting Standards Board: Norwalk, CT, USA, November 2011).

12 The definition of fiscal is "of or relating to taxation, public revenues, or public debt" (Webster's Ninth New Collegiate Dictionary, 1984).

13 Allen Schick, Sustainable Budget Policy: Concepts and Approaches (OECD: Paris, 2005).

Current Policy Assumptions

BC31. Paragraphs 40–42 of ED 46 explained that an entity can depart from using current policy to calculate its projections (a) where there is a conflict between current policy and legal obligations and (b) where a policy has "sunset provisions."

BC32. The IPSASB introduced the term "current policy assumptions" to clarify that current policy means current legislation or regulation with departures where appropriate. Current policy assumptions are applied to the entire projection period for inflows or outflows that are individually projected. The RPG gives examples of where a departure may be appropriate in paragraphs 44-46. The IPSASB noted that paragraph 58(e) of the RPG recommends that any departures from current legislation or regulation be disclosed together with the reasons for such departures.

BC33. A respondent to ED 46 raised a concern that the concept of current policy should be broader than that proposed in the ED to deal with issues such as fiscal drag. Fiscal drag refers to the phenomenon that income tax inflows grow faster than the income it is levied on because, as an individual's income grows, an increasing proportion of it is taxed at a higher rate. Fiscal drag occurs if the rates and thresholds for the taxation of individuals are not adjusted over time, and is often addressed by governments through periodic increasing of tax thresholds.

BC34. The IPSASB concluded that the issue of fiscal drag is addressed in paragraph 47 of the RPG because it permits current policy assumptions to be applied to the demographic and economic assumptions, including assumptions over inflation. When a flow such as tax is modeled it may be based on a percentage of a variable such as GDP or reflect the application of current policy assumptions to the changing circumstances reflected in the demographic and economic assumptions.

Revision of RPG 1 as a result of the IPSASB's *The Applicability of IPSAS,* issued in April 2016

BC35. The IPSASB issued *The Applicability of IPSAS* in April 2016. This pronouncement amends references in all IPSAS as follows:

(a) Removes the standard paragraphs about the applicability of IPSAS to "public sector entities other than GBEs" from the scope section of each Standard;

(b) Replaces the term "GBE" with the term "commercial public sector entities", where appropriate; and

(c) Amends paragraph 10 of the *Preface to International Public Sector Accounting Standards* by providing a positive description of public sector entities for which IPSAS are designed.

The reasons for these changes are set out in the Basis for Conclusions to IPSAS 1.

Revision of RPG 1 as a result of *Improvements to IPSAS, 2021*

BC36. Stakeholders noted that the Basis for Conclusions (paragraphs BC1-BC7) in RPG 1 provided a background that highlighted the linkages between RPG 1, the Conceptual Framework and Social Benefits projects. RPG 1 indicated these projects as ongoing when RPG 1 was issued in July 2013. Since these projects have been completed, the IPSASB agreed to add paragraph BC7A in *Improvements to IPSAS, 2021* to indicate that the Conceptual Framework and Social Benefits projects were completed in October 2014 and January 2019, respectively.

Additional Guidance for RPG 1 as a result of *Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative*

BC37. In March 2022, the IPSASB decided to address an urgent stakeholder concern by adding the limited scope project, Reporting Sustainability Program Information. The project responded to the need to provide public

sector entities with guidance emphasizing the applicability of the Recommended Practice Guidelines (RPG) to reporting sustainability program information in general purpose financial reports.

BC38. To clearly communicate the applicability of RPG 1, the IPSASB decided to add non-authoritative guidance to RPG 1 to demonstrate how the authoritative guidance should be applied when reporting on sustainability program information. The IPSASB decided to highlight that the principles and guidance in RPG 1 are relevant for an entity to report the financial impacts of sustainability programs and that they should be included when developing its overall financial projections.

BC39. The IPSASB decided to add IG1-IG3 to communicate:

(a) That RPG 1 applies to reporting sustainability program information and its financial impact on the long-term sustainability of an entity's finances;

(b) How sustainability program's impacts on the dimensions of long-term fiscal sustainability should be assessed; and

(c) The principles applicable for reporting on sustainability program information.

BC40. The IPSASB agreed that IPSAS should be applied to capture the impact of an entity's sustainability-related transactions in general purpose financial statements. RPG 1 provides guidance on disclosures in general purpose financial reports on the overall financial impact of government programs, including programs related to sustainability, on an entity's long-term financial projections.

BC41. The IPSASB considered whether paragraph 4 should be amended to remove the statement that RPG 1 was not designed for reporting on environmental sustainability. The IPSASB decided not to amend paragraph 4 because RPG 1 does not address broad environmental sustainability reporting. However, the second sentence in paragraph 4 makes clear, RPG 1 reporting captures the financial impact of environmental factors and notes that these should be taken into account when developing an entity's long-term financial projections.

BC42. ED 83, *Reporting Sustainability Program* Information received strong support from constituents on its proposed implementation guidance. Constituents suggested minor modifications to the proposals to better align them with the authoritative guidance. Some constituents proposed changes beyond the limited scope of ED 83, such as developing a definition of 'sustainability' or 'sustainability program information'. This project introduced amendments to highlight the applicability of existing concepts and principles in RPG 1 that reporting entities can apply when reporting on sustainability program information. The IPSASB decided that recommendations on the broader scope of sustainability reporting in the public sector were beyond the scope of this project.

Implementation Guidance

This guidance accompanies, but is not part of, RPG 1, Reporting on the Long-Term Sustainability of an Entity's Finances.

Does RPG 1 apply to reporting information on the impact of sustainability programs on an entity's overall finances?

IG1. Yes, RPG 1 provides principles to apply when reporting on an entity's overall long-term fiscal sustainability, including those relating to sustainability programs, provided that the respective inflows and outflows are included when developing projections.

How should sustainability program impacts on the dimensions of long-term fiscal sustainability be assessed?

IG2. RPG 1, paragraph 27 discusses three inter-related dimensions of long-term fiscal sustainability:

- Service;
- Revenue; and
- Debt

Sustainability programs can impact all of these dimensions in terms of future inflows and outflows. The impacts of sustainability programs should therefore be modelled and included in the overall projections based on assumptions regarding current policies, and about future demographic and economic conditions. Depending on the purpose of the report, and their significance, the impacts of such programs can either be presented separately or as part of the overall totals.

Which principles should be applied when reporting on the impacts of sustainability programs?

IG3. All of the guidance in RPG 1 should be applied when reporting on the projected future inflows and outflows associated with sustainability programs, including guidance related to policy, demographic and economic assumptions. Sensitivity analysis may be used to help users understand the impacts of significant changes in demographic and economic assumptions on the projections.

RPG 2, *FINANCIAL STATEMENT DISCUSSION AND ANALYSIS*

History of RPG Guideline

This version includes amendments resulting from IPSAS Accounting Standards issued up to January 31, 2026.

RPG 2, *Financial Statement Discussion and Analysis* was issued in July 2013.

Since then, RPG 2 has been amended by the following IPSAS *Accounting* Standards:

- *The Applicability of IPSAS* (Issued April 2016)

Table of Amended Paragraphs in RPG 2

Information about the Entity's Objectives and Strategies	20–21
Analysis of the Entity's Financial Statements	22–26
Risks and Uncertainties	27–31
Appendix A: Terms in this RPG Defined in IPSAS	
Basis for Conclusions	

Objective

1. This Recommended Practice Guideline (RPG) provides guidance for preparing and presenting financial statement discussion and analysis. Financial statement discussion and analysis will assist users to understand the financial position, financial performance and cash flows presented in the general purpose financial statements (hereafter referred to as “financial statements”).

Status and Scope

2. The reporting of information in accordance with this RPG represents good practice. An entity preparing and presenting financial statement discussion and analysis is encouraged to follow this RPG. Compliance with this RPG is not required in order for an entity to assert that its financial statements comply with International Public Sector Accounting Standards (IPSAS).

3. Financial statement discussion and analysis should be presented at least annually and should use the same reporting period as that covered by the financial statements.

4. The reporting boundary for financial statement discussion and analysis should be the same as that used for the financial statements.

5. Financial statement discussion and analysis should be issued with the financial statements.

6. [Deleted]

7. Financial statement discussion and analysis should not be described as complying with this RPG unless it complies with all the requirements of this RPG.

8. In some jurisdictions, preparation and presentation of financial statement discussion and analysis is a legislative or regulatory requirement, or required by other externally imposed regulations. Entities are encouraged to disclose information about the impact of such requirements on compliance with this RPG.

Definition

9. The following term is used in this RPG with the meaning specified:

   Financial statement discussion and analysis is an explanation of the significant items, transactions and events presented in an entity’s financial statements and the factors that influenced them.

   Terms used in this RPG with the meanings specified in International Public Sector Accounting Standards (IPSAS) are set out in Appendix A.

Identification of Financial Statement Discussion and Analysis

10. Financial statement discussion and analysis should be clearly identified, and distinguished from the financial statements and from other information.

11. Separate identification of financial statement discussion and analysis enables users to distinguish:

    (a) Financial statements prepared and presented under the accrual basis of accounting in accordance with IPSAS;

    (b) Financial statement discussion and analysis prepared in accordance with this RPG; and

    (c) Other information presented in an annual report or other document that may be useful to users but is not the subject of requirements in IPSAS or recommendations in RPG (but could be the subject of guidance in other RPG).

12. Financial statement discussion and analysis should identify the financial statements to which it relates.

Presenting Financial Statement Discussion and Analysis

13. Financial statement discussion and analysis provides information useful to users for accountability and decision-making purposes by enabling users to gain an insight into the operations of the entity from the perspective of the entity itself. It also provides the opportunity to reflect the entity's interpretation of significant items, transactions and events affecting the financial position, financial performance and cash flows of the entity. Therefore, financial statement discussion and analysis complements the information in the financial statements.

14. Information in financial statement discussion and analysis should meet the qualitative characteristics of financial reporting taking into account the constraints on information included in general purpose financial reports (GPFRs)[1].

Content of Financial Statement Discussion and Analysis

15. The content of financial statement discussion and analysis should be consistent with the financial statements and the underlying items, transactions and events, as well as assumptions such as those relating to recognition and measurement.

16. Financial statement discussion and analysis should include the following, without merely replicating information in the financial statements:

    (a) An overview of the entity's operations and the environment in which it operates;

    (b) Information about the entity's objectives and strategies;

    (c) An analysis of the entity's financial statements including significant changes and trends in an entity's financial position, financial performance and cash flows; and

    (d) A description of the entity's principal risks and uncertainties that affect its financial position, financial performance and cash flows, an explanation of changes in those risks and uncertainties since the last reporting date and its strategies for bearing or mitigating those risks and uncertainties.

17. The form and specific content of an entity's financial statement discussion and analysis should reflect the nature of the entity and the regulatory environment in which it operates.

18. Where financial statement discussion and analysis includes information that is also in the financial statements, it should not merely repeat what is in the financial statements, but should analyze and explain how items, transactions and events affect the entity's financial position, financial performance and cash flows. Financial statement discussion and analysis should include cross-references to the financial statements where appropriate to avoid duplication of information.

Overview of the Entity's Operations and Environment

19. An overview of the entity helps users to understand the entity's operations and how the environment in which it operates affects its financial statements. This information assists users' understanding of an entity's financial statements. Information provided about an entity's operations in financial statement discussion and analysis may include current information, and changes from the prior period, relating to:

    (a) The entity's mission and vision;

    (b) The entity's governance (e.g., legislative or regulatory structure, management structure);

[1] The qualitative characteristics of financial reporting are relevance, faithful representation, understandability, timeliness, comparability and verifiability. The constraints on information are materiality, cost-benefit and the balance between the qualitative characteristics. See Chapter 3 of the *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* for further details.

(c) The entity's relationships with other entities, with a focus on relationships that could significantly affect the entity's financial position, financial performance and cash flows (e.g., funding arrangements);

(d) External trends, events and developments in the legal, regulatory, social, political and macro-economic environment specific to the entity, which have or may have a significant impact on the entity's financial position, financial performance and cash flows (e.g., the impact of events in international markets on employment, the tax base, or interest rates); and

(e) The entity's main operations, including service delivery methods (e.g., outsourcing, service concession arrangements) and significant changes in them.

Information about the Entity's Objectives and Strategies

20. Financial statement discussion and analysis should discuss the entity's objectives and strategies relating to its financial position, financial performance and cash flows in a way that enables users of the financial statements to understand the entity's priorities and to identify the resources that must be managed to achieve these objectives and strategies. For example, such objectives and strategies could include managing surplus/deficit, and managing the levels of debt and reserves. Financial statement discussion and analysis should explain how achievement of the entity's objectives would be measured and over what time period progress would be measured.

21. Financial statement discussion and analysis should discuss significant changes in an entity's objectives and strategies from the previous period or periods.

Analysis of the Entity's Financial Statements

22. Financial statement discussion and analysis should include an analysis of significant changes and trends in an entity's financial position, financial performance and cash flows. An analysis of trends includes those financial statement items that are important and significant to gaining a better understanding of an entity's financial position, financial performance and cash flows and changes in financial position, financial performance and cash flows over a period of time.

23. Financial statement discussion and analysis should describe the significant items, transactions and events that have affected the financial position, financial performance and cash flows, without simply reiterating the information presented in the financial statements. Judgment is required in identifying the significant items, transactions and events.

24. If information from the financial statements has been adjusted for inclusion in financial statement discussion and analysis, that fact should be disclosed along with the nature of and reasons for the adjustments. When financial performance measures are derived from the financial statements, those measures should be reconciled to measures presented in the financial statements that have been prepared in accordance with IPSAS.

25. Comparative information should be disclosed for amounts presented in financial statement discussion and analysis when it is relevant to an understanding of the current period's financial statement discussion and analysis.

26. When an entity is required or elects to make its approved budget(s) publicly available, IPSAS 24, *Presentation of Budget Information in Financial Statements* requires a comparison of budget and actual amounts in the financial statements. IPSAS 24 also requires an explanation of material differences between the budgeted and actual amounts and permits an entity to disclose this information either in the notes to the financial statements or in other public reports. When an entity elects to include this information in its financial statement discussion and analysis, it should apply the guidance in IPSAS 24 to these disclosures.

Risks and Uncertainties

27. Financial statement discussion and analysis should discuss the entity's principal risks and uncertainties that affect its financial position, financial performance and cash flows and include an explanation of how this relates to the objectives and strategies of the entity. This information would help users to evaluate the impact of those risks in the current period (e.g., contingent liabilities disclosed in the financial statements or the use of foreign currency hedges to mitigate risk) as well as expected outcomes.

28. The principal risks and uncertainties can be external or internal risks; any description of these risks and uncertainties should cover exposures to both negative consequences and potential opportunities.

29. A discussion of how the entity manages its risks and uncertainties helps users obtain a faithful representation of the entity's exposure to risks that directly affect financial statement items, which allows them to evaluate the entity's financial position, financial performance and cash flows. Such disclosure may include the entity's decision to "self-insure" in respect of some risks, or to mitigate risk by transferring or sharing it through insurance.

30. A discussion of these risks and uncertainties would provide relevant information to users about exposure or vulnerability to concentrations of risks such as significant loans to particular regions or industries, or dependence on a particular source of revenue.

31. Risks and uncertainties that affect the financial position, financial performance and cash flows may have a pervasive effect on the financial statements. Therefore, information relating to these risks and uncertainties may be reported separately, or in relevant sections throughout financial statement discussion and analysis.

Appendix A

Terms in this RPG Defined in IPSAS

Term	Definition
Approved budget	The expenditure authority derived from laws, appropriation bills, government ordinances, and other decisions related to the anticipated revenue or receipts for the budgetary period.

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, RPG 2.

Background

BC1. The IPSASB approved a project in March 2008 to address "narrative reporting". In developing this RPG, the IPSASB clarified that the scope of the project was to address only those reports that provide discussion and analysis specifically relating to an entity's general purpose financial statements ("financial statements") as set out in IPSAS 1, *Presentation of Financial Statements* and not broader types of reports that may be considered general purpose financial reports as envisaged in the IPSASB's *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the *Conceptual Framework*). The IPSASB considers that it is important to provide narrative information related directly to the financial statements since this provides useful information for accountability and decision-making by users of financial statements.

BC2. In undertaking this project, the IPSASB considered, under its *Process for Reviewing and Modifying IASB Documents*, whether to develop guidance that was converged with *Management Commentary*, an IFRS Practice Statement. The IPSASB did not consider this approach to be appropriate because the users identified in the Practice Statement are investors whereas Chapter 2 of the *Conceptual Framework* identifies different users, which results in different information needs related to the financial statements. On this basis the IPSASB decided it was important to develop guidance on financial statement discussion and analysis specific to the public sector. Financial statement discussion and analysis assists users of public sector entities' financial statements by complementing and supplementing the financial statement explanations with insights and perspectives.

BC3. Financial statement discussion and analysis is intended to address similar matters to reports that may be termed "management discussion and analysis" and "management commentary" in various jurisdictions. However, the IPSASB did not consider those terms to accurately describe the nature of the report in relation to the financial statements. The IPSASB decided it was important to link financial statement discussion and analysis to the financial statements because financial statement discussion and analysis is intended to explain the financial statements, and not to stand alone. The IPSASB considers the term "financial statement discussion and analysis" clearly defines the scope of applicability of this RPG and its close linkage to the financial statements.

Exposure Draft 47, *Financial Statement Discussion and Analysis*

BC4. The IPSASB developed Exposure Draft (ED) 47, *Financial Statement Discussion and Analysis* which was issued in March 2012. This ED proposed that entities that prepare and present their financial statements in accordance with IPSAS should be required to prepare financial statement discussion and analysis. This meant that financial statement discussion and analysis would have the same level of authority as accrual-based IPSAS even though it related to a GPFR.

BC5. In developing the ED the IPSASB considered that financial statement discussion and analysis provides additional information necessary to meet the objectives of financial statements. Furthermore, the IPSASB considered that the benefits of providing financial statement discussion and analysis would outweigh the costs of preparing it, as the information is used in the preparation of the financial statements, and tailored to the specific circumstances of the entity. The IPSASB therefore proposed that financial statement discussion and analysis should be prepared by all entities that prepare their financial statements in accordance with IPSAS.

BC6. Some respondents to the ED raised the concern that entities might not be able to assert compliance with IPSAS applicable to the financial statements if they did not follow the proposed requirements in the ED (if

issued as an IPSAS). In particular, respondents were concerned that financial statement discussion and analysis might still be considered to be a part of the IPSAS reporting framework even though the ED explicitly stated that financial statement discussion and analysis is not a component of the financial statements. Some of these respondents suggested that this would not be an issue if the ED was developed into non-authoritative guidance, e.g., a Recommended Practice Guideline (RPG).

BC7. The IPSASB considered whether the ED should be developed as an IPSAS or an RPG. The IPSASB considered this issue in the context of whether or not authoritative pronouncements could be developed for GPFRs, an issue on which members had varying views. The IPSASB noted that the scope of its *Conceptual Framework* is not limited to general purpose financial statements.

BC8. Respondents to the ED were split on this issue with a slight majority favoring the material not becoming an IPSAS. Of those not in favor of issuing an IPSAS, the majority of respondents expressed a clear view that it should be issued as guidance similar to the proposed RPG *Reporting on the Long-Term Sustainability of an Entity's Finances*.

BC9. As a well-established area of GPFRs, an authoritative pronouncement on financial statement discussion and analysis would help entities meet the accountability objective of financial reporting since it would enable users to gain an insight into the operations of the entity from the perspective of the entity itself. Financial statement discussion and analysis is an explanation of the financial statements but is not part of the financial statements and therefore it is not required for the fair presentation of the financial statements.

BC10. On balance the IPSASB decided that the ED should be developed into an RPG. The IPSASB considers that this RPG provides useful guidance for entities and its flexible application could benefit entities in jurisdictions that have local requirements or regulations. It will also promote comparability across entities that present financial statement discussion and analysis. Furthermore, the IPSASB considers that the RPG might encourage entities that are not accustomed to presenting financial statement discussion and analysis to provide users with this information.

BC11. Because financial statement discussion and analysis contributes to meeting the accountability objective of financial reporting, the IPSASB decided that it should consider the authority of this pronouncement on financial statement discussion and analysis in the future.

Forward-Looking Information

BC12. The IPSASB considered whether it should recommend that an entity disclose forward-looking information, such as forecasts. The IPSASB acknowledged concerns that in some jurisdictions providing forward-looking information might be seen as signaling political intent or committing a public sector entity to certain future actions. In addition, whether forward-looking information can be included in financial statement discussion and analysis will vary depending upon the regulatory and budgetary reporting environment in which the entity operates. Some members expressed the opinion that not including forward-looking information could have an impact on the ability of financial discussion and analysis to support decision-making of users and therefore its inclusion should be recommended. However, on balance the IPSASB decided not to recommend that an entity disclose forward-looking information, though such information may be provided if an entity so chooses.

Implementation Guidance and Illustrative Examples

BC13. ED 47 included Implementation Guidance on qualitative characteristics, and illustrative examples of information about the entity's financial statements and variances and trends. The IPSASB decided to delete the implementation guidance and illustrative examples on the basis that entities preparing financial statement discussion and analysis should focus on the guidance in the RPG. Moreover, the IPSASB observed that best-practice examples are available from other sources.

Revision of RPG 2 as a result of the IPSASB's *The Applicability of IPSAS*, issued in April 2016

BC14. The IPSASB issued *The Applicability of IPSAS* in April 2016. This pronouncement amends references in all IPSAS as follows:

(a) Removes the standard paragraphs about the applicability of IPSAS to "public sector entities other than GBEs" from the scope section of each Standard;

(b) Replaces the term "GBE" with the term "commercial public sector entities", where appropriate; and

(c) Amends paragraph 10 of the *Preface to International Public Sector Accounting Standards* by providing a positive description of public sector entities for which IPSAS are designed.

The reasons for these changes are set out in the Basis for Conclusions to IPSAS 1.

RPG 3, *REPORTING SERVICE PERFORMANCE INFORMATION*

History of RPG Guideline

This version includes amendments resulting from IPSAS Accounting Standards and RPG Guidelines issued up to January 31, 2026.

RPG 3, *Reporting Service Performance Information* was issued in March 2015.

Since then, RPG 3 has been amended by the following IPSAS Accounting Standards and RPG Guidelines:

- *Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative Guidance* (issued May 2023)
- *The Applicability of IPSAS* (issued April 2016)

Objective

1. This Recommended Practice Guideline (RPG) provides guidance on reporting service performance information in General Purpose Financial Reports (GPFRs). Service performance information is information on the services that the entity provides, an entity's service performance objectives and the extent of its achievement of those objectives. Service performance information assists users of GPFRs (hereafter termed "users") to assess the entity's service efficiency and effectiveness.

Status and Scope

2. The reporting of information in accordance with this RPG represents good practice. An entity reporting service performance information should aim to achieve the principles set out in this RPG. Compliance with this RPG is not required in order for an entity to assert that its financial statements comply with International Public Sector Accounting Standards (IPSAS).

3. Although this RPG does not apply directly to commercial public sector entities, the services provided by a commercial public sector entity controlled by the reporting entity are within the scope of this RPG.

4. Service performance information should not be described as complying with this RPG unless it complies with all the principles in this RPG.

5. This RPG outlines information to be presented. An entity may present additional information if such information is useful in meeting the objectives of financial reporting and meets the qualitative characteristics of financial reporting.

6. In some jurisdictions the presentation of service performance information is a legislative or regulatory requirement. Entities are encouraged to disclose information about the impact of such requirements on compliance with this RPG.

7. A jurisdiction may have established service performance reporting requirements that extend beyond the guidelines in this RPG. These could include, for example, greater specification of required information organization, requirements for a larger set of information to display or disclose, and/or specific performance indicators or specific types of performance that are required to be presented. In that case the entity is encouraged to ensure that information identified through application of both this guideline and jurisdictional requirements is presented.

Definitions

8. The following terms are used in this RPG with the meanings specified:

   Effectiveness is the relationship between actual results and service performance objectives.

   Efficiency is the relationship between (a) inputs and outputs, or (b) inputs and outcomes.

   Inputs are the resources used by an entity to provide outputs.

   Outputs are the services provided by an entity to recipients external to the entity.

   Outcomes are the impacts on society, which occur as a result of, or are reasonably attributable to, the entity's outputs.

   Performance indicators are quantitative measures, qualitative measures, and/or qualitative descriptions of the nature and extent to which an entity is using resources, providing services, and achieving its service performance objectives.

   A service performance objective is a description of the planned result(s) that an entity is aiming to achieve expressed in terms of inputs, outputs, outcomes or efficiency.

9. The Implementation Examples that accompany RPG 3 illustrate the terms defined above.

Effectiveness

10. When reporting on its effectiveness the entity reports the extent to which one or more of its service performance objectives has been achieved. The more effectively an entity operates as a service provider, the better will be its actual results when measured against its planned results.

Efficiency

11. An efficiency indicator can be used to show when a service is being provided more (or less) efficiently compared to a reference such as:

    (a) Previous reporting periods;

    (b) Expectations;

    (c) Comparable service providers; or,

    (d) Benchmarks.

12. If the same quantity and quality of outputs can be produced at less cost than before then production efficiency has improved and an efficiency indicator designed to report that type of efficiency gain will show an improvement. Similarly, if the quality of a service improves so that the outcomes achieved are better than those previously attained, with other variables such as service quantity (outputs) and cost holding constant, then this represents an increase in efficiency, and an efficiency indicator designed to capture that type of efficiency gain will show an improvement. The converse—quality decreases so that outcomes are worse, with other variables such as service quantity (outputs) and cost holding constant—would indicate less efficient service provision.

Inputs

13. Resources used to produce outputs may include:

    (a) Human resources or labor;

    (b) Capital assets such as land, buildings and vehicles;

    (c) Cash and other financial assets; and,

    (d) Intangible assets such as intellectual property.

14. Inputs can be reported in terms of costs incurred or quantities used to produce outputs.

Outputs

15. Services provided by an entity to external recipients include:

    (a) Services provided directly to individuals and institutions—for example, health or education services or the provision of goods such as food or books;

    (b) Services provided indirectly to individuals and institutions—for example, services which aim to develop, promote, protect or defend a community, institution, country, or community values and rights;

    (c) Transfers to individuals and institutions—for example, cash transfers and the provision of economic incentives such as tax incentives;

    (d) Policies, regulations or legislation to achieve public policy goals, which includes, for example, revenue related legislation and the enforcement of such legislation; and

    (e) Collection of taxes and other revenues.

16. The receipt of services by recipients external to the entity is a critical factor in deciding whether services are outputs, rather than services consumed internally as part of an entity's production of outputs.

Outcomes

17. An entity's outcomes could be impacts affecting society as a whole or impacts on particular groups or institutions within society. Outcomes could be relatively direct impacts on recipients of the entity's services. They could also be impacts on others that are not recipients of the entity's services but who benefit indirectly from those services.

18. Outcomes may include, for example, changes to educational achievements within society, changes to poverty and crime levels, or changes to the health of different groups within society.

19. There may be a strong, direct causal link between an entity's actions and its outcomes, but this will not always be the case. Factors beyond the entity's control may intervene to either hinder or facilitate the entity's achievement of outcomes.

Performance Indicators

20. Inputs, outputs, outcomes, efficiency and effectiveness are types of performance indicators.

21. Performance indicators may be quantitative measures—for example, the number of outputs produced, the cost of services, the time taken to provide a service, or a numerical target for an outcome. Performance indicators may be qualitative measures—for example descriptors such as poor/good/excellent or satisfactory/unsatisfactory, which could include service quality ratings by service recipients, citizens or experts. Use of quantitative and qualitative measures may help users with:

    (a) Their assessment of whether service performance objectives have been achieved; and,

    (b) Inter-period and inter-entity comparisons of service performance.

22. A performance indicator could also be in the form of a qualitative description. A qualitative description may be necessary to provide users with relevant and understandable information on service performance where there is a high level of complexity and judgment involved in a particular service.

Service Performance Objective

23. Service performance objectives may be expressed using performance indicators of inputs, outputs, outcomes or efficiency, or through a combination of one or more of these four performance indicators. A service performance objective may also be expressed using a narrative description of a desired future state resulting from provision of services.

24. Service performance objectives will generally be specific, measurable, achievable, realistic and time-bound.

25. An entity's service performance objectives may all be expressed in the same type of performance indicator; for example, all expressed in outcomes. They may also be expressed in different types of performance indicators; for example, some of the service performance objectives may be expressed in outcomes, while others are expressed in outputs and/or inputs.

26. A single service may contribute to achievement of one or more service performance objectives. Several services may contribute to the same service performance objective.

Reporting Boundary

27. For reporting service performance information the reporting boundary of the entity should be the same as that used for the financial statements.

28. The performance indicators presented will be relevant to the controlling entity's own service performance objectives. Unlike consolidated financial statements, which combine the finances of controlled entities, service

performance information reported by a controlling entity is not usually a combination of the services reported by its controlled entities.

Annual Reporting and Reporting Period

29. Service performance information should be reported at least annually.

30. Service performance information should cover the same reporting period as that covered by the financial statements. However, a consideration of users' needs and an assessment of costs and benefits may indicate that the reporting period should be different from that covered by the entity's financial statements. This may be the case, for example, when service performance information presented by a controlling entity is based on service performance information reported by controlled entities that have a different reporting period.

31. Service performance objectives may require periods longer than one year to achieve. Users will need information on progress towards such multi-year service performance objectives. Paragraph 53 addresses the type of service performance information that can be presented to show annual progress towards multi-year service performance objectives.

Principles for Presentation of Service Performance Information

32. An entity should present service performance information that is useful to users for accountability and decision making purposes. Presentation should enable users to assess the extent, efficiency and effectiveness of the entity's service performance. It should be appropriate to the entity's service performance objectives and make the relationship between the entity's service performance objectives and its service performance achievements clear.

33. When used in combination with the information in an entity's financial statements, service performance information should enable users to assess the entity's finances in the context of its achievement of service performance objectives and vice versa.

34. The service performance information presented should take account of the entity's specific circumstances, such as:

    (a) The services that the entity provides;

    (b) The nature of the entity; and,

    (c) The regulatory environment in which the entity operates.

35. The presentation of service performance information should achieve the qualitative characteristics of financial reporting, while applying the pervasive constraints on information in GPFRs. (The *Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the Conceptual Framework) describes the qualitative characteristics and pervasive constraints.)

36. Aggregation or disaggregation of service performance information should be at a level that conveys a meaningful understanding of the entity's service performance achievements. The level of aggregation should not be so high as to conceal or obscure performance, while the level of disaggregation should not be so low as to result in detailed listings that also obscure performance and reduce understandability. Information reported should be sufficiently specific for users to hold the entity accountable for its service performance, particularly its performance with respect to its service performance objectives.

37. Comparability to other entities can be difficult to achieve in the context of service performance information since diverse services are provided. Even where two entities provide exactly the same service they may have different service performance objectives with the result that they need to report different, non-comparable performance indicators. Inter-entity comparability may need to be traded off against relevance, so that service performance objectives and their related performance indicators are chosen to be relevant to the service performance situation

of the entity. Alternatively the needs of users may indicate that performance indicators that are comparable with those of other entities delivering the same services are relevant to the entity, and the two qualitative characteristics—comparability and relevance—are aligned.

Selection of Service Performance Information

Information for Display

38. The following information should be displayed:

    (a) Service performance objectives;

    (b) Performance indicators; and,

    (c) Total costs of the services.

39. With respect to performance indicators and the total costs of the services, the entity should display:

    (a) Planned and actual information for the reporting period; and

    (b) Actual information for the previous reporting period.

40. Where service performance information includes information that is also in the financial statements, cross-references to the financial statements should be presented so that users can assess the information within the context of the financial information reported in the financial statements.

41. Information found in an entity's legislation and planning documents (budget statement, mission statement, strategic plan, funding agreements, corporate plan, etc.) will usually help to identify the service performance objectives and performance indicators that are relevant to the entity.

Service Performance Objectives

42. Where the entity's service performance objectives change, the information presented should reflect the change. For example, an entity may initially have service performance objectives related to increasing either the inputs or outputs related to its services, and then later re-focus its performance towards improving either the services' efficiency or effectiveness. That change should be reflected in the service performance information that the entity presents.

Performance Indicators

43. Judgment is needed to determine the most suitable set of performance indicators to be reported. The overriding principle is that indicators should be selected on the basis of their importance to users and their usefulness in assessing the entity's achievements in terms of its service performance objectives. For performance indicators to be relevant they should link directly to one or more of the entity's service performance objectives. Alignment between the different indicators presented—for example between input, output and/or outcome performance indicators—and the service performance objectives helps users to assess the relationship between resources and results, and how resource availability may have influenced achievement of service performance objectives.

44. The performance indicators presented should allow users to assess how efficiently and effectively the entity has used its resources to deliver services and achieve its service performance objectives.

45. Where an entity has publicly reported planned performance indicators the actual performance indicators presented will usually be consistent with those previously made public. Those entities that publish their budget information and apply IPSAS 24, *Presentation of Budget Information in Financial Statements*, should consider the relationship between that information and the service performance information that they report.

46. An entity is encouraged to display information about its intended outcomes and its achievements with respect to those outcomes.

47. There may be a large number of performance indicators that can be presented for an entity's service performance objectives. To ensure that the information is understandable and to avoid overwhelming users, entities generally will need to identify only those few key performance indicators that will best meet the needs of users for information that meets the objectives of financial reporting.

48. Performance indicators that involve quantification should be able to be measured reliably. Where performance indicators can be generated by a transaction processing system the use of such a system will support the verifiability and timeliness of reported information.

49. When selecting performance indicators entities should ensure that the indicators presented will provide a representationally faithful description of the achievement of service performance objectives. There may be trade-offs between different aspects of service performance, such that one aspect improves while another aspect deteriorates. Information presented should be neutral. Entities should avoid any tendency to present performance indicators that are biased towards reporting positive results. This helps to ensure that the qualitative characteristics are met and users can be confident that the performance indicators faithfully represent the entity's service performance.

50. Ease of measurement is likely to be a consideration when selecting performance indicators, but it should be secondary to the needs of users. The performance indicators presented should not over-emphasize easily measured dimensions.

51. In some situations a qualitative description (also called narrative information) should be presented as a performance indicator. This could be the case where service performance achievements cannot be reduced to a small set of quantitative or qualitative measures because the service:

    (a) Is complex;

    (b) Involves interrelated factors; and

    (c) Involves a large number of different possible indicators of success or progress, all of which involve judgment as to their relative importance.

52. Information reported on any particular service may include one or more different types of performance indicators; quantitative measures, qualitative measures and/or qualitative descriptions.

Multi-year Service Performance Objectives and Performance Indicators

53. The extended timeframe of multi-year service performance objectives should not be a deterrent to reporting multi-year objectives and disclosing progress towards their achievement, although ways to report on progress in a cost-effective way may need to be developed. Alternative or proxy measures that indicate progress towards achievement of the service performance objective may be able to be presented in the short-term, until information on achievement of the multi-year service performance objective is available. For example, where an entity establishes both annual outputs and longer term, multi-year outcomes for one or more service area there may be scope to treat annual reporting against outputs as indicative of progress towards achievement of the outcomes, with actual outcomes reported less frequently.

Total Costs of Services and Disaggregated Cost Information

54. In addition to display of the total costs of services, an entity may also choose to present disaggregated cost information. Disaggregated cost information could, for example, be costs related to individual service performance objectives, outcomes, service areas, individual services, the costs of outputs, or costs related to particular inputs. Users' assessment of efficiency may be supported through provision of costs related to either outputs or outcomes.

Planned and Actual Service Performance

55. Planned and actual service performance information should be reported consistently so that users' assessments of effectiveness are facilitated. Wherever possible, entities should report on the same performance indicators, with the same methodology and parameters for their computation, as that established before the start of the reporting period. This enables users to compare actual performance with planned performance at the end of the reporting period.

56. Consistency of performance indicators over several years facilitates long-term trend analysis. But such consistency should not be pursued at the expense of:

    (a) Improving the quality of performance indicators; or,

    (b) Aligning indicators with changed expectations from stakeholders.

57. An entity may need to address the issue of how to report on changes to planned service performance that occurred during the reporting period. This situation may arise, for example, when stakeholders revise their service performance expectations during the reporting period, resulting in an amendment to service performance objectives. Service performance objectives may also change as a result of a public sector combination, where accountability for services is transferred from one entity to another or reporting needs to be on services previously provided by two different entities and now provided by a single, merged entity. In these situations it may be possible for the entity to report against both the original and the revised service performance objectives. The reason for, and the impact of, these changes could be outlined in narrative discussion and analysis, so that users have the information they need to understand reasons for variances between service performance objectives at the beginning of the reporting period and actual achievements, while also understanding the degree of actual achievement against the more up-to-date, revised service performance objectives.

Information for Disclosure

58. Judgment is needed to decide what information should be disclosed so that users:

    (a) Understand the basis of the displayed service performance information; and,

    (b) Receive a concise overview of the entity's service performance, which highlights the main issues relevant to their assessment of that service performance.

Basis of Displayed Service Performance Information

59. An entity should disclose sufficient information on the basis of displayed service performance information to enable users to evaluate whether the information on service performance objectives, performance indicators and total costs achieves the qualitative characteristics of financial reporting.

60. An entity should disclose information on the sources of displayed service performance information.

61. The following information should be disclosed:

    (a) An explanation of the displayed service performance objectives, which describes how they have been established, the need for them to be achieved, and the relationship(s) between the service performance objectives and:

        (i) The displayed performance indicators, and

        (ii) The entity's overall objectives.

    (b) An explanation of the relationship(s) between related performance indicators. (For example, information on the extent of alignment between input, output and/or outcome indicators, where the inputs and outputs contribute to achievement of a particular outcome.)

(c) An explanation of the basis for information aggregation (or disaggregation), which addresses the level of detail reported.

Disaggregated Information on Costs

62. If an entity chooses to present disaggregated information on costs then the basis for cost determination should be disclosed.

63. Cost determination information includes information such as:

(a) Cost allocation policies;

(b) The treatment of direct and indirect service related expenses; and/or

(c) A reconciliation or a comparison between the costs of services presented and total expenses.

Controlling Entity Disclosures

64. Where a controlling entity reports on services provided by its controlled entities the controlling entity should disclose information that explains the respective roles and responsibilities for service performance within the economic entity.

Disclosures when Reporting Period is Different

65. When the service performance information covers a reporting period different from that for the entity's financial statements, the following information should be disclosed:

(a) The fact that the reporting period is not the same as that for the financial statements;

(b) Why there is a difference; and,

(c) If financial information is included in the service performance report, either

(i) The reporting period of the financial statements from which the information has been derived, along with information to facilitate access to those financial statements; or

(ii) The source of the financial information reported, if the information has not been derived from the entity's financial statements, along with information to facilitate access to that source.

66. When the reporting period for information on some services is different from the reporting period of the entity's service performance report the following information should be considered for disclosure:

(a) The services affected,

(b) The applicable reporting period(s), and

(c) An explanation for the difference(s).

Disclosures when Separate from the Financial Statements

67. Paragraphs 72–75 below address the location of service performance information in a GPFR. Where service performance information is presented separately from the GPFR that includes the financial statements, the following information should be presented:

(a) The name of the entity;

(b) Where the entity is a controlling entity, a description of the group of entities controlled by the reporting entity;

(c) Where the entity is a controlled entity, the identity of the controlling entity;

(d) The reporting date and the reporting period covered by the service performance information;

(e) The financial statements to which the service performance information relates and sufficient information necessary for users to locate the financial statements;

(f) The presentation currency, as defined in IPSAS 4, *The Effects of Changes in Foreign Exchange Rates*; and,

(g) The level of rounding used.

68. Where service performance information is presented in the GPFR that includes the financial statements, the applicable IPSAS(s) establishes that this information should be presented.

Narrative Discussion and Analysis

69. The entity should disclose narrative discussion and analysis on its service performance information. Narrative discussion and analysis complements the displayed service performance information by enabling users to gain insight from the entity on:

(a) Aspects of service performance that the entity considers should be highlighted; and

(b) Factors that affected service performance achievements during the reporting period.

70. Narrative discussion and analysis should provide a concise overview of the entity's service performance that:

(a) Discusses the degree to which service performance objectives have been met;

(b) Provides balanced explanations of the information displayed, which cover both positive and negative aspects of the entity's service performance; and

(c) Facilitates users' assessments of the efficiency and effectiveness of the entity's service performance.

71. The Implementation Examples that accompany RPG 3 illustrate types of information that could be included in narrative discussion and analysis.

Location of Service Performance Information

72. An entity may present service performance information either:

(a) As part of a GPFR that includes the financial statements; or,

(b) In a separately issued GPFR.

73. The following factors should be considered when making this decision:

(a) The extent to which the service performance information needs to be reviewed within the context of information in the financial statements, including information on budget-actual comparisons;

(b) Whether the needs of users and the qualitative characteristics are enhanced if the service performance information is included in the same GPFR as the financial statements or in a separate GPFR;

(c) Application of the pervasive constraints on information, including whether the benefits of including the information in the same GPFR as the financial statements justify the additional costs (if any) involved; and,

(d) Jurisdiction-specific requirements which could specify either that service performance information should be located in the same GPFR as the financial statements or in a separate GPFR.

74. With respect to point (a) in paragraph 73 above, an important factor in this decision is likely to be whether the primary objective of providing the service performance information is:

(a) To inform assessments on resource allocation decisions for the provision of services, in which case there is likely to be value in associating the reporting of service performance information with the financial statements that are compared to budget allocations; or

(b) To inform assessments on policy or strategy decisions, in which case there is likely to be value in associating the reporting of service performance information with information on policies or strategy.

75. Where an entity chooses to present its service performance information in a separate GPFR from the financial statements the separate GPFR should be issued on a timely basis, which will usually be demonstrated through issuance at the same time as the financial statements or, if not at the same time, then very close to issuance of the financial statements.

Organization of Service Performance Information

76. The organization of service performance information within a GPFR should enable users to:

(a) Understand an entity's service performance, including its achievement of service performance objectives;

(b) Assess the entity's service efficiency and effectiveness; and

(c) Use the service performance information for the purposes of accountability and decision making.

77. The service performance information should be organized so that connections are clear between displayed information and:

(a) Disclosures on the basis of the displayed information, and

(b) Narrative discussion and analysis.

78. One way to organize service performance information is in a "statement of service performance", which involves organizing information into a tabular or statement form. A statement of service performance can support understandability and comparability when the performance indicators presented are quantitative measures or qualitative measures reported on multiple services.

79. Where service performance information is presented through narrative or case studies a tabular approach is unlikely to be appropriate. In some cases a mixture of case studies and one or more tables or statements will be appropriate.

80. Entities may use several levels of reporting in order to achieve a balance between being:

(a) Concise enough to be understandable; and,

(b) Providing sufficient detail with respect to multiple aspects related to each service performance objective.

81. The use of several levels of reporting allows the display of concise reporting at higher levels, and display or disclosure of more detailed coverage at lower levels, where service areas, for example, could be disaggregated into two or more individual services.

82. IPSAS 18, *Segment Reporting,* applies to entities' identification of segments. It describes service segments and identifies factors that should be considered when grouping services into segments for financial reporting purposes.

Basis for Conclusions

This Basis for Conclusions accompanies, but is not part of, RPG 3.

Background

Project Initiation, Consultation Paper and Decision to Develop Guidance

BC1. The IPSASB's project on reporting service performance information began with a review of national standards, guidance, and regulatory requirements for service performance reporting (or its equivalent) from selected national jurisdictions, the United Nations, and the Organization for Economic Co-operation and Development. No two jurisdictions have identical service performance reporting frameworks, but there are similarities in the service performance information that is reported. Consideration of these similarities and of commonly used terms provided the basis for the Consultation Paper (CP), Reporting Service Performance Information, issued in 2011. The CP proposed a principles based framework for reporting service performance information and a standard terminology.

Development of a Recommended Practice Guideline

BC2. In 2013 the IPSASB decided that information additional to that included in the financial statements should presently be addressed through development of a Recommended Practice Guideline (RPG). Therefore a draft RPG, ED 54, Reporting Service Performance Information, was developed for reporting service performance information. This RPG is based on the service performance reporting framework developed for the CP, revised for the IPSASB's decisions during its review of responses to the CP and its subsequent review of responses to ED 54. This RPG is underpinned by the Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities (the Conceptual Framework).

Overall Approach of RPG—Guidance on Decisions and Minimum Characteristics

BC3. During development of this RPG, the IPSASB considered whether its overall approach should aim to:

(a) Establish minimum characteristics of service performance information, consistent with an RPG's role as providing guidelines on good practice and requirements; or

(b) Provide a framework that identifies decisions that preparers need to make and guidance on those decisions, consistent with the framework approach in the CP and an RPG's function as guidance.

BC4. Given the diversity of services and reporting contexts, the IPSASB decided that the RPG should not attempt to standardize service performance reporting, but focus on achievement of principles. At the same time, the core type of service performance information that should be presented. This approach was decided on the basis that guidelines are needed on what type of information should be presented and it is possible to identify broad categories of information—for example, information on service performance objectives—that are applicable to all entities that report service performance information.

BC5. In developing an RPG for reporting service performance information the IPSASB acknowledged the challenge in developing guidance that would be useful when applied to diverse services, diverse service performance objectives, and diverse accountability and decision-making contexts world-wide. Arguably service performance reporting quality depends in part on the extent to which it meets the particular information needs arising from the services provided and the context for their provision. For example, a report that tells the story of factors influencing progress toward critical targets may look quite different to a report that provides an account of services delivered for the resources provided. The IPSASB considered these matters and was of the view that it would be most helpful to develop an RPG that identifies the decisions that preparers will need to make, then provides guidance on how such decisions should be made, rather than an RPG that establishes minimum standards.

BC6. The IPSASB's view is that principles applicable to reporting service performance information provide useful guidance, without attempting to establish global requirements that may not be appropriate for the variety of different services and different service delivery contexts that exist globally. Service performance information is a developing area, which means that the RPG should not be overly prescriptive.

BC7. Some respondents to the ED were concerned about an apparent contradiction between RPG as pronouncements that do not establish requirements and paragraph 5 of the ED, which stated that compliance with the RPG involves compliance with all of its requirements. The IPSASB decided that the phrase "compliance with requirements" in this paragraph should be replaced with "compliance with principles". The basis for this is twofold. First, the RPG establishes principles which entities then use to guide their decisions on what service performance information they report. Second, while the paragraph still uses the idea of "compliance", the IPSASB considers that this is consistent with the RPG's role as a recommended guideline. The nature of an RPG as a guideline is established by the allowance for entities to not follow a particular RPG—in its entirety—without impacting negatively on the entity's IPSAS compliance. Preparers (or jurisdictions) may also choose to apply part of the RPG and, for example, progressively move towards full compliance, at which point compliance can be asserted. Nonetheless the specific content of an RPG involves a set of principles that establish good practice. An RPG may also, depending on the topic addressed, involve more flexibility of application than is the case for an IPSAS. This is the case for this RPG which includes options as to presentation and uses principles to guide preparers' decisions on what information to present.

Scope

BC8. When this RPG was issued, the IPSASB considered whether the RPG should apply to [Government Business Enterprises (GBEs)] (the term in square brackets is no longer used following the issue of *The Applicability of IPSAS* in April 2016). While acknowledging that GBEs provide services and may report service performance information on those services the IPSASB decided that this RPG should apply to all public sector entities other than GBEs. When this RPG was issued, this was consistent with the Preface to International Public Sector Accounting Standards, which stated that the IPSASB developed accounting standards and other publications for use by public sector entities, other than GBEs. This exclusion from the scope should not be read as implying that the guidance could not be applied by GBEs or that there is any barrier to GBEs applying this guidance.

BC9. In reaching this conclusion the IPSASB noted that where a controlling entity reports service performance information according to the recommendations in this RPG it may provide information on services provided by one or more controlled GBEs. Although the GBEs' own reporting was not within the scope of this RPG, the IPSASB decided that the information reported by the controlling entity—about the GBEs' services—needed to follow the RPG's requirements, if the controlling entity was to assert compliance with the RPG.

BC10. The IPSASB considered whether this RPG should apply to entities in national jurisdictions which already have extensive service performance information reporting requirements for their public sector entities—requirements that may extend beyond the principles approach to information which is set out in the RPG. The IPSASB's view is that, in such circumstances, the entity will need to ensure that jurisdictional requirements are met. While the RPG does not set out detailed comprehensive and specific requirements, this does not represent an encouragement to report less than is already reported under national or other requirements, nor is this viewed as in conflict with more extensive reporting. Paragraphs 6–7 of the RPG addresses the relationship between the RPG and jurisdictional requirements for service performance information, explaining that the RPG does not preclude the presentation of additional information and more extensive jurisdictional requirements would apply in addition to the guidelines in the RPG. The IPSASB concluded that the RPG adequately addresses this issue and the RPG should be able to be applied to entities in jurisdictions where extensive service performance information reporting requirements already exist.

Definitions of Terms

BC11. In reaching its view on the need for standardized service performance terminology the IPSASB noted that although entities use some terminology consistently, many of those entities have not defined some or all of the terms they use. Moreover, the same terms sometimes have different meanings in different jurisdictions. On this basis, the IPSASB concluded that a standardized service performance terminology was necessary to support the understandability and comparability of service performance information reported by entities in GPFRs.

BC12. The IPSASB developed the defined terms in the RPG, by basing them, as far as possible, on terms already used in jurisdictions with a well thought through and explicit approach to, and extensive experience in, service performance reporting.

BC13. During the review of responses on the CP and the ED, and then during subsequent development of the RPG the IPSASB revised the definition of an effectiveness indicator. The CP definition was: “Effectiveness indicators are measures of the relationship between outputs and outcomes.” This implies that the relationship between outputs and outcomes is relatively simple to measure. After further consideration the IPSASB considered that the relationship between outputs and outcomes is likely, in many situations, to be more complex than the simple relationship underpinning the original definition. Furthermore, the IPSASB considered that effectiveness is better understood to be the degree to which an entity is successful in achieving its service performance objectives. On this basis the IPSASB decided that effectiveness indicators show the extent to which an entity has achieved its services performance objectives

BC14. During development of the CP and ED 54, and the subsequent review of responses to ED 54, the IPSASB considered whether to include “economy indicators” in the RPG’s set of defined terms. IPSASB members decided to exclude economy indicators because the term is both confusing and unnecessary given other terms defined in the RPG. “Economy indicators” do not represent something additional to the ideas conveyed by either inputs or efficiency, for which the RPG establishes clear definitions. The IPSASB noted that the RPG’s approach to selection of service performance information allows jurisdictions to assess “economy”, whatever the meaning that a particular national jurisdiction gives that word. For example, the RPG supports the presentation of information on costs, on other inputs, and on efficiency.

BC15. Economy is a commonly used term in the context of service performance reporting. However different jurisdictions have different meanings for economy. For some jurisdictions economy means lower costs for service delivery without reference to impact on quantity and/or quality of services delivered. Other jurisdictions consider that this first view is not really economy and that using “economy” to describe situations where costs are reduced but service quantity and/or quality is negatively impacted could be misleading to users of GPFRs. A second view of economy is that it is only achieved if service delivery is maintained or enhanced, when costs or other inputs are reduced. This second view of economy fits the definition of “efficiency” in the RPG. Indeed, there is a third group of national jurisdictions that does not use the term “economy” on the basis that the term can be confusing and it overlaps with efficiency. Therefore the RPG does not define “economy indicators” and does not use the term “economy”.

Reporting Entity

BC16. Service performance information should support the users of the GPFRs as they hold the entity accountable for its service provision and use of resources and make decisions affecting that entity. On that basis a majority of the IPSASB considered that service performance information should be prepared for the same reporting entity as for the financial statements. To be consistent with coverage in RPG 1 and 2 (see paragraph 14 of RPG 1 and paragraph 4 of RPG 2) the wording in RPG 3 focuses on “reporting boundary” rather than reporting entity, In reaching this conclusion the IPSASB also noted that the RPG’s accountability and decision making focus is not designed to apply to supply chains, networks or other combinations of individual entities that may be able to influence each other but do not have the ability to control.

BC17. Several respondents to the ED suggested that the RPG should also provide guidance for reporting on programs or policies that involve a group of entities that are not under common control, that is, "cross-boundary" reporting. The IPSASB acknowledged that there is a trade-off between service performance reporting that applies the same reporting entity boundary as for the financial statements and flexible boundaries that provide scope for cross-boundary reporting. A focus on the same reporting entity as for the financial statements has the benefit of following lines of control and supporting organization-focused accountability, while also facilitating both collection of service performance information and the integration of such information with financial information in the entity's financial statements. However there are cases where no single entity is accountable for a program or policy and requiring cross-boundary reporting, aligned with the program or policy, would provide information that better explains service performance related to that program or policy. The IPSASB considered expanding the RPG's scope to also include guidance for cross-boundary reporting on "programs" or "sets of activities that contribute to the same outcome(s)". The IPSASB decided that the RPG should remain focused on reporting by the same entity as that for the financial statements. This does not prevent national jurisdictions from adapting the RPG's principles and guidance for application to cross-boundary reporting.

BC18. The IPSASB considered concerns expressed by respondents to the CP and the ED over controlling entities being required to report all services provided by their controlled entities. That could have the result that information becomes too detailed and lengthy to meet the qualitative characteristics and support users' assessments for accountability and decision making. The IPSASB decided to include further explanation in the RPG to address this concern. On this basis the RPG states that controlling entities should report against their own service performance objectives rather than attempt to aggregate all those services provided by controlled entities.

Annual Reporting and Reporting Period

BC19. The IPSASB considered whether service performance information should be reported annually, when service performance objectives, whether expressed in outcomes, outputs or inputs, may require periods longer than one year to achieve. The majority of IPSASB members considered that service performance information should be reported annually because this is important to ensure that users' have the information they need for the purposes of accountability and decision-making. To address the existence of multi-year service performance objectives the IPSASB decided that the RPG could encourage entities to disclose information on their progress towards multi-year service performance objectives. The IPSASB noted that responses to the ED indicated generally strong support for annual reporting. The IPSASB confirmed that service performance information should be presented annually and use the same reporting period as that for the financial statements, unless users' needs require a different period.

Scope to Report More Frequently

BC20. Some respondents to the ED were concerned that it did not allow entities to report more frequently than annually. The IPSASB agreed with respondents who argued in favor of scope for more frequent reporting, noting that this is likely to increase transparency and accountability. As one respondent stated, more frequent reporting also can encourage "management dialogue between all those involved in the evaluated public policy mission and improves the management process by increasing the accountability of the public manager." The IPSASB decided to use the phrase "should be reported at least annually", which allows for more frequent reporting and is the same phrase as that used in IPSAS 1, Presentation of Financial Statements, to address reporting frequency.

Reporting Against Multi-Year Performance Objectives

BC21. The IPSASB considered concerns raised by some respondent to the ED that annual reporting could have negative consequences for outcome reporting, including the possibility that annual reporting could have the unintended effect of reducing the extent to which entities report outcomes. The IPSASB noted that for some outcomes annual measurement is very expensive and measurable change showing progress towards outcome achievement will not emerge for two or more years. One respondent noted that annual reporting in such cases

may even be misleading. This problem is not restricted to service performance objectives focused on outcomes, but can also occur for outputs and input reporting. To address this concern the RPG includes explicit coverage on use of proxy measures and provides scope for entities to report outputs or inputs as indicative of progress towards achievement of outcomes or other types of multi-year service performance objectives.

Service Performance Information Issued at Same Time as the Financial Statements

BC22. The IPSASB considered whether the RPG should state that service performance information should be issued at the same time as the financial statements. The IPSASB noted that issuance at the same time as the financial statement supports timeliness, but may be very difficult for some entities to achieve. The IPSASB decided that, while acknowledging that it is desirable for service performance to be reported at the same time as the financial statements, the RPG should not state that this is necessary.

Controlling Entity and Controlled Entities with a Different Reporting Period

BC23. The IPSASB considered situations in which a controlling entity includes information on services that are provided by controlled entities with a different reporting period from that of the controlling entity. Ideally all the service performance information reported should cover the same reporting period. However there are situations where the benefits of aligning the information with the controlling entity's reporting period do not outweigh the costs involved. For example, some public sector entities provide service performance reports to donors who require a different reporting period from that for the entities' financial statements. The additional costs of preparing service performance reports for each reporting period (donors and financial statements) may not justify the benefits. On this basis the IPSASB decided that the RPG should acknowledge the possibility that some of the service performance information reported may be for a different reporting period and address this through additional disclosures.

Two Approaches for Reporting Service Performance Information

BC24. In developing this RPG the IPSASB acknowledged that there are differing approaches to reporting service performance information, including approaches that are more output-focused and approaches that are more outcome-focused. A more outputs-focused approach reports information about the services provided. This type of information is oriented towards resource providers and aims primarily to report on the services received for resources provided and whether resources have been used efficiently, although there is scope to widen the focus to include information about outcomes. A more outcome-focused approach tells a performance story, which generally reports on the achievement of outcomes, although there is scope to relate this performance story back to the costs of services. The information reported explains how well the entity is doing in terms of achieving its objectives, where those objectives are described in terms of outcomes.

BC25. The IPSASB considered whether the RPG should include guidance specifically tailored for each approach, but decided against this on the basis that the RPG's focus on achievement of objectives can be applied to either approach. Allowing entities to tailor their reporting to their objectives means that entities or jurisdictions do not need to fit their individual approach into either an output-focused approach or an outcome-focused approach in order to apply the RPG. This means that the RPG's content will be useful to a variety of entities applying different approaches. Entities' service performance objectives may even relate to inputs, when their reporting of service performance information is at an early stage. However, the ideal to which entities should, over time, aspire is the reporting of service performance information that reports comprehensively on both outcomes and outputs, along with information that allows users to assess the efficiency and effectiveness of both. This is consistent with the IPSASB's view, discussed below, that the performance indicators presented should form a holistic system such that they communicate a coherent, integrated view of the entity's service performance.

Principles for Presentation of Service Performance Information

BC26. The RPG sets out principles applicable to the presentation of service performance information, which includes principles applicable to decisions on information selection, location and organization. The RPG identifies factors that should be considered when making presentation decisions and generally proposes information that should be considered for presentation, in light of those principles, rather than prescribing an extensive list of information requirements. This principles-based approach is consistent with the IPSASB's decisions on the RPG's overall approach, developed during the consultation phase and further considered during both development of the ED and the IPSASB's review of responses to the ED. Although the RPG identifies the type of information that all entities should present, it does not prescribe an extensive set of information. The IPSASB has maintained the principles based approach proposed in the CP and then exposed in the ED on the basis that the principles-based approach:

(a) Allows entities the flexibility they need to report service performance information that is relevant an appropriate to their service performance objectives and will meet the needs of users of the information;

(b) Reduces the risk of "disclosure overload", which undermines the extent to which a report on service performance meets the needs of users and does not achieve either the qualitative characteristics or provide benefits in excess of the costs; and

(c) Requires entities to apply principles that will result in the presentation of the service performance information that users need for the purpose of accountability and decision-making.

BC27. The IPSASB determined that the key principles for reporting service performance information should be based on the users' needs that such information should meet, as established through consultation and with reference to the experience of different jurisdictions. The principles are consistent with the Conceptual Framework and have involved application of the Conceptual Framework to the reporting of service performance information.

Presentation of Service Performance Information

Consultation Paper's Dimensions and Components of Service Performance Information

BC28. The CP explained that there are four dimensions of service performance on which information should be presented. The four dimensions—why, what, how and when—relate to an entity's:

(a) Service performance objectives;

(b) Performance indicators;

(c) Comparison between planned and actual performance; and

(d) Time series that allow users to assess either changes in service provision over time or progress towards a multi-year goal.

BC29. The RPG's coverage of information selection addresses these four dimensions when it establishes that an entity should report:

(a) Information on an entity's service performance objectives, including the need or demand for these objectives to be achieved (the "why" dimension);

(b) Performance indicators to show achievements with respect to service performance objectives (the "what" dimension);

(c) Comparisons of actual performance to planned (or targeted) results, including information on the factors that influence results (the "how" dimension); and

(d) Annually on service performance information presenting actual information for the current and the previous reporting period (the "when" dimension).

BC30. The CP also established components of service performance information, which relate to these four dimensions. The RPG's coverage of information selection addresses the CP's components, which are:

(a) Narrative discussion of the achievement of objectives;

(b) Information on the "parameters" of the service performance information reported (termed "basis" in the RPG); and

(c) Information on the entity's service performance objectives, and its achievement of those service performance objectives.

Principles Rather than Specific Requirements

BC31. The IPSASB acknowledged that entities' presentation of service performance information will vary, depending on:

(a) The services that the entity provides;

(b) The nature of the entity; and

(c) The regulatory environment or other context within which the entity operates.

BC32. Because services provided, service performance objectives, and applicable service performance indicators depend on these different factors, the IPSASB decided that the RPG should not identify specific performance indicators that must be presented. Instead, it should identify broad types of information that should be reported and provide guidance on achievement of the qualitative characteristics when selecting service performance information.

BC33. The RPG identifies different types of performance indicators that could be presented, but does not require that particular performance indicators be presented. While efficiency and effectiveness indicators directly address those aspects of performance, the RPG's objective of providing information for users to assess efficiency and effectiveness does not mean that those two types of performance indicators must be presented. For example, efficiency can be calculated using information about outputs and their cost. Effectiveness can be assessed using information on service performance objectives and results achieved against those service performance objectives.

Information that Conveys a Coherent, Integrated View of the Entity's Service Performance

BC34. The IPSASB considered that the principles focused approach was appropriate because it allows entities at an early stage of developing service performance reporting to meet the RPG's guidelines and report service performance information consistent with their existing reporting capabilities. Nonetheless, the IPSASB's view is that good quality service performance information needs to be reported so that users can assess an entity's service performance, including both its achievement of objectives and the extent to which it has used resources efficiently and effectively to deliver outputs and achieve outcomes. Ideally the set of performance indicators presented should form a holistic system such that they communicate a coherent, integrated view of the entity's service performance.

Selection of Performance Indicators

BC35. The IPSASB considered whether the RPG should require entities to report all five types of performance indicators—inputs, outputs, outcomes, efficiency and effectiveness—for the services that they provide. This would result in comprehensive coverage of an entity's service performance, but it might not reflect an entity's actual service performance focus. In practice it is likely that an entity's service performance objectives will change over time. For example, service performance objectives may initially focus on inputs, then outputs and efficiency, and then outcomes. If an entity is able to adjust its reporting of performance indicators to align them with its service performance objectives, then the information presented is more likely to be useful to users and meet the

qualitative characteristics, while supporting achievement of the financial reporting objectives. On that basis the IPSASB decided that the RPG should not require reporting of all five types of indicators but should instead provide guidance on how an entity should choose the types of performance indicators that it reports.

BC36. The IPSASB also considered whether the RPG should require entities to report outcome indicators. Outcome information is important to users, because it focuses on the ultimate reason for service provision, which is the impact that services have on the community. However outcome information can be very difficult for entities to provide, particularly when they are at an early stage in developing their services performance reporting or in situations where the reporting entity is one of many entities contributing to the same outcome(s). On that basis the IPSASB decided that the RPG should encourage but not require entities to present information on outcomes.

Total Costs of Services

BC37. The IPSASB considered providing guidelines on what costs should be included in the total costs of services. Costing of services involves management accounting considerations. The meaning of total costs of services may be jurisdiction specific and/or entity specific. Entities may report total costs of services that are equivalent to the total expense they present in their financial statements. Alternatively entities may exclude some costs, for example overhead, or some expense types, for example borrowing costs, with the result that the total costs of services differs from the total expenses presented in the financial statements. On this basis the IPSASB decided not to stipulate what is meant by the total costs of services.

Location of Service Performance Information

BC38. The IPSASB considered whether service performance information should be located in the same report as the financial statements or in a separate GPFR. It noted that while many national jurisdictions treat service performance information as different in nature and therefore preferably kept separate from information provided with the financial statements, there are also jurisdictions that integrate service performance information into the same report as the financial statements, treating the two sets of information as complimentary. There are benefits to both approaches. In order to allow for jurisdictional differences the IPSASB decided that the RPG should allow entities to report service performance information either in the same report as the financial statements or in a separate report.

Organization of Service Performance Information

BC39. The IPSASB considered whether the RPG should:

(a) Propose one way that service performance information should be organized, with the main method considered being a tabular form, described as a “statement of service performance”; or

(b) Provide principles that should be applied to guide jurisdictions and/or preparers when they choose between different possible information organization approaches.

BC40. The IPSASB noted that in some jurisdictions there are requirements that service performance information be reported in a “statement of service performance”. In other jurisdictions preparers apply principles to identify how best to organize information, with reference to the particular types of services, desired outcomes, or planned achievements on which information needs to be reported. Organizing information into a tabular or statement form can support understandability and comparability when numerical or “summary descriptive” performance indicators (e.g. “satisfactory or unsatisfactory”) are reported on multiple services. But service achievements could be misrepresented or poorly described if a statement format is the only form of presentation permitted.

BC41. The IPSASB decided that the RPG should focus on principles applicable to this decision. By focusing on principles rather than stipulating a standard reporting structure, the RPG allows the choice of information organization to be tailored to:

(a) The nature of the services on which performance information is presented;

(b) The needs of users, so that it supports achievement of the objectives and qualitative characteristics of financial reporting; and

(c) The regulatory context, including the regulatory environment in which the entity operates.

BC42. Although this could result in less standardization, and reduced comparability between entities, service performance information differs from financial statements information due to the diversity of services reported. Unless the performance indicators themselves are comparable, a single presentation format will not provide the benefits of inter-entity comparability, but will sacrifice the benefits to be gained from allowing the organization of information to be tailored to an entity's service performance objectives and services provided so that it meets the needs of users.

Revision of RPG 3 as a result of the IPSASB's *The Applicability of IPSAS*, issued in April 2016

BC43. The IPSASB issued *The Applicability of IPSAS* in April 2016. This pronouncement amends references in all IPSAS as follows:

(a) Removes the standard paragraphs about the applicability of IPSAS to "public sector entities other than GBEs" from the scope section of each Standard;

(b) Replaces the term "GBE" with the term "commercial public sector entities", where appropriate; and

(c) Amends paragraph 10 of the *Preface to International Public Sector Accounting Standards* by providing a positive description of public sector entities for which IPSAS are designed.

The reasons for these changes are set out in the Basis for Conclusions to IPSAS 1.

Additional Guidance for RPG 3 as a result of *Reporting Sustainability Program Information–Amendments to RPG 1 and 3: Additional Non-Authoritative*

BC44. In March 2022, the IPSASB decided to address an urgent stakeholder concern by adding the limited scope project, *Reporting Sustainability Program Information*. The project responds to the need to provide public sector entities with guidance emphasizing the applicability of the Recommended Practice Guidelines (RPG) to reporting sustainability program information in general purpose financial reports.

BC45. To clearly communicate the applicability of RPG 3, the IPSASB decided to add non-authoritative guidance to RPG 3 to demonstrate how the authoritative guidance should be applied when reporting on sustainability program information. The IPSASB decided to highlight that the principles and guidance in RPG 3 are relevant for an entity to report on the impact of sustainability programs, to enable transparency and accountability of the program's impact against its objectives.

BC46. The IPSASB decided to add IG1.- IG4. to communicate:

(a) That RPG 3 applies to reporting information related to sustainability programs; and

(b) How RPG 3 can be applied to individual sustainability programs.

BC47. The IPSASB decided to add IE4.-IE8. to illustrate how the guidance in RPG 3 applies to sustainability programs, including:

(a) A program financed by a green bond;

(b) A program financed by a carbon tax;

(c) An investment in infrastructure to mitigate the impacts of climate change; and

(d) A tax expenditure for sustainability investments.

BC48. The IPSASB agreed that IPSAS should be applied to capture the impact of an entity's sustainability-related transactions in general purpose financial statements. RPG 3 provides guidance on disclosures in general purpose financial reports, including the impact of individual programs in achieving its objectives.

BC49. The IPSASB noted that normally illustrative examples developed by the IPSASB show the application of different concepts. However, IE4. - IE8. illustrate similar RPG 3 concepts applied to four different sustainability programs to help communicate how the guidance can be applied to various types of programs.

BC50. ED 83, *Reporting Sustainability Program Information* received strong support from constituents on its proposed implementation guidance and additional illustrative examples. A few constituents suggested editorial changes to the illustrative examples. Some constituents proposed changes beyond the limited scope of ED 83, such as developing a definition of 'sustainability' or 'sustainability program information'. This project introduced amendments to highlight the applicability of existing concepts and principles in RPG 3 that reporting entities can apply when reporting on sustainability program information. The IPSASB decided that recommendations on the broader scope of sustainability reporting in the public sector were beyond the scope of this project.

Implementation Guidance

This guidance accompanies, but is not part of, RPG 3, Reporting Service Performance Information.

Does RPG 3 apply to reporting information related to sustainability programs?

IG1. Yes, RPG 3 provides principles to apply when reporting on an entity's service performance by considering its objectives, and measuring performance against relevant indicators (inputs, outputs, outcomes, efficiency, or effectiveness).

IG2. The RPG 3 principles are applicable for entities that establish service performance objectives related to sustainability programs and can measure performance against relevant overall indicators set by the entity or specific program metrics.

How does RPG 3 apply to an individual sustainability program?

IG3. Decision makers may want to evaluate the governance, strategy, risks and performance associated with sustainability programs as part of delivering the entity's service performance objectives. RPG 3 reporting supports transparency in these key areas which are important both for ensuring accountability and for providing useful information for decision-making purposes.

IG4. The illustrative examples (IE4.–IE8.) in RPG 3 demonstrate the application of the principles to four different types of sustainability programs. This includes how an entity identifies service performance objectives of its respective programs, and how they can be expressed using performance indicators related to inputs, outputs, outcomes, efficiency, or effectiveness, or through a combination of two or more such indicators.

Illustrative Examples

These examples accompany, but are not part of, RPG 3.

IE1. The examples in this appendix portray hypothetical situations. Although some aspects of the examples may be present in actual situations, all facts and circumstances of a particular situation would need to be evaluated when applying RPG 3. Where a cost is identified the amount is express in “currency units” (CU).

IE2. The first part of this appendix lists examples of terms defined in the RPG. It is not intended to be an exhaustive list of examples for all defined terms. The examples illustrate the meaning of different terms usually through reference to an entity that provides health services. The examples focus on one service— the provision of vaccinations to infants in order to prevent measles. The entity uses a range of inputs to produce its outputs (measles vaccinations). Those outputs are then expected to cause (directly or indirectly) the desired outcome(s).

IE3. The second part of this appendix provides an illustrative list of information that could be included in an entity’s service performance narrative analysis and discussion.

Part 1: Examples of Defined Terms

- **Service Performance Objectives (SPO):**

  RPG 3 states that service performance objectives may be expressed using performance indicators of inputs, outputs, outcomes or efficiency, or through a combination of one or more of these four performance indicators. The following are examples of service performance objectives that have these different forms of expression. The first example is of a service performance objective that has a focus on inputs, the second has a focus on outputs, the third has a focus on outcomes, and then the last example has a focus on efficiency.

  - To apply 1,200 full-time equivalent days of medical staff time to vaccination services.
  - To provide 20,000 vaccinations to infants.
  - To reduce the percentage of infants who contract measles annually from 65% to 2% within five years i.e. by the end 20XX.
  - To reduce the total cost per vaccination from CU5 to CU4.

- **Input:** The number of full-time equivalent staff days used to provide vaccinations against measles.
- **Outputs:** The number of infants vaccinated against measles.
- **Outcome:** A reduction in the number of infants that contract measles. (The reduction could be expressed in absolute terms (5,000 fewer incidents of measles) or as a percentage reduction (a 35% percentage reduction in infants contracting measles).

  RPG 3 states that outcomes could be impacts affecting society as a whole or impacts on particular groups or institutions within society. Outcomes could be relatively direct impacts on recipients of the entity’s services. They could also be impacts on others that are not recipients of the entity’s services but who benefit indirectly from those services. RPG 3 also states that factors beyond the entity’s control may intervene to either hinder or facilitate the entity’s achievement of outcomes. The first example below illustrates an outcome that affects a particular group within society. The second and third examples illustrate a direct impact on service recipients and an indirect impact on non-recipients. The fourth example illustrates a situation where factors beyond the entity’s control intervenes to facilitate the entity’s achievement of an outcome.

  - A 35% reduction in the incidence of measles for infants within the lowest socio-economic decile.
  - A reduction in the number of incidents of measles experienced by recipients of measles vaccinations provided by the entity is an example of a direct impact on the recipients of the entity’s services.

- Children going to the same schools as those that vaccinated children attend but who have not received a vaccination will also be impacted indirectly by the entity's vaccination services, because their risk of contracting measles is reduced.
- An outbreak of measles in a nearby region leads to extensive media coverage of measles related health risks and an increased vaccination rate in that nearby region covered by another health services provider. These factors facilitate achievement of the entity's outcome to reduce the incidence of measles in its own region. The factors evident in the other region (measles outbreak, media coverage and increased vaccination rate) are outside of the control of the entity.

- **Efficiency:**

RPG 3 states that efficiency is the relationship between (a) inputs and outputs, or (b) inputs and outcomes. The two examples in the first bullet point below illustrate efficiency expressed as the relationship between inputs and outputs. The example in the second bullet point illustrates efficiency expressed in terms of inputs and outcomes.

- "Cost per infant vaccinated" is an example of an efficiency indicator that relates outputs (vaccinations) to an input (cost). Efficiency may also be expressed in terms of other inputs such as, for example, number of staff or staff time. For example, 1,000 vaccinations annually per qualified medical staff member.
- "Cost per reduction in number of infants contracting measles" is an example of an efficiency indicator that relates an outcome (reduction in number of infants contracting measles) to an input (cost).

- **Effectiveness:**

RPG 3 states that effectiveness is the relationship between actual results and service performance objectives. Therefore an assessment of effectiveness depends on the type of service performance objectives that the entity has presented. The three examples below illustrate effectiveness for different service performance objectives. The first example illustrates effectiveness where the service performance objective was expressed in terms of inputs, the second in terms of outputs, and the third in terms of an outcome.

- The service performance objective was to dedicate 20,000 hours of medical staff time to provision of measles vaccinations during the year ended 31 March 20XX. The actual result achieved was 18,000 hours of medical staff time. Therefore the entity effectiveness in this area was 90%.
- The service performance objective was to provide 100,000 measles vaccinations to infants during the year ended 31 March 20XX. The actual result achieved was 99,000 vaccinations. Therefore the entity's effectiveness in this area was 99%.
- The service performance objective was to reduce the number of infants that contract measles by 3,000 compared to the previous year. The actual result achieved was a 3,000 reduction in infants contracting measles. Therefore the entity's effectiveness in this area was 100%.

- **Performance indicator—Qualitative Description:**

RPG 3 states that performance indicators are quantitative measures, qualitative measures, and/or qualitative descriptions of the nature and extent to which an entity is using resources, providing services, and achieving its service performance objectives. The example below illustrates a performance indicator expressed as a qualitative description:

A government department (the Ministry) responsible for supporting the government's relationships with other nations, including trade relationships, uses the following qualitative description as one of its performance indicators:

Engagement with Latin America during this year is expected to include several successful ministerial-led business missions to national governments and ministerial engagement in two regional forums. The Ministry will provide

host and other support for ministerial level visits from several countries in the region, and undertake bilateral foreign policy consultations. Consultations will include advocacy of free trade agreements. The diplomatic network in several Latin America countries will be expanded through additional consulates and honorary consuls.

Part 2: Narrative Discussion and Analysis—Types of Information

The following list provides examples of the different types of information that could be included in narrative discussion and analysis to help users' assessment of an entity's service performance:

(a) Particular service performance achievements, deficiencies and issues.

(b) Identification and discussion of the factors that may have influenced achievement (or non-achievement) of service performance objectives.

(c) Effectiveness indicators.

(d) Discussions of differences between planned and actual achievements.

(e) Comparisons of indicators:

  (i) Over time;

  (ii) To milestones; and/or,

  (iii) Between actual and planned results.

(f) Reasons for change(s), if the service performance objectives or performance indicators presented have changed compared to those presented for the previous year.

(g) Where an entity has multi-year service performance objectives, narrative about progress towards their achievement.

(h) Where outcomes are reported, information on the extent to which outcomes can be attributed to the entity's activities.

(i) Significant lessons learned during the reporting period with respect to the entity's service performance including, where relevant, plans on ways to address issues affecting service performance and areas that require further evaluation.

(j) Identification and discussion of the risks associated with the delivery of services and, if risk assessments for services have been carried out, information on how such risk trade-off decisions are informed and managed.

(k) Identification and discussion of the consequences—intended and unintended, direct and indirect—of the services provided.

If an entity provides a discussion of differences between planned and actual achievements this discussion could include, for example:

(a) Identification of the size of the variances; and

(b) Factors contributing to the variances. (For example, external factors, efficiencies or inefficiencies in internal processes, resource availability, or government service delivery decisions.)

The achievement of outcomes is often influenced by factors outside of the entity's control. If an entity provides narrative discussion and analysis on outcomes the disclosures should be sufficient to ensure that users do not overestimate the entity's role with respect to either improving or worsening outcomes. Where outcome information is displayed, information on the following may be useful for users:

(a) The extent to which the outcomes can be attributed to the entity's activities, and

(b) Other factors that may have influenced the outcomes.

The delivery of public services often follows a risk assessment, involving clear parameters around tolerance of different types of risks, including the risk of false positives and false negatives with respect to intervention decisions. Information on how an entity assesses risks as part of service delivery can support users' understanding of an entity's service performance.

Examples Related to Reporting Sustainability Program Information

IE4. A general overview of how to apply the RPG 3 principles when reporting service performance information is provided in IE1.– IE3. Specific examples of how to report service performance information related to sustainability programs are provided in IE5.– IE8. These examples are not exhaustive and are meant to provide entities with a simplified fact pattern for illustrative purposes on how to report on service performance objectives of sustainability programs. An entity needs to evaluate all relevant facts and circumstances of its specific programs when applying the RPG 3 guidance.

Example 1—Program Financed by a Green Bond

IE5. Green bonds may be used by entities to raise funds for investment in sustainability programs, for example, environmental or climate change mitigation programs. Issuers of such green bonds may identify specific metrics or targets to provide investors with information on the performance of the program in achieving those targets. Below is an example of a program financed by a green bond, The example shows how to apply RPG 3 for reporting on the program.

Green Bond Details and Objectives:

- On January 1, 20x0 Entity A issued a green bond to fund a reforestation program with the goal of planting 100 million trees by the end of the year at a cost of CU4 per tree.
- The reforestation program's target outcome is the absorption of 997,900 tons of CO2 per year ((100 million trees x 22 pounds of CO2 absorbed per tree) divided by 2,204.63 pounds in tons) for the first 20 years.
- At the end of 20x0, forestry staff had planted 85 million trees and determined that the CO2 absorbed by the reforestation program in year 1 was 578,328 tons of CO2 ((85 million trees x 15 pounds of CO2 absorbed per tree) divided by 2,204.63 pounds in tons).
- The actual cost to plant each tree in the reforestation program was CU4.1 (CU348.5 million/85 million trees).

Performance Indicators:

- Inputs: The cost to plant each tree.
- Outputs: The number of trees planted.
- Outcome: Total CO2 absorbed.
- Efficiency:
  - The cost per tree planted was CU4.1, i.e., higher than the expected cost of CU4. The total number of trees planted fell short by 15 million trees (100 million less 85 million). The cost per ton of CO2 absorbed was CU 603 (CU348.5 million/578,328 CO2 tons), while the planned cost per ton of CO2 was CU 401 (CU 400 million/997,900 CO2 tons). The higher cost of CO2 tons per CU spent shows a lower absorption of CO2, which could be attributed to a number of factors, including the gradual process of planting trees, a lower number of trees planted by the program than planned, and a lower survival rate of planted trees.
- Effectiveness:

- Input: 102.5% (the actual cost to plant a tree over the target cost to plant a tree – CU4.1/CU4) because the actual cost to plant the trees (CU348.5 million) was less than the planned cost (CU400 million) and the actual number of trees planted (85 million) fell short of the target number of trees to be planted (100 million).
- Output: 85% (the actual number of trees planted over the target number of trees to be planted – 85 million/100 million) because fewer trees were planted than planned.
- Outcome: 58% (the absorption of CO2 at the end of year 1 over the target absorption of CO2 in year 1 – 578,328 tons of CO2/997,900 tons of CO2) because less carbon was absorbed than planned.

Example 2—Program Financed by a Carbon Tax

IE6. Carbon taxes may be used by entities to generate revenue to fund investment in sustainability programs, including those to fund investment in climate change mitigation. Carbon tax programs often have specific metrics or targets. This information can be used by the entity to report on the performance against the program objectives. Below is an example of a program financed by a carbon tax. The example shows how to apply RPG 3 for reporting on the program.

Carbon Tax Details and Objectives:

- On January 1, 20x1 Jurisdiction B implements a carbon tax to generate revenue to fund the installation of 10,000 electrical vehicle (EV) charging stations over the next 15 years along their highways.
- The objective of Jurisdiction B's program is to incentivize the development of the zero-emission vehicles (ZEV) market so that ZEVs make up 100% of the 460,000 new light-duty vehicles sold per year, within 15 years.
- The program's target for year 1, which starts in 20x2, is to install 600 EV charging stations (expected to cost CU28,500 to install each charging station) and for ZEV sales to comprise 26% of new light-duty sales in Jurisdiction B (119,600).
- At the end of 20x2, Jurisdiction B invested CU13.11 million to install 460 EV charging stations and 18% (85,000/460,000) of all new light-duty vehicle sales were ZEV.

Performance Indicators:

- Input: The cost to install each EV charging station.
- Output: The number of EV charging stations installed.
- Outcome: ZEV market share of the new light-duty vehicles market.
- Efficiency:
  - The cost per EV charging station installed was CU28,500 (CU13.11 million/460 EV charging stations), achieving the 20x2 target cost per station. However, the program only resulted in 460 EV charging station installations falling short by 140 (the plan was to complete 600 EV charging stations). The cost incurred by Jurisdiction B to incentivize the purchase of new light-duty ZEV in 20x2 was CU154 per ZEV (CU13.11 million/85,000 new light-duty ZEV). The program's planned cost was CU143 per additional new light-duty ZEV sold, however, this expectation was based on capturing 26% of the market, instead of 18% captured in 20x2.
- Effectiveness:
  - Input: 100% (the actual cost to install an EV charging station over the target cost to install an EV charging station – CU28,500/CU28,500) because the cost planned was achieved.

- Output: 77% (the actual number of EV charging stations installed over the target number of planned EV charging station installations – 460/600) because fewer EV charging stations were installed than planned.
- Outcome: 71% (the actual number of new light-duty ZEV sold over the target (85,000/119,600) because the market share achieved of 18% was lower than the 26% targeted.

Example 3—Investment in Infrastructure to Mitigate the Impacts of Climate Change

IE7. Investments in infrastructure can be used by entities to help restore the natural environment and mitigate the impact of climate change. Such investments often identify specific metrics or targets the investments are intended to achieve, including those related to service delivery. This information can be used by the entity to report on the performance of the program in achieving the program objectives. Below is an example of an investment in green infrastructure (i.e., rain garden) financed by environmental penalties collected to mitigate the impacts of climate change. The example shows how to apply RPG 3 when reporting on the program.

Investment in Infrastructure Details and Objectives:

- Community C utilizes funds collected from environmental penalties to provide funding for programs helping restore the environment, through 'green infrastructure' programs, such as installing rain gardens to reduce the risk of flooding and help communities adapt to climate change.
- In 20x1, Community C made CU250,000 available for the installation of rain gardens in residential homes and small businesses, with an average cost of CU5,556 each (CU250,000/45 rain gardens).
- A water management consultant report states that the plan to install 45 rain gardens is estimated to reduce instances of flooding by 60% (30 fewer flooding instances).
- Rain levels between 20x0 and 20x1 were consistent, 50 flooding instances were noted in 20x0, and after issuing funding of CU150,000 for 25 rain gardens in 20x1 there were 17 fewer flooding instances (34% reduction).

Performance Indicators:

- Input: Funding collected from environmental penalties and available for rain gardens.
- Output: The number of rain gardens funded by Community C.
- Outcome: Reduction of residential and small business flooding instances.
- Efficiency:
  - The cost per rain garden was CU6,000 (CU150,000/25 rain gardens), CU444 over the target cost. There were only 17 fewer flooding instances than the estimated 30, which can be attributed to the lower number of rain gardens funded by the program (45 rain gardens were estimated to be funded, but only 25 were funded and completed in 20x1). The cost per reduction in flooding instances was CU490 higher per flooding instance, as the planned cost was CU8,333 (CU250,000/30 reductions of flooding instances) and the actual cost was CU8,823 (CU150,000/17 reductions of flooding instances).
- Effectiveness:
  - Input: 60% (the actual funding provided for rain gardens over the target funding available – CU150,000/CU250,000) because less funding was provided than was available.
  - Output: 56% (the actual number of rain gardens funded over the target number of rain gardens planned – 25/45) because fewer rain gardens were funded than planned.

- Outcome: 57% (the actual reduction of flooding instances over the target reduction of flooding instances – 17/30) because fewer flooding instances were prevented than planned.

Example 4—Tax Expenditures for Sustainability Investments

IE8. Tax expenditures[1] can be used to incentivize private investment to improve energy efficiency and reduce energy consumption. Such programs encourage investments and often identify specific metrics or targets the investments are intended to achieve. This information can be used by the entity to report on the program performance in achieving its objectives. Below is an example of a tax expenditure program to encourage energy efficiency improvements through conservation that sets out how to apply RPG 3 when reporting on the program.

Tax Expenditure Details and Objectives:

- In 20x6, Country A introduced a tax credit to incentivize energy-efficient renovations of CU525 million (approximately 80,000 renovations) to decrease energy consumption, specifically natural gas, by 15% in 20x7.
- In 20x7, an income tax credit of CU300 million was given by Country A on housing energy efficiency expenditures.
- The tax credit for energy transition triggered about 60,000 additional eligible energy-efficient renovations and accounted for a reduction of 7% (94,007,117 MMcf[2]) in the natural gas consumption in residential properties in 20x7 (the 20x7 total natural gas consumption was 1,342,958,820 MMcf).

Performance Indicators:

- Input: The total amount of tax credits provided
- Output: The number of eligible energy-efficient renovations completed.
- Outcome: Reduction in energy consumption.
- Efficiency:
  - The average tax expenditure provided for each energy-efficient renovation was CU5,000, resulting in a lower tax expenditure than planned of CU6,563 per renovation (CU525 million/80,000 renovations). The actual cost per unit of energy conservation was CU3.191 per MMcf (CU300 million/94,007,117 MMcf), which was higher than planned at 2.606 per MMcf (CU525 million/201,443,823 MMcf). This could be attributed to fewer actual renovations (60,000) than planned (80,000) and less energy savings per renovation – 1,566.78 MMcf per renovation (94,007,117.40 MMcf/60,000 renovations) instead of 2,518.05 MMcf per renovation (201,443,823 MMcf/80,000 renovations).
- Effectiveness:
  - Input: 57% (the actual tax credit issued for eligible energy-efficient renovations over the target announced – CU300 million/CU525 million) because the tax expenditures issued were below the target.
  - Output: 75% (the actual number of eligible energy-efficient renovations over the target – 60,000/80,000) because there were fewer energy-efficient renovations than planned.
  - Outcome: 47% (the actual natural gas consumption reduction over the target – 7%/15%) because the reduction in natural gas consumption achieved was lower than planned.

[1] This term is defined in the Glossary of Defined Terms.

[2] One million cubic feet of natural gas.

CASH BASIS IPSAS® STANDARD

THIS PAGE INTENTIONALLY LEFT BLANK

INTRODUCTION TO THE INTERNATIONAL PUBLIC SECTOR ACCOUNTING STANDARD UNDER THE CASH BASIS OF ACCOUNTING—ISSUED IN 2017

The International Public Sector Accounting Standards Board (the IPSASB) develops accounting standards for public sector entities referred to as International Public Sector Accounting Standards (IPSAS). The IPSASB recognizes the significant benefits of achieving consistent and comparable financial information across jurisdictions and it believes that the IPSAS Accounting Standards will play a key role in enabling these benefits to be realized. The IPSASB strongly encourages governments and national standard-setters to engage in the development of its Standards by commenting on the proposals set out in its Exposure Drafts and Consultation Papers.

The IPSASB issues IPSAS Accounting Standards dealing with financial reporting under the cash basis of accounting and the accrual basis of accounting.

The adoption of IPSAS Accounting Standards by governments will improve both the quality and comparability of financial information reported by public sector entities around the world. The IPSASB recognizes the right of governments and national standard-setters to establish accounting standards and guidelines for financial reporting in their jurisdictions. The IPSASB considers that this Standard is an important step forward in improving the consistency and comparability of financial reporting under the cash basis of accounting and encourages the adoption of this Standard. Financial statements should be described as complying with this IPSAS only if they comply with all the requirements of Part 1 of this IPSAS.

The IPSASB encourages governments to progress to the accrual basis of accounting and to harmonize national requirements with the IPSAS Accounting Standards prepared for application by entities adopting the accrual basis of accounting. Entities intending to adopt the accrual basis of accounting at some time in the future may find other publications helpful, particularly *Pathways to Accrual*, which was developed by IFAC with content provided by the Chartered Institute of Public Finance and Accountancy (CIPFA) and feedback from the IPSASB and international community stakeholders.

INTERNATIONAL PUBLIC SECTOR ACCOUNTING STANDARD: FINANCIAL REPORTING UNDER THE CASH BASIS OF ACCOUNTING—ISSUED IN 2017

Structure of the Standard

This Standard comprises two parts:

- Part 1 is mandatory. It sets out the requirements which are applicable to all public sector entities preparing general purpose financial statements under the cash basis of accounting. It defines the cash basis of accounting, establishes requirements for the disclosure of information in the financial statements and supporting notes, and deals with a number of specific reporting issues. The requirements in this part of the Standard must be complied with by public sector entities which claim to be reporting in accordance with the International Public Sector Accounting Standard *Financial Reporting under the Cash Basis of Accounting*.
- Part 2 is not mandatory. It identifies additional accounting policies and disclosures that a public sector entity is encouraged to adopt to enhance the usefulness of its financial statements for accountability and decision-making purposes and to support its transition to the accrual basis of financial reporting and adoption of accrual IPSAS.
- The Cash Basis IPSAS was issued in January 2003. The IPSAS was updated with additional requirements and encouragements dealing with the presentation of budget information in 2006 and external assistance in 2007.
- In 2017 a revised Cash Basis IPSAS was issued. The objectives of the revisions were to:
    (a) Remove obstacles to the adoption of the Cash Basis IPSAS represented by the existing requirements dealing with consolidation, external assistance and third party payments: in particular, to recast the requirements in Part 1 of the IPSAS to prepare consolidated financial statements and disclose information about external assistance and third party payments as encouragements in Part 2 of the IPSAS;
    (b) Ensure that requirements and encouragements in the Standard are not contrary to those of the equivalent accrual IPSAS, except where such differences are appropriate to reflect adoption of the cash basis; and
    (c) Clarify that the role the Cash Basis IPSAS is intended to play in the IPSASB's overall standards setting strategy is primarily as a step on the path to adoption of the accrual basis IPSAS, rather than as an end in itself.

FINANCIAL REPORTING UNDER THE CASH BASIS OF ACCOUNTING

CONTENTS

Introduction

Structure of the Standard

Part 1: Requirements

Objective

	Paragraphs
1.1 Scope of the Requirements	1.1.1–1.1.6
1.2 The Cash Basis	1.2.1–1.2.10
Definitions	1.2.1–1.2.10
Cash Basis of Accounting	1.2.2
Cash Equivalents	1.2.3–1.2.5
Cash Controlled by the Reporting Entity	1.2.6–1.2.9
Control of an entity	1.2.10
1.3 Presentation and Disclosure Requirements	1.3.1–1.3.33
Definitions	1.3.1–1.3.3
Financial Statements	1.3.4–1.3.11
Information to be Presented in the Statement of Cash Receipts and Payments	1.3.12–1.3.24
Classification	1.3.17–1.3.18
Line Items, Headings and Sub-totals	1.3.19
Reporting on a Net Basis	1.3.20–1.3.24
Accounting Policies and Explanatory Notes	1.3.25–1.3.33
Structure of the Notes	1.3.25–1.3.26
Selection and Disclosure of Accounting Policies	1.3.27–1.3.33
1.4 General Considerations	1.4.1–1.4.25
Reporting Period	1.4.1–1.4.3
Timeliness	1.4.4
Authorization Date	1.4.5–1.4.6
Information about the Entity	1.4.7–1.4.8
Restrictions on Cash Balances and Access to Borrowings	1.4.9–1.4.12
Consistency of Presentation	1.4.13–1.4.15
Comparative Information	1.4.16–1.4.20
Identification of Financial Statements	1.4.21–1.4.25
1.5 Correction of Errors	1.5.1–1.5.5

1.6 Foreign Currency 1.6.1–1.6.8
Definitions 1.6.1
Treatment of Foreign Currency Cash Receipts, Payments and Balances 1.6.2–1.6.8
1.7 Presentation of Budget Information in Financial Statements 1.7.1–1.7.46
Definitions 1.7.1–1.7.7
Approved Budgets 1.7.2–1.7.4
Original and Final Budget 1.7.5–1.7.6
Actual Amounts 1.7.7
Presentation of a Comparison of Budget and Actual Amounts 1.7.8–1.7.32
Scope 1.7.9–1.7.10
Comparison of Budget and Actual Amounts 1.7.11–1.7.16
Presentation 1.7.17–1.7.19
Level of Aggregation 1.7.20–1.7.22
Changes from Original to Final Budget 1.7.23–1.7.24
Comparable Basis 1.7.25–1.7.30
Multiyear Budgets 1.7.31–1.7.32
Note Disclosures of Budgetary Basis, Period and Scope 1.7.33–1.7.40
Reconciliation of Actual Amounts on a Comparable Basis and Actual Amounts in the Financial Statements 1.7.41–1.7.46
1.8 Effective date of Part 1 and Transitional Provisions 1.8.1–1.8.13
Transitional Provisions 1.8.1–1.8.4
Effective Date 1.8.5–1.8.6
Withdrawal of the Cash Basis IPSAS (2007) 1.8.7–1.8.10
Changes in Accounting Policies of Entities that Adopt the Superseded Cash Basis IPSAS 1.8.11–1.8.13
Basis For Conclusions

Basis for Conclusions
Appendix 2: Illustration of Certain Disclosures Encouraged in Part 2 of the Standard

Appendix 3: Presentation of the Statement of Cash Receipts and Payments in the Format Required by IPSAS 2 Cash Flow Statements

Appendix 4: Qualitative Characteristics of Information Included in General Purpose Financial Reports

PART 1: REQUIREMENTS

Part 1 of this Standard sets out the requirements for reporting under the cash basis of accounting.

Authoritative requirements are set out in bold italic type. They use the term "shall" to signal that they are authoritative requirements. They are to be read in the context of the commentary paragraphs in this Standard, which are in plain type, and in the context of the "Preface to International Public Sector Accounting Standards". International Public Sector Accounting Standards are not intended to apply to immaterial items.

Objective

The purpose of this Standard is to prescribe the manner in which general purpose financial statements are to be presented under the cash basis of accounting.

The objectives of financial reporting by public sector entities are to provide information about the entity that is useful to users of general purpose financial statements and other general purpose financial reports (GPFRs) for accountability and decision-making purposes. Information about the cash receipts, cash payments and cash balances of an entity is necessary for accountability purposes and provides input useful for assessments of the ability of the entity to generate adequate cash in the future and the likely sources and uses of cash. In making and evaluating decisions about the allocation of cash resources and the sustainability of the entity's activities, users require an understanding of the timing and certainty of cash receipts and cash payments.

Compliance with the requirements and encouragements of this Standard will enhance comprehensive and transparent financial reporting of the cash receipts, cash payments and cash balances of the entity. It will also enhance comparability with the entity's own general purpose financial statements of previous periods and with the financial statements of other entities which adopt the cash basis of accounting.

Role of the Cash Basis IPSAS

The IPSASB is of the view that the objectives of financial reporting can best be achieved by adoption of the accrual IPSAS. Consequently the IPSASB encourages governments and other public sector entities to present financial statements that comply with the requirements of the accrual IPSAS. However, the IPSASB appreciates that in some jurisdictions a transitionary process may be necessary to achieve that end. The Cash Basis IPSAS has been developed as an intermediate step to assist in the transition to the accrual basis of financial reporting and adoption of accrual IPSAS. It is not intended as an end in itself. The role of the encouraged disclosures in Part 2 of the Standard is to support an entity's transition to the accrual basis of financial reporting and adoption of the accrual IPSAS.

The path chosen to transition to the accrual basis of financial reporting and adoption of the accrual IPSAS will reflect jurisdiction circumstances and, consequently, may differ from jurisdiction to jurisdiction. The IPSASB does not specify that a particular transitional path should be adopted nor that entities must necessarily adopt the Cash Basis IPSAS as the first step in the transition process.

1.1 Scope of the Requirements

1.1.1 The IPSAS are designed to apply to public sector entities[1] that meet all the following criteria:

(a) Are responsible for the delivery of services[2] to benefit the public and/or to redistribute income and wealth;

(b) Mainly finance their activities, directly or indirectly, by means of taxes and/or transfers from other levels of government, social contributions, debt or fees; and

[1] Paragraph 1.8 of *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* identifies a wide range of public sector entities for which IPSAS are designed.

[2] Services encompasses goods, services and policy advice, including to other public sector entities.

(c) Do not have a primary objective to make profits.

1.1.2 ***A public sector entity which prepares and presents general purpose financial statements (financial statements) under the cash basis of accounting, as defined in this Standard, shall apply the requirements of Part 1 of this Standard in the presentation of its annual financial statements.***

1.1.3 General purpose financial statements are developed primarily to respond to the information needs of service recipients and resource providers who are not in a position to demand reports tailored to meet their specific information needs, and representatives of these users. Service recipients and their representatives and resource providers and their representatives include citizens, residents, taxpayers and ratepayers, members of the legislature (or similar body) and members of parliament (or a similar representative body), donor agencies, lenders and others that provide resources to, or benefit from, services of governments. General purpose financial statements prepared to respond to the information needs of service recipients and resource providers for accountability and decision-making purposes may also provide information useful to other parties. General purpose financial statements include those financial statements that are presented separately or within another public document such as an annual report. For purposes of this Standard, the terms "general purpose financial statements" and "financial statements" are used interchangeably, unless specified otherwise.

1.1.4 A reporting entity is an individual entity that presents financial statements or, where a controlling entity elects to present group financial statements, a reporting entity may comprise a controlling entity and one or more controlled entities that present financial statements as if they are a single entity. A public sector reporting entity (hereafter referred to as a reporting entity or entity, unless specified otherwise) is a government or other public sector organization, program or identifiable area of activity for which financial statements are prepared. Paragraph 1.4.7 of this Standard requires the disclosure of certain information about the entities and activities in respect of which financial statements have been prepared.

1.1.5 This Standard applies equally to the financial statements of an individual entity and to the financial statements of a reporting entity that comprises a controlling entity and one or more controlled entities. It requires the preparation of a statement of cash receipts and payments which recognizes the cash controlled by the reporting entity, and the disclosure of accounting policies and explanatory notes.

1.1.6 ***An entity whose financial statements comply with the requirements of Part 1 of this Standard shall disclose that fact. Financial statements shall not be described as complying with this Standard unless they comply with all the requirements in Part 1 of this Standard.***

1.2 The Cash Basis

Definitions

1.2.1 ***The following terms are used in this Standard with the meaning specified:***

Cash comprises cash on hand, demand deposits and cash equivalents.

Cash basis means a basis of accounting that recognizes transactions and other events only when cash is received or paid.

Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.

Cash flows are inflows and outflows of cash.

Cash payments are cash outflows.

Cash receipts are cash inflows.

***Control of cash** arises when the entity can use or otherwise benefit from the cash in pursuit of its objectives and can exclude or regulate the access of others to that benefit.*

***Control of an entity:** An entity controls another entity when the entity is exposed, or has rights, to variable benefits from its involvement with the other entity and has the ability to affect the nature or amount of those benefits through its power over the other entity.*

***Controlled entity** is an entity that is under the control of another entity (known as the controlling entity).*

Cash Basis of Accounting

1.2.2 The cash basis of accounting recognizes transactions and events only when cash (including cash equivalents) is received or paid by the entity. Financial statements prepared under the cash basis provide readers with information about the sources of cash raised during the period, the purposes for which cash was used and the cash balances at the reporting date. The measurement focus in the financial statements is balances of cash and changes therein. Notes to the financial statements may provide additional information about liabilities, such as payables and borrowings, and some non-cash assets, such as receivables, investments and property, plant and equipment.

Cash Equivalents

1.2.3 Cash equivalents are held for the purpose of meeting short-term cash commitments rather than for investment or other purposes. For an investment to qualify as a cash equivalent it must be readily convertible to a known amount of cash and be subject to an insignificant risk of changes in value. Therefore, an investment normally qualifies as a cash equivalent only when it has a short maturity of, say, three months or less from the date of acquisition. Equity investments are excluded from cash equivalents unless they are, in substance, cash equivalents.

1.2.4 Bank borrowings are generally considered to give rise to cash inflows. However, in some jurisdictions, bank overdrafts which are repayable on demand form an integral part of an entity's cash management. In these circumstances, bank overdrafts are included as a component of cash. A characteristic of such banking arrangements is that the bank balance often fluctuates from being positive to overdrawn.

1.2.5 Cash flows exclude movements between items that constitute cash because these components are part of the cash management of an entity rather than increases or decreases in the cash it controls. Cash management includes the investment of excess cash on hand in cash equivalents.

Cash Controlled by the Reporting Entity

1.2.6 Cash is controlled by an entity when the entity can use the cash for the achievement of its own objectives or otherwise benefit from the cash and exclude or regulate the access of others to that benefit. Cash collected by, or appropriated or granted to, an entity which the entity can use to fund its operating objectives, acquire capital assets or repay its debt is controlled by the entity.

1.2.7 Amounts deposited in the bank account of an entity are controlled by that entity. In some cases, cash which a government entity:

(a) Collects on behalf of its government (or another entity) is deposited in its own bank account before transfer to consolidated revenue or another general government account; and

(b) Is to transfer to third parties on behalf of its government is initially deposited in its own bank account prior to transfer to the authorized recipient.

In these cases, the entity will control the cash for only the period during which the cash resides in its bank account prior to transfer to consolidated revenue or another government controlled bank account, or to third

parties. Paragraph 1.4.9 requires the disclosure of cash balances held by an entity at reporting date that are not available for use by the entity or are subject to external restrictions. Additional guidance on the treatment of cash flows that an entity administers on behalf of other entities is included in paragraphs 2.1.6 to 2.1.13 of Part 2 of this Standard.

1.2.8 In some jurisdictions, a government will manage the expenditure of its individual departments and other entities through a centralized treasury function, often referred to as a "treasury single account". Under these arrangements, individual departments and entities do not establish their own separate bank accounts. Rather, the centralized treasury function acts as a bank on behalf of the individual departments and other entities. The cash inflows, cash outflows and cash balances of the entity which flow through, or are held in, the treasury single account will be reported in the statement of cash receipts and payments in accordance with the requirements of paragraph 1.3.4. From the perspective of the centralized treasury function, payments on behalf of individual departments and other entities are treated as changes within their accounts — reflecting the approach adopted by a bank in accounting for payments made on behalf of its customers.

1.2.9 In some cases, the centralized treasury function will be undertaken by an entity which controls the bank account(s) from which payments on behalf of the individual operating departments and other entities are made. In these cases, transfers to and payments from those bank accounts reflect cash receipts and payments which the central entity administers on behalf of the individual operating departments and other entities. Paragraph 1.3.13 specifies that cash receipts and payments which arise from transactions the entity administers on behalf of other entities and which are recognized in the primary financial statements may be reported on a net basis. Paragraph 1.4.9 requires the disclosure of cash balances held by an entity at reporting date that are not available for use by the entity or are subject to external restrictions.

Control of an entity

1.2.10 Governments and other public sector entities may control a large number of entities including government departments, agencies and commercial public sector entities. Financial statements may be prepared in respect of a reporting entity that comprises an individual entity or a controlling entity and all or some of its controlled entities. This Standard encourages (at paragraph 2.1.37) but does not require, controlling entities to prepare and present consolidated financial statements that encompass the controlling entity and all its controlled entities, with exceptions in certain defined circumstances. The factors to be considered in assessing whether one entity controls another entity for financial reporting purposes are set out in IPSAS 35, *Consolidated Financial Statements*.

1.3 Presentation and Disclosure Requirements

Definitions

1.3.1 ***The following terms are used in this Standard with the meanings specified:***

***Accounting policies** are the specific principles, bases, conventions, rules and practices adopted by an entity in preparing and presenting financial statements.*

***Materiality:** information is material if its omission or misstatement could influence the discharge of accountability by the entity, or the decisions that users make on the basis of the entity's financial statements prepared for that reporting period. Materiality depends on both the nature and amount of the item judged in the particular circumstances of each entity.*

***Reporting date** means the date of the last day of the reporting period to which financial statements relate.*

1.3.2 Financial statements result from processing large quantities of transactions that are structured by being aggregated into groups according to their nature or function. The final stage in the process of aggregation

and classification is the presentation of condensed and classified data that form line items either on the face of the financial statements or in the notes. If a line item is not individually material, it is aggregated with other items either on the face of the financial statements or in the notes. An item that is not sufficiently material to warrant separate presentation on the face of the financial statements may nevertheless be sufficiently material that it should be presented separately in the notes.

1.3.3 The principle of materiality provides that the specific disclosure requirements of International Public Sector Accounting Standards need not be met if the resulting information is not material.

Financial Statements

1.3.4 ***An entity shall prepare and present financial statements which include the following components:***

(a) ***A statement of cash receipts and payments which recognizes all cash receipts, cash payments and cash balances controlled by the entity;***

(b) ***Accounting policies and explanatory notes; and***

(c) ***When the entity makes publicly available its approved budget, a comparison of budget and actual amounts either as a separate additional financial statement or as a budget column in the statement of cash receipts and payments in accordance with paragraph 1.7.8 of this Standard.***

1.3.5 ***When an entity elects to disclose information prepared on a different basis from the cash basis of accounting as defined in this Standard or otherwise required by paragraph 1.3.4(c), such information shall be disclosed in the notes to the financial statements.***

1.3.6 The financial statements comprises the statement of cash receipts and payments and other statements that disclose additional information about the cash receipts, payments and balances controlled by the entity and accounting policies and notes. In accordance with the requirements of paragraph 1.3.4(a) above, only cash receipts, cash payments and cash balances controlled by the reporting entity will be recognized as such in the statement of cash receipts and payments or other statements that might be prepared. In accordance with the requirements of paragraph 1.3.4(c) above, the financial statements may include a comparison of budget and actual amounts as an additional financial statement.

1.3.7 Paragraph 1.7.17 of this Standard provides that an entity can present a comparison of budget and actual amounts as additional budget columns in the statement of cash receipts and payments only where the financial statements and the budget are prepared on a comparable basis. When the budget and financial statements are not prepared on a comparable basis, a separate statement of comparison of budget and actual amounts is presented.

1.3.8 Notes to the financial statements include narrative descriptions or more detailed schedules or analyses of amounts shown on the face of the financial statements, as well as additional information. They include information required and encouraged to be disclosed by this Standard, and can include other disclosures considered necessary to achieve a fair presentation and enhance accountability.

1.3.9 This Standard does not preclude an entity from including in its general purpose financial statements, statements in addition to the statement of cash receipts and payments as specified in paragraph 1.3.4 above. Consequently, general purpose financial statements may also include additional statements which, for example:

(a) Report cash receipts, cash payments and cash balances for major fund categories such as the consolidated revenue fund;

(b) Provide additional information about the sources and deployment of borrowings and the nature and type of cash payments; or

(c) Provide a comparison of actual and budget amounts.

In accordance with the requirements of paragraph 1.3.5 above, any additional statements will only report cash receipts, payments and balances which are controlled by the entity.

1.3.10 Entities that report using the cash basis of accounting frequently collect information on items that are not recognized under cash accounting. Examples of the type of information that may be collected include details of:

(a) Receivables, payables, borrowings and other liabilities, non-cash assets and accruing revenues and expenses;

(b) Commitments and contingent liabilities; and

(c) Performance indicators and the achievement of service delivery objectives.

1.3.11 Entities preparing general purpose financial statements in accordance with this Standard may disclose such information in the notes to the financial statements where that information is likely to be useful to users. Where such disclosures are made they should be clearly described and readily understandable. If not disclosed in the financial statements themselves, comparisons with budget may also be included in the notes. Part 2 of this Standard encourages inclusion of information about non-cash assets and liabilities and a comparison with budget in general purpose financial statements.

Information to be Presented in the Statement of Cash Receipts and Payments

1.3.12 ***The statement of cash receipts and payments shall present the following amounts for the reporting period:***

(a) ***Total cash receipts of the entity showing separately a sub-classification of total cash receipts using a classification basis appropriate to the entity's operations;***

(b) ***Total cash payments of the entity showing separately a sub-classification of total cash payments using a classification basis appropriate to the entity's operations; and***

(c) ***Beginning and closing cash balances of the entity.***

1.3.13 ***Total cash receipts and total cash payments, and cash receipts and cash payments for each sub-classification of cash receipt and payment, shall be reported on a gross basis, except that cash receipts and payments may be reported on a net basis when:***

(a) ***They arise from transactions which the entity administers on behalf of other parties and which are recognized in the statement of cash receipts and payments; or***

(b) ***They are for items in which the turnover is quick, the amounts are large, and the maturities are short.***

1.3.14 ***Line items, headings and sub-totals shall be presented in the statement of cash receipts and payments when such presentation is necessary to present fairly the entity's cash receipts, cash payments and cash balances.***

1.3.15 This Standard requires all entities to present a statement of cash receipts and payments which discloses beginning and closing cash balances of the entity, total cash receipts and total cash payments over the reporting period, and major sub-classifications thereof. This will ensure that the financial statements provide comprehensive information about the cash balances of the entity and changes therein over the period in a format that is accessible and understandable to users.

1.3.16 Disclosure of information about such matters as the cash balances of the entity, whether cash is generated from taxes, fines, fees, and/or borrowings and whether it was expended to meet operating costs, for the

acquisition of capital assets or for the retirement of debt will enhance transparency and accountability of financial reporting. These disclosures will also facilitate more informed analysis and assessments of the entity's current cash resources and the likely sources and sustainability of future cash inflows.

Classification

1.3.17 The sub-classifications (or classes) of total cash receipts and payments which will be disclosed in accordance with paragraphs 1.3.12 and 1.3.14 are a matter of professional judgment. That judgment will be applied in the context of the objectives and qualitative characteristics of financial reporting under the cash basis of accounting. Appendix 4 of this Standard summarizes the qualitative characteristics of information included in general purpose financial reports. Total cash receipts may be classified to, for example, separately identify cash receipts from: taxation or appropriation; grants and donations; borrowings; proceeds from the disposal of property, plant and equipment; and other ongoing service delivery and trading activities. Total cash payments may be classified to, for example, separately identify cash payments in respect of: ongoing service delivery activities including transfers to constituents or other governments or entities; debt reduction programs; acquisitions of property, plant and equipment; and any trading activities. Alternative presentations are also possible, for example total cash receipts may be classified by reference to their source and cash payments may be sub-classified by reference to either the nature of the payments or their function or program within the entity, as appropriate.

1.3.18 Part 2 of this Standard encourages the disclosure of certain information about external assistance and other assistance received during the reporting period, and the balance of undrawn external assistance and other assistance available to the entity at reporting date. For many public sector reporting entities in developing economies, the classification of cash receipts and payments to identify the amount of external assistance and other assistance received as cash and the use of that assistance is likely to be relevant for accountability and decision-making purposes.

Line Items, Headings and Sub-Totals

1.3.19 Factors to be taken into consideration in determining which line items, headings and sub-totals should be presented within each sub-classification in accordance with the requirements of paragraph 1.3.14 above include: the requirements of other sections of this Standard; assessments of the likely materiality of the disclosures to users; and the extent to which necessary explanations and disclosures are made in the notes to the financial statements. Part 2 of this Standard sets out disclosures of additional major classes of cash flows that an entity is encouraged to make in the notes to the financial statements or in the financial statements themselves. It is likely that in many, but not necessarily all, cases these disclosures will satisfy the requirements of paragraph 1.3.12 above.

Reporting on a Net Basis

1.3.20 This Standard requires the reporting of cash receipts, payments and balances on a gross basis except in the circumstances identified by paragraph 1.3.13 above. Paragraphs 1.3.21 and 1.3.24 below further elaborate on those circumstances in which reporting on a net basis may be justified.

1.3.21 Governments and government departments and other government entities may administer transactions and otherwise act as agents on behalf of others. These administered and agency transactions may encompass the collection of revenues on behalf of another entity, the transfer of funds to eligible beneficiaries or the safekeeping of monies on behalf of constituents. Examples of such activities may include:

(a) The collection of taxes by one level of government for another level of government, not including taxes collected by a government for its own use as part of a tax sharing arrangement;

(b) The acceptance and repayment of demand deposits of a financial institution;

(c) Funds held for customers by an investment or trust entity;

(d) Rents collected on behalf of, and paid over to, the owners of properties;

(e) Transfers by a government department to third parties consistent with legislation or other government authority; and

(f) Funds administered by a central entity under the "single account" basis for management of government expenditure (as referred to in paragraph 1.2.8).

1.3.22 In many cases, the cash an entity receives in respect of transactions it administers as an agent for others will be deposited in trust accounts for, or directly in the bank account of, the ultimate recipients of the cash. In these cases, the entity will not control the cash it receives in respect of the transactions it administers and these cash flows will not form part of the cash receipts, cash payments or cash balances of the entity. However, in other cases the cash received will be deposited in bank accounts controlled by the entity acting as an agent and the receipt and transfer of that cash will be reported in the statement of cash receipts and payments of the entity.

1.3.23 In some cases, the amounts of the cash flows arising from administered transactions which "pass-through" the bank account of the reporting entity may be large relative to the entity's own transactions, and control may occur for only a short time before the amounts are transferred to the ultimate recipients. This may also be true for other cash flows including for example, advances made for, and the repayment of:

(a) The purchase and sale of investments; and

(b) Other short-term borrowings, for example, those which have a maturity period of three months or less.

1.3.24 The recognition of these transactions on a gross basis may undermine the ability of the financial statements of some governments and government entities to communicate information about cash receipts and cash payments resulting from the entity's own activities. Accordingly, this Standard permits cash receipts and cash payments to be offset and reported on a net basis in the statement of cash receipts and payments in the circumstances identified in paragraph 1.3.13 above.

Accounting Policies and Explanatory Notes

Structure of the Notes

1.3.25 ***The notes to the financial statements of an entity shall:***

(a) ***Present information about the basis of preparation of the financial statements and the specific accounting policies selected and applied for significant transactions and other events; and***

(b) ***Provide additional information which is not presented on the face of the financial statements but is necessary for a fair presentation of the entity's cash receipts, cash payments and cash balances.***

1.3.26 ***Notes to the financial statements shall be presented in a systematic manner. Each item on the face of the statement of cash receipts and payments and other financial statements shall be cross referenced to any related information in the notes.***

Selection and Disclosure of Accounting Policies

1.3.27 ***Financial statements shall present information that is:***

(a) ***Understandable;***

(b) ***Relevant to the decision-making and accountability needs of users;***

(c) ***A faithful representation of the cash receipts, cash payments and cash balances of the entity and the other information disclosed in the financial statements in that it is:***

(i) **Complete;**

(ii) **Neutral; and**

(iii) **Free from material error;**

(d) ***Comparable;***

(e) ***Timely; and***

(f) ***Verifiable.***

Constraints on information included in financial statements are that it is material, satisfies a cost-benefit assessment, and achieves an appropriate balance between the qualitative characteristics identified in (a) to (f) above.

1.3.28 The quality of information provided in financial statements determines the usefulness of those statements to users. Paragraph 1.3.27 identifies the qualitative characteristics of, and pervasive constraints on, information included in financial statements. It requires the development of accounting policies to ensure that the financial statements provide information that meets the qualitative characteristics identified in paragraphs 1.3.27(a) to 1.3.27(f), and satisfies the constraints on information included in financial statements. Appendix 4 of this Standard summarizes the qualitative characteristics of, and constraints on, information included in general purpose financial reports. The maintenance of complete and accurate accounting records during the reporting period is essential for timely production of the financial statement.

1.3.29 ***The accounting policies section of the notes to the financial statements shall describe each specific accounting policy that is necessary for a proper understanding of the financial statements, including the extent to which the entity has applied any transitional provisions in this Standard.***

1.3.30 ***Inappropriate accounting treatments are not rectified either by disclosure of the accounting policies used, or by notes or explanatory material.***

1.3.31 In deciding whether a specific accounting policy should be disclosed, management considers whether disclosure would assist users in understanding the way in which transactions and events are reflected in the reported cash receipts, payments and balances. An accounting policy may be significant even if amounts shown for current and prior periods are not material. Paragraph 1.3.4 of this Standard specifies that general purpose financial statements include accounting policies and explanatory notes. Consequently, the requirements of paragraph 1.3.29 above also apply to notes to the financial statements.

1.3.32 ***Where an entity elects to include in its financial statements any disclosures encouraged in Part 2 of this Standard, those disclosures shall comply with the requirements of paragraph 1.3.27 above.***

1.3.33 Part 2 of this Standard encourages the disclosure of additional information in notes to the financial statements. Where such disclosures are made, they will need to be understandable and to satisfy the other qualitative characteristics of financial information.

1.4 General Considerations

Reporting Period

1.4.1 ***The general purpose financial statements shall be presented at least annually. When, in exceptional circumstances, an entity's reporting date changes and the annual financial statements are presented for a period longer or shorter than one year, an entity shall disclose in addition to the period covered by the financial statements:***

(a) ***The reason(s) for a period other than one year being used; and***

(b) ***The fact that comparative amounts may not be comparable.***

1.4.2 The reporting date is the date of the last day of the reporting period to which the financial statements relate. In exceptional circumstances an entity may be required to, or decide to, change its reporting date to, for example, align the reporting cycle more closely with the budgeting cycle. When this is the case, it is important that the reason for the change in reporting date is disclosed and that users are aware that the amounts shown for the current period and the comparative amounts are not comparable.

1.4.3 Normally, the financial statements are consistently prepared covering a one-year period. However, some entities prefer to report, for example, for a 52 week period for practical reasons. This Standard does not preclude this practice, as the resulting financial statements are unlikely to be materially different from that which would be presented for one year.

Timeliness

1.4.4 The usefulness of the financial statements are impaired if they are not made available to users within a reasonable period after the reporting date. An entity should be in a position to issue its financial statements within six months of the reporting date, although a timeframe of no more than three months is strongly encouraged. Ongoing factors such as the complexity of an entity's operations are not sufficient reason for failing to report on a timely basis. More specific deadlines are dealt with by legislation and regulations in many jurisdictions.

Authorization Date

1.4.5 ***An entity shall disclose the date when the financial statements were authorized for issue and who gave that authorization. If another body has the power to amend the financial statements after issuance, the entity shall disclose that fact.***

1.4.6 The authorization date is the date on which the financial statements have received approval from the individual or body with the authority to finalize those statements for issue. It is important for users to know when the financial statements were authorized for issue, because the financial statements do not reflect events after this date. It is also important for users to know of the rare circumstances in which any persons or organizations have the authority to amend the financial statements after issuance. Examples of individuals or bodies that may have the power to amend the financial statements after issuance are Ministers, the government of which the entity forms part, Parliament or an elected body of representatives. If changes are made, the amended financial statements are a new set of financial statements.

Information about the Entity

1.4.7 ***An entity shall disclose the following in the notes to the financial statements if not disclosed elsewhere in information published with the financial statements:***

(a) ***The domicile and legal form of the entity, and the jurisdiction(s) within which it operates;***

(b) ***A description of the nature of the entity's operations and principal activities;***

(c) ***A reference to the relevant legislation governing the entity's operations, if any; and***

(d) ***The significant entities or sectors of government that are presented in the financial statements, and changes in the significant entities or sectors that comprise the reporting entity and were presented in the previous periods financial statements.***

1.4.8 Financial statements may be prepared for a single organization or administrative unit such as a government department, agency or program; for the government as a whole; or for a group of entities or identifiable activities such as those that reflect the budget sector, general government sector or other sector of

government. The disclosure of the information required by paragraph 1.4.7 will enable users to identify the nature of the entity's operations and gain an understanding of the legislative and institutional environment within which it operates. It will also enable users to identify the significant entities or sectors that make up the reporting entity and changes therein since the last reporting date. This is necessary for accountability purposes and will assist users in understanding and evaluating the financial statements of the entity.

Restrictions on Cash Balances and Access to Borrowings

1.4.9 ***An entity shall disclose in the notes to the financial statements together with a commentary, the nature and amount of:***

(a) ***Significant cash balances that are not available for use by the entity;***

(b) ***Significant cash balances that are subject to external restrictions; and***

(c) ***Undrawn borrowing facilities that may be available for future operating activities and to settle capital commitments, indicating any restrictions on the use of these facilities.***

1.4.10 Cash balances held by an entity would not be available for use by the entity when, for example, a controlled entity operates in a country where exchange controls or other legal restrictions apply and the balances are not available for general use by the controlling entity or other controlled entities.

1.4.11 Cash balances controlled by an entity may be subject to restrictions which limit the purpose or timing of their use. This situation often exists when an entity receives a grant or donation which must be used for a specific purpose. It may also exist where, at reporting date, an entity holds in its own bank accounts cash it has collected for other parties in its capacity as an agent but not yet transferred to those parties. Although these balances are controlled by the entity and reported as a cash balance of the entity, separate disclosure of the amount of such items is helpful to readers.

1.4.12 Undrawn borrowing facilities represent a potential source of cash for an entity. Disclosure of the amount of these facilities by significant type allows readers to assess the availability of such cash, and the extent to which the entity has made use of them during the reporting period.

Consistency of Presentation

1.4.13 ***The presentation and classification of items in the financial statements shall be retained from one period to the next unless:***

(a) ***It is apparent, following a significant change in the nature of the operations of the entity or a review of its financial statements that another presentation or classification would be more appropriate having regard to the criteria for the selection and application of accounting policies in paragraph 1.3.27; or***

(b) ***A change in presentation is required by a future amendment to this Standard.***

1.4.14 A major restructuring of service delivery arrangements; the creation of a new, or termination of a major existing, government entity; a significant acquisition or disposal; or a review of the overall presentation of the entity's financial statements might suggest that the statement of cash receipts and payments or other individual financial statements should be presented differently. For example, a government may dispose of a government savings bank that represents one of its most significant entities with the remaining entities conducting mainly administrative and policy advice services. In this case, the presentation of the financial statements identifying a financial institution as a principal activity of the government is unlikely to be relevant.

1.4.15 Only if the revised structure is likely to continue, or if an alternative presentation provides information that is a faithful representation and is more relevant to users of the financial statement, should an entity change the presentation of its financial statements. When such changes in presentation are made, an entity reclassifies

its comparative information in accordance with paragraph 1.4.19. Where an entity complies with this International Public Sector Accounting Standard, a change in presentation to comply with national requirements is permitted as long as the revised presentation is consistent with the requirements of this Standard.

Comparative Information

1.4.16 ***Unless a provision of this Standard permits or requires otherwise, comparative information shall be disclosed in respect of the previous period for all numerical information required by this Standard to be disclosed in the financial statements, except in respect of the financial statements for the reporting period to which this Standard is first applied. Comparative information shall be included in narrative and descriptive information when it is relevant to an understanding of the current period's financial statements.***

1.4.17 This Standard requires the presentation of a statement of cash receipts and payments and specifies certain disclosures that are required to be made in that statement and notes thereto. This Standard does not preclude the preparation of additional financial statements. Part 2 of this Standard encourages certain additional disclosures. Where financial statements in addition to the statement of cash receipts and payments are prepared or disclosures encouraged by Part 2 of this Standard are made, the disclosure of comparative information is also encouraged.

1.4.18 In some cases, narrative information provided in the financial statements for the previous period(s) continues to be relevant in the current period. For example, details of a legal dispute, the outcome of which was uncertain at the last reporting date and is yet to be resolved, may be disclosed in the current period. Users benefit from knowing that the uncertainty existed at the last reporting date, and the steps that have been taken during the period to resolve the uncertainty.

1.4.19 ***When the presentation or classification of items required to be disclosed in the financial statements is amended, comparative amounts shall be reclassified, unless it is impracticable to do so, to ensure comparability with the current period, and the nature, amount of, and reason for any reclassification shall be disclosed. When it is impracticable to reclassify comparative amounts, an entity shall disclose the reason for not reclassifying and the nature of the changes that would have been made if amounts were reclassified.***

1.4.20 Circumstances may exist when it is impracticable to reclassify comparative information to achieve comparability with the current period. For example, data may not have been collected in the previous period(s) in a way which allows reclassification, and it may not be practicable to recreate the information. In such circumstances, the nature of the adjustments to comparative amounts that would have been made is disclosed.

Identification of Financial Statements

1.4.21 ***The financial statements shall be clearly identified and distinguished from other information in the same published document.***

1.4.22 This Standard applies only to the financial statements, and not to other information presented in an annual report or other document. Therefore, it is important that users are able to distinguish information that is prepared using this Standard from other information that may be useful to users but that is not the subject of this Standard.

1.4.23 ***Each component of the financial statements shall be clearly identified. In addition, the following information shall be prominently displayed and repeated when it is necessary for a proper understanding of the information presented:***

(a) ***The name of the reporting entity or other means of identification;***

(b) ***Whether the financial statements cover an individual entity or a group of entities;***

(c) ***The reporting date or the period covered by the financial statements, whichever is appropriate to the related component of the financial statements;***

(d) ***The presentation currency; and***

(e) ***The level of precision used in the presentation of figures in the financial statements.***

1.4.24 The requirements in paragraph 1.4.23 are normally met by presenting page headings and abbreviated column headings on each page of the financial statements. Judgment is required in determining the best way of presenting such information. For example, when the financial statements are read electronically, separate pages may not be used. In such cases, the items identified in paragraph 1.4.23 are presented frequently enough to ensure a proper understanding of the information given.

1.4.25 Financial statements are often made more understandable by presenting information in thousands or millions of units of the presentation currency. This is acceptable as long as the level of precision in presentation is disclosed and relevant information is not lost.

1.5 Correction of Errors

1.5.1 ***When an error arises in relation to a cash balance reported in the financial statements, the amount of the error that relates to prior periods shall be reported by adjusting the cash at the beginning of the period. Comparative information shall be restated, unless it is impracticable to do so.***

1.5.2 ***An entity shall disclose in the notes to the financial statements the following:***

(a) ***The nature of the error that relates to a prior period;***

(b) ***The amount of the correction; and***

(c) ***The fact that comparative information has been restated or that it is impracticable to do so.***

1.5.3 Potential current period errors discovered in the current period are corrected before the financial statements are authorized for issue. Errors in the preparation of the financial statements of one or more prior periods may be discovered in the current period. Errors may occur as a result of mathematical mistakes, mistakes in applying accounting policies, misinterpretation of facts, fraud or oversights. When an error is identified in respect of a previous period, the opening balance of cash is adjusted to correct the prior period error and the financial statements, including the comparative information for prior periods, is presented as if the error had been corrected in the period in which it was made. An explanation of the error and its adjustment is included in the notes.

1.5.4 The restatement of comparative information does not necessarily give rise to the amendment of financial statements which have been approved by the governing body or registered or filed with regulatory authorities. However, national laws may require the amendment of such financial statements.

1.5.5 This Standard requires the presentation of a statement of cash receipts and payments, and does not preclude the presentation of other financial statements. Where financial statements in addition to the statement of cash receipts and payments are presented, the requirements in paragraphs 1.5.1 and 1.5.2 for correction of errors will also apply to those statements.

1.6 Foreign Currency

Definitions

1.6.1 ***The following terms are used in this Standard with the meanings specified:***

***Closing rate** is the spot exchange rate at the reporting date.*

***Exchange difference** is the difference resulting from translating a given number of units of one currency into another currency at different exchange rates.*

***Exchange rate** is the ratio of exchange for two currencies.*

***Foreign currency** is a currency other than the presentation currency of the entity.*

***Presentation currency** is the currency in which the financial statements are presented.*

***Spot exchange rate** is the exchange rate for immediate delivery.*

Treatment of Foreign Currency Cash Receipts, Payments and Balances

1.6.2 ***Cash receipts and payments arising from transactions in a foreign currency shall be incorporated in the Statement of Receipts and Payments in an entity's presentation currency by applying to the foreign currency amount the spot exchange rate between the reporting currency and the foreign currency at the date of the receipts and payments.***

1.6.3 ***Cash balances held in a foreign currency shall be translated using the closing rate.***

1.6.4 ***The cash receipts and cash payments of a foreign controlled entity shall be translated at the exchange rates between the presentation currency and the foreign currency at the dates of the receipts and payments.***

1.6.5 ***An entity shall disclose the amount of exchange differences included as reconciling items between opening and closing cash balances for the period.***

1.6.6 ***When the presentation currency is different from the currency of the country in which the entity is domiciled, the reason for using a different currency shall be disclosed. The reason for any change in the presentation currency shall also be disclosed.***

1.6.7 Governments and government entities may have transactions in foreign currencies such as borrowing an amount of foreign currency, receiving external and other assistance in the form of foreign currency, or purchasing goods and services where the purchase price is designated as a foreign currency amount. They may also have foreign operations and transfer cash to and receive cash from those foreign operations. In order to include foreign currency transactions and foreign operations in financial statements the entity must express cash receipts, payments and balances in the currency in which the reporting entity presents its financial statements.

1.6.8 Unrealized gains and losses arising from changes in foreign currency exchange rates are not cash receipts and payments. However, the effect of exchange rate changes on cash held in a foreign currency is reported in the statement of cash receipts and payments in order to reconcile cash at the beginning and the end of the period. This amount is presented separately from cash receipts and payments and includes the differences, if any, had those cash receipts payments and balances been reported at end-of-period exchange rates.

1.7 Presentation of Budget Information in Financial Statements

Definitions

1.7.1 ***The following terms are used in this Standard with the meanings specified:***

***Accounting basis** means the accrual or cash basis of accounting as defined in the accrual basis International Public Sector Accounting Standards and the Cash Basis International Public Sector Accounting Standard.*

***Annual budget** means an approved budget for one year. It does not include published forward estimates or projections for periods beyond the budget period.*

***Appropriation** is an authorization granted by a legislative body to allocate funds for purposes specified by the legislature or similar authority.*

***Approved budget** means the expenditure authority derived from laws, appropriation bills, government ordinances and other decisions related to the anticipated revenue or receipts for the budgetary period.*

***Budgetary basis** means the accrual, cash or other basis of accounting adopted in the budget that has been approved by the legislative body.*

***Comparable basis** means the actual amounts presented on the same accounting basis, same classification basis, for the same entities and for the same period as the approved budget.*

***Final budget** is the original budget adjusted for all reserves, carry over amounts, transfers, allocations, supplemental appropriations, and other authorized legislative or similar authority changes applicable to the budget period.*

***Multiyear budget** is an approved budget for more than one year. It does not include published forward estimates or projections for periods beyond the budget period.*

***Original budget** is the initial approved budget for the budget period.*

Approved Budgets

1.7.2 An approved budget as defined by this Standard reflects the anticipated revenues or receipts expected to arise in the annual or multiyear budget period based on current plans and the anticipated economic conditions during that budget period, and expenses or expenditures approved by a legislative body, being the legislature or other relevant authority. An approved budget is not a forward estimate or a projection based on assumptions about future events and possible management actions which are not necessarily expected to take place. Similarly, an approved budget differs from prospective financial information which may be in the form of a forecast, a projection or a combination of both – for example, a one year forecast plus a five year projection.

1.7.3 In some jurisdictions, budgets may be signed into law as part of the approval process. In other jurisdictions, approval may be provided without the budget becoming law. Whatever the approval process, the critical feature of approved budgets is that the authority to withdraw funds from the government treasury or similar body for agreed and identified purposes is provided by a higher legislative body or other appropriate authority. The approved budget establishes the expenditure authority for the specified items. The expenditure authority is generally considered the legal limit within which an entity must operate. In some jurisdictions, the approved budget for which the entity will be held accountable may be the original budget and in others it may be the final budget.

1.7.4 If a budget is not approved prior to the beginning of the budget period, the original budget is the budget that was first approved for application in the budget year.

Original and Final Budget

1.7.5 The original budget may include residual appropriated amounts automatically carried over from prior years by law. For example, governmental budgetary processes in some jurisdictions include a legal provision that requires the automatic rolling forward of appropriations to cover prior year commitments. Commitments encompass possible future liabilities based on a current contractual agreement. In some jurisdictions, they

may be referred to as obligations or encumbrances and include outstanding purchase orders and contracts where goods or services have not yet been received.

1.7.6 Supplemental appropriations may be necessary where the original budget did not adequately envisage expenditure requirements arising from, for example, war or natural disasters. In addition, there may be a shortfall in budgeted receipts during the period, and internal transfers between budget heads or line items may be necessary to accommodate changes in funding priorities during the fiscal period. Consequently, the funds allotted to an entity or activity may need to be cut back from the amount originally appropriated for the period in order to maintain fiscal discipline. The final budget includes all such authorized changes or amendments.

Actual Amounts

1.7.7 This Standard uses the term actual or actual amounts to describe the amounts that result from execution of the budget. In some jurisdictions, budget out-turn, budget execution or similar terms may be used with the same meaning as actual or actual amounts.

Presentation of a Comparison of Budget and Actual Amounts

1.7.8 ***Subject to the requirements of paragraph 1.7.17, an entity that makes publicly available its approved budget(s) shall present a comparison of the budget amounts for which it is held publicly accountable and actual amounts either as a separate additional financial statement or as additional budget columns in the statement of cash receipts and payments currently presented in accordance with this Standard. The comparison of budget and actual amounts shall present separately for each level of legislative oversight:***

(a) ***The original and final budget amounts;***

(b) ***The actual amounts on a comparable basis; and***

(c) ***By way of note disclosure, an explanation of material differences between the budget for which the entity is held publicly accountable and actual amounts, unless such explanation is included in other public documents issued in conjunction with the financial statements, and a cross reference to those documents is made in the notes.***

Scope

1.7.9 This Standard applies to all entities that are required to, or elect to, make publicly available their approved budget(s). This Standard does not require approved budgets to be made publicly available, nor does it require that the financial statements disclose information about, or include comparisons with, approved budgets which are not made publicly available.

1.7.10 In some cases, approved budgets will be compiled to encompass all the activities controlled by a public sector entity. In other cases, separate approved budgets may be required to be made publicly available for certain activities, groups of activities or entities included in the financial statements of a government or other public sector entity. This may occur where, for example, a government's financial statements encompass government agencies or programs that have operational autonomy and prepare their own budgets, or where a budget is prepared only for the general government sector of the whole-of-government. This Standard applies to all entities which present financial statements when approved budgets for the entity, or components thereof, are made publicly available.

Comparison of Budget and Actual Amounts

1.7.11 Presentation in the financial statements of the original and final budget amounts and actual amounts on a comparable basis with the budget, which is made publicly available, will complete the accountability cycle by

enabling users of the financial statements to identify whether resources were obtained and used in accordance with the approved budget. Differences between the actual amounts and the budget amounts, whether original or final budget (often referred to as the "variance" in accounting), may also be presented in the financial statements for completeness.

1.7.12 An explanation of the material differences between actual amounts and the budget amounts will assist users in understanding the reasons for material departures from the approved budget for which the entity is held publicly accountable.

1.7.13 An entity may be required, or may elect, to make publicly available its original budget, its final budget or both its original and final budget. In circumstances where both original and final budget are required to be made publicly available, the legislation, regulation or other authority will often provide guidance on whether explanation of material differences between actual and the original budget amounts, or actual and the final budget amounts, is required in accordance with paragraph 1.7.8(c). In the absence of any such guidance, material differences may be determined by reference to, for example, differences between actual and original budget to focus on performance against original budget, or differences between actual and final budget to focus on compliance with the final budget.

1.7.14 In many cases, the final budget amount and the actual amount will be the same. This is because budget execution is monitored over the reporting period and the original budget progressively revised to reflect changing conditions, changing circumstances and experiences during the reporting period. Paragraph 1.7.23 of this Standard requires the disclosure of an explanation of the reasons for changes between the original and final budget. That disclosure, together with the disclosures required by paragraph 1.7.8 above, will ensure that entities which make publicly available their approved budget(s) are held publicly accountable for their performance against, and compliance with, the relevant approved budget.

1.7.15 Management discussion and analysis, operations review or other public reports which provide commentary on the performance and achievements of the entity during the reporting period, including explanations of any material differences from budget amounts, are often issued in conjunction with the financial statements. In accordance with paragraph 1.7.8(c) of this Standard, explanation of material differences between actual and budget amounts will be included in notes to the financial statements unless included in other public reports or documents issued in conjunction with the financial statements, and the notes to the financial statements identify the reports or documents in which the explanation can be found.

1.7.16 Where approved budgets are only made publicly available for some of the entities or activities included in the financial statements, the requirements of paragraph 1.7.8 will apply to only the entities or activities reflected in the approved budget. This means that where, for example, a budget is prepared only for the general government sector of a whole-of-government reporting entity, the disclosures required by paragraph 1.7.8 will be made only in respect of the general government sector of the government.

Presentation

1.7.17 ***An entity shall present a comparison of budget and actual amounts as additional budget columns in the statement of cash receipts and payments only where the financial statements and the budget are prepared on a comparable basis.***

1.7.18 Comparisons of budget and actual amounts may be presented in a separate financial statement ("statement of comparison of budget and actual amounts" or a similarly titled statement). Alternatively, where the financial statements and the budget are prepared on a comparable basis – that is, on the same basis of accounting for the same entity and reporting period, and adopt the same classification structure – additional columns may be added to the statement of cash receipts and payments presented in accordance with this Standard. These additional columns will identify original and final budget amounts and, if the entity so chooses, differences between the budget and actual amounts.

1.7.19 When the budget and financial statements are not prepared on a comparable basis, a separate statement of comparison of budget and actual amounts is presented. In these cases, to ensure that readers do not misinterpret financial information which is prepared on different bases, the financial statements could usefully clarify that the budget and the accounting bases differ and the statement of comparison of budget and actual amounts is prepared on the budget basis.

Level of Aggregation

1.7.20 Budget documents may provide great detail about particular activities, programs or entities. These details are often aggregated into broad classes under common budget heads, budget classifications or budget headings for presentation to, and approval by, the legislature or other authoritative body. The disclosure of budget and actual information consistent with those broad classes and budget heads or headings will ensure that comparisons are made at the level of legislative or other authoritative body oversight identified in the budget document(s).

1.7.21 In some cases, the detailed financial information included in approved budgets may need to be aggregated for presentation in financial statements in accordance with the requirements of this Standard. Such aggregation may be necessary to avoid information overload and to reflect relevant levels of legislative or other authoritative body oversight. Determining the level of aggregation will involve professional judgment. That judgment will be applied in the context of the objective of this Standard and the qualitative characteristics of financial statements as identified in paragraph 1.3.27 of this Standard.

1.7.22 Additional budget information, including information about service achievements, may be presented in documents other than financial statements. Part 2 of this Standard encourages the inclusion in the financial statements of a cross reference to such documents.

Changes from Original to Final Budget

1.7.23 ***An entity shall present an explanation of whether changes between the original and final budget are a consequence of reallocations within the budget, or of other factors, either:***

(a) ***By way of note disclosure in the financial statements; or***

(b) ***In a report issued before, at the same time as, or in conjunction with the financial statements, and shall include a cross reference to the report in the notes to the financial statements.***

1.7.24 The final budget includes all changes approved by legislative actions or other designated authority to revise the original budget. Consistent with the requirements of this Standard, notes to the financial statements or a separate report issued before, in conjunction with or at the same time as the financial statements, will include an explanation of changes between the original and final budget. That explanation will include whether, for example, changes arise as a consequence of reallocations within the original budget parameters or as a consequence of other factors, such as changes in the overall budget parameters, including changes in government policy. Such disclosures are often made in a management discussion and analysis or similar report on operations issued in conjunction with, but not as part of, the financial statements. Such disclosures may also be included in budget out-turn reports issued by governments to report on budget execution. Where such disclosures are made in a separate report rather than in the notes to the financial statements, the notes will include a cross reference to that report.

Comparable Basis

1.7.25 ***All comparisons of budget and actual amounts shall be presented on a comparable basis to the budget.***

1.7.26 The comparison of budget and actual amounts will be presented on the same accounting basis (accrual, cash or other basis), same classification basis and for the same entities and period as for the approved budget. This

will ensure that the disclosure of information about compliance with the budget in the financial statements is on the same basis as the budget itself. In some cases, this may mean presenting a budget and actual comparison on a different basis of accounting, for a different group of activities, and with a different presentation or classification format than that adopted for the financial statements.

1.7.27 As noted in paragraph 1.7.10, separate budgets may be approved and made publicly available for individual entities or particular activities that make up the reporting entity. Where this occurs, the separate budgets may be recompiled for presentation in the financial statements in accordance with the requirements and encouragements of this Standard. Where such recompilation occurs, it will not involve changes or revisions to approved budgets. This is because this Standard requires a comparison of actual amounts with the approved budget amounts.

1.7.28 Entities may adopt different bases of accounting for the preparation of their financial statements and for their approved budgets. For example, in some, albeit rare, cases a government or government agency may adopt the cash basis for its financial statements and the accrual basis for its budget. In addition, budgets may focus on, or include information about, commitments to expend funds in the future and changes in those commitments, while the financial statements will report cash receipts and payments and balances thereof. However, the budget entity and financial reporting entity will often be the same. Similarly, the period for which the budget is prepared and the classification basis adopted for the budget will often be reflected in financial statements. This will ensure that the accounting system records and reports financial information in a manner which facilitates the comparison of budget and actual data for management and for accountability purposes – for example, for monitoring progress of execution of the budget during the budget period and for reporting to the government, the public and other users on a relevant and timely basis.

1.7.29 In some jurisdictions, budgets may be prepared on a cash or accrual basis consistent with a statistical reporting system that encompasses entities and activities different from those included in the financial statements. For example, budgets prepared to comply with a statistical reporting system may focus on the general government sector and encompass only entities fulfilling the “primary” or “non-market” functions of government as their major activity, while financial statements report on all activities controlled by a government, including the business activities of the government.

1.7.30 In statistical reporting models, the general government sector may comprise national, state/provincial and local government levels. In some jurisdictions, the national government may control state/provincial and local governments, consolidate those governments in its financial statements and develop, and require to be made publicly available, an approved budget that encompasses all three levels of government. In these cases, the requirements of this Standard will apply to the financial statements of those national governmental entities. However, where a national government does not control state or local governments, the consolidated financial statements of the national government will not consolidate state/provincial or local governments that it does not control. However, separate financial statements may be prepared for each level of government. The requirements of this Standard will only apply to the financial statements of governmental entities when approved budgets for the entities and activities they control, or subsections thereof, are made publicly available.

Multiyear Budgets

1.7.31 Some governments and other entities approve and make publicly available multiyear budgets, rather than separate annual budgets. Conventionally, multiyear budgets comprise a series of annual budgets or annual budget targets. The approved budget for each component annual period reflects the application of the budgetary policies associated with the multiyear budget for that component period. In some cases, the multiyear budget provides for a roll forward of unused appropriations in any single year.

1.7.32 Governments and other entities with multiyear budgets may take different approaches to determining their original and final budget depending on how their budget is passed. For example, a government may pass a biennial budget that contains two approved annual budgets, in which case an original and final approved budget for each annual period will be identifiable. If unused appropriations from the first year of the biennial budget are legally authorized to be spent in the second year, the "original" budget for the second year period will be increased for these "carry over" amounts. In the rare cases in which a government passes a biennial or other multi-period budget that does not specifically separate budget amounts into each annual period, judgment may be necessary in identifying which amounts are attributable to each annual period for determining the annual budget for the purposes of this Standard. For example, the original and final approved budget for the first year of a biennial period will encompass any approved capital acquisitions for the biennial period that occurred during the first year, together with the amount of the recurring revenue and expenditure items attributable to that year. The unexpended amounts from the first annual period would then be included in the "original" budget for the second annual period and that budget together with any amendments thereto would form the final budget for the second year. Part 2 of this Standard encourages disclosure of the relationship between budget and actual amounts during the budget period.

Note Disclosures of Budgetary Basis, Period and Scope

1.7.33 ***An entity shall explain in notes to the financial statements the budgetary basis and classification basis adopted in the approved budget.***

1.7.34 There may be differences between the accounting basis (cash, accrual, or some modification thereof) used in preparation and presentation of the budget and the accounting basis used in the financial statements. These differences may occur when the accounting system and the budget system compile information from different perspectives – the budget may focus on cash flows plus certain accruals and commitments, while the financial statements report cash receipts and cash payments.

1.7.35 Formats and classification schemes adopted for presentation of the approved budget may also differ from the formats adopted for the financial statements. An approved budget may classify items on the same basis as is adopted in the financial statements, for example, expenditures by economic nature (compensation of employees, supplies and consumables, grants and transfers, etc.) or function (health, education, etc.). Alternatively, the budget may classify items by specific programs (for example, poverty reduction or control of contagious diseases) or program components linked to performance outcome objectives (for example, students graduating from tertiary education or surgical operations performed by hospital emergency services), which differ from classifications adopted in the financial statements. Further, a recurrent budget for ongoing operations (for example, education or health) may be approved separately from a capital budget for capital outlays (for example, infrastructure or buildings).

1.7.36 Disclosure of the budgetary basis and classification basis adopted for the preparation and presentation of approved budgets will assist users to better understand the relationship between the budget and accounting information disclosed in the financial statements.

1.7.37 ***An entity shall disclose in notes to the financial statements the period of the approved budget.***

1.7.38 Financial statements are presented at least annually. Entities may approve budgets for an annual period or for multiyear periods. Disclosure of the period covered by the approved budget where that period differs from the reporting period adopted for the financial statements will assist the user of those financial statements to better understand the relationship of the budget data and budget comparison to the financial statements. Disclosure of the period covered by the approved budget where that period is the same as the period covered by the financial statements will also serve a useful confirmation role, particularly in jurisdictions where interim budgets and financial statements and reports are also prepared.

1.7.39 ***An entity shall identify in notes to the financial statements the entities included in the approved budget.***

1.7.40 Paragraph 2.1.37 of Part 2 of this Standard encourages controlling entities to prepare and present consolidated financial statements which encompass budget-dependent entities and commercial public sector entities controlled by the government. However, as noted in paragraph 1.7.29, approved budgets prepared in accordance with statistical reporting models may not encompass operations of the government that are undertaken on a commercial or market basis. Consistent with the requirements of paragraph 1.7.25, budget and actual amounts will be presented on a comparable basis. Disclosure of the entities encompassed by the budget will enable users to identify the extent to which the entity's activities are subject to an approved budget and how the budget entity differs from the entity reflected in the financial statements.

Reconciliation of Actual Amounts on a Comparable Basis and Actual Amounts in the Financial Statements

1.7.41 ***The actual amounts presented on a comparable basis to the budget in accordance with paragraph 1.7.25 shall, where the financial statements and the budget are not prepared on a comparable basis, be reconciled to total cash receipts and total cash payments, identifying separately any basis, timing and entity differences. The reconciliation shall be disclosed on the face of the statement of comparison of budget and actual amounts or in the notes to the financial statements.***

1.7.42 Differences between the actual amounts identified consistent with the comparable basis and the actual amounts recognized in the financial statements can usefully be classified into the following:

(a) Budgetary basis differences, which occur when the approved budget is prepared on a basis other than the accounting basis. For example, where the budget is prepared on the accrual basis or modified cash basis and the financial statements are prepared on the cash basis;

(b) Timing differences, which occur when the budget period differs from the reporting period reflected in the financial statements; and

(c) Entity differences, which occur when the budget omits programs or entities that are part of the entity for which the financial statements are prepared.

There may also be differences in formats and classification schemes adopted for presentation of financial statements and the budget.

1.7.43 The reconciliation required by paragraph 1.7.41 of this Standard will enable the entity to better discharge its accountability obligations by identifying major sources of difference between the actual amounts on a budget basis and the total cash receipts and total cash payments recognized in the statement of cash receipts and payments. This Standard does not preclude reconciliation of each major total and subtotal, or each class of items, presented in a comparison of budget and actual amounts with the equivalent amounts in the financial statements.

1.7.44 For entities adopting the cash basis of accounting for preparation of both the budget documents and the financial statements, a reconciliation will not be required where the budget is prepared for the same period, encompasses the same entities and adopts the same presentation format as the financial statements. For other entities adopting the same basis of accounting for the budget and the financial statements, there may be a difference in presentation format, reporting entity or reporting period – for example, the approved budget may adopt a different classification or presentation format to the financial statements, may include only non-commercial activities of the entity, or may be a multiyear budget. A reconciliation would be necessary where there are presentation, timing or entity differences between the budget and the financial statements prepared on the same accounting basis.

1.7.45 ***The disclosure of comparative information in respect of the previous period in accordance with the requirements of this Standard is not required.***

1.7.46 This Standard requires a comparison of budget and actual amounts to be included in the financial statements of entities which make publicly available their approved budget(s). It does not require the disclosure of a comparison of actual amounts of the previous period with the budget of that previous period, nor does it require that the related explanations of differences between the actuals and budget of that previous period be disclosed in the financial statements of the current period.

1.8 Effective Date of Part 1 and Transitional Provisions

Transitional Provisions

1.8.1 ***Entities which are adopting the Cash Basis IPSAS, Financial Reporting under the Cash Basis of Accounting for the first time shall apply all its provisions from the date of its first adoption.***

1.8.2 ***Entities that currently present financial statements in accordance with the superseded Cash Basis IPSAS, Financial Reporting under the Cash Basis of Accounting are not required to comply with the requirements in this Standard until 1 January 2019.***

1.8.3 ***Where entities apply the transitional provision in paragraph 1.8.2, they shall disclose the accounting policies that have not yet been adopted.***

1.8.4 When an entity adopts the Cash Basis IPSAS for the first time, this Standard applies to the entity's annual financial statements covering periods beginning on or after the date of adoption. The transitional provisions provide entities that currently adopt the Cash Basis IPSAS with a period of up to two years from the effective date of this Standard to adopt all of its accounting policies. Entities that take advantage of the transitional provisions shall identify the policies that they are not yet fully compliant with. All changes to accounting policies resulting from the application of this Standard shall be accounted for in accordance with the requirements of paragraphs 1.8.11 to 1.8.13 below.

Effective Date

1.8.5 ***An entity shall apply this Standard for annual financial statements covering periods beginning on or after January 1, 2019. Earlier application is encouraged. If an entity applies this Standard for a period beginning before January 1, 2019 it shall disclose that fact.***

1.8.6 This Standard applies to an entity which adopts the Cash Basis IPSAS for the first time and to an entity which already adopts the Cash Basis IPSAS.

Withdrawal of the Cash Basis IPSAS (2007)

1.8.7 ***This Standard supersedes the Cash Basis IPSAS, Financial Reporting under the Cash Basis of Accounting issued in 2007.***

1.8.8 The Cash Basis IPSAS was first issued in January 2003. It was applicable to annual financial statements covering periods beginning on or after 1 January 2004. It was subsequently updated with additional requirements and encouragements dealing with budget reporting and external assistance in 2006 and 2007. The effective date of the additional requirements in Section 9, *Presentation of Budget Information in Financial Statements* and Section 10*, Recipients of External Assistance* of Part 1 of the Standard was for annual financial statements covering periods beginning on or after 1 January 2009.

1.8.9 This Standard was issued in 2017. It supersedes the 2007 Standard previously on issue. It has been revised to provide relief from the requirement for preparation of consolidated financial statements and disclosure of information about third party payments and external assistance included in Part 1 of the 2007 Standard. Certain of those requirements are now included as encouragements in Part 2 of this Standard. This Standard

has also been amended to better align with *The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities* (the Conceptual Framework) and the accrual IPSAS currently on issue where appropriate.

1.8.10 The combination of requirements and encouragements in Part 1 and Part 2 of this Standard will mean that in many, though not necessarily all, respects information presented in financial statements prepared in accordance with the superseded standard will also be presented by financial statements prepared in accordance with this Standard. However, entities that presented financial statements that complied with the superseded standard will need to review the requirements and encouragements in this Standard to ensure they remain compliant.

Changes in Accounting Policies of Entities that Adopt the Superseded Cash Basis IPSAS

1.8.11 ***When the adoption of this Standard requires a change in an accounting policy of an entity that currently applies the superseded Cash Basis IPSAS, the entity shall apply the change retrospectively by adjusting the opening cash balance of the current period presented and the other comparative amounts disclosed for the immediate prior period presented as if the new accounting policy had always been applied.***

1.8.12 ***When it is impracticable for an entity that currently applies the superseded Cash Basis IPSAS to determine the cumulative effect, at the beginning of the current period, of applying a new accounting policy to the immediate prior period presented, the entity shall:***

(a) ***Apply the new accounting policy to transactions, other events and conditions occurring after the date at which the policy is changed; and***

(b) ***Recognize the effects of the new policy on the cash receipts, payments and balances of the current period and future periods affected by the change.***

1.8.13 ***When initial application of this Standard by an entity that currently applies the superseded Cash Basis IPSAS, (a) has an effect on the current period or the immediate prior period, or (b) would have such an effect, except that it is impracticable to determine the amount of the adjustment, the entity shall disclose:***

(a) ***The nature of the change in accounting policy;***

(b) ***For the current period and the immediate prior period presented, to the extent practicable, the amount of the adjustment for each financial statement line item affected; and***

(c) ***If retrospective application required by paragraph 1.8.11 is impracticable, the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied.***

Basis for Conclusions – Cash Basis IPSAS Part 1

This Basis for Conclusions accompanies, but is not part of the IPSAS, Financial Reporting under the Cash Basis of Accounting.

The Basis for Conclusions which follows Part 2 of this Standard deals with amendments to the encouragements in Part 2.

Introduction

BC1 The IPSAS, *Financial Reporting under the Cash Basis of Accounting* (the Cash Basis IPSAS) was issued in January 2003 and updated with additional requirements and encouragements about the presentation of budget information in 2006 and external assistance in 2007. It comprises two parts: Part 1 identifies the requirements that must be adopted by a reporting entity whose general purpose financial statements comply with this Standard. Part 2 identifies encouraged additional disclosures which provide additional information useful for accountability and decision-making purposes and support those entities transitioning to the accrual basis of financial reporting and adoption of accrual IPSAS.

Reasons for, and Scope of, this Review

BC2 While there are different views about just how many governments and other public sector entities have adopted the Cash Basis IPSAS, there is general agreement that it is not widely adopted. The requirements for consolidation, external assistance and third party payments have been identified by the IPSASB Task Force established to review operation of the IPSAS (IPSASB Task Force Report 2010) and many constituents, including those implementing the IPSAS, as major obstacles to adoption of the Cash Basis IPSAS.

BC3 Despite its limited adoption, the IPSASB's strategy consultation in 2014 found that there is strong support for retention of the Cash Basis IPSAS, whether as a Standard in its own right or as first step on the transition to the accrual basis of financial reporting and adoption of accrual IPSAS and, in some cases, for revisions to its requirements to remove obstacles to its adoption. Entities transitioning to the accrual basis of financial reporting are also encouraged to refer to IPSASB Study 14 *Transition to the Accrual Basis of Accounting: Guidance for Public Sector Entities* (Third Edition January 2011) which provides guidance on the approaches that may be adopted in transitioning to the accrual basis.

BC4 The amendments made through this revised Cash Basis IPSAS (2017) reflect a limited scope review of the IPSAS as a response to input the IPSASB has received from constituents on the operation of the Cash Basis IPSAS. The amendments are intended to:

(a) Overcome the substantial obstacles to its adoption represented by the requirements relating to consolidation, external assistance and third party payments; and

(b) Clarify that the role the Cash Basis IPSAS is intended to play in the IPSASB's standards setting strategy is primarily as a step on the path to adoption of the accrual basis IPSAS, rather than an end in itself.

BC5 This revised Cash Basis IPSAS (2017) also includes minor "housekeeping" amendments intended to ensure that, while the requirements and encouragements in this Standard may differ from the requirements in equivalent accrual IPSAS, they are not contrary to those requirements unless intended to be so to reflect the cash basis focus in this Standard. Since issue of the Cash Basis IPSAS in 2003, the accrual IPSAS have been updated, and in some cases withdrawn and/or replaced. The "housekeeping" amendments reflect, as far as is appropriate, developments in the accrual IPSAS.

Consolidation

BC6 Many public sector entities wishing to prepare financial statements that comply with the requirements of this Standard and reflect best practice for financial reporting under the cash basis of accounting faced significant obstacles in the preparation and presentation of fully consolidated financial statements. This may be for a number of reasons including: (a) compatibility with existing legislation or regulation which requires the preparation of financial reports for the budget or general government sector or other grouping of activities; (b) difficulties in identifying all controlled entities at reporting date; (c) differences in the reporting basis adopted by commercial public sector entities, and (d) the capacity (including access to necessary technical expertise) to collect and process the necessary data on a timely basis and meet reporting deadlines.

BC7 Many constituents expressed concern that the previous consolidation requirements undermined the capacity of the Cash Basis IPSAS (2007) to perform its role of enhancing the quality of financial statements prepared under the cash basis of accounting and supporting the transition to the accrual basis of financial reporting and adoption of accrual IPSAS — because governments and other public sector entities could not comply with the Standard. This revised Cash Basis IPSAS (2017) makes amendments to the Cash Basis IPSAS (2007) to respond to these concerns, as outlined below.

BC8 This revision removes from Part 1 of the Standard and recasts as an encouragement in Part 2 of the Standard the requirement that controlling entities are to prepare consolidated financial statements that consolidate all controlled entities be This is intended to overcome a major obstacle to adoption of the IPSAS.

BC9 Part 2 of this Standard also encourages controlling entities that do not consolidate all controlled entities to prepare financial statements that reflect a budget sector, general government sector or other representation of core government activities as they transition to the accrual basis of financial reporting and adoption of the accrual IPSAS. This supports an orderly and achievable transition to full consolidation as required by the accrual IPSAS, and responds to concerns of some constituents that full consolidation would result in the loss of information about core governmental activities and, in some cases, is contrary to legislative requirements.

BC10 To support those entities transitioning to the accrual basis, the key definitions, including that of control, are revised where necessary to ensure that they do not conflict with IPSAS 34, *Separate Financial Statements* and IPSAS 35, *Consolidated Financial Statements*.

BC11 The IPSASB considered a number of approaches to removing the obstacles to adoption represented by the current requirements for consolidation. While many of these approaches had merit, the IPSASB decided that, on balance, the approach taken in this revised Cash Basis IPSAS (2017) best responded to the concerns of those faced with implementing the Cash Basis IPSAS, and those dependent on financial statements prepared in accordance with the IPSAS for information useful for accountability and decision-making purposes. The other approaches considered, and IPSASB's reasons for not proposing their adoption, include:

(a) The inclusion of a transitional period of 3 to 5 years, or longer, from first adoption for entities to comply with the requirement that controlling entities shall consolidate all controlled entities. However, it is some 12 years since issue of the Cash Basis IPSAS and consolidation remains a major obstacle to its adoption. The IPSASB was not convinced that a 3 to 5 year transitional period was sufficient to overcome the wide, and differing, range of obstacles identified in many jurisdictions;

(b) Recasting all the consolidation requirements as encouragements, except for those requirements relating to the accounting procedures that are to be adopted in the preparation of consolidated financial statements and disclosure of the composition of the economic entity. Such an approach was appealing. It meant that the procedures adopted for the preparation of any consolidated financial statements would be identified as requirements to be applied consistently from period to period for the same economic entity and across all entities that complied with the IPSAS. However, the retention of these matters as requirements may continue to present obstacles to the adoption of the IPSAS. In addition, the IPSASB

was of the view that designation of some processes and disclosures central to the preparation and presentation of consolidated financial statements as requirements and the designation of other such processes and disclosures as only encouragements is difficult to justify and results in an unnecessarily complex Standard;

(c) Retaining the existing consolidation requirements but providing relief for specific practical obstacles such as the need to consolidate commercial public sector entities or other problematic class of public sector entities. Such an approach would respond to some of the obstacles identified by constituents and was appealing on that basis. However, it did not respond to all of the obstacles identified by constituents. In addition, for consistency of application, it would have also required an agreed definition of what constitutes a commercial public sector entity or other specified class of public sector entities. It was not clear that such a definition would be readily applicable across all jurisdictions; and

(d) Requiring presentation of financial statements for an economic entity that reflects the budget sector or the general government sector or similar interim group of controlled entities, rather than for all controlled entities. Such an approach responded to obstacles identified by constituents in many jurisdictions and was appealing on that basis. However, any attempt to define or specify such an interim group may trigger some jurisdictional specific obstacles, particularly if legislative requirements did not directly align with a specified interim group. It may also give rise to obstacles in jurisdictions that are transitioning to the accrual basis and have moved past the interim group reporting entity that might be specified. This revised Cash Basis IPSAS (2017) allows and acknowledges that group financial statements reflecting the budget sector or general government sector may be prepared and presented on the path to the full accrual basis.

External Assistance

BC12 The requirements and encouragements for the disclosure of information about external assistance were added to the Cash Basis IPSAS in 2007 in response to requests from, and with the support of, many recipients, donors and others from the financial reporting community who saw a need for internationally agreed authoritative requirements for financial reporting of external assistance under the cash basis of accounting.

BC13 However, the IPSASB was aware that the information recipients of external assistance needed to satisfy the requirements of that Standard was not made as readily available or accessible as was anticipated by the IPSASB and its constituents when the requirements were developed and, after being subject to the IPSASB's due process, included in the Cash Basis IPSAS (2007). The Cash Basis IPSAS (2007) provided some relief from the disclosure requirements when the information is not readily available or verifiable. However, the IPSASB was concerned that the extent to which that relief was necessary, and the resultant inability to verify the completeness and accuracy of information disclosed, may well have undermined the usefulness for accountability or decision-making purposes of any resultant information that was disclosed. This revised Cash Basis IPSAS (2017) responded to these concerns as outlined below.

BC14 All requirements to disclose information about external assistance received during the reporting period and available to the entity at reporting date have been removed from Part 1 and recast as encouragements in Part 2 of the IPSAS and revised to focus on the disclosure of information about external assistance received as cash or in the form of third party payments. The Cash Basis IPSAS (2017) also encourages disclosure of similar information about *other assistance* (assistance from non-government organizations and other sources) received by the entity during the period.

BC15 The recasting of these requirements as encouragements will overcome a major obstacle to adoption of the IPSAS. It also responds to concerns of constituents that the requirements for disclosure of information about external assistance included in the Cash Basis IPSAS (2007) were:

(a) More detailed and onerous than those specified in the accrual basis IPSAS, and that was not consistent with the role in supporting the transition to the accrual basis of financial reporting and adoption of accrual IPSAS; and

(b) In the nature of information that sits more comfortably in special purpose financial reports than in general purpose financial statements.

BC16 External assistance received in cash will continue to be recognized in the Statement of Cash Receipts and Payments. Paragraph 1.3.18 is added to Part 1 of the Cash Basis IPSAS (2017) to explain that for many public sector reporting entities in developing economies, the amount of external assistance received as cash is likely to warrant separate disclosure in the statement of cash receipts and payments.

Third Party payments

BC17 In principle, the rationale for the disclosure of third party payments as a separate column on the statement of cash receipts and payments appears sound — to ensure that the form of arrangements to provide cash resources to support an entity's operations during any period, whether provided to the recipient entity for the acquisition of goods or services or provided directly to the supplier of those goods or services as designated by the recipient, does not determine whether it is reported in the statement of cash receipts and payments. However, payments made by third parties are likely to mostly comprise payments for goods and services that satisfy the definition of external assistance and other assistance.

BC18 Concerns about limited access to information necessary to satisfy the requirements for disclosure of information about external assistance in the form of third party payments noted above, and the potential misinterpretation of the inevitable incomplete information that results, also apply to other categories of third party payments.

BC19 The Cash Basis IPSAS (2017) removes from Part 1 and recasts as encouraged disclosures in Part 2 the requirements for disclosure of information about payments made by third parties. This responds to the concerns of many constituents and overcome a major obstacle to adoption of the IPSAS.

BC20 In some jurisdictions, a government will manage the expenditure of its individual departments and other entities through a centralized treasury function, often referred to as a "treasury single account". The Cash Basis IPSAS (2007) reflected that under "treasury single account" arrangements, amounts paid by a central agency on behalf of a government department or other government entity that is a reporting entity are also to be classified as third party payments. The IPSASB was of the view that, while the individual departments and entities do not establish separate bank accounts in which amounts authorized for their use are deposited, they can use and will benefit from those amounts. Therefore they do control such cash inflows, outflows and available balances. The Cash Basis IPSAS (2017) includes additional explanation of treasury single account arrangements to reflect the IPSASB's view that such arrangements do not give rise to third party payments.

"Housekeeping" — Correction of Errors, Foreign Currency, Government Business Enterprises and Qualitative Characteristics

BC21 Some minor amendments have been made to terminology and explanation of defined terms in sections dealing with *Correction of Errors* and *Foreign Currency* to ensure that the requirements of this Standard are not directly in conflict with those in the equivalent accrual IPSAS 3, *Accounting Policies, Changes in Accounting Estimates and Errors* (issued in December 2006 and last updated in October 2011), and IPSAS 4, *The Effects of Changes in Foreign Exchange Rates* (issued in April 2008 and last updated in October 2011).

BC22 The differences between the current IPSAS 3 and IPSAS 4 and the equivalent IPSAS that were on issue when the Cash Basis IPSAS (2007) was approved are substantial. In some cases, they involved different accounting methods and in other cases additional disclosures. Readers should be aware that the revisions to these sections in the Cash Basis IPSAS (2017) do not fully reflect all the requirements of the updated

IPSAS 3 and IPSAS 4. This is because the IPSASB has not received input that the requirements of the Cash Basis IPSAS (2007) present obstacles to its adoption. The IPSASB was concerned that amending the Cash Basis IPSAS to incorporate all changes to IPSAS 3 and IPSAS 4 may have some unintended effects that could introduce additional obstacles to adoption of the IPSAS. While more substantial amendments to these sections are beyond the limited scope of this review, they may be considered in any future review of the Standard.

BC23 As part of the housekeeping process, this revised Cash Basis IPSAS (2017):

(a) Deletes the definition and explanation of a *Government Business Enterprise* (GBE). The characteristics of the public sector entities to which IPSAS are designed to apply are identified. This is consistent with amendments made in the IPSAS, *Applicability of IPSAS* (issued April 2016);

(b) Updates the objectives of financial reporting and the identification and explanation of the qualitative characteristics of information included in general purpose financial statements and pervasive constraints on such information, and the users of general purpose financial statements, to better reflect their explanation in the Conceptual Framework. Similar amendments are being developed for inclusion in accrual IPSAS; and

(c) Brings together and amends the requirements for the effective date of application of the Standard and transitional arrangements to better reflect the equivalent requirements of IPSAS *3, Accounting Policies, Changes in Accounting Estimates and Errors* currently on issue.

Appendix 1

Illustration of the Requirements of Part 1 of the Standard

This Appendix is illustrative only and does not form part of the Standard. Its purpose is to assist in clarifying the meaning of the requirements of Part 1 of this Standard by illustrating their application in the preparation and presentation of general purpose financial statements under the cash basis of accounting for:

A The Financial Statements of National Government A;

B The financial Statements of Government Entity B, *which controls its own bank account; and*

C The financial Statements of Government Department C, *whose cash receipts and payments are managed through a* centralized treasury function often referred to as a *"treasury single account".*

PUBLIC SECTOR ENTITY – WHOLE-OF-GOVERNMENT A

Notes to the Financial Statements

1. **Accounting Policies**

Basis of preparation

The financial statements have been prepared in accordance with Cash Basis IPSAS, *Financial Reporting under the Cash Basis of Accounting*.

The accounting policies have been applied consistently throughout the period.

Reporting entity

The financial statements are for the national government of Country A. The financial statements encompass the reporting entity as specified in the relevant legislation (Public Finance Act 20XX).

Government activities include the provision of health, education, defense, social protection, housing, recreational and cultural and general public services and economic management to, and on behalf of, constituents. [Identify level of government, jurisdiction and nature of services provided.]

A list of significant entities encompassed in the financial statements and the sectors in which they operate is shown in Note 7 to the financial statements.

Presentation currency

The presentation currency is (currency of Country A).

2. **Cash**

Cash comprises cash on hand, demand deposits and cash equivalents. Demand deposits and cash equivalents consist of balances with banks and investments in short-term money market instruments.

Cash included in the statement of cash receipts and payments comprise the following amounts:

(in thousands of currency units)	**200X**	**200X-1**
Cash on hand and balances with banks	X	X
Short-term investments	X	X
	X	X

Included in the amount stated above is X currency units provided by the International Agency XX that is restricted to the construction of road infrastructure.

3. **Borrowings**

Borrowings comprise cash inflows from commercial banks and similar commercial institutions and development banks and similar aid agencies.

4. **Other Receipts**

Included in other receipts are fees, fines, penalties and miscellaneous receipts.

5. **Other Payments**

Included in other payments are dividends, distributions paid, legal settlements of lawsuits and miscellaneous payments.

6. **Undrawn Borrowing Facilities**

(in thousands of currency units)	**200X**	**200X-1**

Total undrawn borrowing facilities	X	X

7. **Significant Entities**

Entity 200X	**Entity 200X-1**
Entity A	**Entity A**
Entity B	**Entity B**
Entity C	**Entity C**
Entity D	**Entity D**

8. **Authorization Date**

The financial statement was authorized for publication on XX *Month* 200X+1 by Mr. YY, the Treasurer of Country A.

9. **Original and Final Approved Budget and Comparison of Actual and Budget Amounts**

The approved budget is developed on the same accounting basis (cash basis), same classification basis, and for the same period (from 1 January 200X to 31 December 200X) as for the financial statements. It encompasses the same entities as the consolidated financial statement – these are identified in Note 7 above.

The original budget was approved by legislative action on (date) and a supplemental appropriation of XXX for disaster relief support was approved by legislative action on (date) due to the earthquake in the Northern Region on (date). The original budget objectives and policies, and subsequent revisions are explained more fully in the Operational Review and Budget Out-turn Report issued in conjunction with the financial statements.

The excess of actual expenditure over the final budget of 15% (25% over original budget) for the Health function was due to expenditures above the level approved by legislative action in response to the earthquake. There were no other material differences.

Alternative Note 9 when budget and financial statements are prepared on a different basis

9. Original and Final Approved Budget and Comparison of Actual and Budget Amounts

The budget is approved on a modified cash basis by functional classification. The approved budget covers the fiscal period from 1 January 200X to 31 December 200X and includes all entities within the general government sector. The general government sector includes all government departments – significant departments are included in the list of entities identified in Note 7 above.

The original budget was approved by legislative action on (date) and a supplemental appropriation of XXX for disaster relief support was approved by legislative action on (date) due to the earthquake in the Northern Region on (date). The original budget objectives and policies, and subsequent revisions are explained more fully in the Operational Review and Budget Out-turn Report issued in conjunction with the financial statements.

The excess of actual expenditure over the final budget of 15% (25% over original budget) for the Health function was due to expenditures above the level approved by legislative action in response to the earthquake. There were no other material differences between the final approved budget and the actual amounts.

The budget and the accounting bases differ. The financial statements for the government are prepared on the cash basis using a classification based on the nature of expenses. The financial statements include all controlled entities, including commercial public sector entities for the fiscal period from 1 January 20XX to 31 December 20XX. The budget is approved on the modified cash basis by functional classification and deals only with the general government sector which excludes commercial public sector entities and certain other non-market government entities and activities.

The amounts in the statement of cash receipts and payments were adjusted to be consistent with the modified cash basis and reclassified by functional classification to be on the same basis as the final approved budget. In addition, adjustments to amounts in the statement of cash receipts and payments for timing differences associated with the continuing appropriation and differences in the entities covered (commercial public sector entities and other entities) were made to express the actual amounts on a comparable basis to the final approved budget.

A reconciliation between the actual inflows and outflows as presented in the statement of comparison of budget and actual amounts and the amounts of total cash receipts and total cash payments reported in the statement of cash receipts and payments for the year ended 31 December 20XX is presented below.

	Total inflows	**Total outflows**
Actual Amount on Comparable Basis as Presented in the Budget and Actual Comparative Statement	**X**	**X**
Basis Differences	X	X
Timing Differences	-	-
Entity Differences	X	X
Total Cash receipts	**X**	
Total Cash Payments		**X**

The financial statements and budget documents are prepared for the same period. There is an entity difference: the budget is prepared for the general government sector and the financial statements include all entities controlled by the government. There is also a basis difference: the budget is prepared on a modified cash basis and the financial statements on the cash basis.

This reconciliation could be included on the face of the Statement of Comparison of Budget and Actual Amounts or as a note disclosure.

10. Donations, Grants and Other Aid

Cash receipts during the period included donations, grants and other aid provided by individual multilateral and bilateral donor agencies and non-governmental organizations; co-operative financing facilities established by such organizations and donations from charities, corporations and private individuals.

The amount of donations, grants and other aid (XXX) does not include aid received during the reporting period in the form of the proceeds of loans. The proceeds of any aid received during the period in the form of loans are included in the amount of borrowings presented as a separate line item in the Statement of Receipts and Payments.

APPENDIX 1B – GOVERNMENT ENTITY B

(THIS ENTITY CONTROLS ITS OWN BANK ACCOUNT.)

NOTES TO THE FINANCIAL STATEMENTS

1. Accounting Policies

Basis of preparation

The financial statements have been prepared in accordance with the Cash Basis IPSAS, *Financial Reporting under the Cash Basis of Accounting*.

The *accounting* policies have been applied consistently throughout the period.

Reporting entity

The financial statements are for a public sector entity (Government Entity B). The financial statements encompass the reporting entity as specified in the relevant legislation (Public Finance Act 20XX).

Government Entity B's principal activity is to provide [identify type of] services to constituents. The Entity controls its own bank account.

Presentation currency

The presentation currency is (currency of Country A).

2. Cash

Cash comprises cash on hand, demand deposits and cash equivalents. Demand deposits and cash equivalents *comprise* balances with banks and investments in short-term money market instruments.

Appropriations and other cash receipts are deposited in the Entity's bank account. All borrowings are undertaken by a central finance entity.

Receipts from exchange transactions are deposited in trading fund accounts controlled by the Entity. They are *transferred* to consolidated revenue at year end.

Cash included in the *statement* of cash receipts and payments comprise the following amounts:

(in thousands of currency units)	**200X**	**200X-1**
Cash on hand and balances with banks	X	X
Short-term investments	X	X
	X	X

3. Transfers

Amounts are transferred to eligible recipients in accordance with the operating mandate and authority of the entity.

4. Significant Entities

Entity 200X	**Entity 200X-1**
Entity X	X
Entity Y	X

5. Authorization Date

The financial statements were authorized for issue on XX *Month* 200X+1 by Mr. YY, Minister of XXXXX for Entity AB.

APPENDIX 1C – GOVERNMENT DEPARTMENT C

(THE GOVERNMENT OPERATES A CENTRALIZED SINGLE ACCOUNT SYSTEM)

STATEMENT OF CASH RECEIPTS AND PAYMENTS FOR DEPARTMENT C FOR YEAR ENDED 31 DECEMBER 200X

	Note	200X	200X-1

ADDITIONAL FINANCIAL STATEMENTS (OPTIONAL)

Additional financial statements may be prepared, for example, to disclose budget information by major fund groups if applicable or to display expenditures by major functions or payments. An example of a statement by function is included below.

STATEMENT OF PAYMENTS BY FUNCTION

	Note	200X	200X-1
(in thousands of currency units)		**Receipts/(Payments)**	**Receipts/(Payments)**
PAYMENTS			
Program I		X	X
Program II		X	X
Program III		X	X
Program IV		X	X
Other payments		X	X
Total payments		**X**	**X**

NOTES TO THE FINANCIAL STATEMENTS

1. **Accounting Policies**

Basis of preparation

The financial statements have been prepared in accordance with the Cash Basis IPSAS, *Financial Reporting under the Cash Basis of Accounting*.

The accounting policies have been applied consistently throughout the period.

Reporting entity

The financial statements are for a public sector entity: Government Department C. The financial statements encompass the reporting entity as specified in the relevant legislation (Public Finance Act 20XX).

Government Department C's principal activity is to provide (specify type of) services to constituents.

Government Department C does not operate its own bank account. The Government operates a centralized treasury function which manages the cash receipts and payments (expenditures) of the department during the financial year.

Presentation currency

The presentation currency is (currency of Country A).

2. **Amounts authorized for use by Department C**

Amounts authorized for use by Government Department C are managed through a central account administered by the Office of the Treasury on the Department's behalf. Amounts are deployed on behalf of Department C on request when supported by presentation of appropriate documentation and authorization. All borrowings are undertaken by a central finance entity.

Amounts authorized for use of the Department which are unexpended amounts at year end are transferred to consolidated revenue.

3. **Transfers**

Amounts are transferred to eligible recipients in accordance with the operating mandate and authority of Department AC.

4. **Authorization Date**

The financial statements were authorized on XX *Month* 200X+1 by Mr. YY, Minister of XXXXX for Government Department C.

Part 2: Financial Reporting under the Cash Basis of Accounting—Encouraged Additional Disclosures

This part of the Standard is not mandatory. It has been prepared to support those entities transitioning from the cash basis of accounting to the accrual basis of financial reporting and adoption of the accrual IPSAS. It sets out encouraged additional disclosures for reporting under the cash basis of accounting. It should be read together with Part 1 of this Standard, which sets out the requirements for reporting under the cash basis of accounting. The encouraged disclosures, which have been set in italic type, should be read in the context of the commentary paragraphs in this part of the Standard, which are in plain type.

Reporting entities should plot their path to adoption of the accrual IPSAS, and commence the process of building the information necessary to comply with those IPSAS consistent with the transition path that has been adopted.

FINANCIAL REPORTING UNDER THE CASH BASIS OF ACCOUNTING PART 2: ENCOURAGED ADDITIONAL DISCLOSURES

The encouraged disclosures are set out in italicized type. They are to be read in the context of the commentary paragraphs in Part 2 of this Standard, which are in plain type,

2.1 Encouraged Additional Disclosures

Definitions

2.1.1 *The following terms are used in this part of the Standard with the meanings specified:*

Accrual basis means a basis of accounting under which transactions and other events are recognized when they occur (and not only when cash or its equivalent is received or paid). Therefore, the transactions and events are recorded in the accounting records and recognized in the financial statements of the periods to which they relate. The elements recognized under accrual accounting are assets, liabilities, net assets/equity, revenue and expenses.

Assets are resources controlled by an entity as a result of past events and from which future economic benefits or service potential are expected to flow to the entity.

Borrowing costs are interest and other expenses incurred by an entity in connection with the borrowing of funds.

Closing rate is the spot exchange rate at the reporting date.

Distributions to owners are future economic benefits or service potential distributed by the entity to all or some of its owners, either as a return on investment or as a return of investment.

Expenses are decreases in economic benefits or service potential during the reporting period in the form of outflows or consumption of assets or incurrences of liabilities that result in decreases in net assets/equity, other than those relating to distributions to owners.

Liabilities are present obligations of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits or service potential.

Revenue is the gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets/equity, other than increases relating to contributions from owners.

Terms defined in Part 1 of this Standard are used in this part of the Standard with their defined meaning.

Future Economic Benefits or Service Potential

2.1.2 Assets, including cash and other resources, provide a means for entities to achieve their objectives. Assets that are used to deliver goods and services in accordance with an entity's objectives but which do not directly generate net cash inflows are often described as embodying "service potential." Assets that are used to generate net cash inflows are often described as embodying future economic benefits. To encompass all the purposes to which assets may be put, this Standard uses the term "future economic benefits or service potential" to describe the essential characteristic of assets.

Going Concern

2.1.3 *When preparing the financial statements of an entity, those responsible for the preparation of the financial statements are encouraged to make an assessment of the entity's ability to continue as a going concern. When those responsible for the preparation of the financial statements are aware, in making their assessment, of material uncertainties related to events or conditions which may cast significant doubt upon the entity's ability to continue as a going concern, the disclosure of those uncertainties is encouraged.*

2.1.4 The determination of whether an entity is a going concern is primarily relevant for individual entities rather than for the government as a whole. For individual entities, in assessing whether the entity is a going concern, those responsible for the preparation of the financial statements:

(a) Will need to take into account all available information for the foreseeable future which will include, but will not necessarily be limited to, twelve months from the approval of the financial statements; and

(b) May need to consider a wide range of factors surrounding current and expected performance, potential and announced restructurings of organizational units, estimates of receipts or the likelihood of continued government funding, and potential sources of replacement financing before it is appropriate to conclude that the entity is a going concern.

2.1.5 There may be circumstances where the usual going concern tests of liquidity and solvency as applied to business enterprises appear unfavorable, but other factors suggest that the entity is nonetheless a going concern. For example:

(a) In assessing whether the government is a going concern, the power to levy rates or taxes may enable some entities to be considered as a going concern even though their cash payments may exceed their cash receipts for extended periods; and

(b) For an individual entity, an assessment of its cash flows for a reporting period may suggest that the entity is not a going concern. However, there may be multi-year funding agreements in place with the government that will ensure the continued operation of the entity.

Administered Transactions

2.1.6 *An entity is encouraged to disclose in the notes to the financial statements, the amount and nature of cash flows and cash balances resulting from transactions administered by the entity as an agent on behalf of others where those amounts are outside the control of the entity.*

2.1.7 The cash flows associated with transactions administered by an entity acting as an agent on behalf of others may not pass through a bank account controlled by the reporting entity. In these cases, the entity cannot use, or otherwise benefit from, the cash it administers in the pursuit of its own objectives. These cash flows are not controlled by the entity and therefore are not included in the totals shown on the face of the statement of cash receipts and payments or other financial statements that might be prepared. However, disclosure of the amount and nature of these transactions by major type is encouraged because it provides useful information on the scope of the entity's activities and it is relevant for an assessment of an entity's performance.

2.1.8 Where such cash receipts and payments pass through a bank account controlled by the entity, they are treated as cash flows and balances of the entity itself and included in the totals shown on the face of the statement of cash receipts and payments. Paragraph 1.3.13(a) of Part 1 of this Standard permits such cash receipts and payments to be reported on a net basis. Paragraphs 2.1.9 to 2.1.13 below provide guidance on the cash receipts, payments and balances that:

(a) May be controlled by a government or government entity and will be reported in the statement of cash receipts and payments in accordance with Part 1 of this Standard; and

(b) Are administered transactions which will not be included on the face of the statement of cash receipts and payments or other financial statements that might be prepared but for which disclosure is encouraged.

Revenue Collection

2.1.9 Public sector entities may control cash or administer cash receipts or payments on behalf of the government or other governments or government entities. For example, a government Department of Taxation (or

revenue collection agency) may be established with its own bank account and provided with an appropriation to fund its operations. The operations of the Department will include administering certain aspects of the Taxation Act and may encompass the collection of taxes on behalf of the government.

2.1.10 A Department of Taxation can use cash appropriated to it and deposited in a bank account which it controls to achieve its operating objectives as mandated, and can exclude others from using or benefiting from that cash. In these cases, the Department will control the cash appropriated for its own use. However, the cash the Department collects on behalf of the government through its tax collection activities is usually deposited in a specified government trust fund or transferred to a government bank account administered by the Treasury or similar department. In these circumstances, the cash collected cannot be used to support achievement of the objectives of the Department of Taxation, or otherwise deployed at the discretion of the Department's management without specific appropriation or other authorization by the government or relevant body. Therefore, the cash collected is not controlled by the Department of Taxation and would not form part of the cash receipts or cash balances of the Department. As a consequence of a government decision, some of the amounts collected may be appropriated or otherwise allocated for use by the Department. However, it is the government's decision to authorize the expenditure of the funds by the Department of Taxation, rather than the collection of the cash, that gives rise to the control.

2.1.11 Similar circumstances may arise when one government, for example a state or local government, collects cash on behalf of another government (such as a national government). In these cases, the government is acting as an agent for others in the collection of cash. The cash that arises as a result of managing transactions as an agent for others would not usually be deposited in a bank account of the collection agency and therefore would not form part of the cash receipts, cash payments or cash balances of the reporting entity.

"Pass-through" Cash Flows

2.1.12 In some cases, the administrative arrangements in place in respect of the revenue collection activities a government or government entity undertakes as an agent of another party may provide for the cash collected to be initially deposited in the entity's own bank account before it is transferred to the ultimate recipient. Cash flows arising as a consequence of these transactions are sometimes termed "pass-through" cash flows. In these cases, the entity will:

(a) Control the cash it collects in its capacity as an agent for the, usually short, period the cash is deposited in the entity's bank account prior to transfer to third parties;

(b) Usually benefit from any interest arising from amounts deposited in interest bearing accounts prior to its transfer to the other entity; and

(c) Have an obligation to transfer the cash collected to third parties in accordance with legislative requirements or administrative arrangements.

When cash inflows from administered transactions pass through a bank account controlled by the reporting entity, the cash receipts, cash transfers and cash balances arising from the collection activity will be included in the entity's statement of cash receipts and payments in accordance with paragraph 1.3.4(a) of Part 1 of this Standard. Paragraph 1.3.13(a) of Part 1 of this Standard specifies that cash receipts and payments which arise from transactions the entity administers on behalf of other parties and which are recognized in the financial statements may be reported on a net basis.

Transfer Payments

2.1.13 Consistent with a government's objectives and with legislation or other authority, amounts appropriated to a government entity (a department, agency or similar) may include amounts to be transferred to third parties in respect of, for example, unemployment benefits, age or invalid pensions, family allowances and other social security and community benefit payments. In some cases, these amounts will pass through a bank

account controlled by the entity. Where this occurs, the entity will recognize the cash appropriated for transfer during the reporting period as a cash receipt, the amounts transferred during that reporting period as a cash payment and any amounts held at the end of the reporting period for transfer in the future as part of closing balance of cash.

Disclosure of Major Classes of Cash Flows

2.1.14 *An entity is encouraged to disclose, either on the face of the statement of cash receipts and payments or other financial statements or in the notes to those statements:*

(a) *An analysis of total cash payments using a classification based on either the nature of the payments or their function within the entity, as appropriate; and*

(b) *Proceeds from borrowings. In addition, the amount of borrowings may be further classified into type and source.*

2.1.15 The sub-classifications encouraged in paragraph 2.1.14(a) may be presented on the face of the statement of cash receipts and payments in accordance with the requirements of paragraph 1.3.12 of Part 1 of this Standard. Where a different classification basis is adopted in the statement of cash receipts and payments, additional disaggregated disclosures reflecting the encouragement in paragraph 2.1.14(a) above is encouraged either as a separate statement or by way of note.

2.1.16 Cash payment items may be further sub-classified in order to enhance accountability by identifying the major purposes for which the payments are made. They may also be sub-classified in order to highlight the costs and cost recoveries of particular programs, activities or other relevant segments of the reporting entity. An entity is encouraged to present this information in at least one of the following two ways.

2.1.17 The first method is referred to as the nature of payments method. Payments are aggregated in the statement of cash receipts and payments according to their nature (for example, purchases of materials, transport costs, wages and salaries), and are not reallocated amongst various functions within the entity. An example of a classification using the nature of payments method is as follows:

	Cash payments
Wages and salaries	(X)
Transport costs	(X)
Capital acquisitions	(X)
Borrowing costs	(X)
Other	(X)
Total payments	(X)

2.1.18 The second method, referred to as the functional method of classification, classifies payments according to the program or purpose for which they were made. This presentation often provides more relevant information to users, although the allocation of payments to functions can be arbitrary and may involve considerable judgment. An example of a functional classification of cash payments is as follows:

	Cash payments
Health services	(X)
Education services	(X)
Other	(X)

Total payments	(X)

2.1.19 Under this method, the cash payments associated with the main functions undertaken by the entity are shown separately. In this example, the entity has functions related to the provision of health services and education services. The entity would present cash payment line items for each of these functions.

2.1.20 Entities classifying cash payments by function are encouraged to disclose additional information on the nature of payments, including payments made for salaries and other employee benefits.

2.1.21 Paragraph 1.3.12 of Part 1 of this Standard requires the disclosure of total cash receipts of the entity showing separately a sub-classification of total cash receipts using a classification basis appropriate to the entity's operations. The sub-classification of cash receipts into appropriate classes will depend upon the size, nature and function of the amounts involved. In addition to disclosure of the amount of receipts from borrowings, the following sub-classifications may be appropriate:

(a) Receipts from taxation (these may be further sub-classified into types of taxes);

(b) Receipts from fees, fines, penalties and licenses;

(c) Receipts from exchange transactions including receipts from the sale of goods and services and user charges (where these are classified as exchange transactions);

(d) The total amount of receipts from external and other assistance (possibly classified by the amount of grants, loans and other assistance provided, the significant classes of providers of that assistance and the amount provided);

(e) Receipts from other grants, transfers, or budget appropriations (possibly classified by source and purpose);

(f) Receipts from interest and dividends; and

(g) Receipts from gifts, donations, and other forms of assistance.

Related Party Disclosures

2.1.22 *An entity is encouraged to disclose in the notes to the financial statements information required by International Public Sector Accounting Standard IPSAS 20, "Related Party Disclosures."*

2.1.23 IPSAS 20, in the accrual based series of IPSAS, defines related parties and other relevant terms, requires the disclosure of related party relationships where control exists and requires the disclosure of certain information about related party transactions, including information about aggregate remuneration of key management personnel.

Disclosure of Assets, Liabilities, Revenues, Expenses and Comparison with Budgets

2.1.24 *An entity is encouraged to disclose in the notes to the financial statements:*

(a) *Information about the assets, liabilities, revenues and expenses of the entity; and*

(b) *If the entity does not make publicly available its approved budget, a comparison with budgets.*

2.1.25 Governments and government entities control significant resources in addition to cash and deploy those resources in the achievement of service delivery objectives. They borrow to fund their activities, incur other debts and liabilities in the course of their operations and make commitments to expend money in the future on the acquisition of capital assets. They also incur costs and generate revenues during the reporting period which will result in cash flows of a future reporting period. Non-cash assets, liabilities, revenues and expenses will not be reported on the face of the statement of cash receipts and payments or other financial statements that might be prepared under the cash basis of accounting. However, governments maintain records of, and

monitor and manage, their debt and other liabilities, their non-cash assets and the costs of their activities during the reporting period and the sources and amount of related revenues. The disclosure of information about assets, liabilities and the costs and revenues of particular programs and activities will enhance accountability and provide information useful for decision-making purposes and, therefore, is encouraged by this Standard.

2.1.26 Entities that make such disclosures are encouraged to identify revenues and expenses by nature or their function as appropriate to the entity's operations and assets and liabilities by type, for example, by classifying:

(a) Assets as receivables, investments or property plant and equipment; and

(b) Liabilities as payables, borrowings by type or source and other liabilities.

While such disclosures may not be comprehensive in the first instance, entities are encouraged to progressively develop and build on them as they transition to full adoption of the accrual IPSAS. In order to comply with the requirements of paragraphs 1.3.5 and 1.3.32 of Part 1 of this Standard, these disclosures will need to comply with qualitative characteristics of financial information and should be clearly described and readily understood.

2.1.27 Accrual basis IPSAS can provide useful guidance to entities disclosing additional information about assets, liabilities revenues and expense. Recommended Practice Guidelines will also provide guidance on disclosures that will assist users to better understand such matters as the financial position, financial performance and cash flows of the entity; its service performance objectives and achievements; and the sustainability of its finances.

Comparison with Budgets

2.1.28 Public sector entities are typically subject to budgetary limits in the form of appropriations or other budgetary authority which may be given effect through authorizing legislation. One of the objectives of financial reporting by public sector entities is to report on whether cash was obtained and used in accordance with the legally adopted budget. In some jurisdictions, this requirement is reflected in legislation. Entities which make publicly available their approved budgets are required to comply with the requirements of paragraphs 1.7.1 to 1.7.46 of Part 1 of this Standard. This Standard encourages other entities (that is, entities which do not make publicly available their approved budgets) to include in their financial statements the disclosure of a comparison of actual with the budgeted amounts for the reporting period where the financial statements and the budget are on the same basis of accounting. Reporting against budgets for these other entities may be presented in different ways, including:

(a) The preparation of a note with separate columns for budgeted amounts and actual amounts. A column showing any variances from the budget or appropriation may also be presented for completeness; and

(b) Disclosure that the budgeted amounts have not been exceeded. If any budgeted amounts or appropriations have been exceeded, or payments made without appropriation or other form of authority, then details may be disclosed by way of note to the relevant item in the financial statements.

2.1.29 *Entities which disclose in their financial statements a comparison of actual with budgeted amounts are encouraged to include in the financial statements a cross reference to reports which include information about service achievements.*

2.1.30 *Entities which adopt multi-period budgets are encouraged to provide additional note disclosures about the relationship between budget and actual amounts during the budget period.*

2.1.31 Additional budget information, including information about service achievements, may be presented in documents other than financial statements. Entities which disclose in their financial statements a comparison of actual with budgeted amounts are encouraged to include in their financial statements a cross reference to

such documents, particularly to link budget and actual data to non-financial budget data and service achievements.

2.1.32 As noted in paragraph 1.7.32 of this Standard, entities may take different approaches to determining the annual budget within the multi-period budget. Where multi-period budgets are adopted, entities are encouraged to provide additional disclosures about such matters as the relationship between the multi period budget and component annual budgets and actual amounts during the budget period.

Consolidated Financial Statements

Definitions

2.1.33 *The following terms are used in this Part of the Standard with the meanings specified:*

Consolidated financial statements are the financial statements of an economic entity in which the cash receipts, cash payments and cash balances of the controlling entity and its controlled entities are presented as that of a single entity.

Control of an entity: An entity controls another entity when the entity is exposed, or has rights, to variable benefits from its involvement with the other entity and has the ability to affect the nature or amount of those benefits through its power over the other entity.

Controlled entity is an entity that is under the control of another entity (known as the controlling entity).

Controlling entity is an entity that has one or more controlled entities.

Economic entity means a controlling entity and its controlled entities.

Economic Entity

2.1.34 The term “economic entity” is used in this Standard to define, for financial reporting purposes, a group of entities comprising the controlling entity and any controlled entities. Other terms sometimes used to refer to an economic entity include administrative entity, financial entity, consolidated entity, and group. Factors to be considered in assessing whether one entity controls another entity for financial reporting purpose are outlined in IPSAS 35, *Consolidated Financial Statements*.

2.1.35 An economic entity may include entities with both social policy and commercial objectives. For example, a government housing department may be an economic entity which includes entities that provide housing for a nominal charge, as well as entities that provide accommodation on a commercial basis.

2.1.36 The determination of the economic entity will need to be made having regard to the constitutional arrangements in a jurisdiction, in particular the ways in which government power is limited and allocated, and how the government system is set up and operates. For example, in jurisdictions with an executive, legislature and judiciary, these may collectively form an economic entity in respect of which there is a user need for consolidated financial statements. Such consolidated financial statements are commonly referred to as whole-of-government financial statements.

Scope of Consolidated Financial Statements

2.1.37 *A controlling entity, other than a controlling entity identified in paragraph 2.1.40 is encouraged to present consolidated financial statements which consolidates all its controlled entities, foreign and domestic by applying the following consolidation procedures:*

(a) *Cash balances and cash transactions between entities within the economic entity are eliminated in full;*

(b) *When the financial statements used in a consolidation are drawn up to different reporting dates, adjustments are made for the effects of significant cash transactions that have occurred between those dates and the date of the controlling entity's financial statements; and*

(c) *Consolidated financial statements are prepared using uniform accounting policies for like cash transactions. If it is not practicable to use uniform accounting policies in preparing the consolidated financial statements, that fact should be disclosed together with the proportions of the items in the consolidated financial statements to which the different accounting policies have been applied.*

2.1.38 *When a controlling entity, other than a controlling entity identified in paragraph 2.1.40, does not present financial statements that consolidated all its controlled entities, it is encouraged to present financial statements that consolidate those of its controlled entities which represent the budget sector, general government sector or other economic entity that represents core government activities and responds to users information needs.*

2.1.39 *An economic entity uses the term "consolidated financial statements" to describe financial statements which comprises the controlling entity and its controlled entities as identified in paragraph 2.1.37. Financial statements of an economic entity which do not comprise the controlling entity and all its controlled entities as identified in paragraph 2.1.37, are identified by a term that is readily understood and clearly describes the classes or (characteristics) of entities that make up the economic entity.*

2.1.40 *The preparation of consolidated financial statements is unnecessary for a controlling entity that meets all the following conditions:*

(a) *It is itself a controlled entity and the information needs of users are met by its controlling entity's consolidated financial statements and, in the case of a partially owned controlled entity, all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the entity not presenting consolidated financial statements;*

(b) *Its debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets);*

(c) *It did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organization for the purpose of issuing any class of instruments in a public market; and*

(d) *Its ultimate or any intermediate controlling entity produces consolidated financial statements that are available for public use and comply with the Cash Basis IPSAS or the accrual IPSAS.*

2.1.41 For accountability and decision-making purposes, users of the financial statements of a government or other public sector entity are usually concerned with, and need to be informed about, the cash resources controlled by the economic entity as a whole. This need is served by consolidated financial statements which present financial information about the economic entity as a single entity without regard for the legal boundaries of the separate legal entities.

2.1.42 This Standard encourages governments and other public sector controlling entities to present financial statements which consolidate all controlled entities when users of such financial statements are likely to exist.

2.1.43 The consolidated financial statements of an economic entity that comprises a government and all its controlled entities will provide information about the cash resources controlled by the government directly and through its controlled entities at reporting date, and changes in those resources during the reporting period. The consolidated financial statements of other public sector economic entities such as, for example, a ministry of health or an education department, will provide information about the cash resources controlled by the ministry or department and changes in those resources during the reporting period.

2.1.44 The preparation of consolidated financial statements is not a cost-free process. Therefore, it is important that the benefits of preparing such statements justify the costs of their preparation. Preparation of consolidated financial statements by a controlling entity which is itself a controlled entity will often not be necessary in the circumstances identified in paragraph 2.1.40. This is because users' need for information presented in cash basis financial statements are often met by the consolidated financial statements of its controlling entity when such statements are prepared consistent with the requirement of the Cash Basis IPSAS or the accrual IPSAS, and the other circumstances identified in paragraph 2.1.40 apply. However, in other cases, consolidated financial statements at a whole-of-government level may not meet the information needs of users in respect of key sectors or activities of a government. In many jurisdictions, there are legislated financial reporting requirements intended to address the information needs of such users.

2.1.45 In some cases, an entity which has the power to direct the relevant activities of another entity may not be able to benefit from the activities of that other entity - for example, when the other entity is subject to severe external long-term restrictions which prevent the entity with the power to direct its activities from benefiting from those activities. The cash flows and balances of such entities are not included in consolidated financial statements. This is because consolidated financial statements present information about the cash resources of the government or other public sector reporting entity that can be used to support the delivery of goods and services or otherwise benefit the reporting entity.

2.1.46 Paragraph 2.1.40(d) acknowledges that the ultimate or intermediate controlling entity of an entity which adopts the cash basis IPSAS may prepare and present consolidated financial statements on an accrual basis. While this may occur in some jurisdictions, the ultimate or intermediate controlling entity is likely to face significant practical issues in compiling, in respect of controlled entities that adopt the cash basis, the information necessary to comply with the accrual IPSAS.

Transitioning to Consolidated Financial Statements

2.1.47 Governments and other public sector entities may control a large number of entities including government departments, agencies and commercial public sector entities. The preparation of consolidated financial statements that consolidate a controlling entity and all its controlled entities can be a complex and resource intensive process. Some governments and other public sector entities face significant obstacles in the preparation and presentation of consolidated financial statements and may not be able to prepare fully consolidated financial statements in the short to medium term as they commence the transition to the full accrual basis. This may be because of capacity constraints that limit the ability of a government or other entity to collect and process data from all controlled entities in a timely fashion, because of legislative or other requirements to present financial statements for a subgroup of controlled entities rather than for all controlled entities, or for other reasons.

2.1.48 As governments and other public sector entities that report on the cash basis transition to the accrual basis of financial reporting and develop the capacity, systems and the legislative frameworks to overcome obstacles to consolidation, the potential to include in cash basis financial statements information about additional controlled entities will increase. For governments, the preparation of financial statements that report information about the cash receipts, cash payments and cash balances of an economic entity that comprises the controlled entities that represents, for example, the budget sector, the general government sector or other representation of core government activities will provide information about key sectors of government that is useful to users for accountability and decision-making purposes. This Standard encourages a controlling entity that does not present fully consolidated financial statements to present financial statements for such an economic entity as an interim step in the transition to the accrual basis of financial reporting and the presentation of fully consolidated financial statements in accordance with the accrual IPSAS. Government agencies which do not consolidate all their controlled entities are also

encouraged to present financial statements which consolidate controlled entities which represent a subgroup of their activities useful to users for accountability and decision-making purposes.

2.1.49 The term "consolidated financial statements" is used to describe financial statements that present a "full consolidation" of all controlled entities as identified in paragraph 2.1.37 of this Standard. A term other than "consolidated financial statements" is to be used to describe financial statements that present information about an economic entity that does not include the controlling entity and all its controlled entities. That term is to be readily understood and to clearly describe the classes or (characteristics) of entities that make up the economic entity. The selection of an appropriate term is a matter of professional judgement. That judgment should be exercised in the context of the qualitative characteristics of financial reporting including that it be understandable and a faithful representation of the economic entity presented. For national, state/provincial or local governments that prepare such financial statements, terms such as, for example, the financial statements of the budget sector or the general government sector may be appropriate.

Consolidation Procedures

2.1.50 The consolidation procedures outlined in paragraph 2.1.37 provide the basis for preparing consolidated financial statements for all the entities within the economic entity as a single economic unit, as encouraged by this Standard.

2.1.51 The consolidated financial statements encouraged by this Standard reflect transactions between the economic entity and other entities external to it. Accordingly, transactions between entities within the economic entity are eliminated to avoid double-counting. For example, a government department may sell a physical asset to another government department. Because the net cash effect on the whole-of-government reporting entity is zero, this transaction needs to be eliminated to avoid overstating the cash receipts and cash payments of the whole-of-government reporting entity. A government entity may hold funds with a public sector financial institution. These balances would be eliminated at the whole-of-government level because they represent balances within the economic entity. Similarly, a commercial public sector entity operating overseas may make a payment to a government department which remains in transit at the reporting date. In this case, failure to eliminate the transaction in the preparation of whole-of-government consolidated financial statements would result in understating the cash balance of the whole-of-government economic entity and overstating its cash payments. However, the transaction would not be eliminated in financial statements prepared for a group entity that, for example, represented a general government sector which excluded the commercial public sector entity.

2.1.52 Individual entities within the economic entity may adopt different policies for the classification of cash receipts and cash payments and the presentation of their financial statements. Cash receipts or cash payments arising from like transactions are classified and presented in a uniform manner in the consolidated financial statements where practicable.

Consolidation Disclosures

2.1.53 *An entity is encouraged to disclose in the notes to the consolidated financial statements of an economic entity prepared in accordance with the encouragements in paragraph 2.1.37:*

(a) *A listing of significant controlled entities including the name, the jurisdiction in which the controlled entity operates (when it is different from that of the controlling entity);*

(b) *The reasons for not consolidating a controlled entity;*

(c) *The proportion of ownership interest in controlled entities and a description of how that ownership interest has been determined; and*

(d) *Where applicable, the factors considered in determining that the controlling entity:*

(i) *Controls another entity (or category of entities) even though it holds less than half of the voting rights of the other entity (or entities), together with an explanation of how control exists; and*

(ii) *Does not control another entity (or category of entities) even though it holds more than half of the voting rights of the other entity (or entities).*

2.1.54 *An entity which presents financial statements for an economic entity which consolidates some but not all controlled entities as is encouraged in paragraph 2.1.37, is encouraged to disclose in the notes to those financial statements the disclosures encouraged in paragraph 2.1.53 together with:*

(a) *A description of the classes (or characteristics) of controlled entities that are included in, and excluded from, the group financial statements together with an explanation of the reason for the exclusion of any classes from the group accounts; and*

(b) *A listing of significant entities that have been added to, or removed from, those included in the group financial statements since presentation of the previous period's financial statements.*

2.1.55 *A controlling entity which does not present a consolidated financial statement as encouraged in paragraph 2.1.37 is encouraged to disclose the reasons why the consolidated financial statements have not been presented together with the method used to account for controlled entities in its separate financial statements. It is also encouraged to disclose the name and the principal address of its controlling entity that publishes a consolidated financial statement.*

2.1.56 The disclosures encouraged in paragraphs 2.1.53 and 2.1.54 will provide users with information about the composition and key features of fully consolidated financial statements prepared in accordance with the encouragements in paragraph 2.1.37, and financial statements that consolidate a subset of its controlled entities in accordance with the encouragements in paragraph 2.1.38. The disclosures encouraged in paragraph 2.1.55 will enable users to determine whether a controlling entity prepares consolidated financial statements and, if not, the method used to account for controlled entities.

Acquisitions and Disposals of Controlled Entities and Other Operating Units

2.1.57 *An entity is encouraged to disclose and present separately the aggregate cash flows arising from acquisitions and from disposals of controlled entities or other operating units.*

2.1.58 *An entity is encouraged to disclose in the notes to the financial statements, in aggregate in respect of both acquisitions and disposals of controlled entities or other operating units during the period, each of the following:*

(a) *The total purchase or disposal consideration (including cash or other assets);*

(b) *The portion of the purchase or disposal consideration discharged by means of cash; and*

(c) *The amount of cash in the controlled entity or operating unit acquired or disposed of.*

2.1.59 The separate presentation of the cash flow effects of acquisitions and disposals of controlled entities and other operations, together with the separate disclosure of the amounts of assets and liabilities acquired or disposed of, helps to distinguish those cash flows from cash receipts and payments arising from the other activities of the entity. To enable users to identify the effects of both acquisitions and disposals, the cash flow effects of disposals would not be deducted from those acquisitions.

2.1.60 The aggregate amount of the cash paid or received as purchase or sale consideration is reported in the statement of cash receipts and payments net of cash acquired or disposed of.

2.1.61 Paragraph 2.1.24 encourages the disclosure of assets, liabilities, revenues and expenses of the entity. Assets, liabilities, revenues and expenses other than cash or cash flows of a controlled entity or operating unit acquired or disposed of may also be separately disclosed, summarized by each major category.

Consistent with the requirement of paragraph 1.3.32 of Part 1 of this Standard, where such disclosure is made, the assets, liabilities, revenues and expenses should be clearly identified and the basis on which they are measured and recognized explained.

Joint Arrangements

2.1.62 *An entity is encouraged to make disclosures about joint arrangements which are necessary for a fair presentation of the cash receipts and payments of the entity during the period and the balances of cash as at the reporting date.*

2.1.63 A joint arrangement is an arrangement of which two or more parties have joint control. Many public sector entities establish joint arrangements to undertake a variety of activities. The nature of these activities range from commercial undertakings to provision of community services at no charge. The terms of a joint arrangement are set out in a contract or other binding arrangement and usually specify the initial contribution from each joint venturer and the share of revenues or other benefits (if any) and expenses of each of the joint venturers. Entities which report on a cash basis will generally report:

(a) As cash payments, the cash expended in the acquisition of an interest in a joint arrangement and in the ongoing operations of the joint arrangement; and

(b) As cash receipts, the cash received from the joint arrangement.

Disclosures about joint arrangements may include a listing and description of interests in significant joint arrangements. International Public Sector Accounting Standards IPSAS 36, *Investments in Associates and Joint Ventures* and IPSAS 37, *Joint Arrangements* in the accrual based series of IPSAS provides guidance on the different forms and structures that joint arrangements may take and potential additional disclosures that might be made. The definition and explanation of “control” in IPSAS 35 will need to be considered in determining whether an entity is an “associate” and whether an arrangement is a “joint arrangement“ as defined in IPSAS 36 and IPSAS 37.

Financial Reporting in Hyperinflationary Economies

2.1.64 In a hyperinflationary economy, the presentation of the financial statements in the local currency without restatement is not useful. Money loses purchasing power at such a rate that comparison of amounts from transactions and other events that have occurred at different times, even within the same accounting period, is misleading.

2.1.65 This Standard does not identify an absolute rate at which hyperinflation is deemed to arise. It is a matter of judgment when restatement of financial statements in accordance with the encouragements in this Standard would become necessary. Hyperinflation is indicated by characteristics of the economic environment of a country which include, but are not limited to, the following:

(a) The general population prefers to keep its wealth in non-monetary assets or in a relatively stable foreign currency. Amounts of local currency held are immediately invested to maintain purchasing power;

(b) The general population regards monetary amounts not in terms of the local currency but in terms of a relatively stable foreign currency. Prices may be quoted in that currency;

(c) Sales and purchases on credit take place at prices that compensate for the expected loss of purchasing power during the credit period, even if the period is short;

(d) Interest rates, wages and prices are linked to a price index; and

(e) The cumulative inflation rate over three years is approaching, or exceeds, 100%.

The Restatement of Financial Statements

2.1.66 *An entity that reports in the currency of a hyperinflationary economy is encouraged to:*

(a) *Restate its statement of cash receipts and payments and other financial statements in terms of the measuring unit current at the reporting date;*

(b) *Restate the comparative information for the previous period, and any information in respect of earlier periods in terms of the measuring unit current at the reporting date; and*

(c) *Use a general price index that reflects changes in general purchasing power. It is preferable that all entities that report in the currency of the same economy use the same index.*

2.1.67 *The entity is encouraged to make the following disclosures:*

(a) *The fact that the statement of cash receipts and payments and other financial statements, and the corresponding figures for previous periods, have been restated for the changes in the general purchasing power of the reporting currency and, as a result, are stated in terms of the measuring unit current at the reporting date; and*

(b) *The identity and level of the price index at the reporting date and the movement in the index during the current and the previous reporting period.*

2.1.68 Prices change over time as the result of various political, economic and social forces. Specific forces such as changes in supply and demand, and technological changes may cause individual prices to increase or decrease significantly and independently of each other. In addition, general economic forces may result in changes in the general level of prices and therefore in the general purchasing power of money.

2.1.69 In a hyperinflationary economy, the usefulness of financial statements is substantially increased if they are expressed in terms of the measuring unit current at the reporting date. As a result, the treatments and disclosures in paragraphs 2.1.66 and 2.1.67 above are encouraged. Presentation of this information as the primary presentation rather than as a supplement to financial statements which have not been restated is encouraged. Separate presentation of the statement of cash receipts and payments and other financial statements before restatement is discouraged.

2.1.70 All items in the statement of cash receipts and payments will be expressed in terms of the measuring unit current at the reporting date. Therefore, all amounts, including any payments by third parties disclosed on the face of the statement of cash receipts and payments or in other financial statements, would be restated by applying the change in the general price index from the dates when the payments and receipts were initially recorded.

2.1.71 Many entities in the public sector include in their financial statements the related budgetary information, to facilitate comparisons with the budget. Where this occurs, this Standard encourages restatement of the budgetary information in accordance with this Standard.

Comparative Information

2.1.72 If comparisons with previous periods are to be meaningful, comparative information for the previous reporting period will be restated by applying a general price index so that the comparative financial statements are presented in terms of the measurement unit current at the end of the reporting period. Information that is disclosed in respect of earlier periods is also expressed in terms of the measurement unit current at the end of the reporting period.

Consolidated Financial Statements

2.1.73 A controlling entity that reports in the currency of a hyperinflationary economy may have controlled entities that also report in the currencies of hyperinflationary economies. If the statement of cash receipts and

payments and other financial statements are to be prepared on a consistent basis, the financial statements of any such controlled entity will be restated by applying a general price index of the country in whose currency it reports before they are included in the consolidated financial statements issued by its controlling entity. Where such a controlled entity is a foreign controlled entity, its restated financial statements are translated at closing rates.

2.1.74 If financial statements with different reporting dates are consolidated, all items, whether non-monetary or monetary, need to be restated into the measuring unit current at the date of the consolidated financial statement.

Selection and Use of the General Price Index

2.1.75 The restatement of financial statements in accordance with the approach encouraged by this Standard requires the use of a general price index that reflects changes in general purchasing power. It is preferable that all entities that report in the currency of the same economy use the same index.

2.1.76 The disclosures encouraged by this Standard are intended to make clear the basis of dealing with the effects of hyperinflation in the financial statements. They are also intended to provide other information necessary to understand that basis and the resulting amounts.

Payments by Third Parties on Behalf of the Entity

2.1.77 *When during the reporting period a reporting entity has been formally advised that payments have been made to directly settle its obligations or purchase goods and services for its benefit by third parties, or the entity has otherwise verified that such payments have been made, the entity is encouraged to disclose in notes to the financial statements:*

(a) *Total payments made by such third parties; and*

(b) *A sub-classification of the total amount of such payments using a classification basis appropriate to the entity's operation.*

2.1.78 In some cases, third parties purchase goods or services on behalf of the entity or settle obligations of the entity. For example, a national government may fund the operation of a health or education program of an independent provincial or municipal government by directly paying service providers and acquiring and transferring to the other government the necessary supplies during the period. Similarly, a national government or independent aid agency may pay a construction company directly for building a road for another government rather than providing the funds directly to the government itself. These payments may be made by way of a grant, donation or other form of aid, or as a loan which is to be repaid. In these cases, the provincial or municipal government does not receive cash (including cash equivalents) directly from, or gain control of a bank account or similar facility established for its benefit by, the other entity. Therefore, the amount settled or paid on its behalf does not constitute "cash" as defined in this Standard. However, the recipient government benefits from the cash payments being made on its behalf.

2.1.79 The disclosure of information about the amount, and the classes of payments made by third parties (whether by nature, function or both) will provide additional information useful for accountability and decision-making purposes. In some cases, an entity may not have been formally advised or otherwise be aware of third party payments made on its behalf during the reporting period, or may be unable to verify that an expected payment has occurred. If an entity cannot have confidence that the amount of third party payments disclosed is a faithful representation of all such payments made on behalf of the entity during the period, the notes should advise users that such disclosures may not encompass all such third party payments.

2.1.80 Paragraph 2.1.77 encourages the disclosure of the total amount of third party payments made during the reporting period and the major classes of such payments. Third party payments will encompass amounts

defined as external assistance and other assistance in paragraph 2.1.82 of this Standard. Paragraph 2.1.90(b) encourages the disclosure of the amount of external assistance provided to an entity in the form of third party payments. Paragraph 2.1.91 encourages that such disclosures also be made about other assistance where practicable.

2.1.81 The sub-classifications (or classes) of third party payments which may be disclosed in accordance with paragraphs 2.1.77(b) are a matter of professional judgment. The factors that will be considered in exercising that judgment are outlined in paragraph 1.3.17 of Part 1 of this Standard.

Recipients of External and Other Assistance

Definitions

2.1.82 *The following terms are used in this Standard with the meaning specified:*

Assistance means external assistance and other assistance.

Bilateral External Assistance Agencies are agencies established under national law, regulation or other authority of a nation for the purpose of, or including the purpose of, providing some or all of that nation's external assistance.

Exchange transactions are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equally value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange.

External Assistance means all official resources which the recipient can use or otherwise benefit from in pursuit of its objectives.

Multilateral External Assistance Agencies are all agencies established under international agreement or treaty for the purpose of, or including the purpose of, providing external assistance.

Non-Governmental Organizations (NGOs) are all foreign or national agencies established independent of control by any government for the purpose of providing assistance to government(s), government agencies, other organizations or individuals.

Official Resources means all loans, grants, technical assistance, guarantees or other forms of assistance provided or committed under a binding agreement by multilateral or bilateral external assistance agencies or by a government, or agencies of a government, other than to a recipient of the same nation as the government or government agency providing, or committing to provide, the assistance.

Other Assistance means resources provided by non-governmental organizations (NGOs) and gifts and donations or other forms of assistance voluntarily provided by individuals and private sector organizations which the recipient can use or otherwise benefit from in pursuit of its objectives. Other assistance does not include official resources, taxes, fines and fees, resources provided in an exchange transaction or resources provided by the government or agencies of a government of the same nation as the recipient.

Assistance

2.1.83 "Assistance" is defined broadly in this Standard to encompass "external assistance" and "other assistance". Key features of external assistance and other assistance are outlined below.

External assistance

2.1.84 External assistance is defined as all official resources which the recipient can use or otherwise benefit from in pursuit of its objectives. Different organizations may use different terminology for external assistance or classes of external assistance. For example, some organizations may use the term external aid or aid, rather than external assistance. In these cases, the different terminology is unlikely to cause confusion. However,

in other cases, the terminology may be substantially different. In these cases it will be necessary to exercise professional judgment in determining whether the resources provided should be classified as external assistance.

2.1.85 Official resources are resources provided or committed under a binding agreement by multilateral or bilateral external assistance agencies or governments or government agencies, other than to a recipient of the same nation as the provider of the assistance. Governments as referred to in the definition of official resources may include national, state, provincial or local governments in any nation. Therefore, assistance provided by, for example, a national government or state government agency of one nation to a state or local government of another nation is external assistance as defined in this Standard. However, assistance provided by a national or state government to another level of government within the same nation and assistance provided by non-governmental organizations (NGOs), even if such assistance is provided under a binding agreement, does not satisfy the definition of official resources and, therefore, is not external assistance.

2.1.86 External assistance agreements may provide for the entity to:

(a) Draw down in cash the full proceeds of the loan or grant or a tranche of the loan or grant;

(b) Seek reimbursement(s) for qualifying payments made by the entity to a third party settling in cash an obligation(s) of the entity, as defined by the loan or grant agreement; or

(c) Request the external assistance agency to make payments directly to a third party settling in cash an obligation(s) of the recipient entity as defined by the loan or grant agreement, including an obligation of the recipient entity for goods or services provided or to be provided by a NGO.

External assistance agreements may also include the provision of goods or services to the recipient.

Other Assistance

2.1.87 Other assistance is defined as resources provided by NGO's and assistance that is voluntarily provided by, for example, individuals and charitable and other organizations. Taxes and other resources compulsorily paid or payable to public sector entities in accordance with laws or regulation, fines or other penalties imposed for breaches of laws or regulation, and fees for services provided by, or on behalf of, public sector entities are not other assistance as defined in paragraph 2.1.82. Similarly, resources provided in exchange transactions and transfers of resources between governments within the same nation are not classified as other assistance.

2.1.88 In most cases it will be clear whether resources are provided voluntarily and whether their intent is to provide assistance for purposes of, for example, emergency relief or to assist the entity in achieving economic development or welfare objectives, or for other purposes. However, in some cases, it will be necessary to exercise professional judgment in determining whether the resources provided should be classified as other assistance.

2.1.89 NGOs are foreign or national agencies established independent of control by any government. In some rare cases, it may not be clear whether the donor organization is a bilateral or multilateral external assistance agency or a NGO, and therefore independent of control by any government. Where such a donor organization provides, or commits to provide, assistance under the terms of a binding agreement, the distinction between official resources as defined in this Standard and resources provided by a NGO may become blurred. In these cases, professional judgment will need to be exercised to determine whether the assistance received satisfies the definition of external assistance or other assistance.

External Assistance Received

2.1.90 *An entity is encouraged to disclose separately in notes to the financial statements:*

(a) *The total amount of external assistance received in cash during the period unless disclosed as a separate class of cash receipt on the face of the statement of cash receipts and payments;*

(b) *The total external assistance paid by third parties during the period to directly settle obligations of the entity or purchase goods and services on behalf of the entity when advised by the third party or otherwise verified by the recipient;*

(c) *The total amount of external assistance received during the period as loans and the total amount received as grants;*

(d) *The significant classes of providers of external assistance and the amount provided;*

(e) *By significant class and amount, the purposes for which external assistance was received and used during the reporting period showing separately amounts provided by way of loans and grants; and*

(f) *The balance of undrawn external assistance loans and grants available at reporting date to fund future operations when the amount of the loans or grants available to the recipient is specified in a binding agreement and the satisfaction of any substantial terms and conditions that determine, or affect access to, that amount is highly likely, showing separately:*

(i) *Total external assistance loans;*

(ii) *Total external assistance grants; and*

(iii) *The purposes for which the undrawn loan assistance and undrawn grant assistance may be used.*

Other Assistance Received

2.1.91 *Where practicable, an entity is encouraged to apply to other assistance received, the disclosures identified in paragraph 2.1.90 above.*

External Assistance and Other Assistance Received

2.1.92 Disclosure of the total amount of external assistance received and, separately, other assistance received in the form of cash and in the form of third party payments made on behalf of the entity can provide useful information about the extent to which the operations of the reporting entity are funded from taxes and/or internal sources, or are dependent upon external assistance and other assistance, and the form of that assistance – whether as cash or other benefit. The disclosure of external assistance and other assistance received in the form of payments made by third parties is encouraged when the entity has been formally advised, or otherwise verified, that such payments have been made during the reporting period.

2.1.93 Disclosure of the amount of external assistance and other assistance received by way of loan or grant will enable users to identify whether the entity has an obligation to repay the assistance provided at some time in the future.

2.1.94 Disclosure of the significant classes of providers of assistance such as, for example, multilateral donors, bilateral donors, international assistance organizations, NGOs, national assistance organizations or other major classes as appropriate for the reporting entity will identify the extent of the entity's dependence on particular classes of providers, and will be relevant to an assessment of the sustainability of the assistance.

2.1.95 An entity may receive external assistance for many purposes including assistance to support its:

(a) Economic development or welfare objectives, often termed development assistance;

(b) Emergency relief objectives, often termed emergency assistance;

(c) Balance of payments position or to defend its currency exchange rate, often termed balance of payments assistance;

(d) Military and/or defense objectives, often termed military assistance; and

(e) Trading activities, including export credits or loans offered by export/import banks or other government agencies, often termed trade finance.

2.1.96 Other assistance may also be provided for some of these purposes such as, for example, emergency relief and to support an entity's welfare objectives.

2.1.97 Disclosure by significant class of the purposes for which external assistance and other assistance was provided and used during the reporting period will further enhance the entity's accountability for its use of assistance received.

2.1.98 The amount of external assistance and assistance from NGO's and other sources currently committed under a binding agreement but not yet drawn may be significant. In some cases, the amount of assistance loan(s) or grant(s) is specified in a binding agreement and the satisfaction of any substantial conditions that need to be satisfied to access that amount is highly likely. This may occur in respect of undrawn balances of project funding for projects currently under development where conditions have been, and continue to be, satisfied and the project is anticipated to continue under the terms of the agreement. The disclosure of undrawn balances of external assistance and other assistance in these circumstances will provide information about the extent to which assistance made available to the entity has been drawn on during the reporting period and the amount of committed external and other assistance is available to support the ongoing development of particular projects.

2.1.99 In some cases, a donor may express an intention to provide ongoing assistance to the reporting entity, but not specify in a binding agreement the amount of the assistance loan(s) or grant(s) to be provided in future periods. In other cases, the amount of assistance may be specified but be subject to terms and conditions, the satisfaction of which cannot be assessed as being highly likely at the reporting date. In these cases, disclosure of the undrawn amounts is not encouraged by paragraph 2.1.90(f). In some cases, professional judgment may need to be exercised in assessing whether the satisfaction of the substantial terms and conditions that determine, or effect access to, the external assistance or other assistance is highly likely.

Goods and Services Received

2.1.100 *An entity is encouraged to disclose separately in the notes to the financial statements the value of assistance received during the period in the form of goods or service, and the basis on which that value is determined.*

2.1.101 Significant resources may be received as assistance in the form of goods or services. This will occur when new or used goods such as vehicles, computers or other equipment are transferred to the entity under an external assistance agreement or by, for example, NGO's or private sector benefactors. It will also occur when food aid is provided to a government for distribution to its citizens as emergency relief under an external assistance agreement or by NGO's or other donors. For some recipients, goods or services may be the major form in which assistance is received.

2.1.102 Disclosure of the value of assistance received as goods and services during the reporting period will assist readers of the financial statements to better understand the full extent of assistance received during the reporting period. However, in some cases and for some recipients, determining the value of such goods and services can be a difficult, time consuming and costly process. This is particularly so where a domestic market price for those goods and services cannot be readily determined, where the goods and services provided are not widely traded in international markets or where they are of an unique nature, such as often occurs in respect of emergency assistance.

2.1.103 This Standard does not specify the basis on which the value of the goods or services is to be determined. Therefore, their value may be determined as the depreciated historical cost of physical assets at the time the assets are transferred to the recipient or the price paid for the food by an external assistance agency or other donor. It may also be determined on the basis of an assessment of the value by management of the transferor, or the recipient, or by a third party. Where the value of assistance in the form of goods or services is disclosed, paragraph 2.1.100 encourages the disclosure of the basis on which that value is determined. Where such is described as fair value it will conform with the definition of fair value – that is, the amount for which an asset could be exchanged, or a liability settled, between knowledgeable willing parties in an arm's length transaction.

2.2 Governments and Other Public Sector Entities Completing the Transition to the Accrual Basis of Financial Reporting and Adoption of Accrual IPSAS

Presentation of the Statement of Cash Receipts and Payments

2.2.1 *An entity which is completing its transition to the accrual basis of financial reporting and adoption of accrual IPSAS is encouraged to present a statement of cash receipts and payments in the same format as that required by International Public Sector Accounting Standard 2 (IPSAS 2), Cash Flow Statements.*

2.2.2 As entities transition to the accrual basis of financial reporting they will need to progressively build the information and systems necessary to comply with each accrual IPSAS on issue prior to the formal adoption of the accrual IPSAS. The presentation of information in a format that replicates as far as possible that adopted by the accrual IPSAS will assist the transition process.

2.2.3 IPSAS 2 provides guidance on classifying cash flows as operating, financing and investing and includes requirements for preparing a cash flow statement which reports these classes separately on the face of the statement. A summary of key aspects of IPSAS 2 and guidance on their application for financial reporting under this Standard is included in Appendix 3. Part 2 of this Standard encourages disclosure of information additional to that required by IPSAS 2. Entities which adopt the format of IPSAS 2 for the presentation of the statement of cash receipts and payments are encouraged to also make the additional disclosures identified in Part 2 of this Standard.

Consolidated Financial Statements – The Economic Entity

2.2.4 This Standard encourages controlling entities to present consolidated financial statements which consolidates all controlled entities in accordance with generally accepted consolidation processes, and identifies some circumstances in which this may not be necessary. These circumstances reflect those in IPSAS 35, *Consolidated Financial Statements*. However, IPSAS 35 includes additional exemptions from the requirement to prepare consolidated financial statements for controlling entities that are investment entities and measure their controlled entities at fair value through surplus or deficit. This exemption is not applicable to controlling entities that are investment entities and apply the Cash Basis IPSAS.

2.2.5 When financial statements which consolidate all controlled entities are not presented, this Standard encourages the presentation of financial statements which present information about an economic entity that comprises subgroups of controlled entities such as those reflecting the budget sector or the general government sector or other representation of core government activities. While accrual IPSAS do not prohibit the presentation of information about such economic entities, they cannot be presented as an alternative to the full consolidation of all controlled entities as prescribed in IPSAS 35.

2.2.6 Entities completing the transition to the accrual basis of financial reporting and adoption of the accrual IPSAS will need to be aware of these differences in the consolidation requirements of the accrual and cash basis IPSAS.

Required and Encouraged Disclosures under the Cash Basis IPSAS

2.2.7 The requirements and encouragements of this Standard are not inconsistent with the requirements and encouragements of the equivalent accrual IPSAS to the extent they apply to financial reporting under the cash basis. However, in some cases this Standard encourages disclosures that are not required by the accrual IPSAS. This occurs in respect of, for example, encouraged disclosures about such matters as third party payments and external and other assistance. These disclosures are encouraged in this Standard to provide additional information useful in assessing how the entity is resourced. Such information is useful to all users of general purpose financial statements for accountability and decision-making purposes. It may also be relevant to the "special purpose" needs of, for example, providers of external and other assistance for information useful in monitoring the provision and use of assistance provided to the entity.

IPSAS 33—First-Time Adoption of Accrual Basis IPSAS

2.2.8 IPSAS 33, *First Time Adoption of Accrual Basis International Public Sector Accounting Standards (IPSAS)* identifies transitional provisions that provide entities with relief from adoption of certain of the requirements of accrual IPSAS for three (3) years from the date of first adoption of accrual IPSAS. IPSAS 33 provides that on the date of adoption of IPSAS, a first-time adopter may elect to adopt one of more of the exemptions included in IPSAS 33 and, subject to the nature of the exemptions adopted, identify its financial statements as either:

(a) *Transitional IPSAS financial statements*, when it adopts exemptions identified in IPSAS 33 as "Exemptions that Affect Fair Presentation and Compliance with Accrual Basis IPSAS"; or

(b) *Financial statements that comply with the accrual IPSAS*, when it adopts other of the exemptions identified in IPSAS 33. That is the exemptions identified in IPSAS 33 as "Exemptions that Do Not Affect Fair Presentation and Compliance with Accrual Basis IPSAS"[3].

2.2.9 Appendix A of IPSAS 33 lists the transitional exemptions and provisions that a first-time adopter is required to apply and/or can elect to apply on adoption of accrual basis IPSAS, and illustrates whether fair presentation and the first-time adopter's ability to assert compliance with accrual basis IPSAS will be affected.

[3] IPSAS 33, Appendix A lists the transitional exemptions and provisions that a first-time adopter is required to apply and/or can elect to apply on adoption of accrual basis IPSAS and illustrates whether fair presentation and the first-time adopter's ability to assert compliance with accrual basis IPSAS will be affected.

Basis for Conclusions – Cash Basis IPSAS Part 2

This Basis for Conclusions accompanies, but is not part of the IPSAS, Financial Reporting under the Cash Basis of Accounting.

Introduction — Removing obstacles to adoption of this IPSAS

BC1 The requirements for preparation of consolidated financial statements and disclosure of information about external assistance and third party payments that were previously included in Part 1 of the Cash Basis IPSAS (2007)(proved to be major obstacles to adoption of this Standard. To remove those obstacles these requirements were revised and recast as encouragements in Part 2 of the Standard.

BC2 In the process of recasting these requirements as encouragements, additional amendments were made to strengthen the role of Part 2 of the Standard in supporting the transition to the accrual basis of financial reporting and adoption of accrual IPSAS.

Consolidation

BC3 Part 2 of the Standard encourages controlling entities to present consolidated financial statements which consolidates all controlled entities. It also encourages controlling entities that do not consolidate all controlled entities, to prepare financial statements for an economic entity that represents the budget sector, the general government sector or other representation of core government activities as an interim step in the transition to the accrual basis of financial reporting and adoption of accrual IPSAS. Such financial statements will provide information useful to users for accountability and decision-making purposes and support an orderly and useful transition to full consolidation as required by the accrual IPSAS. The encouragement to present financial statements for an economic entity that comprises the controlled entities that represent the general government sector is also consistent with the IPSASB's strategic objective of supporting the convergence of public sector accounting standards and statistical bases of financial reporting where appropriate.

BC4 To further support those entities transitioning to the accrual basis, key definitions and encouraged disclosures were revised where necessary to ensure that they did not conflict with IPSAS 34, *Separate Financial Statements*; IPSAS 35, *Consolidated Financial Statements*, IPSAS 36, *Investments in Associates and Joint Ventures*, IPSAS 37, *Joint Arrangement*s and IPSAS 38, *Disclosure of Interests in Other Entities*.

External assistance

BC5 Requirements to disclose information about external assistance that were included in Part 1 of the Cash Basis IPSAS (2007) have been revised and recast as encouragements in Part 2 of the Standard. In addition, disclosures that were previously required or encouraged have been reduced to focus primarily on encouragements to disclose information about external assistance received and used during the reporting period in the form of cash and third party payments, and the amount of undrawn assistance available to the reporting entity as at reporting date. This revised Cash Basis IPSAS (2017) also encourages the disclose of information about such matters as significant terms and conditions of external assistance agreements, terms and conditions that have not been complied with and repayment terms and conditions of outstanding external assistance debt be removed from the Standard. Where practical, Part 2 of the Standard encourages a reporting entity to make disclosures about assistance provided to the entity in the form of cash and third party payments by, for example, NGOs and public and private sector donors.

BC6 The IPSASB is of the view that the encouraged disclosures provide information useful for accountability and decision-making purposes, are more likely to be achievable and better reflect the general purpose nature intended for the cash basis financial statements.

BC7 Part 2 of the Cash Basis IPSAS (2007) encouraged the disclosure of the value of goods and services received during the period in the form of external assistance. Part 1 of the Cash Basis IPSAS (2007) required that where an entity chose to disclose the value of external assistance received during the period in the form of goods and services it should also disclose the basis on which that value is determined. Such disclosures were encouraged, but not required, for assistance received from NGO's. Some constituents sought clarification of the relationship of these requirements and encouragements to those relating to third party payments. Some constituents also expressed concern that the disclosure of the basis on which the value of goods and services was determined was required when those goods and services were received as official resources under external assistance agreements, but only encouraged in other circumstances. The IPSASB responded to these concerns. In this revised Cash Basis IPSAS (2017) the relationship between external assistance and third party payments has been clarified and the requirement to disclose the basis of valuation of goods and services received has been recast as an encouragement in Part 2 of the IPSAS and broadened to apply to external assistance and other assistance received in the form of goods and services.

Third Party payments

BC8 Part 1 of the Cash Basis IPSAS (2007) required the disclosure of certain information about payments made by third parties in a separate column on the face of the statement of cash receipts and payments. This revised Cash Basis IPSAS (2017) recasts this as an encouragement to include such disclosures in notes to the financial statements, rather than on the face of the financial statements. The recasting of the requirement to disclose information about third party payments as an encouragement was made because of concerns that information necessary to fully satisfy the requirements or encouragement would not be available to recipients on a timely basis. In such circumstances, the information included in the financial statements was likely to be incomplete and the potential for misinterpretation of its usefulness for accountability and decision-making purposes did not justify its disclosure in a separate column on the face of the financial statements.

BC9 This revised Cash Basis IPSAS (2017) also makes changes to Part 1 to include an additional explanation of single account type arrangements to reflect the IPSASB's view that such arrangements do not give rise to third party payments. This explanation narrows the circumstances in which third party payments may arise.

Amendments to support Entities transitioning to the accrual basis of financial reporting and adoption of accrual IPSAS

BC10 This revised Cash Basis IPSAS (2017) makes refinements to the encouragements in Part 2 to reinforce the role of the Standard in supporting governments and other public sector entities transitioning to the accrual basis of financial reporting and adoption of accrual IPSAS. These refinements include:

(a) Updated definitions and encouraged disclosures to ensure that they are not contrary to the equivalent accrual IPSAS unless intended to be so to reflect the cash basis focus in this Standard; and

(b) Outlining the role of IPSAS 33, *First-Time Adoption of Accrual Basis International Public Sector* Accounting *Standards (IPSAS)* in providing relief from complying with certain of the requirements of accrual IPSAS for a 3-year period from first adoption.

BC11 Consistent with the role of Part 2 of the Standard in supporting entities transitioning to the accrual basis of financial reporting and adoption of the accrual IPSAS, the definitions of assets, liabilities, revenues and expenses included in this Standard are the same as those included in the accrual IPSAS. While encompassing essentially the same characteristics, the definitions of assets, liabilities, revenues and expenses in the "Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities" (The Conceptual Framework) have been further developed to clarify their key characteristics. The accrual IPSAS have not yet been updated to reflect the definitions of assets, liabilities, revenues and expenses in the Conceptual Framework and, consequently, the definitions in this Standard do not reflect those in the Framework.

Extraordinary Items

BC12 This revised Cash Basis IPSAS (2017) no longer encourages the disclosure of information about extraordinary items and supporting definitions and explanations. IPSAS 1, *Presentation of Financial Statements* (issued in 2000), which was on issues when the previous Cash Basis IPSAS was issued, required certain disclosures about extraordinary items to be made on the face of the financial statements. IPSAS 2, *Cash Flow Statements* (issued in 2000) and IPSAS 3, *Accounting Policies, Changes in Accounting Estimates* and *Errors* (issued in 2000) also required separate disclosure of extraordinary items. These requirements have now been removed from the accrual IPSAS. The accrual IPSAS do not require, encourage or prohibit disclosure of extraordinary items. These amendments were made to align Part 2 of this Standard with the accrual IPSAS.

Appendix 2

Illustration of Certain Disclosures Encouraged in Part 2 of the Standard

This appendix is illustrative only. The purpose of the appendix is to illustrate the application of the encouragements and to assist in clarifying their meaning.

Extract from notes to the financial statements of Government Entity ABC

Administered Transactions (paragraph 2.1.6)

Administered transactions comprise cash flows resulting from transactions administered by the Entity as an agent on behalf of the government and specific government bodies. All cash collected in the capacity of an agent is deposited in the consolidated revenue fund and/or trust account (name of account), as appropriate. These accounts are not controlled by the Entity and the cash deposited in them cannot be used by the Entity without specific authorization by the relevant government body.

Related Party Transactions (paragraph 2.1.22)

The key management personnel (as defined by International Public Sector Accounting Standard IPSAS 20, *Related Party Disclosures*) of Entity ABC are the Minister, the members of the governing body and the members of the senior management group. The governing body consists of members appointed by Government A. The chief executive officer and the chief financial officer attend meetings of the governing body but are not members of the governing body. The Minister is not remunerated by Entity ABC. The aggregate remuneration of members of the governing body and the number of members determined on a full time equivalent basis receiving remuneration within this category, are:

Aggregate remuneration AX million.

Number of persons AY persons.

The senior management group consists of the Entity's chief executive officer, the chief financial officer, and the heads of division. The aggregate remuneration of members of the senior management group and the number of managers determined on a full-time equivalent basis receiving remuneration within this category are:

Aggregate remuneration AP millions.

Number of persons AQ persons.

Notes to consolidated financial statements of Government X

(Extracts illustrating encouraged disclosures)

Note A: Controlled Entities *(paragraph 2.1.53)*

Entity XYZ has rights to variable benefits from its involvement with controlled entities and has the ability to affect the nature or amount of those benefits through its power over those entities. All controlled entities are included in the consolidated financial statements. The significant controlled entities are identified below.

Significant Controlled Entities	Jurisdiction
Entity A	
Entity B	
Entity C	X
Entity D	
Entity E	
Entity F	
Entity G	
Entity H	X
Entity I	
Entity J	

Control of government entities arises by way of statute or other enabling legislation. Control of commercial public sector entities (commercial entities) arises by way of statute and in the case of commercial entities C and D, by way of ownership interest. The Government retains control of commercial entity J through legislative authority although the majority of the equity of commercial entity J has been sold to private investors.

Entity	Ownership Interest (%)	Voting Power (%)
Entity C	XX	XX
Entity D	XX	XX
Entity J	XX	XX

(Extract from notes to consolidated financial statements of Government X continued)

Acquisitions of Controlled Entities and Operating Units *(paragraphs 2.1.57 and 2.1.58)*

Names of Entities acquired	Proportion of shares acquired %	Purchase consideration (in thousands of currency units)	Cash portion of purchase consideration (in thousands of currency units)	Cash balances acquired (in thousands of currency units)
Entity C	XX	X	X	X
Entity D	XX	X	X	X

Regional Water Board	Water provision	XX	XX
Regional Electricity Board	Provision of utility services	XX	XX

(Extract from notes to consolidated financial statements of Government X Continued)

Note C: Assets, Liabilities, Revenues and Expenses *(paragraph 2.1.24(a))*

Property, plant and equipment

The Government commenced the process of identifying and valuing major classes of its property, plant and equipment. The assets are stated at historical cost or valuation. The valuations were performed by an independent professional valuer. The valuation bases used for each class of assets are as follows:

Plant and Equipment	Cost
Land	Current Value
Buildings	Cost or Market Value

(in thousands of currency units)	200X	200X-1
Plant and equipment	X	X
Land and buildings		
Property within jurisdiction (country, state, city) limits	X	X
Buildings at cost	X	X
Buildings at valuation	X	X
	X	X

Revenue and Expense

The Government continues to build data on revenues and expenses of the reporting period as it transitions to the accrual basis of financial reporting.

The Government maintains records of property taxes due and payable at reporting date based on property values as assessed by the revenue office on a three year rolling basis, It also estimates amounts of goods and services tax and [*identify industry*] royalties accruing based on sales and production returns and reports.

It is developing a statistical model for measuring income tax revenue on an accruals basis which draws on taxation statistics compiled since 200X-3 as well as other information, including average weekly earnings, gross domestic product, and the consumer and producer price indexes. The Government anticipates that the model will enable it to reliably measure income tax revenue on an accruals basis for the reporting period ended December 31, 20XX.

(*Extract from notes to consolidated financial statements of Government X Continued)*

Accrued expenses comprise amounts due and payable for wages, salaries and rental and other costs due and payable as at reporting date.

(in thousands of currency units)	**200X**	**200X-1**
Accrued Revenue	X	X
Property taxes	X	X

(Extract from notes to consolidated financial statements of Government X continued)

Note E: Payments by Third Parties *(paragraph 2.1.77)*

Government X benefits from payments made by third parties to purchase goods and services on its behalf during the period. These payments do not constitute cash receipts or payments by the government. They include payments for goods and services made by multilateral and bilateral aid agencies and non-governmental organizations. They form part of the support for government programs provided by way of external and other assistance – additional information about external assistance and other assistance is provided in Note F below. The government has verified that the following payments have been made by third parties to purchase goods and services during 200X and 200X-1.

Note F: External Assistance and Other Assistance ***(paragraphs 2.1.90 and 2.1.91)***

Assistance was received in the form of cash transfers and deposits to current and term deposit accounts and trusts fund accounts controlled by the government. It also encompasses amounts drawn by the government from accounts of donors consistent with external assistance and other assistance agreements and other authorizations. Assistance was also received in the form of third party payments.

External assistance comprises loans and grants from multilateral and bilateral donor agencies under agreements specifying the purposes for which the assistance will be utilized. Other assistance was provided for specified purposes by NGOs, private corporations and other donors.

The amounts, class of provider and purposes for which external assistance was provided during the period is outlined below.

(Extract from notes to consolidated financial statements of Government X continued)

(Extract from notes to consolidated financial statements of Government X continued)

Undrawn External Assistance and Other Assistance *(paragraph 2.1.90(f) and paragraph 2.1.91)*

Undrawn external assistance loans and grants consist of amounts which have been specified in a binding agreement with external assistance agencies but have not been utilized at reporting date, and are subject to terms and conditions that have been satisfied in the past and it is anticipated will be satisfied in the future. There were no amounts of undrawn assistance from NGOs or other providers of other assistance in 200X or 200X-1.

Goods and Services Received *(paragraph 2.1.100)*

During 200X, a severe earthquake occurred in the ZZZ region inflicting serious damage to government property and private property, and significant loss of life. Multilateral agencies, bilateral agencies, NGO's, private corporations and associations of several nations donated personnel and equipment to assist in locating and rescuing individuals trapped in the rubble. In addition, specialized medical teams trained in trauma treatment together with medical equipment, were flown into the region. Temporary shelter, food and clothing were also supplied. The value of goods and services received has been estimated at XX domestic currency units. The value of the emergency assistance provided has been estimated based on cost estimates provided by international aid agencies, NGO's and corporations that were major contributors because local prices for equivalent goods or services were not available.

Fifty thousand tons of rice was received as food aid during the year. It has been valued at XX domestic currency units which represents the wholesale price of similar rice in domestic wholesale markets.

Goods and services received during the year have not been recorded in the Statement of Cash Receipts and Payments, which reflects only cash received (directly or indirectly) or paid by the Government. Goods and services-in-kind were received as part of the emergency assistance and are reflected in this note.

Appendix 3

Presentation of the Statement of Cash Receipts and Payments in the Format Required by IPSAS 2, *Cash Flow Statements*

Paragraph 2.2.1 of Part 2 of this Standard encourages an entity which is completing its transition to the accrual basis of financial reporting and adoption of accrual IPSAS to present a statement of cash receipts and payments in the same format as that required by IPSAS 2, Cash Flow Statements. IPSAS 2 is applied by an entity which reports on an accrual basis of financial reporting in accordance with International Public Sector Accounting Standards.

This appendix provides a summary of key aspects of IPSAS 2 and guidance on their application for financial reporting under the cash basis of accounting as required by this Standard. Entities intending to present a statement of cash receipts and payments in accordance with the requirements of IPSAS 2 as far as is appropriate will need to refer to that IPSAS.

Presentation in the Format Required by IPSAS 2, *Cash Flow Statements*

1 IPSAS 2, *Cash Flow Statements* requires an entity which prepares and presents financial statements under the accrual basis of financial reporting ***and adoption of accrual IPSAS*** to prepare a cash flow statement which reports cash flows during the period classified by operating, investing and financing activities as defined below.

Definitions

2 *Financing activities are activities that result in changes in the size and composition of the contributed capital and borrowings of the entity.*

Investing activities are the acquisition and disposal of long-term assets and other investments not included in cash equivalents.

Operating activities are the activities of the entity that are not investing or financing activities.

Components of the Financial Statements

3 In presenting a statement of cash receipts and payments in this format it may be necessary to classify cash flows arising from a single transaction in different ways. (The term cash flow statement is used in the remainder of this appendix for a statement of cash receipts and payments presented in the same format as that required by IPSAS 2.) For example, when the cash repayment of a loan includes both interest and capital, the interest element may be classified as an operating activity and the capital element may be classified as a financing activity. An entity presenting information by way of a cash flow statement presents its cash flows from operating, investing and financing activities in a manner which is most appropriate to its activities.

4 A cash flow statement will include line items which present the following amounts:

(a) Total receipts from operating activities;

(b) Total payments on operating activities;

(c) Net cash flows from operating activities;

(d) Net cash flows from investing activities;

(e) Net cash flows from financing activities;

(f) Beginning and closing balances of cash; and

(g) Net increase or decrease in cash.

Additional line items, headings and sub-totals will also be presented on the face of the statement when such presentation is necessary to present fairly the entity's cash flows.

5 An entity will also present on the face of the cash flow statement or in the notes:

(a) Major classes of gross cash receipts and gross cash payments arising from operating, investing and financing activities, except to the extent that paragraph 1.3.13 of Part 1 of this Standard allows reporting on a net basis;

(b) A sub-classification of total cash receipts from operations in a manner appropriate to an entity's operations; and

(c) An analysis of payments on operating activities using a classification based on either the nature of payments or their function within the entity, as appropriate.

Separate disclosure of payments made for capital acquisitions and for interest and dividends is also consistent with the requirements of IPSAS 2.

6 Disclosure of information about such matters as whether cash is generated from taxes, fines, fees (operating activities), the sale of capital assets (investing activities) and/or borrowings (financing activities) and whether it was expended to meet operating costs, for the acquisition of capital assets (investing activities) or for the retirement of debt (financing activities) will enhance transparency and accountability of financial reports. These disclosures will also facilitate more informed analysis and assessments of the entity's current cash resources and the likely sources and sustainability of future cash inflows. Accordingly, this Standard encourages all entities to disclose this information in the financial statements and/or related notes.

Operating Activities

7 The amount of net cash flows arising from operating activities is a key indicator of the extent to which the operations of the entity are funded:

(a) By way of taxes (directly and indirectly); and

(b) From the recipients of goods and services provided by the entity.

The disclosure of the amount of net cash flows from operating activities also assists in identifying the extent to which operations of the entity generate cash that can be deployed to repay obligations, pay a dividend/distribution to its owner and make new investments without recourse to external sources of financing. The consolidated whole-of-government operating cash flows provide an indication of the extent to which a government has financed its current activities through taxation and charges. Information about the specific components of historical operating cash flows is useful, in conjunction with other information, in forecasting future operating cash flows.

8 Cash flows from operating activities are primarily derived from the principal cash-generating activities of the entity. Examples of cash flows from operating activities are:

(a) Cash receipts from taxes, levies and fines;

(b) Cash receipts from charges for goods and services provided by the entity;

(c) Cash receipts from grants, or transfers and other appropriations or budget authorizations made by central government or other public sector entities, including those made for the acquisition of capital assets;

(d) Cash receipts from royalties, fees and commissions;

(e) Cash payments to other public sector entities to finance their operations (not including loans or equity injections);

(f) Cash payments to suppliers for goods and services;

(g) Cash payments to and on behalf of employees;

(h) Cash receipts and cash payments of a public sector insurance entity for premiums and claims, annuities and other policy benefits;

(i) Cash payments of local property taxes or income taxes (where appropriate) in relation to operating activities;

(j) Cash receipts and payments from contracts held for dealing or trading purposes;

(k) Cash receipts or payments from discontinuing operations; and

(l) Cash receipts or payments in relation to litigation settlements.

9 An entity may hold securities and loans for dealing or trading purposes, in which case they are similar to inventory acquired specifically for resale. Therefore, cash flows arising from the purchase and sale of dealing or trading securities are classified as operating activities. Similarly, cash advances and loans made by public financial institutions are usually classified as operating activities since they relate to the main cash-generating activity of that entity.

10 In some jurisdictions, governments or other public sector entities will appropriate or authorize funds to entities to finance the operations of the entity, and no clear distinction is made for the disposition of those funds between current activities, capital works and contributed capital. Where an entity is unable to separately identify appropriations or budget authorizations as current activities, capital works (operating activities) and contributed capital (investing activities), IPSAS 2 explains that the entity should classify the appropriation or budget authorization as cash flows from operations, and disclose this in the notes to the statement of cash flows.

Investing Activities

11 The separate disclosure of cash flows arising from investing activities identifies the extent to which cash outflows have been made for resources which are intended to contribute to the entity's future service delivery. Examples of cash flows arising from investing activities are:

(a) Cash payments to acquire property, plant and equipment, intangibles and other long-term assets. These payments include those relating to capitalized development costs and self-constructed property, plant and equipment;

(b) Cash receipts from sales of property, plant and equipment, intangibles and other long-term assets;

(c) Cash payments to acquire equity or debt instruments of other entities and interests in joint ventures (other than payments for those instruments considered to be cash equivalents or those held for dealing or trading purposes);

(d) Cash receipts from sales of equity or debt instruments of other entities and interests in joint ventures (other than receipts for those instruments considered to be cash equivalents and those held for dealing or trading purposes);

(e) Cash advances and loans made to other parties (other than advances and loans made by a public financial institution);

(f) Cash receipts from the repayment of advances and loans made to other parties (other than advances and loans of a public financial institution);

(g) Cash payments for futures contracts, forward contracts, option contracts and swap contracts except when the contracts are held for dealing or trading purposes, or the payments are classified as financing activities; and

(h) Cash receipts from futures contracts, forward contracts, option contracts and swap contracts except when the contracts are held for dealing or trading purposes, or the receipts are classified as financing activities.

When a contract is designated as a hedge of an identifiable position, the cash flows of the contract are classified in the same manner as the cash flows of the position being hedged.

Financing Activities

12 The separate disclosure of cash flows arising from financing activities is useful in predicting claims on future cash flows by providers of capital to the entity. Examples of cash flows arising from financing activities are:

(a) Cash proceeds from issuing debentures, loans, notes, bonds, mortgages and other short or long-term borrowings;

(b) Cash repayments of amounts borrowed;

(c) Cash payments by a lessee for the reduction of the outstanding liability relating to a finance lease; and

(d) Cash receipts and payments relating to the issue of and redemption of currency.

Interest and Dividends

13 IPSAS 2 requires the separate disclosure of cash flows from interest and dividends received and paid. IPSAS 2 also requires that where such disclosures are made they should be classified in a consistent manner from period to period as either operating, investing or financing activities.

14 The total amounts of interest and dividends paid and received during a period are disclosed in the cash flow statement. Interest paid and interest and dividends received are usually classified as operating cash flows for a public financial institution. However, there is no consensus on the classification of the cash flows associated with interest and dividends received and paid for other entities. Interest and dividends paid and interest and dividends received may be classified as operating cash flows. Alternatively, interest and dividends paid and interest and dividends received may be classified as financing cash flows and investing cash flows respectively, because they are costs of obtaining financial resources or returns on investments.

Reporting Major Classes of Receipts and Payments

15 The sub-classification of receipts depends upon the size, nature and function of the amounts involved. Depending upon the nature of the entity, the following sub-classifications may be appropriate:

(a) Receipts from taxation (these may be further sub-classified into types of taxes);

(b) Receipts from fees, fines, penalties and licenses;

(c) Receipts from exchange transactions including receipts from the sale of goods and services and user charges (where these are classified as exchange transactions);

(d) Receipts from grants, transfers, or budget appropriations (possibly classified by source); and

(e) Receipts from interest and dividends.

16 Payment items are sub-classified in order to highlight the costs and cost recoveries of particular programs, activities or other relevant segments of the reporting entity. Examples of classification of payments by nature and function are included in Parts 1 and 2 of this Standard.

Appendix 4

Qualitative Characteristics of Information Included in General Purpose Financial Reports

Paragraph 1.3.27 of Part 1 of this Standard requires that the financial statements provide information that meets the qualitative characteristics of information included in general purpose financial statements and satisfies the constraints on such information. This appendix summarizes the qualitative characteristics and constraints of general purpose financial reports as identified in paragraph 1.3.27. For a full explanation of the qualitative characteristics and constraints, readers should refer to "The Conceptual Framework for General Purpose Financial Reporting by Public Sector Entities".

Qualitative characteristics are the attributes that make the information provided in financial statements useful to users and support the achievement of the objectives of financial reporting. The objectives of financial reporting are to provide information useful for accountability and decision-making purposes. They are applicable to financial statements, regardless of the basis of accounting used to prepare the financial statements. The qualitative characteristics are understandability, relevance, faithful representation, timeliness, comparability and verifiability. Pervasive constraints on information included in financial statements are materiality, cost-benefit, and achieving an appropriate balance between the qualitative characteristics.

Understandability

Understandability is the quality of information that enables users to comprehend its meaning. General Purpose Financial Statements (financial statements) of public sector entities should present information in a manner that responds to the needs and knowledge base of users, and to the nature of the information presented. Users are assumed to have a reasonable knowledge of the entity's activities and the environment in which it operates, and to be willing to study the information.

Information about complex matters should not be excluded from the financial statements merely on the grounds that it may be too difficult for certain users to understand without assistance.

Relevance

Information is relevant if it is capable of making a difference in achieving the objectives of financial reporting. Information is capable of making a difference when it has confirmatory value, predictive value, or both. It may be capable of making a difference, and thus be relevant, even if some users choose not to take advantage of it or are already aware of it.

Faithful Representation

To be useful in financial reporting, information must be a faithful representation of the economic and other phenomena that it purports to represent. Faithful representation is attained when the depiction of the phenomenon is complete, neutral, and free from material error. Information that faithfully represents an economic or other phenomenon depicts the substance of the underlying transactions and other events, activity or circumstance—which is not necessarily always the same as its legal form.

Comparability

Information in financial statements is comparable when users are able to identify similarities in, and differences between, two sets of phenomena. Comparability is not a quality of an individual item of information, but rather a quality of the relationship between two or more items of information.

Comparability applies to the:

- Comparison of financial statements of different entities; and
- Comparison of the financial statements of the same entity over periods of time.

An important implication of the characteristic of comparability is that users need to be informed of the policies employed in the preparation of financial statements, changes to those policies and the effects of those changes.

Because users wish to compare the performance of an entity over time, it is important that the financial statements show corresponding information for preceding periods.

Timeliness

Timeliness means having information available for users before it loses its capacity to be useful for accountability and decision-making purposes. Having relevant information available sooner can enhance its usefulness as input to assessments of accountability and its capacity to inform and influence decisions that need to be made. A lack of timeliness can render information less useful.

Verifiability

Verifiability is the quality of information that helps assure users that information in financial statements faithfully represents the economic and other phenomena that it purports to represent. Supportability is sometimes used to describe this quality when applied in respect of explanatory information and prospective financial and non-financial quantitative information disclosed in financial statements. Whether referred to as verifiability or supportability, the characteristic implies that different knowledgeable and independent observers could reach general consensus, although not necessarily complete agreement, that either:

- The information represents the economic and other phenomena that it purports to represent without material error or bias; or
- An appropriate recognition, measurement, or representation method has been applied without material error or bias.

Constraints on Information Included in General Purpose Financial Statements

Materiality

Information is material if its omission or misstatement could influence the discharge of accountability by the entity, or the decisions that users make on the basis of the entity's financial statements prepared for that reporting period. Materiality depends on both the nature and amount of the item judged in the particular circumstances of each entity.

Balance between Benefit and Cost

The balance between benefit and cost is a pervasive constraint. The benefits derived from information should justify the cost of providing it. Assessing whether the benefits of providing information justify the related costs is often a matter of judgment because it is often not possible to identify and/or quantify all the costs and all the benefits of information included in financial statements.

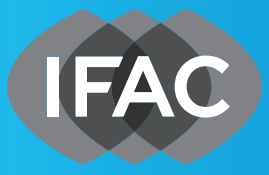
The costs of providing information include the costs of collecting and processing the information, the costs of verifying it and/or presenting the assumptions and methodologies that support it, and the costs of disseminating it. Users incur the costs of analysis and interpretation.

Preparers expend the majority of the effort to provide information in financial statements. However, service recipients and resource providers ultimately bear the cost of those efforts—because resources are redirected from service delivery activities to preparation of information for inclusion in financial statements. Users reap the majority of benefits from the information provided by financial statements. However, information prepared for financial statements may also be used internally by management and result in better decision-making by management.

In developing IPSAS, the IPSASB considers information from preparers, users, academics, and others about the expected nature and quantity of the benefits and costs of the proposed requirements. Disclosure and other requirements which result in the presentation of information useful to users of financial statements for accountability and decision-

making purposes and satisfy the qualitative characteristics are prescribed by IPSAS when the benefits of compliance with those disclosures and other requirements are assessed by the IPSASB to justify their costs.

Balance between Qualitative Characteristics



The qualitative characteristics work together to contribute to the usefulness of information. In some cases, a balancing or trade-off between qualitative characteristics may be necessary to achieve the objectives of financial reporting. The relative importance of the qualitative characteristics in each situation is a matter of professional judgment. The aim is to achieve an appropriate balance among the characteristics in order to meet the objectives of financial reporting.
